Socrates:: I believe that I know Phaedrus about as well as I know myself, and I am very sure that the speech of Lysias was repeated to him, not once only, but again and again;—he insisted on hearing it many times over and Lysias was very willing to gratify him; at last, when nothing else would do, he got hold of the book, and looked at what he most wanted to see,—this occupied him during the whole morning;—and then when he was tired with sitting, he went out to take a walk, not until, by the dog, as I believe, he had simply learned by heart the entire discourse, unless it was unusually long, and he went to a place outside the wall that he might practice his lesson. There he saw a certain lover of discourse who had a similar weakness;—he saw and rejoiced; now thought he, 'I shall have a partner in my revels.' And he invited him to come and walk with him. But when the lover of discourse begged that he would repeat the tale, he gave himself airs and said, 'No I cannot,' as if he were indisposed; although, if the hearer had refused, he would sooner or later have been compelled by him to listen whether he would or no. Therefore, Phaedrus, bid him do at once what he will soon do whether bidden or not.

Phaedrus:: I see that you will not let me off until I speak in some fashion or other; verily therefore my best plan is to speak as I best can.

Socrates:: A very true remark, that of yours.

Phaedrus:: I will do as I say; but believe me, Socrates, I did not learn the very words—O no; nevertheless I have a general notion of what he said, and will give you a summary of the points in which the lover differed from the non-lover. Let me begin at the beginning.

Socrates:: Yes, my sweet one; but you must first of all show what you have in your left hand under your cloak, for that roll, as I suspect, is the actual discourse. Now, much as I love you, I would not have you suppose that I am going to have your memory exercised at my expense, if you have Lysias himself here.

Phaedrus:: Enough; I see that I have no hope of practicing my art upon you. But if I am to read, where would you please to sit?

Socrates:: Let us turn aside and go by the Ilissus; we will sit down at some quiet spot.

Phaedrus:: I am fortunate in not having my sandals, and as you never have any, I think that we may go along the brook and cool our feet in the water; this will be the easiest way, and at midday and in the summer is far from being unpleasant.

Socrates:: Lead on, and look out for a place in which we can sit down.

Phaedrus:: Do you see that tallest plane-tree in the distance?

Socrates:: Yes.

Phaedrus:: There are shade and gentle breezes, and grass on which we may either sit or lie down.

Socrates:: Move forward.

Phaedrus:: I should like to know, Socrates, whether the place is not somewhere here at which Boreas is said to have carried off Orithyia from the banks of the Ilissus?

Socrates:: Such is the tradition.

Phaedrus:: And is this the exact spot? The little stream is delightfully clear and bright; I can fancy that there might be maidens playing near.

Socrates:: I believe that the spot is not exactly here, but about a quarter of a mile lower down, where you cross to the temple of Artemis, and there is, I think, some sort of an altar of Boreas at the place.

Phaedrus:: I have never noticed it; but I beseech you to tell me, Socrates, do you believe this tale?

Socrates:: The wise are doubtful, and I should not be singular if, like them, I too doubted. I might have a rational explanation that Orithyia was playing with Pharmacia, when a northern gust carried her over the neighboring rocks; and this being the manner of her death, she was said to have been carried away by Boreas. There is a discrepancy, however, about the locality; according to another version of the story she was taken from the Areopagus, and not from this place. Now I quite acknowledge that these allegories are very nice, but he is not to be envied who has to invent them; much labor and ingenuity will be required of him; and when he has once begun, he must go on and rehabilitate Hippocentaurs and chimeras dire. Gorgons and winged steeds flow in apace, and numberless other inconceivable and portentous natures. And if he is skeptical about them, and would fain reduce them one after another to the rules of probability, this sort of crude philosophy will take up a great deal of time. Now I have no leisure for such enquiries; shall I tell you why? I must first know myself, as the Delphian inscription says; to be curious about that which is not my concern, while I am still in ignorance of my own self, would be ridiculous. And therefore I bid farewell to all this; the common opinion is enough for me. For, as I was saying, I want to know not about this, but about myself: am I a monster more complicated and swollen with passion than the serpent Typho, or a creature of a gentler and simpler sort, to whom Nature has given a diviner and lowlier destiny? But let me ask you, friend: have we not reached the plane-tree to which you were conducting us?

Phaedrus:: Yes, this is the tree.

Socrates:: By Herè, a fair resting-place, full of summer sounds and scents. Here is this lofty and spreading plane-tree, and the agnus castus high and clustering, in the fullest blossom and the greatest fragrance; and the stream which flows beneath the plane-tree is deliciously cold to the feet. Judging from the ornaments and images, this must be a spot sacred to Achelous and the Nymphs. How delightful is the breeze:—so very sweet; and there is a sound in the air shrill and summerlike which makes answer to the chorus of the cicadae. But the greatest charm of all is the grass, like a pillow gently sloping to the head. My dear Phaedrus, you have been an admirable guide.

Phaedrus:: What an incomprehensible being you are, Socrates: when you are in the country, as you say, you really are like some stranger who is led about by a guide. Do you ever cross the border? I rather think that you never venture even outside the gates.

Socrates:: Very true, my good friend; and I hope that you will excuse me when you hear the reason, which is, that I am a lover of knowledge, and the men who dwell in the city are my teachers, and not the trees or the country. Though I do indeed believe that you have found a spell with which to draw me out of the city into the country, like a hungry cow before whom a bough or a bunch of fruit is waved. For only hold up before me in like manner a book, and you may lead me all round Attica, and over the wide world. And now having arrived, I intend to lie down, and do you choose any posture in which you can read best. Begin.

Phaedrus:: Listen. You know how matters stand with me; and how, as I conceive, this affair may be arranged for the advantage of both of us. And I maintain that I ought not to fail in my suit, because I am not your lover: for lovers repent of the kindnesses which they have shown when their passion ceases, but to the non-lovers who are free and not under any compulsion, no time of repentance ever comes; for they confer their benefits according to the measure of their ability, in the way which is most conducive to their own interest. Then again, lovers consider how by reason of their love they have neglected their own concerns and rendered service to others: and when to these benefits conferred they add on the troubles which they have endured, they think that they have long ago made to the beloved a very ample return. But the non-lover has no such tormenting recollections; he has never neglected his affairs or quarreled with his relations; he has no troubles to add up or excuses to invent; and being well rid of all these evils, why should he not freely do what will gratify the beloved? If you say that the lover is more to be esteemed, because his love is thought to be greater; for he is willing to say and do what is hateful to other men, in order to please his beloved;—that, if true, is only a proof that he will prefer any future love to his present, and will injure his old love at the pleasure of the new. And how, in a matter of such infinite importance, can a man be right in trusting himself to one who is afflicted with a malady which no experienced person would attempt to cure, for the patient himself admits that he is not in his right mind, and acknowledges that he is wrong in his mind, but says that he is unable to control himself? And if he came to his right mind, would he ever imagine that the desires were good which he conceived when in his wrong mind? Once more, there are many more non-lovers than lovers; and if you choose the best of the lovers, you will not have many to choose from; but if from the non-lovers, the choice will be larger, and you will be far more likely to find among them a person who is worthy of your friendship. If public opinion be your dread, and you would avoid reproach, in all probability the lover, who is always thinking that other men are as emulous of him as he is of them, will boast to some one of his successes, and make a show of them openly in the pride of his heart;—he wants others to know that his labor has not been lost; but the non-lover is more his own master, and is desirous of solid good, and not of the opinion of mankind. Again, the lover may be generally noted or seen following the beloved (this is his regular occupation), and whenever they are observed to exchange two words they are supposed to meet about some affair of love either past or in contemplation; but when non-lovers meet, no one asks the reason why, because people know that talking to another is natural, whether friendship or mere pleasure be the motive. Once more, if you fear the fickleness of friendship, consider that in any other case a quarrel might be a mutual calamity; but now, when you have given up what is most precious to you, you will be the greater loser, and therefore, you will have more reason in being afraid of the lover, for his vexations are many, and he is always fancying that every one is leagued against him. Wherefore also he debars his beloved from society; he will not have you intimate with the wealthy, lest they should exceed him in wealth, or with men of education, lest they should be his superiors in understanding; and he is equally afraid of anybody's influence who has any other advantage over himself. If he can persuade you to break with them, you are left without a friend in the world; or if, out of a regard to your own interest, you have more sense than to comply with his desire, you will have to quarrel with him. But those who are non-lovers, and whose success in love is the reward of their merit, will not be jealous of the companions of their beloved, and will rather hate those who refuse to be his associates, thinking that their favorite is slighted by the latter and benefited by the former; for more love than hatred may be expected to come to him out of his friendship with others. Many lovers too have loved the person of a youth before they knew his character or his belongings; so that when their passion has passed away, there is no knowing whether they will continue to be his friends; whereas, in the case of non-lovers who were always friends, the friendship is not lessened by the favors granted; but the recollection of these remains with them, and is an earnest of good things to come. Further, I say that you are likely to be improved by me, whereas the lover will spoil you. For they praise your words and actions in a wrong way; partly, because they are afraid of offending you, and also, their judgment is weakened by passion. Such are the feats which love exhibits; he makes things painful to the disappointed which give no pain to others; he compels the successful lover to praise what ought not to give him pleasure, and therefore the beloved is to be pitied rather than envied. But if you listen to me, in the first place, I, in my intercourse with you, shall not merely regard present enjoyment, but also future advantage, being not mastered by love, but my own master; nor for small causes taking violent dislikes, but even when the cause is great, slowly laying up little wrath—unintentional offences I shall forgive, and intentional ones I shall try to prevent; and these are the marks of a friendship which will last. Do you think that a lover only can be a firm friend? reflect:—if this were true, we should set small value on sons, or fathers, or mothers; nor should we ever have loyal friends, for our love of them arises not from passion, but from other associations. Further, if we ought to shower favors on those who are the most eager suitors,—on that principle, we ought always to do good, not to the most virtuous, but to the most needy; for they are the persons who will be most relieved, and will therefore be the most grateful; and when you make a feast you should invite not your friend, but the beggar and the empty soul; for they will love you, and attend you, and come about your doors, and will be the best pleased, and the most grateful, and will invoke many a blessing on your head. Yet surely you ought not to be granting favors to those who besiege you with prayer, but to those who are best able to reward you; nor to the lover only, but to those who are worthy of love; nor to those who will enjoy the bloom of your youth, but to those who will share their possessions with you in age; nor to those who, having succeeded, will glory in their success to others, but to those who will be modest and tell no tales; nor to those who care about you for a moment only, but to those who will continue your friends through life; nor to those who, when their passion is over, will pick a quarrel with you, but rather to those who, when the charm of youth has left you, will show their own virtue. Remember what I have said; and consider yet this further point: friends admonish the lover under the idea that his way of life is bad, but no one of his kindred ever yet censured the non-lover, or thought that he was ill-advised about his own interests.

‘Perhaps you will ask me whether I propose that you should indulge every non-lover. To which I reply that not even the lover would advise you to indulge all lovers, for the indiscriminate favor is less esteemed by the rational recipient, and less easily hidden by him who would escape the censure of the world. Now love ought to be for the advantage of both parties, and for the injury of neither.

‘I believe that I have said enough; but if there is anything more which you desire or which in your opinion needs to be supplied, ask and I will answer’

Now, Socrates, what do you think? Is not the discourse excellent, more especially in the matter of the language?

Socrates:: Yes, quite admirable; the effect on me was ravishing. And this I owe to you, Phaedrus, for I observed you while reading to be in an ecstasy, and thinking that you are more experienced in these matters than I am, I followed your example, and, like you, my divine darling, I became inspired with a frenzy.

Phaedrus:: Indeed, you are pleased to be merry.

Socrates:: Do you mean that I am not in earnest?

Phaedrus:: Now don’t talk in that way, Socrates, but let me have your real opinion; I adjure you, by Zeus, the god of friendship, to tell me whether you think that any Hellene could have said more or spoken better on the same subject.

Socrates:: Well, but are you and I expected to praise the sentiments of the author, or only the clearness, and roundness, and finish, and tournure of the language? As to the first I willingly submit to your better judgment, for I am not worthy to form an opinion, having only attended to the rhetorical manner; and I was doubting whether this could have been defended even by Lysias himself; I thought, though I speak under correction, that he repeated himself two or three times, either from want of words or from want of pains; and also, he appeared to me ostentatiously to exult in showing how well he could say the same thing in two or three ways.

Phaedrus:: Nonsense, Socrates; what you call repetition was the especial merit of the speech; for he omitted no topic of which the subject rightly allowed, and I do not think that any one could have spoken better or more exhaustively.

Socrates:: There I cannot go along with you. Ancient sages, men and women, who have spoken and written of these things, would rise up in judgment against me, if out of complaisance I assented to you.

Phaedrus:: Who are they, and where did you hear anything better than this?

Socrates:: I am sure that I must have heard; but at this moment I do not remember from whom; perhaps from Sappho the fair, or Anacreon the wise; or, possibly, from a prose writer. Why do I say so? Why, because I perceive that my bosom is full, and that I could make another speech as good as that of Lysias, and different. Now I am certain that this is not an invention of my own, who am well aware that I know nothing, and therefore I can only infer that I have been filled through the ears, like a pitcher, from the waters of another, though I have actually forgotten in my stupidity who was my informant.

Phaedrus:: That is grand:—but never mind where you heard the discourse or from whom; let that be a mystery not to be divulged even at my earnest desire. Only, as you say, promise to make another and better oration, equal in length and entirely new, on the same subject; and I, like the nine Archons, will promise to set up a golden image at Delphi, not only of myself, but of you, and as large as life.

Socrates:: You are a dear golden ass if you suppose me to mean that Lysias has altogether missed the mark, and that I can make a speech from which all his arguments are to be excluded. The worst of authors will say something which is to the point. Who, for example, could speak on this thesis of yours without praising the discretion of the non-lover and blaming the indiscretion of the lover? These are the commonplaces of the subject which must come in (for what else is there to be said?) and must be allowed and excused; the only merit is in the arrangement of them, for there can be none in the invention; but when you leave the commonplaces, then there may be some originality.

Phaedrus:: I admit that there is reason in what you say, and I too will be reasonable, and will allow you to start with the premise that the lover is more disordered in his wits than the non-lover; if in what remains you make a longer and better speech than Lysias, and use other arguments, then I say again, that a statue you shall have of beaten gold, and take your place by the colossal offerings of the Cypselids at Olympia.

Socrates:: How profoundly in earnest is the lover, because to tease him I lay a finger upon his love! And so, Phaedrus, you really imagine that I am going to improve upon the ingenuity of Lysias?

Phaedrus:: There I have you as you had me, and you must just speak 'as you best can.' Do not let us exchange 'tu quoque' as in a farce, or compel me to say to you as you said to me, 'I know Socrates as well as I know myself, and he was wanting to speak, but he gave himself airs.' Rather I would have you consider that from this place we stir not until you have embosomed yourself of the speech; for here are we all alone, and I am stronger, remember, and younger than you:—Wherefore perpend, and do not compel me to use violence.

Socrates:: But, my sweet Phaedrus, how ridiculous it would be of me to compete with Lysias in an extempore speech! He is a master in his art and I am an untaught man.

Phaedrus:: You see how matters stand; and therefore let there be no more pretences; for, indeed, I know the word that is irresistible.

Socrates:: Then don't say it.

Phaedrus:: Yes, but I will; and my word shall be an oath. 'I say, or rather swear'—but what god will be the witness of my oath?—'By this plane-tree I swear, that unless you repeat the discourse here in the face of this very plane-tree, I will never tell you another; never let you have word of another!'

Socrates:: Villain! I am conquered; the poor lover of discourse has no more to say.

Phaedrus:: Then why are you still at your tricks?

Socrates:: I am not going to play tricks now that you have taken the oath, for I cannot allow myself to be starved.

Phaedrus:: Proceed.

Socrates:: Shall I tell you what I will do?

Phaedrus:: What?

Socrates:: I will veil my face and gallop through the discourse as fast as I can, for if I see you I shall feel ashamed and not know what to say.

Phaedrus:: Only go on and you may do anything else which you please.

Socrates:: Come, O ye Muses, melodious, as ye are called, whether you have received this name from the character of your strains, or because the Melians are a musical race, help, O help me in the tale which my good friend here desires me to rehearse, in order that his friend whom he always deemed wise may seem to him to be wiser now than ever.

Once upon a time there was a fair boy, or, more properly speaking, a youth; he was very fair and had a great many lovers; and there was one special cunning one, who had persuaded the youth that he did not love him, but he really loved him all the same; and one day when he was paying his addresses to him, he used this very argument—that he ought to accept the non-lover rather than the lover; his words were as follows:—

'All good counsel begins in the same way; a man should know what he is advising about, or his counsel will all come to naught. But people imagine that they know about the nature of things, when they don't know about them, and, not having come to an understanding at first because they think that they know, they end, as might be expected, in contradicting one another and themselves. Now you and I must not be guilty of this fundamental error which we condemn in others; but as our question is whether the lover or non-lover is to be preferred, let us first of all agree in defining the nature and power of love, and then, keeping our eyes upon the definition and to this appealing, let us further enquire whether love brings advantage or disadvantage.

'Every one sees that love is a desire, and we know also that non-lovers desire the beautiful and good. Now in what way is the lover to be distinguished from the non-lover? Let us note that in every one of us there are two guiding and ruling principles which lead us whither they will; one is the natural desire of pleasure, the other is an acquired opinion which aspires after the best; and these two are sometimes in harmony and then again at war, and sometimes the one, sometimes the other conquers. When opinion by the help of reason leads us to the best, the conquering principle is called temperance; but when desire, which is devoid of reason, rules in us and drags us to pleasure, that power of misrule is called excess. Now excess has many names, and many members, and many forms, and any of these forms when very marked gives a name, neither honorable nor creditable, to the bearer of the name. The desire of eating, for example, which gets the better of the higher reason and the other desires, is called gluttony, and he who is possessed by it is called a glutton; the tyrannical desire of drink, which inclines the possessor of the desire to drink, has a name which is only too obvious, and there can be as little doubt by what name any other appetite of the same family would be called;—it will be the name of that which happens to be dominant. And now I think that you will perceive the drift of my discourse; but as every spoken word is in a manner plainer than the unspoken, I had better say further that the irrational desire which overcomes the tendency of opinion towards right, and is led away to the enjoyment of beauty, and especially of personal beauty, by the desires which are her own kindred—that supreme desire, I say, which by leading conquers and by the force of passion is reinforced, from this very force, receiving a name, is called love (ἐρρωμένως ἔρως).'

And now, dear Phaedrus, I shall pause for an instant to ask whether you do not think me, as I appear to myself, inspired?

Phaedrus:: Yes, Socrates, you seem to have a very unusual flow of words.

Socrates:: Listen to me, then, in silence; for surely the place is holy; so that you must not wonder, if, as I proceed, I appear to be in a divine fury, for already I am getting into dithyrambics.

Phaedrus:: Nothing can be truer.

Socrates:: The responsibility rests with you. But hear what follows, and perhaps the fit may be averted; all is in their hands above. I will go on talking to my youth. Listen:—

Thus, my friend, we have declared and defined the nature of the subject. Keeping the definition in view, let us now enquire what advantage or disadvantage is likely to ensue from the lover or the non-lover to him who accepts their advances.

He who is the victim of his passions and the slave of pleasure will of course desire to make his beloved as agreeable to himself as possible. Now to him who has a mind diseased anything is agreeable which is not opposed to him, but that which is equal or superior is hateful to him, and therefore the lover will not brook any superiority or equality on the part of his beloved; he is always employed in reducing him to inferiority. And the ignorant is the inferior of the wise, the coward of the brave, the slow of speech of the speaker, the dull of the clever. These, and not these only, are the mental defects of the beloved;—defects which, when implanted by nature, are necessarily a delight to the lover, and, when not implanted, he must contrive to implant them in him, if he would not be deprived of his fleeting joy. And therefore he cannot help being jealous, and will debar his beloved from the advantages of society which would make a man of him, and especially from that society which would have given him wisdom, and thereby he cannot fail to do him great harm. That is to say, in his excessive fear lest he should come to be despised in his eyes he will be compelled to banish from him divine philosophy; and there is no greater injury which he can inflict upon him than this. He will contrive that his beloved shall be wholly ignorant, and in everything shall look to him; he is to be the delight of the lover's heart, and a curse to himself. Verily, a lover is a profitable guardian and associate for him in all that relates to his mind.

Let us next see how his master, whose law of life is pleasure and not good, will keep and train the body of his servant. Will he not choose a beloved who is delicate rather than sturdy and strong? One brought up in shady bowers and not in the bright sun, a stranger to manly exercises and the sweat of toil, accustomed only to a soft and luxurious diet, instead of the hues of health having the colors of paint and ornament, and the rest of a piece?—such a life as any one can imagine and which I need not detail at length. But I may sum up all that I have to say in a word, and pass on. Such a person in war, or in any of the great crises of life, will be the anxiety of his friends and also of his lover, and certainly not the terror of his enemies; which nobody can deny.

And now let us tell what advantage or disadvantage the beloved will receive from the guardianship and society of his lover in the matter of his property; this is the next point to be considered. The lover will be the first to see what, indeed, will be sufficiently evident to all men, that he desires above all things to deprive his beloved of his dearest and best and holiest possessions, father, mother, kindred, friends, of all whom he thinks may be hinderers or reprovers of their most sweet converse; he will even cast a jealous eye upon his gold and silver or other property, because these make him a less easy prey, and when caught less manageable; hence he is of necessity displeased at his possession of them and rejoices at their loss; and he would like him to be wifeless, childless, homeless, as well; and the longer the better, for the longer he is all this, the longer he will enjoy him.

There are some sort of animals, such as flatterers, who are dangerous and mischievous enough, and yet nature has mingled a temporary pleasure and grace in their composition. You may say that a courtesan is hurtful, and disapprove of such creatures and their practices, and yet for the time they are very pleasant. But the lover is not only hurtful to his love; he is also an extremely disagreeable companion. The old proverb says that 'birds of a feather flock together'; I suppose that equality of years inclines them to the same pleasures, and similarity begets friendship; yet you may have more than enough even of this; and verily constraint is always said to be grievous. Now the lover is not only unlike his beloved, but he forces himself upon him. For he is old and his love is young, and neither day nor night will he leave him if he can help; necessity and the sting of desire drive him on, and allure him with the pleasure which he receives from seeing, hearing, touching, perceiving him in every way. And therefore he is delighted to fasten upon him and to minister to him. But what pleasure or consolation can the beloved be receiving all this time? Must he not feel the extremity of disgust when he looks at an old shriveled face and the remainder to match, which even in a description is disagreeable, and quite detestable when he is forced into daily contact with his lover; moreover he is jealously watched and guarded against everything and everybody, and has to hear misplaced and exaggerated praises of himself, and censures equally inappropriate, which are intolerable when the man is sober, and, besides being intolerable, are published all over the world in all their indelicacy and wearisomeness when he is drunk.

And not only while his love continues is he mischievous and unpleasant, but when his love ceases he becomes a perfidious enemy of him on whom he showered his oaths and prayers and promises, and yet could hardly prevail upon him to tolerate the tedium of his company even from motives of interest. The hour of payment arrives, and now he is the servant of another master; instead of love and infatuation, wisdom and temperance are his bosom's lords; but the beloved has not discovered the change which has taken place in him, when he asks for a return and recalls to his recollection former sayings and doings; he believes himself to be speaking to the same person, and the other, not having the courage to confess the truth, and not knowing how to fulfill the oaths and promises which he made when under the dominion of folly, and having now grown wise and temperate, does not want to do as he did or to be as he was before. And so he runs away and is constrained to be a defaulter; the oyster-shell has fallen with the other side uppermost—he changes pursuit into flight, while the other is compelled to follow him with passion and imprecation, not knowing that he ought never from the first to have accepted a demented lover instead of a sensible non-lover; and that in making such a choice he was giving himself up to a faithless, morose, envious, disagreeable being, hurtful to his estate, hurtful to his bodily health, and still more hurtful to the cultivation of his mind, than which there neither is nor ever will be anything more honored in the eyes both of gods and men. Consider this, fair youth, and know that in the friendship of the lover there is no real kindness; he has an appetite and wants to feed upon you:

'As wolves love lambs so lovers love their loves.'

But I told you so, I am speaking in verse, and therefore I had better make an end; enough.

Phaedrus:: I thought that you were only half-way and were going to make a similar speech about all the advantages of accepting the non-lover. Why do you not proceed?

Socrates:: Does not your simplicity observe that I have got out of dithyrambics into heroics, when only uttering a censure on the lover? And if I am to add the praises of the non-lover what will become of me? Do you not perceive that I am already overtaken by the Nymphs to whom you have mischievously exposed me? And therefore I will only add that the non-lover has all the advantages in which the lover is accused of being deficient. And now I will say no more; there has been enough of both of them. Leaving the tale to its fate, I will cross the river and make the best of my way home, lest a worse thing be inflicted upon me by you.

Phaedrus:: Not yet, Socrates; not until the heat of the day has passed; do you not see that the hour is almost noon? there is the midday sun standing still, as people say, in the meridian. Let us rather stay and talk over what has been said, and then return in the cool.

Socrates:: Your love of discourse, Phaedrus, is superhuman, simply marvelous, and I do not believe that there is any one of your contemporaries who has either made or in one way or another has compelled others to make an equal number of speeches. I would except Simmias the Theban, but all the rest are far behind you. And now I do verily believe that you have been the cause of another.

Phaedrus:: That is good news. But what do you mean?

Socrates:: I mean to say that as I was about to cross the stream the usual sign was given to me,—that sign which always forbids, but never bids, me to do anything which I am going to do; and I thought that I heard a voice saying in my ear that I had been guilty of impiety, and that I must not go away until I had made an atonement. Now I am a diviner, though not a very good one, but I have enough religion for my own use, as you might say of a bad writer—his writing is good enough for him; and I am beginning to see that I was in error. O my friend, how prophetic is the human soul! At the time I had a sort of misgiving, and, like Ibycus, 'I was troubled; I feared that I might be buying honor from men at the price of sinning against the gods.' Now I recognize my error.

Phaedrus:: What error?

Socrates:: That was a dreadful speech which you brought with you, and you made me utter one as bad.

Phaedrus:: How so?

Socrates:: It was foolish, I say,—to a certain extent, impious; can anything be more dreadful?

Phaedrus:: Nothing, if the speech was really such as you describe.

Socrates:: Well, and is not Eros the son of Aphrodite, and a god?

Phaedrus:: So men say.

Socrates:: But that was not acknowledged by Lysias in his speech, nor by you in that other speech which you by a charm drew from my lips. For if love be, as he surely is, a divinity, he cannot be evil. Yet this was the error of both the speeches. There was also a simplicity about them which was refreshing; having no truth or honesty in them, nevertheless they pretended to be something, hoping to succeed in deceiving the manikins of earth and gain celebrity among them. Wherefore I must have a purgation. And I bethink me of an ancient purgation of mythological error which was devised, not by Homer, for he never had the wit to discover why he was blind, but by Stesichorus, who was a philosopher and knew the reason why; and therefore, when he lost his eyes, for that was the penalty which was inflicted upon him for reviling the lovely Helen, he at once purged himself. And the purgation was a recantation, which began thus,—

> ‘False is that word of mine—the truth is that thou didst
> not embark in ships, nor ever go to the walls of Troy;’

and when he had completed his poem, which is called ‘the recantation’ immediately his sight returned to him. Now I will be wiser than either Stesichorus or Homer, in that I am going to make my recantation for reviling love before I suffer; and this I will attempt, not as before, veiled and ashamed, but with forehead bold and bare.

Phaedrus:: Nothing could be more agreeable to me than to hear you say so.

Socrates:: Only think, my good Phaedrus, what an utter want of delicacy was shown in the two discourses; I mean, in my own and in that which you recited out of the book. Would not any one who was himself of a noble and gentle nature, and who loved or ever had loved a nature like his own, when we tell of the petty causes of lovers’ jealousies, and of their exceeding animosities, and of the injuries which they do to their beloved, have imagined that our ideas of love were taken from some haunt of sailors to which good manners were unknown—he would certainly never have admitted the justice of our censure?

Phaedrus:: I dare say not, Socrates.

Socrates:: Therefore, because I blush at the thought of this person, and also because I am afraid of Love himself, I desire to wash the brine out of my ears with water from the spring; and I would counsel Lysias not to delay, but to write another discourse, which shall prove that ‘ceteris paribus’ the lover ought to be accepted rather than the non-lover.

Phaedrus:: Be assured that he shall. You shall speak the praises of the lover, and Lysias shall be compelled by me to write another discourse on the same theme.

Socrates:: You will be true to your nature in that, and therefore I believe you.

Phaedrus:: Speak, and fear not.

Socrates:: But where is the fair youth whom I was addressing before, and who ought to listen now; lest, if he hear me not, he should accept a non-lover before he knows what he is doing?

Phaedrus:: He is close at hand, and always at your service.

Socrates:: Know then, fair youth, that the former discourse was the word of Phaedrus, the son of Vain Man, who dwells in the city of Myrrhina (Myrrhinusius). And this which I am about to utter is the recantation of Stesichorus the son of Godly Man (Euphemus), who comes from the town of Desire (Himera), and is to the following effect: ‘I told a lie when I said’ that the beloved ought to accept the non-lover when he might have the lover, because the one is sane, and the other mad. It might be so if madness were simply an evil; but there is also a madness which is a divine gift, and the source of the chiefest blessings granted to men. For prophecy is a madness, and the prophetess at Delphi and the priestesses at Dodona when out of their senses have conferred great benefits on Hellas, both in public and private life, but when in their senses few or none. And I might also tell you how the Sibyl and other inspired persons have given to many an one many an intimation of the future which has saved them from falling. But it would be tedious to speak of what every one knows.

There will be more reason in appealing to the ancient inventors of names, who would never have connected prophecy (μαντικὴ), which foretells the future and is the noblest of arts, with madness (μανικὴ), or called them both by the same name, if they had deemed madness to be a disgrace or dishonor;—they must have thought that there was an inspired madness which was a noble thing; for the two words, μαντικὴ and μανικὴ, are really the same, and the letter τ is only a modern and tasteless insertion. And this is confirmed by the name which was given by them to the rational investigation of futurity, whether made by the help of birds or of other signs—this, for as much as it is an art which supplies from the reasoning faculty mind (νοῦς) and information (ἱστορία) to human thought (οἴησις), they originally termed οἰονοιστικὴ, but the word has been lately altered and made sonorous by the modern introduction of the letter Omega (οἰονοιστικὴ and οἰωνιστικὴ) and in proportion as prophecy (μαντικὴ) is more perfect and august than augury, both in name and fact, in the same proportion, as the ancients testify, is madness superior to a sane mind (σωφροσύνη), for the one is only of human, but the other of divine origin. Again, where plagues and mightiest woes have bred in certain families, owing to some ancient blood-guiltiness, there madness has entered with holy prayers and rites, and by inspired utterances found a way of deliverance for those who are in need; and he who has part in this gift, and is truly possessed and duly out of his mind, is by the use of purifications and mysteries made whole and exempt from evil, future as well as present, and has a release from the calamity which was afflicting him. The third kind is the madness of those who are possessed by the Muses; which taking hold of a delicate and virgin soul, and there inspiring frenzy, awakens lyrical and all other numbers; with these adorning the myriad actions of ancient heroes for the instruction of posterity. But he who, having no touch of the Muses' madness in his soul, comes to the door and thinks that he will get into the temple by the help of art—he, I say, and his poetry are not admitted; the sane man disappears and is nowhere when he enters into rivalry with the madman.

I might tell of many other noble deeds which have sprung from inspired madness. And therefore, let no one frighten or flutter us by saying that the temperate friend is to be chosen rather than the inspired, but let him further show that love is not sent by the gods for any good to lover or beloved; if he can do so we will allow him to carry off the palm. And we, on our part, will prove in answer to him that the madness of love is the greatest of heaven's blessings, and the proof shall be one which the wise will receive, and the witling disbelieve. But first of all, let us view the affections and actions of the soul divine and human, and try to ascertain the truth about them. The beginning of our proof is as follows:—

The soul through all her being is immortal, for that which is ever in motion is immortal; but that which moves another and is moved by another, in ceasing to move ceases also to live. Only the self-moving, never leaving self, never ceases to move, and is the fountain and beginning of motion to all that moves besides. Now, the beginning is unbegotten, for that which is begotten has a beginning; but the beginning is begotten of nothing, for if it were begotten of something, then the begotten would not come from a beginning. But if unbegotten, it must also be indestructible; for if beginning were destroyed, there could be no beginning out of anything, nor anything out of a beginning; and all things must have a beginning. And therefore the self-moving is the beginning of motion; and this can neither be destroyed nor begotten, else the whole heavens and all creation would collapse and stand still, and never again have motion or birth. But if the self-moving is proved to be immortal, he who affirms that self-motion is the very idea and essence of the soul will not be put to confusion. For the body which is moved from without is soulless; but that which is moved from within has a soul, for such is the nature of the soul. But if this be true, must not the soul be the self-moving, and therefore of necessity unbegotten and immortal? Enough of the soul's immortality.

Of the nature of the soul, though her true form be ever a theme of large and more than mortal discourse, let me speak briefly, and in a figure. And let the figure be composite—a pair of winged horses and a charioteer. Now the winged horses and the charioteers of the gods are all of them noble and of noble descent, but those of other races are mixed; the human charioteer drives his in a pair; and one of them is noble and of noble breed, and the other is ignoble and of ignoble breed; and the driving of them of necessity gives a great deal of trouble to him. I will endeavor to explain to you in what way the mortal differs from the immortal creature. The soul in her totality has the care of inanimate being everywhere, and traverses the whole heaven in divers forms appearing;—when perfect and fully winged she soars upward, and orders the whole world; whereas the imperfect soul, losing her wings and drooping in her flight at last settles on the solid ground—there, finding a home, she receives an earthly frame which appears to be self-moved, but is really moved by her power; and this composition of soul and body is called a living and mortal creature. For immortal no such union can be reasonably believed to be; although fancy, not having seen nor surely known the nature of God, may imagine an immortal creature having both a body and also a soul which are united throughout all time. Let that, however, be as God wills, and be spoken of acceptably to him. And now let us ask the reason why the soul loses her wings!

The wing is the corporeal element which is most akin to the divine, and which by nature tends to soar aloft and carry that which gravitates downwards into the upper region, which is the habitation of the gods. The divine is beauty, wisdom, goodness, and the like; and by these the wing of the soul is nourished, and grows apace; but when fed upon evil and foulness and the opposite of good, wastes and falls away. Zeus, the mighty lord, holding the reins of a winged chariot, leads the way in heaven, ordering all and taking care of all; and there follows him the array of gods and demi-gods, marshaled in eleven bands; Hestia alone abides at home in the house of heaven; of the rest they who are reckoned among the princely twelve march in their appointed order. They see many blessed sights in the inner heaven, and there are many ways to and fro, along which the blessed gods are passing, every one doing his own work; he may follow who will and can, for jealousy has no place in the celestial choir. But when they go to banquet and festival, then they move up the steep to the top of the vault of heaven. The chariots of the gods in even poise, obeying the rein, glide rapidly; but the others labor, for the vicious steed goes heavily, weighing down the charioteer to the earth when his steed has not been thoroughly trained:—and this is the hour of agony and extremest conflict for the soul. For the immortals, when they are at the end of their course, go forth and stand upon the outside of heaven, and the revolution of the spheres carries them round, and they behold the things beyond. But of the heaven which is above the heavens, what earthly poet ever did or ever will sing worthily? It is such as I will describe; for I must dare to speak the truth, when truth is my theme. There abides the very being with which true knowledge is concerned; the colorless, formless, intangible essence, visible only to mind, the pilot of the soul. The divine intelligence, being Nurtured upon mind and pure knowledge, and the intelligence of every soul which is capable of receiving the food proper to it, rejoices at beholding reality, and once more gazing upon truth, is replenished and made glad, until the revolution of the worlds brings her round again to the same place. In the revolution she beholds justice, and temperance, and knowledge absolute, not in the form of generation or of relation, which men call existence, but knowledge absolute in existence absolute; and beholding the other true existences in like manner, and feasting upon them, she passes down into the interior of the heavens and returns home; and there the charioteer putting up his horses at the stall, gives them ambrosia to eat and nectar to drink.

Such is the life of the gods; but of other souls, that which follows God best and is likest to him lifts the head of the charioteer into the outer world, and is carried round in the revolution, troubled indeed by the steeds, and with difficulty beholding true being; while another only rises and falls, and sees, and again fails to see by reason of the unruliness of the steeds. The rest of the souls are also longing after the upper world and they all follow, but not being strong enough they are carried round below the surface, plunging, treading on one another, each striving to be first; and there is confusion and perspiration and the extremity of effort; and many of them are lamed or have their wings broken through the ill-driving of the charioteers; and all of them after a fruitless toil, not having attained to the mysteries of true being, go away, and feed upon opinion. The reason why the souls exhibit this exceeding eagerness to behold the plain of truth is that pasturage is found there, which is suited to the highest part of the soul; and the wing on which the soul soars is nourished with this. And there is a law of Destiny, that the soul which attains any vision of truth in company with a god is preserved from harm until the next period, and if attaining always is always unharmed. But when she is unable to follow, and fails to behold the truth, and through some ill-hap sinks beneath the double load of forgetfulness and vice, and her wings fall from her and she drops to the ground, then the law ordains that this soul shall at her first birth pass, not into any other animal, but only into man; and the soul which has seen most of truth shall come to the birth as a philosopher, or artist, or some musical and loving nature; that which has seen truth in the second degree shall be some righteous king or warrior chief; the soul which is of the third class shall be a politician, or economist, or trader; the fourth shall be a lover of gymnastic toils, or a physician; the fifth shall lead the life of a prophet or hierophant; to the sixth the character of a poet or some other imitative artist will be assigned; to the seventh the life of an artisan or husbandman; to the eighth that of a sophist or demagogue; to the ninth that of a tyrant;—all these are states of probation, in which he who does righteously improves, and he who does unrighteously, deteriorates his lot.

Ten thousand years must elapse before the soul of each one can return to the place from whence she came, for she cannot grow her wings in less; only the soul of a philosopher, guileless and true, or the soul of a lover, who is not devoid of philosophy, may acquire wings in the third of the recurring periods of a thousand years; he is distinguished from the ordinary good man who gains wings in three thousand years:—and they who choose this life three times in succession have wings given them, and go away at the end of three thousand years. But the others receive judgment when they have completed their first life, and after the judgment they go, some of them to the houses of correction which are under the earth, and are punished; others to some place in heaven whither they are lightly borne by justice, and there they live in a manner worthy of the life which they led here when in the form of men. And at the end of the first thousand years the good souls and also the evil souls both come to draw lots and choose their second life, and they may take any which they please. The soul of a man may pass into the life of a beast, or from the beast return again into the man. But the soul which has never seen the truth will not pass into the human form. For a man must have intelligence of universals, and be able to proceed from the many particulars of sense to one conception of reason;—this is the recollection of those things which our soul once saw while following God—when regardless of that which we now call being she raised her head up towards the true being. And therefore the mind of the philosopher alone has wings; and this is just, for he is always, according to the measure of his abilities, clinging in recollection to those things in which God abides, and in beholding which He is what He is. And he who employs aright these memories is ever being initiated into perfect mysteries and alone becomes truly perfect. But, as he forgets earthly interests and is rapt in the divine, the vulgar deem him mad, and rebuke him; they do not see that he is inspired.

Thus far I have been speaking of the fourth and last kind of madness, which is imputed to him who, when he sees the beauty of earth, is transported with the recollection of the true beauty; he would like to fly away, but he cannot; he is like a bird fluttering and looking upward and careless of the world below; and he is therefore thought to be mad. And I have shown this of all inspirations to be the noblest and highest and the offspring of the highest to him who has or shares in it, and that he who loves the beautiful is called a lover because he partakes of it. For, as has been already said, every soul of man has in the way of nature beheld true being; this was the condition of her passing into the form of man. But all souls do not easily recall the things of the other world; they may have seen them for a short time only, or they may have been unfortunate in their earthly lot, and, having had their hearts turned to unrighteousness through some corrupting influence, they may have lost the memory of the holy things which once they saw. Few only retain an adequate remembrance of them; and they, when they behold here any image of that other world, are rapt in amazement; but they are ignorant of what this rapture means, because they do not clearly perceive. For there is no light of justice or temperance or any of the higher ideas which are precious to souls in the earthly copies of them: they are seen through a glass dimly; and there are few who, going to the images, behold in them the realities, and these only with difficulty. There was a time when with the rest of the happy band they saw beauty shining in brightness,—we philosophers following in the train of Zeus, others in company with other gods; and then we beheld the beatific vision and were initiated into a mystery which may be truly called most blessed, celebrated by us in our state of innocence, before we had any experience of evils to come, when we were admitted to the sight of apparitions innocent and simple and calm and happy, which we beheld shining in pure light, pure ourselves and not yet enshrined in that living tomb which we carry about, now that we are imprisoned in the body, like an oyster in his shell. Let me linger over the memory of scenes which have passed away.

But of beauty, I repeat again that we saw her there shining in company with the celestial forms; and coming to earth we find her here too, shining in clearness through the clearest aperture of sense. For sight is the most piercing of our bodily senses; though not by that is wisdom seen; her loveliness would have been transporting if there had been a visible image of her, and the other ideas, if they had visible counterparts, would be equally lovely. But this is the privilege of beauty, that being the loveliest she is also the most palpable to sight. Now he who is not newly initiated or who has become corrupted, does not easily rise out of this world to the sight of true beauty in the other; he looks only at her earthly namesake, and instead of being awed at the sight of her, he is given over to pleasure, and like a brutish beast he rushes on to enjoy and beget; he consorts with wantonness, and is not afraid or ashamed of pursuing pleasure in violation of nature. But he whose initiation is recent, and who has been the spectator of many glories in the other world, is amazed when he sees any one having a godlike face or form, which is the expression of divine beauty; and at first a shudder runs through him, and again the old awe steals over him; then looking upon the face of his beloved as of a god he reverences him, and if he were not afraid of being thought a downright madman, he would sacrifice to his beloved as to the image of a god; then while he gazes on him there is a sort of reaction, and the shudder passes into an unusual heat and perspiration; for, as he receives the effluence of beauty through the eyes, the wing moistens and he warms. And as he warms, the parts out of which the wing grew, and which had been hitherto closed and rigid, and had prevented the wing from shooting forth, are melted, and as nourishment streams upon him, the lower end of the wing begins to swell and grow from the root upwards; and the growth extends under the whole soul—for once the whole was winged. During this process the whole soul is all in a state of ebullition and effervescence, —which may be compared to the irritation and uneasiness in the gums at the time of cutting teeth,—bubbles up, and has a feeling of uneasiness and tickling; but when in like manner the soul is beginning to grow wings, the beauty of the beloved meets her eye and she receives the sensible warm motion of particles which flow towards her, therefore called emotion (ἵμερος), and is refreshed and warmed by them, and then she ceases from her pain with joy. But when she is parted from her beloved and her moisture fails, then the orifices of the passage out of which the wing shoots dry up and close, and intercept the germ of the wing; which, being shut up with the emotion, throbbing as with the pulsations of an artery, pricks the aperture which is nearest, until at length the entire soul is pierced and maddened and pained, and at the recollection of beauty is again delighted. And from both of them together the soul is oppressed at the strangeness of her condition, and is in a great strait and excitement, and in her madness can neither sleep by night nor abide in her place by day. And wherever she thinks that she will behold the beautiful one, thither in her desire she runs. And when she has seen him, and bathed herself in the waters of beauty, her constraint is loosened, and she is refreshed, and has no more pangs and pains; and this is the sweetest of all pleasures at the time, and is the reason why the soul of the lover will never forsake his beautiful one, whom he esteems above all; he has forgotten mother and brethren and companions, and he thinks nothing of the neglect and loss of his property; the rules and proprieties of life, on which he formerly prided himself, he now despises, and is ready to sleep like a servant, wherever he is allowed, as near as he can to his desired one, who is the object of his worship, and the physician who can alone assuage the greatness of his pain. And this state, my dear imaginary youth to whom I am talking, is by men called love, and among the gods has a name at which you, in your simplicity, may be inclined to mock; there are two lines in the apocryphal writings of Homer in which the name occurs. One of them is rather outrageous, and not altogether metrical. They are as follows:—

> ‘Mortals call him fluttering love,
> But the immortals call him winged one.
> Because the growing of wings is a necessity to him.’

You may believe this, but not unless you like. At any rate the loves of lovers and their causes are such as I have described.

Now the lover who is taken to be the attendant of Zeus is better able to bear the winged god, and can endure a heavier burden; but the attendants and companions of Ares, when under the influence of love, if they fancy that they have been at all wronged, are ready to kill and put an end to themselves and their beloved. And he who follows in the train of any other god, while he is unspoiled and the impression lasts, honors and imitates him, as far as he is able; and after the manner of his God he behaves in his intercourse with his beloved and with the rest of the world during the first period of his earthly existence. Every one chooses his love from the ranks of beauty according to his character, and this he makes his god, and fashions and adorns as a sort of image which he is to fall down and worship. The followers of Zeus desire that their beloved should have a soul like him; and therefore they seek out some one of a philosophical and imperial nature, and when they have found him and loved him, they do all they can to confirm such a nature in him, and if they have no experience of such a disposition hitherto, they learn of any one who can teach them, and themselves follow in the same way. And they have the less difficulty in finding the nature of their own god in themselves, because they have been compelled to gaze intensely on him; their recollection clings to him, and they become possessed of him, and receive from him their character and disposition, so far as man can participate in God. The qualities of their god they attribute to the beloved, wherefore they love him all the more, and if, like the Bacchic Nymphs, they draw inspiration from Zeus, they pour out their own fountain upon him, wanting to make him as like as possible to their own god. But those who are the followers of Here seek a royal love, and when they have found him they do just the same with him; and in like manner the followers of Apollo, and of every other god walking in the ways of their god, seek a love who is to be made like him whom they serve, and when they have found him, they themselves imitate their god, and persuade their love to do the same, and educate him into the manner and nature of the god as far as they each can; for no feelings of envy or jealousy are entertained by them towards their beloved, but they do their utmost to create in him the greatest likeness of themselves and of the god whom they honor. Thus fair and blissful to the beloved is the desire of the inspired lover, and the initiation of which I speak into the mysteries of true love, if he be captured by the lover and their purpose is effected. Now the beloved is taken captive in the following manner:—

As I said at the beginning of this tale, I divided each soul into three—two horses and a charioteer; and one of the horses was good and the other bad: the division may remain, but I have not yet explained in what the goodness or badness of either consists, and to that I will now proceed. The right-hand horse is upright and cleanly made; he has a lofty neck and an aquiline nose; his color is white, and his eyes dark; he is a lover of honor and modesty and temperance, and the follower of true glory; he needs no touch of the whip, but is guided by word and admonition only. The other is a crooked lumbering animal, put together anyhow; he has a short thick neck; he is flat-faced and of a dark color, with grey eyes and blood-red complexion; the mate of insolence and pride, shag-eared and deaf, hardly yielding to whip and spur. Now when the charioteer beholds the vision of love, and has his whole soul warmed through sense, and is full of the prickings and ticklings of desire, the obedient steed, then as always under the government of shame, refrains from leaping on the beloved; but the other, heedless of the pricks and of the blows of the whip, plunges and runs away, giving all manner of trouble to his companion and the charioteer, whom he forces to approach the beloved and to remember the joys of love. They at first indignantly oppose him and will not be urged on to do terrible and unlawful deeds; but at last, when he persists in plaguing them, they yield and agree to do as he bids them. And now they are at the spot and behold the flashing beauty of the beloved; which when the charioteer sees, his memory is carried to the true beauty, whom he beholds in company with Modesty like an image placed upon a holy pedestal. He sees her, but he is afraid and falls backwards in adoration, and by his fall is compelled to pull back the reins with such violence as to bring both the steeds on their haunches, the one willing and unresisting, the unruly one very unwilling; and when they have gone back a little, the one is overcome with shame and wonder, and his whole soul is bathed in perspiration; the other, when the pain is over which the bridle and the fall had given him, having with difficulty taken breath, is full of wrath and reproaches, which he heaps upon the charioteer and his fellow-steed, for want of courage and manhood, declaring that they have been false to their agreement and guilty of desertion. Again they refuse, and again he urges them on, and will scarce yield to their prayer that he would wait until another time. When the appointed hour comes, they make as if they had forgotten, and he reminds them, fighting and neighing and dragging them on, until at length he on the same thoughts intent, forces them to draw near again. And when they are near he stoops his head and puts up his tail, and takes the bit in his teeth and pulls shamelessly. Then the charioteer is worse off than ever; he falls back like a racer at the barrier, and with a still more violent wrench drags the bit out of the teeth of the wild steed and covers his abusive tongue and jaws with blood, and forces his legs and haunches to the ground and punishes him sorely. And when this has happened several times and the villain has ceased from his wanton way, he is tamed and humbled, and follows the will of the charioteer, and when he sees the beautiful one he is ready to die of fear. And from that time forward the soul of the lover follows the beloved in modesty and holy fear.

And so the beloved who, like a god, has received every true and loyal service from his lover, not in pretence but in reality, being also himself of a nature friendly to his admirer, if in former days he has blushed to own his passion and turned away his lover, because his youthful companions or others slanderously told him that he would be disgraced, now as years advance, at the appointed age and time, is led to receive him into communion. For fate which has ordained that there shall be no friendship among the evil has also ordained that there shall ever be friendship among the good. And the beloved when he has received him into communion and intimacy, is quite amazed at the good-will of the lover; he recognizes that the inspired friend is worth all other friends or kinsmen; they have nothing of friendship in them worthy to be compared with his. And when this feeling continues and he is nearer to him and embraces him, in gymnastic exercises and at other times of meeting, then the fountain of that stream, which Zeus when he was in love with Ganymede named Desire, overflows upon the lover, and some enters into his soul, and some when he is filled flows out again; and as a breeze or an echo rebounds from the smooth rocks and returns whence it came, so does the stream of beauty, passing through the eyes which are the windows of the soul, come back to the beautiful one; there arriving and quickening the passages of the wings, watering them and inclining them to grow, and filling the soul of the beloved also with love. And thus he loves, but he knows not what; he does not understand and cannot explain his own state; he appears to have caught the infection of blindness from another; the lover is his mirror in whom he is beholding himself, but he is not aware of this. When he is with the lover, both cease from their pain, but when he is away then he longs as he is longed for, and has love's image, love for love (Anteros) lodging in his breast, which he calls and believes to be not love but friendship only, and his desire is as the desire of the other, but weaker; he wants to see him, touch him, kiss, embrace him, and probably not long afterwards his desire is accomplished. When they meet, the wanton steed of the lover has a word to say to the charioteer; he would like to have a little pleasure in return for many pains, but the wanton steed of the beloved says not a word, for he is bursting with passion which he understands not;—he throws his arms round the lover and embraces him as his dearest friend; and, when they are side by side, he is not in a state in which he can refuse the lover anything, if he ask him; although his fellow-steed and the charioteer oppose him with the arguments of shame and reason. After this their happiness depends upon their self-control; if the better elements of the mind which lead to order and philosophy prevail, then they pass their life here in happiness and harmony—masters of themselves and orderly—enslaving the vicious and emancipating the virtuous elements of the soul; and when the end comes, they are light and winged for flight, having conquered in one of the three heavenly or truly Olympian victories; nor can human discipline or divine inspiration confer any greater blessing on man than this. If, on the other hand, they leave philosophy and lead the lower life of ambition, then probably, after wine or in some other careless hour, the two wanton animals take the two souls when off their guard and bring them together, and they accomplish that desire of their hearts which to the many is bliss; and this having once enjoyed they continue to enjoy, yet rarely because they have not the approval of the whole soul. They too are dear, but not so dear to one another as the others, either at the time of their love or afterwards. They consider that they have given and taken from each other the most sacred pledges, and they may not break them and fall into enmity. At last they pass out of the body, unwinged, but eager to soar, and thus obtain no mean reward of love and madness. For those who have once begun the heavenward pilgrimage may not go down again to darkness and the journey beneath the earth, but they live in light always; happy companions in their pilgrimage, and when the time comes at which they receive their wings they have the same plumage because of their love.

Thus great are the heavenly blessings which the friendship of a lover will confer upon you, my youth.

Whereas the attachment of the non-lover, which is alloyed with a worldly prudence and has worldly and niggardly ways of doling out benefits, will breed in your soul those vulgar qualities which the populace applaud, will send you bowling round the earth during a period of nine thousand years, and leave you a fool in the world below.

And thus, dear Eros, I have made and paid my recantation, as well and as fairly as I could; more especially in the matter of the poetical figures which I was compelled to use, because Phaedrus would have them. And now forgive the past and accept the present, and be gracious and merciful to me, and do not in thine anger deprive me of sight, or take from me the art of love which thou hast given me, but grant that I may be yet more esteemed in the eyes of the fair. And if Phaedrus or I myself said anything rude in our first speeches, blame Lysias, who is the father of the brat, and let us have no more of his progeny; bid him study philosophy, like his brother Polemarchus; and then his lover Phaedrus will no longer halt between two opinions, but will dedicate himself wholly to love and to philosophical discourses.

Phaedrus:: I join in the prayer, Socrates, and say with you, if this be for my good, may your words come to pass. But why did you make your second oration so much finer than the first? I wonder why. And I begin to be afraid that I shall lose conceit of Lysias, and that he will appear tame in comparison, even if he be willing to put another as fine and as long as yours into the field, which I doubt. For quite lately one of your politicians was abusing him on this very account; and called him a 'speech-writer' again and again. So that a feeling of pride may probably induce him to give up writing speeches.

Socrates:: What a very amusing notion! But I think, my young man, that you are much mistaken in your friend if you imagine that he is frightened at a little noise; and, possibly, you think that his assailant was in earnest?

Phaedrus:: I thought, Socrates, that he was. And you are aware that the greatest and most influential statesmen are ashamed of writing speeches and leaving them in a written form, lest they should be called Sophists by posterity.

Socrates:: You seem to be unconscious, Phaedrus, that the ‘sweet elbow’ of the proverb is really the long arm of the Nile. And you appear to be equally unaware of the fact that this sweet elbow of theirs is also a long arm. For there is nothing of which our great politicians are so fond as of writing speeches and bequeathing them to posterity. And they add their admirers’ names at the top of the writing, out of gratitude to them.

Phaedrus:: What do you mean? I do not understand.

Socrates:: Why, do you not know that when a politician writes, he begins with the names of his approvers?

Phaedrus:: How so?

Socrates:: Why, he begins in this manner: ‘Be it enacted by the senate, the people, or both, on the motion of a certain person,’ who is our author; and so putting on a serious face, he proceeds to display his own wisdom to his admirers in what is often a long and tedious composition. Now what is that sort of thing but a regular piece of authorship?

Phaedrus:: True.

Socrates:: And if the law is finally approved, then the author leaves the theatre in high delight; but if the law is rejected and he is done out of his speech-making, and not thought good enough to write, then he and his party are in mourning.

Phaedrus:: Very true.

Socrates:: So far are they from despising, or rather so highly do they value the practice of writing.

Phaedrus:: No doubt.

Socrates:: And when the king or orator has the power, as Lycurgus or Solon or Darius had, of attaining an immortality of authorship in a state, is he not thought by posterity, when they see his compositions, and does he not think himself, while he is yet alive, to be a god?

Phaedrus:: Very true.

Socrates:: Then do you think that any one of this class, however ill-disposed, would reproach Lysias with being an author?

Phaedrus:: Not upon your view; for according to you he would be casting a slur upon his own favorite pursuit.

Socrates:: Any one may see that there is no disgrace in the mere fact of writing.

Phaedrus:: Certainly not.

Socrates:: The disgrace begins when a man writes not well, but badly.

Phaedrus:: Clearly.

Socrates:: And what is well and what is badly—need we ask Lysias, or any other poet or orator, who ever wrote or will write either a political or any other work, in meter or out of meter, poet or prose writer, to teach us this?

Phaedrus:: Need we? For what should a man live if not for the pleasures of discourse? Surely not for the sake of bodily pleasures, which almost always have previous pain as a condition of them, and therefore are rightly called slavish.

Socrates:: There is time enough. And I believe that the grasshoppers chirruping after their manner in the heat of the sun over our heads are talking to one another and looking down at us. What would they say if they saw that we, like the many, are not conversing, but slumbering at mid-day, lulled by their voices, too indolent to think? Would they not have a right to laugh at us? They might imagine that we were slaves, who, coming to rest at a place of resort of theirs, like sheep lie asleep at noon around the well. But if they see us discoursing, and like Odysseus sailing past them, deaf to their siren voices, they may perhaps, out of respect, give us of the gifts which they receive from the gods that they may impart them to men.

Phaedrus:: What gifts do you mean? I never heard of any.

Socrates:: A lover of music like yourself ought surely to have heard the story of the grasshoppers, who are said to have been human beings in an age before the Muses. And when the Muses came and song appeared they were ravished with delight; and singing always, never thought of eating and drinking, until at last in their forgetfulness they died. And now they live again in the grasshoppers; and this is the return which the Muses make to them—they neither hunger, nor thirst, but from the hour of their birth are always singing, and never eating or drinking; and when they die they go and inform the Muses in heaven who honors them on earth. They win the love of Terpsichore for the dancers by their report of them; of Erato for the lovers, and of the other Muses for those who do them honor, according to the several ways of honoring them;—of Calliope the eldest Muse and of Urania who is next to her, for the philosophers, of whose music the grasshoppers make report to them; for these are the Muses who are chiefly concerned with heaven and thought, divine as well as human, and they have the sweetest utterance. For many reasons, then, we ought always to talk and not to sleep at mid-day.

Phaedrus:: Let us talk.

Socrates:: Shall we discuss the rules of writing and speech as we were proposing?

Phaedrus:: Very good.

Socrates:: In good speaking should not the mind of the speaker know the truth of the matter about which he is going to speak?

Phaedrus:: And yet, Socrates, I have heard that he who would be an orator has nothing to do with true justice, but only with that which is likely to be approved by the many have who sit in judgment; nor with the truly good or honorable, but only with opinion about them, and that from opinion comes persuasion, and not from the truth.

Socrates:: The words of the wise are not to be set aside; for there is probably something in them; and therefore the meaning of this saying is not hastily to be dismissed.

Phaedrus:: Very true.

Socrates:: Let us put the matter thus:—Suppose that I persuaded you to buy a horse and go to the wars. Neither of us knew what a horse was like, but I knew that you believed a horse to be of tame animals the one which has the longest ears.

Phaedrus:: That would be ridiculous.

Socrates:: There is something more ridiculous coming:—Suppose, further, that in sober earnest I, having persuaded you of this, went and composed a speech in honor of an ass, whom I entitled a horse, beginning: 'A noble animal and a most useful possession, especially in war, and you may get on his back and fight, and he will carry baggage or anything.'

Phaedrus:: How ridiculous!

Socrates:: Ridiculous! Yes; but is not even a ridiculous friend better that a cunning enemy?

Phaedrus:: Certainly.

Socrates:: And when the orator instead of putting an ass in the place of a horse, puts good for evil, being himself as ignorant of their true nature as the city on which he imposes is ignorant; and having studied the notions of the multitude, falsely persuades them not about ‘the shadow of an ass’ which he confounds with a horse, but about good which he confounds with evil,—what will be the harvest which rhetoric will be likely to gather after the sowing of that seed?

Phaedrus:: The reverse of good.

Socrates:: But perhaps rhetoric has been getting too roughly handled by us, and she might answer: What amazing nonsense you are talking! As if I forced any man to learn to speak in ignorance of the truth! Whatever my advice may be worth, I should have told him to arrive at the truth first, and then come to me. At the same time I boldly assert that mere knowledge of the truth will not give you the art of persuasion.

Phaedrus:: There is reason in the lady’s defense of herself.

Socrates:: Quite true; if only the other arguments which remain to be brought up bear her witness that she is an art at all. But I seem to hear them arraying themselves on the opposite side, declaring that she speaks falsely, and that rhetoric is a mere routine and trick, not an art. Lo! a Spartan appears, and says that there never is nor ever will be a real art of speaking which is divorced from the truth.

Phaedrus:: And what are these arguments, Socrates? Bring them out that we may examine them.

Socrates:: Come out, fair children, and convince Phaedrus, who is the father of similar beauties, that he will never be able to speak about anything as he ought to speak unless he have a knowledge of philosophy. And let Phaedrus answer you.

Phaedrus:: Put the question.

Socrates:: Is not rhetoric, taken generally, a universal art of enchanting the mind by arguments; which is practiced not only in courts and public assemblies, but in private houses also, having to do with all matters, great as well as small, good and bad alike, and is in all equally right, and equally to be esteemed—that is what you have heard?

Phaedrus:: Nay, not exactly that; I should say rather that I have heard the art confined to speaking and writing in lawsuits, and to speaking in public assemblies—not extended farther.

Socrates:: Then I suppose that you have only heard of the rhetoric of Nestor and Odysseus, which they composed in their leisure hours when at Troy, and never of the rhetoric of Palamedes?

Phaedrus:: No more than of Nestor and Odysseus, unless Gorgias is your Nestor, and Thrasymachus or Theodorus your Odysseus.

Socrates:: Perhaps that is my meaning. But let us leave them. And do you tell me, instead, what are plaintiff and defendant doing in a law-court—are they not contending?

Phaedrus:: Exactly so.

Socrates:: About the just and unjust—that is the matter in dispute?

Phaedrus:: Yes. ‘

Socrates:: And a professor of the art will make the same thing appear to the same persons to be at one time just, at another time, if he is so inclined, to be unjust?

Phaedrus:: Exactly.

Socrates:: And when he speaks in the assembly, he will make the same things seem good to the city at one time, and at another time the reverse of good?

Phaedrus:: That is true.

Socrates:: Have we not heard of the Eleatic Palamedes (Zeno), who has an art of speaking by which he makes the same things appear to his hearers like and unlike, one and many, at rest and in motion?

Phaedrus:: Very true.

Socrates:: The art of disputation, then, is not confined to the courts and the assembly, but is one and the same in every use of language; this is the art, if there be such an art, which is able to find a likeness of everything to which a likeness can be found, and draws into the light of day the likenesses and disguises which are used by others?

Phaedrus:: How do you mean?

Socrates:: Let me put the matter thus: When will there be more chance of deception—when the difference is large or small?

Phaedrus:: When the difference is small.

Socrates:: And you will be less likely to be discovered in passing by degrees into the other extreme than when you go all at once?

Phaedrus:: Of course.

Socrates:: He, then, who would deceive others, and not be deceived, must exactly know the real likenesses and differences of things?

Phaedrus:: He must.

Socrates:: And if he is ignorant of the true nature of any subject, how can he detect the greater or less degree of likeness in other things to that of which by the hypothesis he is ignorant?

Phaedrus:: He cannot.

Socrates:: And when men are deceived and their notions are at variance with realities, it is clear that the error slips in through resemblances?

Phaedrus:: Yes, that is the way.

Socrates:: Then he who would be a master of the art must understand the real nature of everything; or he will never know either how to make the gradual departure from truth into the opposite of truth which is effected by the help of resemblances, or how to avoid it?

Phaedrus:: He will not.

Socrates:: He then, who being ignorant of the truth aims at appearances, will only attain an art of rhetoric which is ridiculous and is not an art at all?

Phaedrus:: That may be expected.

Socrates:: Shall I propose that we look for examples of art and want of art, according to our notion of them, in the speech of Lysias which you have in your hand, and in my own speech?

Phaedrus:: Nothing could be better; and indeed I think that our previous argument has been too abstract and wanting in illustrations.

Socrates:: Yes; and the two speeches happen to afford a very good example of the way in which the speaker who knows the truth may, without any serious purpose, steal away the hearts of his hearers. This piece of good-fortune I attribute to the local deities; and, perhaps, the prophets of the Muses who are singing over our heads may have imparted their inspiration to me. For I do not imagine that I have any rhetorical art of my own.

Phaedrus:: Granted; if you will only please to get on.

Socrates:: Suppose that you read me the first words of Lysias' speech.

Phaedrus:: 'You know how matters stand with me, and how, as I conceive, they might be arranged for our common interest; and I maintain that I ought not to fail in my suit, because I am not your lover. For lovers repent——'

Socrates:: Enough:—Now, shall I point out the rhetorical error of those words?

Phaedrus:: Yes.

Socrates:: Every one is aware that about some things we are agreed, whereas about other things we differ.

Phaedrus:: I think that I understand you; but will you explain yourself?

Socrates:: When any one speaks of iron and silver, is not the same thing present in the minds of all?

Phaedrus:: Certainly.

Socrates:: But when any one speaks of justice and goodness we part company and are at odds with one another and with ourselves?

Phaedrus:: Precisely.

Socrates:: Then in some things we agree, but not in others?

Phaedrus:: That is true.

Socrates:: In which are we more likely to be deceived, and in which has rhetoric the greater power?

Phaedrus:: Clearly, in the uncertain class.

Socrates:: Then the rhetorician ought to make a regular division, and acquire a distinct notion of both classes, as well of that in which the many err, as of that in which they do not err?

Phaedrus:: He who made such a distinction would have an excellent principle.

Socrates:: Yes; and in the next place he must have a keen eye for the observation of particulars in speaking, and not make a mistake about the class to which they are to be referred.

Phaedrus:: Certainly.

Socrates:: Now to which class does love belong—to the debatable or to the undisputed class?

Phaedrus:: To the debatable, clearly; for if not, do you think that love would have allowed you to say as you did, that he is an evil both to the lover and the beloved, and also the greatest possible good?

Socrates:: Capital. But will you tell me whether I defined love at the beginning of my speech? for, having been in an ecstasy, I cannot well remember.

Phaedrus:: Yes, indeed; that you did, and no mistake.

Socrates:: Then I perceive that the Nymphs of Achelous and Pan the son of Hermes, who inspired me, were far better rhetoricians than Lysias the son of Cephalus. Alas! how inferior to them he is! But perhaps I am mistaken; and Lysias at the commencement of his lover's speech did insist on our supposing love to be something or other which he fancied him to be, and according to this model he fashioned and framed the remainder of his discourse. Suppose we read his beginning over again:

Phaedrus:: If you please; but you will not find what you want.

Socrates:: Read, that I may have his exact words.

Phaedrus:: 'You know how matters stand with me, and how, as I conceive, they might be arranged for our common interest; and I maintain I ought not to fail in my suit because I am not your lover, for lovers repent of the kindnesses which they have shown, when their love is over.'

Socrates:: Here he appears to have done just the reverse of what he ought; for he has begun at the end, and is swimming on his back through the flood to the place of starting. His address to the fair youth begins where the lover would have ended. Am I not right, sweet Phaedrus?

Phaedrus:: Yes, indeed, Socrates; he does begin at the end.

Socrates:: Then as to the other topics—are they not thrown down anyhow? Is there any principle in them? Why should the next topic follow next in order, or any other topic? I cannot help fancying in my ignorance that he wrote off boldly just what came into his head, but I dare say that you would recognize a rhetorical necessity in the succession of the several parts of the composition?

Phaedrus:: You have too good an opinion of me if you think that I have any such insight into his principles of composition.

Socrates:: At any rate, you will allow that every discourse ought to be a living creature, having a body of its own and a head and feet; there should be a middle, beginning, and end, adapted to one another and to the whole?

Phaedrus:: Certainly.

Socrates:: Can this be said of the discourse of Lysias? See whether you can find any more connection in his words than in the epitaph which is said by some to have been inscribed on the grave of Midas the Phrygian.

Phaedrus:: What is there remarkable in the epitaph?

Socrates:: It is as follows:—

> 'I am a maiden of bronze and lie on the tomb of Midas;
> So long as water flows and tall trees grow,
> So long here on this spot by his sad tomb abiding,
> I shall declare to passers-by that Midas sleeps below.'

Now in this rhyme whether a line comes first or comes last, as you will perceive, makes no difference.

Phaedrus:: You are making fun of that oration of ours.

Socrates:: Well, I will say no more about your friend's speech lest I should give offence to you; although I think that it might furnish many other examples of what a man ought rather to avoid. But I will proceed to the other speech, which, as I think, is also suggestive to students of rhetoric.

Phaedrus:: In what way?

Socrates:: The two speeches, as you may remember, were unlike; the one argued that the lover and the other that the non-lover ought to be accepted.

Phaedrus:: And right manfully.

Socrates:: You should rather say 'madly;' and madness was the argument of them, for, as I said, 'love is a madness.'

Phaedrus:: Yes.

Socrates:: And of madness there were two kinds; one produced by human infirmity, the other was a divine release of the soul from the yoke of custom and convention.

Phaedrus:: True.

Socrates:: The divine madness was subdivided into four kinds, prophetic, initiatory, poetic, erotic, having four gods presiding over them; the first was the inspiration of Apollo, the second that of Dionysus, the third that of the Muses, the fourth that of Aphrodite and Eros. In the description of the last kind of madness, which was also said to be the best, we spoke of the affection of love in a figure, into which we introduced a tolerably credible and possibly true though partly erring myth, which was also a hymn in honor of Love, who is your lord and also mine, Phaedrus, and the guardian of fair children, and to him we sung the hymn in measured and solemn strain.

Phaedrus:: I know that I had great pleasure in listening to you.

Socrates:: Let us take this instance and note how the transition was made from blame to praise.

Phaedrus:: What do you mean?

Socrates:: I mean to say that the composition was mostly playful. Yet in these chance fancies of the hour were involved two principles of which we should be too glad to have a clearer description if art could give us one.

Phaedrus:: What are they?

Socrates:: First, the comprehension of scattered particulars in one idea; as in our definition of love, which whether true or false certainly gave clearness and consistency to the discourse, the speaker should define his several notions and so make his meaning clear.

Phaedrus:: What is the other principle, Socrates?

Socrates:: The second principle is that of division into species according to the natural formation, where the joint is, not breaking any part as a bad carver might. Just as our two discourses, alike assumed, first of all, a single form of unreason; and then, as the body which from being one becomes double and may be divided into a left side and right side, each having parts right and left of the same name—after this manner the speaker proceeded to divide the parts of the left side and did not desist until he found in them an evil or left-handed love which he justly reviled; and the other discourse leading us to the madness which lay on the right side, found another love, also having the same name, but divine, which the speaker held up before us and applauded and affirmed to be the author of the greatest benefits.

Phaedrus:: Most true.

Socrates:: I am myself a great lover of these processes of division and generalization; they help me to speak and to think. And if I find any man who is able to see 'a One and Many' in nature, him I follow, and 'walk in his footsteps as if he were a god.' And those who have this art, I have hitherto been in the habit of calling dialecticians; but God knows whether the name is right or not. And I should like to know what name you would give to your or to Lysias' disciples, and whether this may not be that famous art of rhetoric which Thrasymachus and others teach and practice? Skilful speakers they are, and impart their skill to any who is willing to make kings of them and to bring gifts to them.

Phaedrus:: Yes, they are royal men; but their art is not the same with the art of those whom you call, and rightly, in my opinion, dialecticians:—Still we are in the dark about rhetoric.

Socrates:: What do you mean? The remains of it, if there be anything remaining which can be brought under rules of art, must be a fine thing; and, at any rate, is not to be despised by you and me. But how much is left?

Phaedrus:: There is a great deal surely to be found in books of rhetoric?

Socrates:: Yes; thank you for reminding me:—There is the exordium, showing how the speech should begin, if I remember rightly; that is what you mean—the niceties of the art?

Phaedrus:: Yes.

Socrates:: Then follows the statement of facts, and upon that witnesses; thirdly, proofs; fourthly, probabilities are to come; the great Byzantian word-maker also speaks, if I am not mistaken, of confirmation and further confirmation.

Phaedrus:: You mean the excellent Theodorus.

Socrates:: Yes; and he tells how refutation or further refutation is to be managed, whether in accusation or defense. I ought also to mention the illustrious Parian, Evenus, who first invented insinuations and indirect praises; and also indirect censures, which according to some he put into verse to help the memory. But shall I 'to dumb forgetfulness consign' Tisias and Gorgias, who are not ignorant that probability is superior to truth, and who by force of argument make the little appear great and the great little, disguise the new in old fashions and the old in new fashions, and have discovered forms for everything, either short or going on to infinity. I remember Prodicus laughing when I told him of this; he said that he had himself discovered the true rule of art, which was to be neither long nor short, but of a convenient length.

Phaedrus:: Well done, Prodicus!

Socrates:: Then there is Hippias the Elean stranger, who probably agrees with him.

Phaedrus:: Yes.

Socrates:: And there is also Polus, who has treasuries of diplasiology, and gnomology, and eikonology, and who teaches in them the names of which Licymnius made him a present; they were to give a polish.

Phaedrus:: Had not Protagoras something of the same sort?

Socrates:: Yes, rules of correct diction and many other fine precepts; for the 'sorrows of a poor old man,' or any other pathetic case, no one is better than the Chalcedonian giant; he can put a whole company of people into a passion and out of one again by his mighty magic, and is first-rate at inventing or disposing of any sort of calumny on any grounds or none. All of them agree in asserting that a speech should end in a recapitulation, though they do not all agree to use the same word.

Phaedrus:: You mean that there should be a summing up of the arguments in order to remind the hearers of them.

Socrates:: I have now said all that I have to say of the art of rhetoric: have you anything to add?

Phaedrus:: Not much; nothing very important.

Socrates:: Leave the unimportant and let us bring the really important question into the light of day, which is: What power has this art of rhetoric, and when?

Phaedrus:: A very great power in public meetings.

Socrates:: It has. But I should like to know whether you have the same feeling as I have about the rhetoricians? To me there seem to be a great many holes in their web.

Phaedrus:: Give an example.

Socrates:: I will. Suppose a person to come to your friend Eryximachus, or to his father Acumenus, and to say to him: 'I know how to apply drugs which shall have either a heating or a cooling effect, and I can give a vomit and also a purge, and all that sort of thing; and knowing all this, as I do, I claim to be a physician and to make physicians by imparting this knowledge to others'—what do you suppose that they would say?

Phaedrus:: They would be sure to ask him whether he knew 'to whom' he would give his medicines, and 'when,' and 'how much.'

Socrates:: And suppose that he were to reply: 'No; I know nothing of all that; I expect the patient who consults me to be able to do these things for himself'?

Phaedrus:: They would say in reply that he is a madman or a pedant who fancies that he is a physician because he has read something in a book, or has stumbled on a prescription or two, although he has no real understanding of the art of medicine.

Socrates:: And suppose a person were to come to Sophocles or Euripides and say that he knows how to make a very long speech about a small matter, and a short speech about a great matter, and also a sorrowful speech, or a terrible, or threatening speech, or any other kind of speech, and in teaching this fancies that he is teaching the art of tragedy—?

Phaedrus:: They too would surely laugh at him if he fancies that tragedy is anything but the arranging of these elements in a manner which will be suitable to one another and to the whole.

Socrates:: But I do not suppose that they would be rude or abusive to him: Would they not treat him as a musician would a man who thinks that he is a harmonist because he knows how to pitch the highest and lowest note; happening to meet such an one he would not say to him savagely, 'Fool, you are mad!' But like a musician, in a gentle and harmonious tone of voice, he would answer: 'My good friend, he who would be a harmonist must certainly know this, and yet he may understand nothing of harmony if he has not got beyond your stage of knowledge, for you only know the preliminaries of harmony and not harmony itself.'

Phaedrus:: Very true.

Socrates:: And will not Sophocles say to the display of the would-be tragedian, that this is not tragedy but the preliminaries of tragedy? and will not Acumenus say the same of medicine to the would-be physician?

Phaedrus:: Quite true.

Socrates:: And if Adrastus the mellifluous or Pericles heard of these wonderful arts, brachylogies and eikonologies and all the hard names which we have been endeavoring to draw into the light of day, what would they say? Instead of losing temper and applying uncomplimentary epithets, as you and I have been doing, to the authors of such an imaginary art, their superior wisdom would rather censure us, as well as them. 'Have a little patience, Phaedrus and Socrates, they would say; you should not be in such a passion with those who from some want of dialectical skill are unable to define the nature of rhetoric, and consequently suppose that they have found the art in the preliminary conditions of it, and when these have been taught by them to others, fancy that the whole art of rhetoric has been taught by them; but as to using the several instruments of the art effectively, or making the composition a whole,—an application of it such as this is they regard as an easy thing which their disciples may make for themselves.'

Phaedrus:: I quite admit, Socrates, that the art of rhetoric which these men teach and of which they write is such as you describe—there I agree with you. But I still want to know where and how the true art of rhetoric and persuasion is to be acquired.

Socrates:: The perfection which is required of the finished orator is, or rather must be, like the perfection of anything else, partly given by nature, but may also be assisted by art. If you have the natural power and add to it knowledge and practice, you will be a distinguished speaker; if you fall short in either of these, you will be to that extent defective. But the art, as far as there is an art, of rhetoric does not lie in the direction of Lysias or Thrasymachus.

Phaedrus:: In what direction then?

Socrates:: I conceive Pericles to have been the most accomplished of rhetoricians.

Phaedrus:: What of that?

Socrates:: All the great arts require discussion and high speculation about the truths of nature; hence come loftiness of thought and completeness of execution. And this, as I conceive, was the quality which, in addition to his natural gifts, Pericles acquired from his intercourse with Anaxagoras whom he happened to know. He was thus imbued with the higher philosophy, and attained the knowledge of Mind and the negative of Mind, which were favorite themes of Anaxagoras, and applied what suited his purpose to the art of speaking.

Phaedrus:: Explain.

Socrates:: Rhetoric is like medicine.

Phaedrus:: How so?

Socrates:: Why, because medicine has to define the nature of the body and rhetoric of the soul—if we would proceed, not empirically but scientifically, in the one case to impart health and strength by giving medicine and food, in the other to implant the conviction or virtue which you desire, by the right application of words and training.

Phaedrus:: There, Socrates, I suspect that you are right.

Socrates:: And do you think that you can know the nature of the soul intelligently without knowing the nature of the whole?

Phaedrus:: Hippocrates the Asclepiad says that the nature even of the body can only be understood as a whole.

Socrates:: Yes, friend, and he was right:—still, we ought not to be content with the name of Hippocrates, but to examine and see whether his argument agrees with his conception of nature.

Phaedrus:: I agree.

Socrates:: Then consider what truth as well as Hippocrates says about this or about any other nature. Ought we not to consider first whether that which we wish to learn and to teach is a simple or multiform thing, and if simple, then to enquire what power it has of acting or being acted upon in relation to other things, and if multiform, then to number the forms; and see first in the case of one of them, and then in the case of all of them, what is that power of acting or being acted upon which makes each and all of them to be what they are?

Phaedrus:: You may very likely be right, Socrates.

Socrates:: The method which proceeds without analysis is like the groping of a blind man. Yet, surely, he who is an artist ought not to admit of a comparison with the blind, or deaf. The rhetorician, who teaches his pupil to speak scientifically, will particularly set forth the nature of that being to which he addresses his speeches; and this, I conceive, to be the soul.

Phaedrus:: Certainly.

Socrates:: His whole effort is directed to the soul; for in that he seeks to produce conviction.

Phaedrus:: Yes.

Socrates:: Then clearly, Thrasymachus or any one else who teaches rhetoric in earnest will give an exact description of the nature of the soul; which will enable us to see whether she be single and same, or, like the body, multiform. That is what we should call showing the nature of the soul.

Phaedrus:: Exactly.

Socrates:: He will explain, secondly, the mode in which she acts or is acted upon.

Phaedrus:: True.

Socrates:: Thirdly, having classified men and speeches, and their kinds and affections, and adapted them to one another, he will tell the reasons of his arrangement, and show why one soul is persuaded by a particular form of argument, and another not.

Phaedrus:: You have hit upon a very good way.

Socrates:: Yes, that is the true and only way in which any subject can be set forth or treated by rules of art, whether in speaking or writing. But the writers of the present day, at whose feet you have sat, craftily conceal the nature of the soul which they know quite well. Nor, until they adopt our method of reading and writing, can we admit that they write by rules of art?

Phaedrus:: What is our method?

Socrates:: I cannot give you the exact details; but I should like to tell you generally, as far as is in my power, how a man ought to proceed according to rules of art.

Phaedrus:: Let me hear.

Socrates:: Oratory is the art of enchanting the soul, and therefore he who would be an orator has to learn the differences of human souls—they are so many and of such a nature, and from them come the differences between man and man. Having proceeded thus far in his analysis, he will next divide speeches into their different classes:—‘Such and such persons,’ he will say, ‘are affected by this or that kind of speech in this or that way,’ and he will tell you why. The pupil must have a good theoretical notion of them first, and then he must have experience of them in actual life, and be able to follow them with all his senses about him, or he will never get beyond the precepts of his masters. But when he understands what persons are persuaded by what arguments, and sees the person about whom he was speaking in the abstract actually before him, and knows that it is he, and can say to himself, ‘This is the man or this is the character who ought to have a certain argument applied to him in order to convince him of a certain opinion;’—he who knows all this, and knows also when he should speak and when he should refrain, and when he should use pithy sayings, pathetic appeals, sensational effects, and all the other modes of speech which he has learned;—when, I say, he knows the times and seasons of all these things, then, and not till then, he is a perfect master of his art; but if he fail in any of these points, whether in speaking or teaching or writing them, and yet declares that he speaks by rules of art, he who says ‘I don’t believe you’ has the better of him. Well, the teacher will say, is this, Phaedrus and Socrates, your account of the so-called art of rhetoric, or am I to look for another?

Phaedrus:: He must take this, Socrates, for there is no possibility of another, and yet the creation of such an art is not easy.

Socrates:: Very true; and therefore let us consider this matter in every light, and see whether we cannot find a shorter and easier road; there is no use in taking a long rough roundabout way if there be a shorter and easier one. And I wish that you would try and remember whether you have heard from Lysias’ or any one else anything which might be of service to us.

Phaedrus:: If trying would avail, then I might; but at the moment I can think of nothing.

Socrates:: Suppose I tell you something which somebody who knows told me.

Phaedrus:: Certainly.

Socrates:: May not ‘the wolf,’ as the proverb says, ‘claim a hearing’?

Phaedrus:: Do you say what can be said for him.

Socrates:: He will argue that there is no use in putting a solemn face on these matters, or in going round and round, until you arrive at first principles; for, as I said at first, when the question is of justice and good, or is a question in which men are concerned who are just and good, either by nature or habit, he who would be a skilful rhetorician has no need of truth—for that in courts of law men literally care nothing about truth, but only about conviction: and this is based on probability, to which he who would be a skilful orator should therefore give his whole attention. And they say also that there are cases in which the actual facts, if they are improbable, ought to be withheld, and only the probabilities should be told either in accusation or defense, and that always in speaking, the orator should keep probability in view, and say good-bye to the truth. And the observance of this principle throughout a speech furnishes the whole art.

Phaedrus:: That is what the professors of rhetoric do actually say, Socrates. I have not forgotten that we have quite briefly touched upon this matter already; with them the point is all-important.

Socrates:: I dare say that you are familiar with Tisias. Does he not define probability to be that which the many think?

Phaedrus:: Certainly, he does.

Socrates:: I believe that he has a clever and ingenious case of this sort:—He supposes a feeble and valiant man to have assaulted a strong and cowardly one, and to have robbed him of his coat or of something or other; he is brought into court, and then Tisias says that both parties should tell lies: the coward should say that he was assaulted by more men than one; the other should prove that they were alone, and should argue thus: 'How could a weak man like me have assaulted a strong man like him?' The complainant will not like to confess his own cowardice, and will therefore invent some other lie which his adversary will thus gain an opportunity of refuting. And there are other devices of the same kind which have a place in the system. Am I not right, Phaedrus?

Phaedrus:: Certainly.

Socrates:: Bless me, what a wonderfully mysterious art is this which Tisias or some other gentleman, in whatever name or country he rejoices, has discovered. Shall we say a word to him or not?

Phaedrus:: What shall we say to him?

Socrates:: Let us tell him that, before he appeared, you and I were saying that the probability of which he speaks was engendered in the minds of the many by the likeness of the truth, and we had just been affirming that he who knew the truth would always know best how to discover the resemblances of the truth. If he has anything else to say about the art of speaking we should like to hear him; but if not, we are satisfied with our own view, that unless a man estimates the various characters of his hearers and is able to divide all things into classes and to comprehend them under single ideas, he will never be a skilful rhetorician even within the limits of human power. And this skill he will not attain without a great deal of trouble, which a good man ought to undergo, not for the sake of speaking and acting before men, but in order that he may be able to say what is acceptable to God and always to act acceptably to Him as far as in him lies; for there is a saying of wiser men than ourselves, that a man of sense should not try to please his fellow-servants (at least this should not be his first object) but his good and noble masters; and therefore if the way is long and circuitous, marvel not at this, for, where the end is great, there we may take the longer road, but not for lesser ends such as yours. Truly, the argument may say, Tisias, that if you do not mind going so far, rhetoric has a fair beginning here.

Phaedrus:: I think, Socrates, that this is admirable, if only practicable.

Socrates:: But even to fail in an honorable object is honorable.

Phaedrus:: True.

Socrates:: Enough appears to have been said by us of a true and false art of speaking.

Phaedrus:: Certainly.

Socrates:: But there is something yet to be said of propriety and impropriety of writing.

Phaedrus:: Yes.

Socrates:: Do you know how you can speak or act about rhetoric in a manner which will be acceptable to God?

Phaedrus:: No, indeed. Do you?

Socrates:: I have heard a tradition of the ancients, whether true or not they only know; although if we had found the truth ourselves, do you think that we should care much about the opinions of men?

Phaedrus:: Your question needs no answer; but I wish that you would tell me what you say that you have heard.

Socrates:: At the Egyptian city of Naucratis, there was a famous old god, whose name was Theuth; the bird which is called the Ibis is sacred to him, and he was the inventor of many arts, such as arithmetic and calculation and geometry and astronomy and draughts and dice, but his great discovery was the use of letters. Now in those days the god Thamus was the king of the whole country of Egypt; and he dwelt in that great city of Upper Egypt which the Hellenes call Egyptian Thebes, and the god himself is called by them Ammon. To him came Theuth and showed his inventions, desiring that the other Egyptians might be allowed to have the benefit of them; he enumerated them, and Thamus enquired about their several uses, and praised some of them and censured others, as he approved or disapproved of them. It would take a long time to repeat all that Thamus said to Theuth in praise or blame of the various arts. But when they came to letters, This, said Theuth, will make the Egyptians wiser and give them better memories; it is a specific both for the memory and for the wit. Thamus replied: O most ingenious Theuth, the parent or inventor of an art is not always the best judge of the utility or inutility of his own inventions to the users of them. And in this instance, you who are the father of letters, from a paternal love of your own children have been led to attribute to them a quality which they cannot have; for this discovery of yours will create forgetfulness in the learners' souls, because they will not use their memories; they will trust to the external written characters and not remember of themselves. The specific which you have discovered is an aid not to memory, but to reminiscence, and you give your disciples not truth, but only the semblance of truth; they will be hearers of many things and will have learned nothing; they will appear to be omniscient and will generally know nothing; they will be tiresome company, having the show of wisdom without the reality.

Phaedrus:: Yes, Socrates, you can easily invent tales of Egypt, or of any other country.

Socrates:: There was a tradition in the temple of Dodona that oaks first gave prophetic utterances. The men of old, unlike in their simplicity to young philosophy, deemed that if they heard the truth even from 'oak or rock' it was enough for them; whereas you seem to consider not whether a thing is or is not true, but who the speaker is and from what country the tale comes.

Phaedrus:: I acknowledge the justice of your rebuke; and I think that the Theban is right in his view about letters.

Socrates:: He would be a very simple person, and quite a stranger to the oracles of Thamus or Ammon, who should leave in writing or receive in writing any art under the idea that the written word would be intelligible or certain; or who deemed that writing was at all better than knowledge and recollection of the same matters?

Phaedrus:: That is most true.

Socrates:: I cannot help feeling, Phaedrus, that writing is unfortunately like painting; for the creations of the painter have the attitude of life, and yet if you ask them a question they preserve a solemn silence. And the same may be said of speeches. You would imagine that they had intelligence, but if you want to know anything and put a question to one of them, the speaker always gives one unvarying answer. And when they have been once written down they are tumbled about anywhere among those who may or may not understand them, and know not to whom they should reply, to whom not: and, if they are maltreated or abused, they have no parent to protect them; and they cannot protect or defend themselves.

Phaedrus:: That again is most true.

Socrates:: Is there not another kind of word or speech far better than this, and having far greater power—a son of the same family, but lawfully begotten?

Phaedrus:: Whom do you mean, and what is his origin?

Socrates:: I mean an intelligent word graven in the soul of the learner, which can defend itself, and knows when to speak and when to be silent.

Phaedrus:: You mean the living word of knowledge which has a soul, and of which the written word is properly no more than an image?

Socrates:: Yes, of course that is what I mean. And now may I be allowed to ask you a question: Would a husbandman, who is a man of sense, take the seeds, which he values and which he wishes to bear fruit, and in sober seriousness plant them during the heat of summer, in some garden of Adonis, that he may rejoice when he sees them in eight days appearing in beauty? at least he would do so, if at all, only for the sake of amusement and pastime. But when he is in earnest he sows in fitting soil, and practices husbandry, and is satisfied if in eight months the seeds which he has sown arrive at perfection?

Phaedrus:: Yes, Socrates, that will be his way when he is in earnest; he will do the other, as you say, only in play.

Socrates:: And can we suppose that he who knows the just and good and honorable has less understanding, than the husbandman, about his own seeds?

Phaedrus:: Certainly not.

Socrates:: Then he will not seriously incline to 'write' his thoughts 'in water' with pen and ink, sowing words which can neither speak for themselves nor teach the truth adequately to others?

Phaedrus:: No, that is not likely.

Socrates:: No, that is not likely—in the garden of letters he will sow and plant, but only for the sake of recreation and amusement; he will write them down as memorials to be treasured against the forgetfulness of old age, by himself, or by any other old man who is treading the same path. He will rejoice in beholding their tender growth; and while others are refreshing their souls with banqueting and the like, this will be the pastime in which his days are spent.

Phaedrus:: A pastime, Socrates, as noble as the other is ignoble, the pastime of a man who can be amused by serious talk, and can discourse merrily about justice and the like.

Socrates:: True, Phaedrus. But nobler far is the serious pursuit of the dialectician, who, finding a congenial soul, by the help of science sows and plants therein words which are able to help themselves and him who planted them, and are not unfruitful, but have in them a seed which others brought up in different soils render immortal, making the possessors of it happy to the utmost extent of human happiness.

Phaedrus:: Far nobler, certainly.

Socrates:: And now, Phaedrus, having agreed upon the premises we may decide about the conclusion.

Phaedrus:: About what conclusion?

Socrates:: About Lysias, whom we censured, and his art of writing, and his discourses, and the rhetorical skill or want of skill which was shown in them—these are the questions which we sought to determine, and they brought us to this point. And I think that we are now pretty well informed about the nature of art and its opposite.

Phaedrus:: Yes, I think with you; but I wish that you would repeat what was said.

Socrates:: Until a man knows the truth of the several particulars of which he is writing or speaking, and is able to define them as they are, and having defined them again to divide them until they can be no longer divided, and until in like manner he is able to discern the nature of the soul, and discover the different modes of discourse which are adapted to different natures, and to arrange and dispose them in such a way that the simple form of speech may be addressed to the simpler nature, and the complex and composite to the more complex nature—until he has accomplished all this, he will be unable to handle arguments according to rules of art, as far as their nature allows them to be subjected to art, either for the purpose of teaching or persuading;—such is the view which is implied in the whole preceding argument.

Phaedrus:: Yes, that was our view, certainly.

Socrates:: Secondly, as to the censure which was passed on the speaking or writing of discourses, and how they might be rightly or wrongly censured—did not our previous argument show—?

Phaedrus:: Show what?

Socrates:: That whether Lysias or any other writer that ever was or will be, whether private man or statesman, proposes laws and so becomes the author of a political treatise, fancying that there is any great certainty and clearness in his performance, the fact of his so writing is only a disgrace to him, whatever men may say. For not to know the nature of justice and injustice, and good and evil, and not to be able to distinguish the dream from the reality, cannot in truth be otherwise than disgraceful to him, even though he have the applause of the whole world.

Phaedrus:: Certainly.

Socrates:: But he who thinks that in the written word there is necessarily much which is not serious, and that neither poetry nor prose, spoken or written, is of any great value, if, like the compositions of the rhapsodes, they are only recited in order to be believed, and not with any view to criticism or instruction; and who thinks that even the best of writings are but a reminiscence of what we know, and that only in principles of justice and goodness and nobility taught and communicated orally for the sake of instruction and graven in the soul, which is the true way of writing, is there clearness and perfection and seriousness, and that such principles are a man's own and his legitimate offspring;—being, in the first place, the word which he finds in his own bosom; secondly, the brethren and descendants and relations of his idea which have been duly implanted by him in the souls of others;—and who cares for them and no others—this is the right sort of man; and you and I, Phaedrus, would pray that we may become like him.

Phaedrus:: That is most assuredly my desire and prayer.

Socrates:: And now the play is played out; and of rhetoric enough. Go and tell Lysias that to the fountain and school of the Nymphs we went down, and were bidden by them to convey a message to him and to other composers of speeches—to Homer and other writers of poems, whether set to music or not; and to Solon and others who have composed writings in the form of political discourses which they would term laws—to all of them we are to say that if their compositions are based on knowledge of the truth, and they can defend or prove them, when they are put to the test, by spoken arguments, which leave their writings poor in comparison of them, then they are to be called, not only poets, orators, legislators, but are worthy of a higher name, befitting the serious pursuit of their life.

Phaedrus:: What name would you assign to them?

Socrates:: Wise, I may not call them; for that is a great name which belongs to God alone,—lovers of wisdom or philosophers is their modest and befitting title.

Phaedrus:: Very suitable.

Socrates:: And he who cannot rise above his own compilations and compositions, which he has been long patching and piecing, adding some and taking away some, may be justly called poet or speech-maker or law-maker.

Phaedrus:: Certainly.

Socrates:: Now go and tell this to your companion.

Phaedrus:: But there is also a friend of yours who ought not to be forgotten.

Socrates:: Who is he?

Phaedrus:: Isocrates the fair:—What message will you send to him, and how shall we describe him?

Socrates:: Isocrates is still young, Phaedrus; but I am willing to hazard a prophecy concerning him.

Phaedrus:: What would you prophesy?

Socrates:: I think that he has a genius which soars above the orations of Lysias, and that his character is cast in a finer mould. My impression of him is that he will marvelously improve as he grows older, and that all former rhetoricians will be as children in comparison of him. And I believe that he will not be satisfied with rhetoric, but that there is in him a divine inspiration which will lead him to things higher still. For he has an element of philosophy in his nature. This is the message of the gods dwelling in this place, and which I will myself deliver to Isocrates, who is my delight; and do you give the other to Lysias, who is yours.

Phaedrus:: I will; and now as the heat is abated let us depart.

Socrates:: Should we not offer up a prayer first of all to the local deities?

Phaedrus:: By all means.

Socrates:: Beloved Pan, and all ye other gods who haunt this place, give me beauty in the inward soul; and may the outward and inward man be at one. May I reckon the wise to be the wealthy, and may I have such a quantity of gold as a temperate man and he only can bear and carry.—Anything more? The prayer, I think, is enough for me.

Phaedrus:: Ask the same for me, for friends should have all things in common.

Socrates:: Let us go.

# Phaedrus

Translated by Alexander Nehamas and Paul Woodruff.

Socrates, Phaedrus

Socrates:: Phaedrus, my friend! Where have you been? And where are you going?

Phaedrus:: I was with Lysias, the son of Cephalus, Socrates, and I am going for a walk outside the city walls because I was with him for a long time, sitting there the whole morning. You see, I'm keeping in mind the advice of our mutual friend Acumenus, who says it's more refreshing to walk along country roads than city streets.

Socrates:: He is quite right, too, my friend. So Lysias, I take it, is in the city?

Phaedrus:: Yes, at the house of Epicrates, which used to belong to Morychus, near the temple of the Olympian Zeus.

Socrates:: What were you doing there? Oh, I know: Lysias must have been entertaining you with a feast of eloquence.

Phaedrus:: You'll hear about it, if you are free to come along and listen.

Socrates:: What? Don't you think I would consider it "more important than the most pressing engagement," as Pindar says, to hear how you and Lysias spent your time?

Phaedrus:: Lead the way, then.

Socrates:: If only you will tell me.

Phaedrus:: In fact, Socrates, you're just the right person to hear the speech that occupied us, since, in a roundabout way, it was about love. It is aimed at seducing a beautiful boy, but the speaker is not in love with him—this is actually what is so clever and elegant about it: Lysias argues that it is better to give your favors to someone who does not love you than to someone who does.

Socrates:: What a wonderful man! I wish he would write that you should give your favors to a poor rather than to a rich man, to an older rather than to a younger one—that is, to someone like me and most other people: then his speeches would be really sophisticated, and they' contribute to the public good besides! In any case, I am so eager to hear it that I would follow you even if you were walking all the way to Megara, as Herodicus recommends, to touch the wall and come back again.

Phaedrus:: What on earth do you mean, Socrates? Do you think that a mere dilettante like me could recite from memory in a manner worthy of him a speech that Lysias, the best of our writers, took such time and trouble to compose? Far from it—though actually I would rather be able to do that than come into a large fortune!

Socrates:: Oh, Phaedrus, if I don't know my Phaedrus I must be forgetting who I am myself—and neither is the case. I know very well that he did not hear Lysias' speech only once: he asked him to repeat it over and over again, and Lysias was eager to oblige. But not even that was enough for him. In the end, he took the book himself and pored over the parts he liked best. He sat reading all morning long, and when he got tired, he went for a walk, having learned—I am quite sure—the whole speech by heart, unless it was extraordinarily long. So he started for the country, where he could practice reciting it. And running into a man who is sick with passion for hearing speeches, seeing him—just seeing him—he was filled with delight: he had found a partner for his frenzied dance, and he urged him to lead the way. But when that lover of speeches asked him to recite it, he played coy and pretended that he did not want to. In the end, of course, he was going to recite it even if he had to force an unwilling audience to listen. So, please, Phaedrus, beg him to do it right now. He'll do it soon enough anyway.

Phaedrus:: Well, I'd better try to recite it as best I can: you'll obviously not leave me in peace until I do so one way or another.

Socrates:: You are absolutely right.

Phaedrus:: That's what I'll do, then. But, Socrates, it really is true that I did not memorize the speech word for word; instead, I will give a careful summary of its general sense, listing all the ways he said the lover differs from the non-lover, in the proper order.

Socrates:: Only if you first show me what you are holding in your left hand under your cloak, my friend. I strongly suspect you have the speech itself. And if I'm right, you can be sure that, though I love you dearly, I'll never, as long as Lysias himself is present, allow you to practice your own speechmaking on me. Come on, then, show me.

Phaedrus:: Enough, enough. You've dashed my hopes of using you as my training partner, Socrates. All right, where do you want to sit while we read?

Socrates:: Let's leave the path here and walk along the Ilisus; then we can sit quietly wherever we find the right spot.

Phaedrus:: How lucky, then, that I am barefoot today—you, of course, are always so. The easiest thing to do is to walk right in the stream; this way, we'll also get our feet wet, which is very pleasant, especially at this hour and season.

Socrates:: Lead the way, then, and find us a place to sit.

Phaedrus:: Do you see that very tall plane tree?

Socrates:: Of course.

Phaedrus:: It's shady, with a light breeze; we can sit or, if we prefer, lie down on the grass there.

Socrates:: Lead on, then.

Phaedrus:: Tell me, Socrates, isn’t it from somewhere near this stretch of the Ilisus that people say Boreas carried Orithuia away?

Socrates:: So they say.

Phaedrus:: Couldn’t this be the very spot? The stream is lovely, pure and clear: just right for girls to be playing nearby.

Socrates:: No, it is two or three hundred yards farther downstream, where one crosses to get to the district of Agra. I think there is even an altar to Boreas there.

Phaedrus:: I hadn’t noticed it. But tell me, Socrates, in the name of Zeus, do you really believe that that legend is true?

Socrates:: Actually, it would not be out of place for me to reject it, as our intellectuals do. I could then tell a clever story: I could claim that a gust of the North Wind blew her over the rocks where she was playing with Pharmaceia; and once she was killed that way people said she had been carried off by Boreas—or was it, perhaps, from the Areopagus? The story is also told that she was carried away from there instead. Now, Phaedrus, such explanations are amusing enough, but they are a job for a man I cannot envy at all. He'd have to be far too ingenious and work too hard—mainly because after that he will have to go on and give a rational account of the form of the Hippocentaurs, and then of the Chimera; and a whole flood of Gorgons and Pegasuses and other monsters, in large numbers and absurd forms, will overwhelm him. Anyone who does not believe in them, who wants to explain them away and make them plausible by means of some sort of rough ingenuity, will need a great deal of time.

But I have no time for such things; and the reason, my friend, is this. I am still unable, as the Delphic inscription orders, to know myself; and it really seems to me ridiculous to look into other things before I have understood that. This is why I do not concern myself with them. I accept what is generally believed, and, as I was just saying, I look not into them but into my own self: Am I a beast more complicated and savage than Typhon, or am I a tamer, simpler animal with a share in a divine and gentle nature? But look, my friend—while we were talking, haven't we reached the tree you were taking us to?

Phaedrus:: That's the one.

Socrates:: By Hera, it really is a beautiful resting place. The plane tree is tall and very broad; the chaste-tree, high as it is, is wonderfully shady, and since it is in full bloom, the whole place is filled with its fragrance. From under the plane tree the loveliest spring runs with very cool water— our feet can testify to that. The place appears to be dedicated to Achelous and some of the Nymphs, if we can judge from the statues and votive offerings. Feel the freshness of the air; how pretty and pleasant it is; how it echoes with the summery, sweet song of the cicadas' chorus! The most exquisite thing of all, of course, is the grassy slope: it rises so gently that you can rest your head perfectly when you lie down on it. You've really been the most marvelous guide, my dear Phaedrus.

Phaedrus:: And you, my remarkable friend, appear to be totally out of place. Really, just as you say, you seem to need a guide, not to be one of the locals. Not only do you never travel abroad—as far as I can tell, you never even set foot beyond the city walls.

Socrates:: Forgive me, my friend. I am devoted to learning; landscapes and trees have nothing to teach me—only the people in the city can do that. But you, I think, have found a potion to charm me into leaving. For just as people lead hungry animals forward by shaking branches of fruit before them, you can lead me all over Attica or anywhere else you like simply by waving in front of me the leaves of a book containing a speech. But now, having gotten as far as this place this time around, I intend to lie down; so choose whatever position you think will be most comfortable for you, and read on.

Phaedrus:: Listen, then:

“You understand my situation: I’ve told you how good it would be for us, in my opinion, if this worked out. In any case, I don’t think I should lose the chance to get what I am asking for, merely because I don’t happen to be in love with you.

“A man in love will wish he had not done you any favors once his desire dies down, but the time will never come for a man who’s not in love to change his mind. That is because the favors he does for you are not forced but voluntary; and he does the best that he possibly can for you, just as he would for his own business.

“Besides, a lover keeps his eye on the balance sheet—where his interests have suffered from love, and where he has done well; and when he adds up all the trouble he has taken, he thinks he’s long since given the boy he loved a fair return. A non-lover, on the other hand, can’t complain about love’s making him neglect his own business; he can’t keep a tab on the trouble he’s been through, or blame you for the quarrels he’s had with his relatives. Take away all those headaches and there’s nothing left for him to do but put his heart into whatever he thinks will give pleasure.

“Besides, suppose a lover does deserve to be honored because, as they say, he is the best friend his loved one will ever have, and he stands ready to please his boy with all those words and deeds that are so annoying to everyone else.

It’s easy to see (if he is telling the truth) that the next time he falls in love he will care more for his new love than for the old one, and it’s clear he’ll treat the old one shabbily whenever that will please the new one.

“And anyway, what sense does it make to throw away something like that on a person who has fallen into such a miserable condition that those who have suffered it don’t even try to defend themselves against it? A lover will admit that he’s more sick than sound in the head. He’s well aware that he is not thinking straight; but he’ll say he can’t get himself under control. So when he does start thinking straight, why would he stand by decisions he had made when he was sick?

“Another point: if you were to choose the best of those who are in love with you, you'd have a pretty small group to pick from; but you’ll have a large group if you don’t care whether he loves you or not and just pick the one who suits you best; and in that larger pool you’ll have a much better hope of finding someone who deserves your friendship.

“Now suppose you’re afraid of conventional standards and the stigma that will come to you if people find out about this. Well, it stands to reason that a lover—thinking that everyone else will admire him for his success as much as he admires himself—will fly into words and proudly declare to all and sundry that his labors were not in vain. Someone who does not love you, on the other hand, can control himself and will choose to do what is best, rather than seek the glory that comes from popular reputation.

“Besides, it’s inevitable that a lover will be found out: many people will see that he devotes his life to following the boy he loves. The result is that whenever people see you talking with him they’ll think you are spending time together just before or just after giving way to desire. But they won’t even begin to find fault with people for spending time together if they are not lovers; they know one has to talk to someone, either out of friendship or to obtain some other pleasure.

“Another point: have you been alarmed by the thought that it is hard for friendships to last? Or that when people break up, it’s ordinarily just as awful for one side as it is for the other, but when you’ve given up what is most important to you already, then your loss is greater than his? If so, it would make more sense for you to be afraid of lovers. For a lover is easily annoyed, and whatever happens, he’ll think it was designed to hurt him. That is why a lover prevents the boy he loves from spending time with other people. He’s afraid that wealthy men will outshine him with their money, while men of education will turn out to have the advantage of greater intelligence. And he watches like a hawk everyone who may have any other advantage over him! Once he’s persuaded you to turn those people away, he’ll have you completely isolated from friends; and if you show more sense than he does in looking after your own interests, you’ll come to quarrel with him.

“But if a man really does not love you, if it is only because of his excellence that he got what he asked for, then he won’t be jealous of the people who spend time with you. Quite the contrary! He’ll hate anyone who does not want to be with you; he’ll think they look down on him while those who spend time with you do him good; so you should expect friendship, rather than enmity, to result from this affair.

“Another point: lovers generally start to desire your body before they know your character or have any experience of your other traits, with the result that even they can’t tell whether they’ll still want to be friends with you after their desire has passed. Non-lovers, on the other hand, are friends with you even before they achieve their goal, and you’ve no reason to expect that benefits received will ever detract from their friendship for you. No, those things will stand as reminders of more to come.

“Another point: you can expect to become a better person if you are won over by me, rather than by a lover. A lover will praise what you say and what you do far beyond what is best, partly because he is afraid of being disliked, and partly because desire has impaired his judgment. Here is how love draws conclusions: When a lover suffers a reverse that would cause no pain to anyone else, love makes him think he’s accursed! And when he has a stroke of luck that’s not worth a moment’s pleasure, love compels him to sing its praises. The result is, you should feel sorry for lovers, not admire them.

“If my argument wins you over, I will, first of all, give you my time with no thought of immediate pleasure; I will plan instead for the benefits that are to come, since I am master of myself and have not been overwhelmed by love. Small problems will not make me very hostile, and big ones will make me only gradually, and only a little, angry. I will forgive you for unintentional errors and do my best to keep you from going wrong intentionally. All this, you see, is the proof of a friendship that will last a long time.

“Have you been thinking that there can be no strong friendship in the absence of erotic love? Then you ought to remember that we would not care so much about our children if that were so, or about our fathers and mothers. And we wouldn’t have had any trustworthy friends, since those relationships did not come from such a desire but from doing quite different things.

“Besides, if it were true that we ought to give the biggest favor to those who need it most, then we should all be helping out the very poorest people, not the best ones, because people we've saved from the worst troubles will give us the most thanks. For instance, the right people to invite to a dinner party would be beggars and people who need to sate their hunger, because they're the ones who'll be fond of us, follow us, knock on our doors, take the most pleasure with the deepest gratitude, and pray for our success. No, it's proper, I suppose, to grant your favors to those who are best able to return them, not to those in the direst need— that is, not to those who merely desire the thing, but to those who really deserve it—not to people who will take pleasure in the bloom of your youth, but to those who will share their goods with you when you are older; not to people who achieve their goal and then boast about it in public, but to those who will keep a modest silence with everyone; not to people whose devotion is short-lived, but to those who will be steady friends their whole lives; not to the people who look for an excuse to quarrel as soon as their desire has passed, but to those who will prove their worth when the bloom of your youth has faded. Now, remember what I said and keep this in mind: friends often criticize a lover for bad behavior; but no one close to a non-lover ever thinks that desire has led him into bad judgment about his interests.

"And now I suppose you'll ask me whether I'm urging you to give your favors to everyone who is not in love with you. No. As I see it, a lover would not ask you to give in to all your lovers either. You would not, in that case, earn as much gratitude from each recipient, and you would not be able to keep one affair secret from the others in the same way. But this sort of thing is not supposed to cause any harm, and really should work to the benefit of both sides.

"Well, I think this speech is long enough. If you are still longing for more, if you think I have passed over something, just ask."

How does the speech strike you, Socrates? Don't you think it's simply superb, especially in its choice of words?

Socrates:: It's a miracle, my friend; I'm in ecstasy. And it's all your doing, Phaedrus: I was looking at you while you were reading and it seemed to me the speech had made you radiant with delight; and since I believe you understand these matters better than I do, I followed your lead, and following you I shared your Bacchic frenzy.

Phaedrus:: Come, Socrates, do you think you should joke about this?

Socrates:: Do you really think I am joking, that I am not serious?

Phaedrus:: You are not at all serious, Socrates. But now tell me the truth, in the name of Zeus, god of friendship: Do you think that any other Greek could say anything more impressive or more complete on this same subject?

Socrates:: What? Must we praise the speech even on the ground that its author has said what the situation demanded, and not instead simply on the ground that he has spoken in a clear and concise manner, with a precise turn of phrase? If we must, I will have to go along for your sake, since—surely because I am so ignorant—that passed me by. I paid attention only to the speech's style. As to the other part, I wouldn't even think that Lysias himself could be satisfied with it. For it seemed to me, Phaedrus— unless, of course, you disagree—that he said the same things two or even three times, as if he really didn't have much to say about the subject, almost as if he just weren't very interested in it. In fact, he seemed to me to be showing off, trying to demonstrate that he could say the same thing in two different ways, and say it just as well both times.

Phaedrus:: You are absolutely wrong, Socrates. That is in fact the best thing about the speech: He has omitted nothing worth mentioning about the subject, so that no one will ever be able to add anything of value to complete what he has already said himself.

Socrates:: You go too far: I can’t agree with you about that. If, as a favor to you, I accept your view, I will stand refuted by all the wise men and women of old who have spoken or written about this subject.

Phaedrus:: Who are these people? And where have you heard anything better than this?

Socrates:: I can’t tell you offhand, but I’m sure I’ve heard better somewhere; perhaps it was the lovely Sappho or the wise Anacreon or even some writer of prose. So, what’s my evidence? The fact, my dear friend, that my breast is full and I feel I can make a different speech, even better than Lysias’. Now I am well aware that none of these ideas can have come from me—I know my own ignorance. The only other possibility, I think, is that I was filled, like an empty jar, by the words of other people streaming in through my ears, though I’m so stupid that I’ve even forgotten where and from whom I heard them.

Phaedrus:: But, my dear friend, you couldn’t have said a better thing! Don’t bother telling me when and from whom you’ve heard this, even if I ask you— instead, do exactly what you said: You’ve just promised to make another speech making more points, and better ones, without repeating a word from my book. And I promise you that, like the Nine Archons, I shall set up in return a life-sized golden statue at Delphi, not only of myself but also of you.

Socrates:: You’re a real friend, Phaedrus, good as gold, to think I’m claiming that Lysias failed in absolutely every respect and that I can make a speech that is different on every point from his. I am sure that that couldn’t happen even to the worst possible author. In our own case, for example, do you think that anyone could argue that one should favor the non-lover rather than the lover without praising the former for keeping his wits about him or condemning the latter for losing his points that are essential to make and still have something left to say? I believe we must allow these points, and concede them to the speaker. In their case, we cannot praise their novelty but only their skillful arrangement; but we can praise both the arrangement and the novelty of the nonessential points that are harder to think up.

Phaedrus:: I agree with you; I think that's reasonable. This, then, is what I shall do. I will allow you to presuppose that the lover is less sane than the non-lover—and if you are able to add anything of value to complete what we already have in hand, you will stand in hammered gold beside the offering of the Cypselids in Olympia.

Socrates:: Oh, Phaedrus, I was only criticizing your beloved in order to tease you—did you take me seriously? Do you think I'd really try to match the product of his wisdom with a fancier speech?

Phaedrus:: Well, as far as that goes, my friend, you've fallen into your own trap. You have no choice but to give your speech as best you can: otherwise you will force us into trading vulgar jibes the way they do in comedy. Don't make me say what you said: "Socrates, if I don't know my Socrates, I must be forgetting who I am myself," or "He wanted to speak, but he was being coy." Get it into your head that we shall not leave here until you recite what you claimed to have "in your breast." We are alone, in a deserted place, and I am younger and stronger. From all this, "take my meaning" and don't make me force you to speak when you can do so willingly.

Socrates:: But, my dear Phaedrus, I'll be ridiculous—a mere dilettante, improvising on the same topics as a seasoned professional!

Phaedrus:: Do you understand the situation? Stop playing hard to get! I know what I can say to make you give your speech.

Socrates:: Then please don't say it!

Phaedrus:: Oh, yes, I will. And what I say will be an oath. I swear to you—by which god, I wonder? How about this very plane tree?—I swear in all truth that, if you don't make your speech right next to this tree here, I shall never, never again recite another speech for you—I shall never utter another word about speeches to you!

Socrates:: My oh my, what a horrible man you are! You've really found the way to force a lover of speeches to do just as you say!

Phaedrus:: So why are you still twisting and turning like that?

Socrates:: I'll stop—now that you've taken this oath. How could I possibly give up such treats?

Phaedrus:: Speak, then.

Socrates:: Do you know what I'll do?

Phaedrus:: What?

Socrates:: I'll cover my head while I'm speaking. In that way, as I'm going through the speech as fast as I can, I won't get embarrassed by having to look at you and lose the thread of my argument.

Phaedrus:: Just give your speech! You can do anything else you like.

Socrates:: Come to me, O you clear-voiced Muses, whether you are called so because of the quality of your song or from the musical people of Liguria, "come, take up my burden" in telling the tale that this fine fellow forces upon me so that his companion may now seem to him even more clever than he did before:

There once was a boy, a youth rather, and he was very beautiful, and had very many lovers. One of them was wily and had persuaded him that he was not in love, though he loved the lad no less than the others. And once in pressing his suit to him, he tried to persuade him that he ought to give his favors to a man who did not love him rather than to one who did. And this is what he said:

"If you wish to reach a good decision on any topic, my boy, there is only one way to begin: You must know what the decision is about, or else you are bound to miss your target altogether. Ordinary people cannot see that they do not know the true nature of a particular subject, so they proceed as if they did; and because they do not work out an agreement at the start of the inquiry, they wind up as you would expect—in conflict with themselves and each other. Now you and I had better not let this happen to us, since we criticize it in others. Because you and I are about to discuss whether a boy should make friends with a man who loves him rather than with one who does not, we should agree on defining what love is and what effects it has. Then we can look back and refer to that as we try to find out whether to expect benefit or harm from love. Now, as everyone plainly knows, love is some kind of desire; but we also know that even men who are not in love have a desire for what is beautiful. So how shall we distinguish between a man who is in love and one who is not? We must realize that each of us is ruled by two principles which we follow wherever they lead: one is our inborn desire for pleasures, the other is our acquired judgment that pursues what is best. Sometimes these two are in agreement; but there are times when they quarrel inside us, and then sometimes one of them gains control, sometimes the other. Now when judgment is in control and leads us by reasoning toward what is best, that sort of self-control is called ‘being in your right mind’; but when desire takes command in us and drags us without reasoning toward pleasure, then its command is known as ‘outrageousness’. Now outrageousness has as many names as the forms it can take, and these are quite diverse. Whichever form stands out in a particular case gives its name to the person who has it—and that is not a pretty name to be called, not worth earning at all. If it is desire for food that overpowers a person’s reasoning about what is best and suppresses his other desires, it is called gluttony and it gives him the name of a glutton, while if it is desire for drink that plays the tyrant and leads the man in that direction, we all know what name we’ll call him then! And now it should be clear how to describe someone appropriately in the other cases: call the man by that name—sister to these others—that derives from the sister of these desires that controls him at the time. As for the desire that has led us to say all this, it should be obvious already, but I suppose things said are always better understood than things unsaid: The unreasoning desire that overpowers a person’s considered impulse to do right and is driven to take pleasure in beauty, its force reinforced by its kindred desires for beauty in human bodies— this desire, all-conquering in its forceful drive, takes its name from the word for force (rhōmē) and is called erōs.”

There, Phaedrus my friend, don’t you think, as I do, that I’m in the grip of something divine?

Phaedrus:: This is certainly an unusual flow of words for you, Socrates.

Socrates:: Then be quiet and listen. There’s something really divine about this place, so don’t be surprised if I’m quite taken by the Nymphs’ madness as I go on with the speech. I’m on the edge of speaking in dithyrambs as it is.

Phaedrus:: Very true!

Socrates:: Yes, and you’re the cause of it. But hear me out; the attack may yet be prevented. That, however, is up to the god; what we must do is face the boy again in the speech:

“All right then, my brave friend, now we have a definition for the subject of our decision; now we have said what it really is; so let us keep that in view as we complete our discussion. What benefit or harm is likely to come from the lover or the non-lover to the boy who gives him favors? It is surely necessary that a man who is ruled by desire and is a slave to pleasure will turn his boy into whatever is most pleasing to himself. Now a sick man takes pleasure in anything that does not resist him, but sees anyone who is equal or superior to him as an enemy. That is why a lover will not willingly put up with a boyfriend who is his equal or superior, but is always working to make the boy he loves weaker and inferior to himself. Now, the ignorant man is inferior to the wise one, the coward to the brave, the ineffective speaker to the trained orator, the slow-witted to the quick. By necessity, a lover will be delighted to find all these mental defects and more, whether acquired or innate in his boy; and if he does not, he will have to supply them or else lose the pleasure of the moment. The necessary consequence is that he will be jealous and keep the boy away from the good company of anyone who would make a better man of him; and that will cause him a great deal of harm, especially if he keeps him away from what would most improve his mind—and that is, in fact, divine philosophy, from which it is necessary for a lover to keep his boy a great distance away, out of fear the boy will eventually come to look down on him. He will have to invent other ways, too, of keeping the boy in total ignorance and so in total dependence on himself. That way the boy will give his lover the most pleasure, though the harm to himself will be severe. So it will not be of any use to your intellectual development to have as your mentor and companion a man who is in love.

“Now let’s turn to your physical development. If a man is bound by necessity to chase pleasure at the expense of the good, what sort of shape will he want you to be in? How will he train you, if he is in charge? You will see that what he wants is someone who is soft, not muscular, and not trained in full sunlight but in dappled shade—someone who has never worked out like a man, never touched hard, sweaty exercise. Instead, he goes for a boy who has known only a soft unmanly style of life, who makes himself pretty with cosmetics because he has no natural color at all. There is no point in going on with this description: it is perfectly obvious what other sorts of behavior follow from this. We can take up our next topic after drawing all this to a head: the sort of body a lover wants in his boy is one that will give confidence to the enemy in a war or other great crisis while causing alarm to friends and even to his lovers. Enough of that; the point is obvious.

“Our next topic is the benefit or harm to your possessions that will come from a lover’s care and company. Everyone knows the answer, especially a lover: His first wish will be for a boy who has lost his dearest, kindliest and godliest possessions—his mother and father and other close relatives. He would be happy to see the boy deprived of them, since he would expect them either to block him from the sweet pleasure of the boy’s company or to criticize him severely for taking it. What is more, a lover would think any money or other wealth the boy owns would only make him harder to snare and, once snared, harder to handle. It follows by absolute necessity that wealth in a boyfriend will cause his lover to envy him, while his poverty will be a delight. Furthermore, he will wish for the boy to stay wifeless, childless, and homeless for as long as possible, since that's how long he desires to go on plucking his sweet fruit.

"There are other troubles in life, of course, but some divinity has mixed most of them with a dash of immediate pleasure. A flatterer, for example, may be an awful beast and a dreadful nuisance, but nature makes flattery rather pleasant by mixing in a little culture with its words. So it is with a mistress—for all the harm we accuse her of causing—and with many other creatures of that character, and their callings: at least they are delightful company for a day. But besides being harmful to his boyfriend, a lover is simply disgusting to spend the day with. 'Youth delights youth,' as the old proverb runs—because, I suppose, friendship grows from similarity, as boys of the same age go after the same pleasures. But you can even have too much of people your own age. Besides, as they say, it is miserable for anyone to be forced into anything by necessity—and this (to say nothing of the age difference) is most true for a boy with his lover. The older man clings to the younger day and night, never willing to leave him, driven by necessity and goaded on by the sting that gives him pleasure every time he sees, hears, touches, or perceives his boy in any way at all, so that he follows him around like a servant, with pleasure.

"As for the boy, however, what comfort or pleasure will the lover give to him during all the time they spend together? Won't it be disgusting in the extreme to see the face of that older man who's lost his looks? And everything that goes with that face—why, it is a misery even to hear them mentioned, let alone actually handle them, as you would constantly be forced to do! To be watched and guarded suspiciously all the time, with everyone! To hear praise of yourself that is out of place and excessive! And then to be falsely accused—which is unbearable when the man is sober and not only unbearable but positively shameful when he is drunk and lays into you with a pack of wild barefaced insults!

"While he is still in love he is harmful and disgusting, but after his love fades he breaks his trust with you for the future, in spite of all the promises he has made with all those oaths and entreaties which just barely kept you in a relationship that was troublesome at the time, in hope of future benefits. So, then, by the time he should pay up, he has made a change and installed a new ruling government in himself: right-minded reason in place of the madness of love. The boy does not even realize that his lover is a different man. He insists on his reward for past favors and reminds him of what they had done and said before—as if he were still talking to the same man! The lover, however, is so ashamed that he does not dare tell the boy how much he has changed or that there is no way, now that he is in his right mind and under control again, that he can stand by the promises he had sworn to uphold when he was under that old mindless regime. He is afraid that if he acted as he had before he would turn out the same and revert to his old self. So now he is a refugee, fleeing from those old promises on which he must default by necessity; he, the former lover, has to switch roles and flee, since the coin has fallen the other way, while the boy must chase after him, angry and cursing. All along he has been completely unaware that he should never have given his favors to a man who was in love—and who therefore had by necessity lost his mind. He should much rather have done it for a man who was not in love and had his wits about him. Otherwise it follows necessarily that he'd be giving himself to a man who is deceitful, irritable, jealous, disgusting, harmful to his property, harmful to his physical fitness, and absolutely devastating to the cultivation of his soul, which truly is, and will always be, the most valuable thing to gods and men.

"These are the points you should bear in mind, my boy. You should know that the friendship of a lover arises without any good will at all. No, like food, its purpose is to sate hunger. 'Do wolves love lambs? That's how lovers befriend a boy!'"

That's it, Phaedrus. You won't hear another word from me, and you'll have to accept this as the end of the speech.

Phaedrus:: But I thought you were right in the middle—I thought you were about to speak at the same length about the non-lover, to list his good points and argue that it's better to give one's favors to him. So why are you stopping now, Socrates?

Socrates:: Didn't you notice, my friend, that even though I am criticizing the lover, I have passed beyond lyric into epic poetry? What do you suppose will happen to me if I begin to praise his opposite? Don't you realize that the Nymphs to whom you so cleverly exposed me will take complete possession of me? So I say instead, in a word, that every shortcoming for which we blamed the lover has its contrary advantage, and the non-lover possesses it. Why make a long speech of it? That's enough about them both. This way my story will meet the end it deserves, and I will cross the river and leave before you make me do something even worse.

Phaedrus:: Not yet, Socrates, not until this heat is over. Don't you see that it is almost exactly noon, "straight-up" as they say? Let's wait and discuss the speeches, and go as soon as it turns cooler.

Socrates:: You're really superhuman when it comes to speeches, Phaedrus; you're truly amazing. I'm sure you've brought into being more of the speeches that have been given during your lifetime than anyone else, whether you composed them yourself or in one way or another forced others to make them; with the single exception of Simmias the Theban, you are far ahead of the rest. Even as we speak, I think, you're managing to cause me to produce yet another one.

Phaedrus:: Oh, how wonderful! But what do you mean? What speech?

Socrates:: My friend, just as I was about to cross the river, the familiar divine sign came to me which, whenever it occurs, holds me back from something I am about to do. I thought I heard a voice coming from this very spot, forbidding me to leave until I made atonement for some offense against the gods. In effect, you see, I am a seer, and though I am not particularly good at it, still—like people who are just barely able to read and write—I am good enough for my own purposes. I recognize my offense clearly now. In fact, the soul too, my friend, is itself a sort of seer; that's why, almost from the beginning of my speech, I was disturbed by a very uneasy feeling, as Ibycus puts it, that "for offending the gods I am honored by men." But now I understand exactly what my offense has been.

Phaedrus:: Tell me, what is it?

Socrates:: Phaedrus, that speech you carried with you here—it was horrible, as horrible as the speech you made me give.

Phaedrus:: How could that be?

Socrates:: It was foolish, and close to being impious. What could be more horrible than that?

Phaedrus:: Nothing—if, of course, what you say is right.

Socrates:: Well, then? Don't you believe that Love is the son of Aphrodite? Isn't he one of the gods?

Phaedrus:: This is certainly what people say.

Socrates:: Well, Lysias certainly doesn't and neither does your speech, which you charmed me through your potion into delivering myself. But if Love is a god or something divine—which he is—he can't be bad in any way; and yet our speeches just now spoke of him as if he were. That is their offense against Love. And they've compounded it with their utter foolishness in parading their dangerous falsehoods and preening themselves over perhaps deceiving a few silly people and coming to be admired by them.

And so, my friend, I must purify myself. Now for those whose offense lies in telling false stories about matters divine, there is an ancient rite of purification—Homer did not know it, but Stesichorus did. When he lost his sight for speaking ill of Helen, he did not, like Homer, remain in the dark about the reason why. On the contrary, true follower of the Muses that he was, he understood it and immediately composed these lines:

> There's no truth to that story:
> You never sailed that lovely ship,
> You never reached the tower of Troy.

And as soon as he completed the poem we call the Palinode, he immediately regained his sight. Now I will prove to be wiser than Homer and Stesichorus to this small extent: I will try to offer my Palinode to Love before I am punished for speaking ill of him—with my head bare, no longer covered in shame.

Phaedrus:: No words could be sweeter to my ears, Socrates.

Socrates:: You see, my dear Phaedrus, you understand how shameless the speeches were, my own as well as the one in your book. Suppose a noble and gentle man, who was (or had once been) in love with a boy of similar character, were to hear us say that lovers start serious quarrels for trivial reasons and that, jealous of their beloved, they do him harm—don’t you think that man would think we had been brought up among the most vulgar of sailors, totally ignorant of love among the freeborn? Wouldn’t he most certainly refuse to acknowledge the flaws we attributed to Love?

Phaedrus:: Most probably, Socrates.

Socrates:: Well, that man makes me feel ashamed, and as I’m also afraid of Love himself, I want to wash out the bitterness of what we’ve heard with a more tasteful speech. And my advice to Lysias, too, is to write as soon as possible a speech urging one to give similar favors to a lover rather than to a non-lover.

Phaedrus:: You can be sure he will. For once you have spoken in praise of the lover, I will most definitely make Lysias write a speech on the same topic.

Socrates:: I do believe you will, so long as you are who you are.

Phaedrus:: Speak on, then, in full confidence.

Socrates:: Where, then, is the boy to whom I was speaking? Let him hear this speech, too. Otherwise he may be too quick to give his favors to the non-lover.

Phaedrus:: He is here, always right by your side, whenever you want him.

Socrates:: You’ll have to understand, beautiful boy, that the previous speech was by Phaedrus, Pythocles’ son, from Myrrhinus, while the one I am about to deliver is by Stesichorus, Euphemus’ son, from Himera. And here is how the speech should go:

“There’s no truth to that story’—that when a lover is available you should give your favors to a man who doesn’t love you instead, because he is in control of himself while the lover has lost his head. That would have been fine to say if madness were bad, pure and simple; but in fact the best things we have come from madness, when it is given as a gift of the god.

“The prophetess of Delphi and the priestesses at Dodona are out of their minds when they perform that fine work of theirs for all of Greece, either for an individual person or for a whole city, but they accomplish little or nothing when they are in control of themselves. We will not mention the Sybil or the others who foretell many things by means of god-inspired prophetic trances and give sound guidance to many people—that would take too much time for a point that’s obvious to everyone. But here’s some evidence worth adding to our case: The people who designed our language in the old days never thought of madness as something to be ashamed of or worthy of blame; otherwise they would not have used the word ‘manic’ for the finest experts of all—the ones who tell the future—thereby weaving insanity into prophecy. They thought it was wonderful when it came as a gift of the god, and that’s why they gave its name to prophecy; but nowadays people don’t know the fine points, so they stick in a ‘t’ and call it ‘mantic.’ Similarly, the clear-headed study of the future, which uses birds and other signs, was originally called oionoïstic, since it uses reasoning to bring intelligence (nous) and learning (historia) into human thought; but now modern speakers call it oiōnistic, putting on airs with their long ‘o’. To the extent, then, that prophecy, mantic, is more perfect and more admirable than sign-based prediction, oiōnistic, in both name and achievement, madness (mania) from a god is finer than self-control of human origin, according to the testimony of the ancient language givers.

“Next, madness can provide relief from the greatest plagues of trouble that beset certain families because of their guilt for ancient crimes: it turns up among those who need a way out; it gives prophecies and takes refuge in prayers to the gods and in worship, discovering mystic rites and purifications that bring the man it touches through to safety for this and all time to come. So it is that the right sort of madness finds relief from present hardships for a man it has possessed.

“Third comes the kind of madness that is possession by the Muses, which takes a tender virgin soul and awakens it to a Bacchic frenzy of songs and poetry that glorifies the achievements of the past and teaches them to future generations. If anyone comes to the gates of poetry and expects to become an adequate poet by acquiring expert knowledge of the subject without the Muses’ madness, he will fail, and his self-controlled verses will be eclipsed by the poetry of men who have been driven out of their minds.

“There you have some of the fine achievements—and I could tell you even more—that are due to god-sent madness. We must not have any fear on this particular point, then, and we must not let anyone disturb us or frighten us with the claim that you should prefer a friend who is in control of himself to one who is disturbed. Besides proving that point, if he is to win his case, our opponent must show that love is not sent by the gods as a benefit to a lover and his boy. And we, for our part, must prove the opposite, that this sort of madness is given us by the gods to ensure our greatest good fortune. It will be a proof that convinces the wise if not the clever.

“Now we must first understand the truth about the nature of the soul, divine or human, by examining what it does and what is done to it. Here begins the proof:

“Every soul is immortal. That is because whatever is always in motion is immortal, while what moves, and is moved by, something else stops living when it stops moving. So it is only what moves itself that never desists from motion, since it does not leave off being itself. In fact, this self-mover is also the source and spring of motion in everything else that moves; and a source has no beginning. That is because anything that has a beginning comes from some source, but there is no source for this, since a source that got its start from something else would no longer be the source. And since it cannot have a beginning, then necessarily it cannot be destroyed. That is because if a source were destroyed it could never get started again from anything else and nothing else could get started from it—that is, if everything gets started from a source. This then is why a self-mover is a source of motion. And that is incapable of being destroyed or starting up; otherwise all heaven and everything that has been started up would collapse, come to a stop, and never have cause to start moving again. But since we have found that a self-mover is immortal, we should have no qualms about declaring that this is the very essence and principle of a soul, for every bodily object that is moved from outside has no soul, while a body whose motion comes from within, from itself, does have a soul, that being the nature of a soul; and if this is so—that whatever moves itself is essentially a soul—then it follows necessarily that soul should have neither birth nor death.

"That, then, is enough about the soul's immortality. Now here is what we must say about its structure. To describe what the soul actually is would require a very long account, altogether a task for a god in every way; but to say what it is like is humanly possible and takes less time. So let us do the second in our speech. Let us then liken the soul to the natural union of a team of winged horses and their charioteer. The gods have horses and charioteers that are themselves all good and come from good stock besides, while everyone else has a mixture. To begin with, our driver is in charge of a pair of horses; second, one of his horses is beautiful and good and from stock of the same sort, while the other is the opposite and has the opposite sort of bloodline. This means that chariot-driving in our case is inevitably a painfully difficult business.

"And now I should try to tell you why living things are said to include both mortal and immortal beings. All soul looks after all that lacks a soul, and patrols all of heaven, taking different shapes at different times. So long as its wings are in perfect condition it flies high, and the entire universe is its dominion; but a soul that sheds its wings wanders until it lights on something solid, where it settles and takes on an earthly body, which then, owing to the power of this soul, seems to move itself. The whole combination of soul and body is called a living thing, or animal, and has the designation 'mortal' as well. Such a combination cannot be immortal, not on any reasonable account. In fact it is pure fiction, based neither on observation nor on adequate reasoning, that a god is an immortal living thing which has a body and a soul, and that these are bound together by nature for all time—but of course we must let this be as it may please the gods, and speak accordingly.

"Let us turn to what causes the shedding of the wings, what makes them fall away from a soul. It is something of this sort: By their nature wings have the power to lift up heavy things and raise them aloft where the gods all dwell, and so, more than anything that pertains to the body, they are akin to the divine, which has beauty, wisdom, goodness, and everything of that sort. These nourish the soul's wings, which grow best in their presence; but foulness and ugliness make the wings shrink and disappear.

"Now Zeus, the great commander in heaven, drives his winged chariot first in the procession, looking after everything and putting all things in order. Following him is an army of gods and spirits arranged in eleven sections. Hestia is the only one who remains at the home of the gods; all the rest of the twelve are lined up in formation, each god in command of the unit to which he is assigned. Inside heaven are many wonderful places from which to look and many aisles which the blessed gods take up and back, each seeing to his own work, while anyone who is able and wishes to do so follows along, since jealousy has no place in the gods' chorus. When they go to feast at the banquet they have a steep climb to the high tier at the rim of heaven; on this slope the gods' chariots move easily, since they are balanced and well under control, but the other chariots barely make it. The heaviness of the bad horse drags its charioteer toward the earth and weighs him down if he has failed to train it well, and this causes the most extreme toil and struggle that a soul will face. But when the souls we call immortals reach the top, they move outward and take their stand on the high ridge of heaven, where its circular motion carries them around as they stand while they gaze upon what is outside heaven.

"The place beyond heaven—none of our earthly poets has ever sung or ever will sing its praises enough! Still, this is the way it is—risky as it may be, you see, I must attempt to speak the truth, especially since the truth is my subject. What is in this place is without color and without shape and without solidity, a being that really is what it is, the subject of all true knowledge, visible only to intelligence, the soul's steersman. Now a god's mind is nourished by intelligence and pure knowledge, as is the mind of any soul that is concerned to take in what is appropriate to it, and so it is delighted at last to be seeing what is real and watching what is true, feeding on all this and feeling wonderful, until the circular motion brings it around to where it started. On the way around it has a view of Justice as it is; it has a view of

Self-control; it has a view of Knowledge—not the knowledge that is close to change, that becomes different as it knows the different things which we consider real down here. No, it is the knowledge of what really is what it is. And when the soul has seen all the things that are as they are and feasted on them, it sinks back inside heaven and goes home. On its arrival, the charioteer stables the horses by the manger, throws in ambrosia, and gives them nectar to drink besides.

"Now that is the life of the gods. As for the other souls, one that follows a god most closely, making itself most like that god, raises the head of its charioteer up to the place outside and is carried around in the circular motion with the others. Although distracted by the horses, this soul does have a view of Reality, just barely. Another soul rises at one time and falls at another, and because its horses pull it violently in different directions, it sees some real things and misses others. The remaining souls are all eagerly straining to keep up, but are unable to rise; they are carried around below the surface, trampling and striking one another as each tries to get ahead of the others. The result is terribly noisy, very sweaty, and disorderly. Many souls are crippled by the incompetence of the drivers, and many wings break much of their plumage. After so much trouble, they all leave the sight of reality unsatisfied, and when they have gone they will depend on what they think is nourishment—their own opinions.

"The reason there is so much eagerness to see the plain where truth stands is that this pasture has the grass that is the right food for the best part of the soul, and it is the nature of the wings that lift up the soul to be nourished by it. Besides, the law of Destiny is this: If any soul becomes a companion to a god and catches sight of any true thing, it will be unharmed until the next circuit; and if it is able to do this every time, it will always be safe. If, on the other hand, it does not see anything true because it could not keep up, and by some accident takes on a burden of forgetfulness and wrongdoing, then it is weighed down, sheds its wings and falls to earth. At that point, according to the law, the soul is not born into a wild animal in its first incarnation; but a soul that has seen the most will be planted in the seed of a man who will become a lover of wisdom or of beauty, or who will be cultivated in the arts and prone to erotic love. The second sort of soul will be put into someone who will be a lawful king or warlike commander; the third, a statesman, a manager of a household, or a financier; the fourth will be a trainer who loves exercise or a doctor who cures the body; the fifth will lead the life of a prophet or priest of the mysteries. To the sixth the life of a poet or some other representational artist is properly assigned; to the seventh the life of a manual laborer or farmer; to the eighth the career of a sophist or demagogue, and to the ninth a tyrant.

"Of all these, any who have led their lives with justice will change to a better fate, and any who have led theirs with injustice, to a worse one. In fact, no soul returns to the place from which it came for ten thousand years, since its wings will not grow before then, except for the soul of a man who practices philosophy without guile or who loves boys philosophically. If, after the third cycle of one thousand years, the last-mentioned souls have chosen such a life three times in a row, they grow their wings back, and they depart in the three-thousandth year. As for the rest, once their first life is over, they come to judgment; and, once judged, some are condemned to go to places of punishment beneath the earth and pay the full penalty for their injustice, while the others are lifted up by justice to a place in heaven where they live in the manner the life they led in human form has earned them. In the thousandth year both groups arrive at a choice and allotment of second lives, and each soul chooses the life it wants. From there, a human soul can enter a wild animal, and a soul that was once human can move from an animal to a human being again. But a soul that never saw the truth cannot take a human shape, since a human being must understand speech in terms of general forms, proceeding to bring many perceptions together into a reasoned unity. That process is the recollection of the things our soul saw when it was traveling with god, when it disregarded the things we now call real and lifted up its head to what is truly real instead.

‘For just this reason it is fair that only a philosopher’s mind grows wings, since its memory always keeps it as close as possible to those realities by being close to which the gods are divine. A man who uses reminders of these things correctly is always at the highest, most perfect level of initiation, and he is the only one who is perfect as perfect can be. He stands outside human concerns and draws close to the divine; ordinary people think he is disturbed and rebuke him for this, unaware that he is possessed by god. Now this takes me to the whole point of my discussion of the fourth kind of madness—that which someone shows when he sees the beauty we have down here and is reminded of true beauty; then he takes wing and flutters in his eagerness to rise up, but is unable to do so; and he gazes aloft, like a bird, paying no attention to what is down below— and that is what brings on him the charge that he has gone mad. This is the best and noblest of all the forms that possession by god can take for anyone who has it or is connected to it, and when someone who loves beautiful boys is touched by this madness he is called a lover. As I said, nature requires that the soul of every human being has seen reality; otherwise, no soul could have entered this sort of living thing. But not every soul is easily reminded of the reality there by what it finds here—not souls that got only a brief glance at the reality there, not souls who had such bad luck when they fell down here that they were twisted by bad company into lives of injustice so that they forgot the sacred objects they had seen before. Only a few remain whose memory is good enough; and they are startled when they see an image of what they saw up there. Then they are beside themselves, and their experience is beyond their comprehension because they cannot fully grasp what it is that they are seeing.

"Justice and self-control do not shine out through their images down here, and neither do the other objects of the soul's admiration; the senses are so murky that only a few people are able to make out, with difficulty, the original of the likenesses they encounter here. But beauty was radiantto see at that time when the souls, along with the glorious chorus (we were with Zeus, while others followed other gods), saw that blessed and spectacular vision and were ushered into the mystery that we may rightly call the most blessed of all. And we who celebrated it were wholly perfect and free of all the troubles that awaited us in time to come, and we gazed in rapture at sacred revealed objects that were perfect, and simple, and unshakeable and blissful. That was the ultimate vision, and we saw it in pure light because we were pure ourselves, not buried in this thing we are carrying around now, which we call a body, locked in it like an oyster in its shell.

"Well, all that was for love of a memory that made me stretch out my speech in longing for the past. Now beauty, as I said, was radiant among the other objects; and now that we have come down here we grasp it sparkling through the clearest of our senses. Vision, of course, is the sharpest of our bodily senses, although it does not see wisdom. It would awaken a terribly powerful love if an image of wisdom came through our sight as clearly as beauty does, and the same goes for the other objects of inspired love. But now beauty alone has this privilege, to be the most clearly visible and the most loved. Of course a man who was initiated long ago or who has become defiled is not to be moved abruptly from here to a vision of Beauty itself when he sees what we call beauty here; so instead of gazing at the latter reverently, he surrenders to pleasure and sets out in the manner of a four-footed beast, eager to make babies; and, wallowing in vice, he goes after unnatural pleasure too, without a trace of fear or shame. A recent initiate, however, one who has seen much in heaven—when he sees a godlike face or bodily form that has captured Beauty well, first he shudders and a fear comes over him like those he felt at the earlier time; then he gazes at him with the reverence due a god, and if he weren’t afraid people would think him completely mad, he'd even sacrifice to his boy as if he were the image of a god. Once he has looked at him, his chill gives way to sweating and a high fever, because the stream of beauty that pours into him through his eyes warms him up and waters the growth of his wings. Meanwhile, the heat warms him and melts the places where the wings once grew, places that were long ago closed off with hard scabs to keep the sprouts from coming back; but as nourishment flows in, the feather shafts swell and rush to grow from their roots beneath every part of the soul (long ago, you see, the entire soul had wings). Now the whole soul seethes and throbs in this condition. Like a child whose teeth are just starting to grow in, and its gums are all aching and itching—that is exactly how the soul feels when it begins to grow wings. It swells up and aches and tingles as it grows them. But when it looks upon the beauty of the boy and takes in the stream of particles flowing into it from his beauty (that is why this is called ‘desire’), when it is watered and warmed by this, then all its pain subsides and is replaced by joy. When, however, it is separated from the boy and runs dry, then the openings of the passages in which the feathers grow are dried shut and keep the wings from sprouting. Then the stump of each feather is blocked in its desire and it throbs like a pulsing artery while the feather pricks at its passageway, with the result that the whole soul is stung all around, and the pain simply drives it wild—but then, when it remembers the boy in his beauty, it recovers its joy. From the outlandish mix of these two feelings—pain and joy— comes anguish and helpless raving: in its madness the lover's soul cannot sleep at night or stay put by day; it rushes, yearning, wherever it expects to see the person who has that beauty. When it does see him, it opens the sluice-gates of desire and sets free the parts that were blocked up before. And now that the pain and the goading have stopped, it can catch its breath and once more suck in, for the moment, this sweetest of all pleasures. This it is not at all willing to give up, and no one is more important to it than the beautiful boy. It forgets mother and brothers and friends entirely and doesn't care at all if it loses its wealth through neglect. And as for proper and decorous behavior, in which it used to take pride, the soul despises the whole business. Why, it is even willing to sleep like a slave, anywhere, as near to the object of its longing as it is allowed to get! That is because in addition to its reverence for one who has such beauty, the soul has discovered that the boy is the only doctor for all that terrible pain.

"This is the experience we humans call love, you beautiful boy (I mean the one to whom I am making this speech). You are so young that what the gods call it is likely to strike you as funny. Some of the successors of Homer, I believe, report two lines from the less well known poems, of which the second is quite indecent and does not scan very well. They praise love this way:

Yes, mortals call him powerful winged 'Love';

But because of his need to thrust out the wings, the gods call him ‘Shove.’

You may believe this or not as you like. But, seriously, the cause of love is as I have said, and this is how lovers really feel.

“If the man who is taken by love used to be an attendant on Zeus, he will be able to bear the burden of this feathered force with dignity. But if it is one of Ares’ troops who has fallen prisoner of love—if that is the god with whom he took the circuit—then if he has the slightest suspicion that the boy he loves has done him wrong, he turns murderous, and he is ready to make a sacrifice of himself as well as the boy.

“So it is with each of the gods: everyone spends his life honoring the god in whose chorus he danced, and emulates that god in every way he can, so long as he remains undefiled and in his first life down here. And that is how he behaves with everyone at every turn, not just with those he loves. Everyone chooses his love after his own fashion from among those who are beautiful, and then treats the boy like his very own god, building him up and adorning him as an image to honor and worship. Those who followed Zeus, for example, choose someone to love who is a Zeus himself in the nobility of his soul. So they make sure he has a talent for philosophy and the guidance of others, and once they have found him and are in love with him they do everything to develop that talent. If any lovers have not yet embarked on this practice, then they start to learn, using any source they can and also making progress on their own. They are well equipped to track down their god’s true nature with their own resources because of their driving need to gaze at the god, and as they are in touch with the god by memory they are inspired by him and adopt his customs and practices, so far as a human being can share a god’s life. For all of this they know they have the boy to thank, and so they love him all the more; and if they draw their inspiration from Zeus, then, like the Bacchants, they pour it into the soul of the one they love in order to help him take on as much of their own god's qualities as possible. Hera's followers look for a kingly character, and once they have found him they do all the same things for him. And so it is for followers of Apollo or any other god: They take their god's path and seek for their own a boy whose nature is like the god's; and when they have got him they emulate the god, convincing the boy they love and training him to follow their god's pattern and way of life, so far as is possible in each case. They show no envy, no mean-spirited lack of generosity, toward the boy, but make every possible effort to draw him into being totally like themselves and the god to whom they are devoted. This, then, is any true lover's heart's desire: if he follows that desire in the manner I described, this friend who has been driven mad by love will secure a consummation for the one he has befriended that is as beautiful and blissful as I said—if, of course, he captures him. Here, then, is how the captive is caught:

"Remember how we divided each soul in three at the beginning of our story—two parts in the form of horses and the third in that of a charioteer? Let us continue with that. One of the horses, we said, is good, the other not; but we did not go into the details of the goodness of the good horse or the badness of the bad. Let us do that now. The horse that is on the right, or nobler, side is upright in frame and well jointed, with a high neck and a regal nose; his coat is white, his eyes are black, and he is a lover of honor with modesty and self-control; companion to true glory, he needs no whip, and is guided by verbal commands alone. The other horse is a crooked great jumble of limbs with a short bull-neck, a pug nose, black skin, and bloodshot white eyes; companion to wild boasts and indecency, he is shaggy around the ears—

deaf as a post—and just barely yields to horsewhip and goad combined. Now when the charioteer looks in the eye of love, his entire soul is suffused with a sense of warmth and starts to fill with tingles and the goading of desire. As for the horses, the one who is obedient to the charioteer is still controlled, then as always, by its sense of shame, and so prevents itself from jumping on the boy. The other one, however, no longer responds to the whip or the goad of the charioteer; it leaps violently forward and does everything to aggravate its yokemate and its charioteer, trying to make them go up to the boy and suggest to him the pleasures of sex. At first the other two resist, angry in their belief that they are being made to do things that are dreadfully wrong. At last, however, when they see no end to their trouble, they are led forward, reluctantly agreeing to do as they have been told. So they are close to him now, and they are struck by the boy's face as if by a bolt of lightning. When the charioteer sees that face, his memory is carried back to the real nature of Beauty, and he sees it again where it stands on the sacred pedestal next to Self-control. At the sight he is frightened, falls over backwards awestruck, and at the same time has to pull the reins back so fiercely that both horses are set on their haunches, one falling back voluntarily with no resistance, but the other insolent and quite unwilling. They pull back a little further; and while one horse drenches the whole soul with sweat out of shame and awe, the other—once it has recovered from the pain caused by the bit and its fall—bursts into a torrent of insults as soon as it has caught its breath, accusing its charioteer and yokemate of all sorts of cowardice and unmanliness for abandoning their position and their agreement. Now once more it tries to make its unwilling partners advance, and gives in grudgingly only when they beg it to wait till later. Then, when the promised time arrives, and they are pretending to have forgotten, it reminds them; it struggles, it neighs, it pulls them forward and forces them to approach the boy again with the same proposition; and as soon as they are near, it drops its head, straightens its tail, bites the bit, and pulls without any shame at all. The charioteer is now struck with the same feelings as before, only worse, and he's falling back as he would from a starting gate; and he violently yanks the bit back out of the teeth of the insolent horse, only harder this time, so that he bloodies its foul-speaking tongue and jaws, sets its legs and haunches firmly on the ground, and 'gives it over to pain.' When the bad horse has suffered this same thing time after time, it stops being so insolent; now it is humble enough to follow the charioteer's warnings, and when it sees the beautiful boy it dies of fright, with the result that now at last the lover's soul follows its boy in reverence and awe.

"And because he is served with all the attentions due a god by a lover who is not pretending otherwise but is truly in the throes of love, and because he is by nature disposed to be a friend of the man who is serving him (even if he has already been set against love by school-friends or others who say that it is shameful to associate with a lover, and initially rejects the lover in consequence), as time goes forward he is brought by his ripening age and a sense of what must be to a point where he lets the man spend time with him. It is a decree of fate, you see, that bad is never friends with bad, while good cannot fail to be friends with good. Now that he allows his lover to talk and spend time with him, and the man's good will is close at hand, the boy is amazed by it as he realizes that all the friendship he has from his other friends and relatives put together is nothing compared to that of this friend who is inspired by a god.

"After the lover has spent some time doing this, staying near the boy (and even touching him during sports and on other occasions), then the spring that feeds the stream Zeus named ‘Desire’ when he was in love with Ganymede begins to flow mightily in the lover and is partly absorbed by him, and when he is filled it overflows and runs away outside him. Think how a breeze or an echo bounces back from a smooth solid object to its source; that is how the stream of beauty goes back to the beautiful boy and sets him aflutter. It enters through his eyes, which are its natural route to the soul; there it waters the passages for the wings, starts the wings growing, and fills the soul of the loved one with love in return. Then the boy is in love, but has no idea what he loves. He does not understand, and cannot explain, what has happened to him. It is as if he had caught an eye disease from someone else, but could not identify the cause; he does not realize that he is seeing himself in the lover as in a mirror. So when the lover is near, the boy’s pain is relieved just as the lover’s is, and when they are apart he yearns as much as he is yearned for, because he has a mirror image of love in him—’back-love’—though he neither speaks nor thinks of it as love, but as friendship. Still, his desire is nearly the same as the lover’s, though weaker: he wants to see, touch, kiss, and lie down with him; and of course, as you might expect, he acts on these desires soon after they occur.

“When they are in bed, the lover’s undisciplined horse has a word to say to the charioteer—that after all its sufferings it is entitled to a little fun. Meanwhile, the boy’s bad horse has nothing to say, but swelling with desire, confused, it hugs the lover and kisses him in delight at his great good will. And whenever they are lying together it is completely unable, for its own part, to deny the lover any favor he might beg to have. Its yokemate, however, along with its charioteer, resists such requests with modesty and reason. Now if the victory goes to the better elements in both their minds, which lead them to follow the assigned regimen of philosophy, their life here below is one of bliss and shared understanding. They are modest and fully in control of themselves now that they have enslaved the part that brought trouble into the soul and set free the part that gave it virtue. After death, when they have grown wings and become weightless, they have won the first of three rounds in these, the true Olympic Contests. There is no greater good than this that either human self-control or divine madness can offer a man. If, on the other hand, they adopt a lower way of living, with ambition in place of philosophy, then pretty soon when they are careless because they have been drinking or for some other reason, the pair's undisciplined horses will catch their souls off guard and together bring them to commit that act which ordinary people would take to be the happiest choice of all; and when they have consummated it once, they go on doing this for the rest of their lives, but sparingly, since they have not approved of what they are doing with their whole minds. So these two also live in mutual friendship (though weaker than that of the philosophical pair), both while they are in love and after they have passed beyond it, because they realize they have exchanged such firm vows that it would be forbidden for them ever to break them and become enemies. In death they are wingless when they leave the body, but their wings are bursting to sprout, so the prize they have won from the madness of love is considerable, because those who have begun the sacred journey in lower heaven may not by law be sent into darkness for the journey under the earth; their lives are bright and happy as they travel together, and thanks to their love they will grow wings together when the time comes.

"These are the rewards you will have from a lover's friendship, my boy, and they are as great as divine gifts should be. A non-lover's companionship, on the other hand, is diluted by human self-control; all it pays are cheap, human dividends, and though the slavish attitude it engenders in a friend's soul is widely praised as virtue, it tosses the soul around for nine thousand years on the earth and leads it, mindless, beneath it.

"So now, dear Love, this is the best and most beautiful palinode we could offer as payment for our debt, especially in view of the rather poetical choice of words Phaedrus made me use. Forgive us our earlier speeches in return for this one; be kind and gracious toward my expertise at love, which is your own gift to me: do not, out of anger, take it away or disable it; and grant that I may be held in higher esteem than ever by those who are beautiful. If Phaedrus and I said anything that shocked you in our earlier speech, blame it on Lysias, who was its father, and put a stop to his making speeches of this sort; convert him to philosophy like his brother Polemarchus so that his lover here may no longer play both sides as he does now, but simply devote his life to Love through philosophical discussions."

Phaedrus:: I join you in your prayer, Socrates. If this is really best for us, may it come to pass. As to your speech, I admired it from the moment you began: You managed it much better than your first one. I'm afraid that Lysias' effort to match it is bound to fall flat, if of course he even dares to try to offer a speech of his own. In fact, my marvelous friend, a politician I know was only recently taking Lysias to task for just that reason: All through his invective, he kept calling him a "speech writer." So perhaps his pride will keep him from writing this speech for us.

Socrates:: Ah, what a foolish thing to say, young man. How wrong you are about your friend: he can't be intimidated so easily! But perhaps you thought the man who was taking him to task meant what he said as a reproach?

Phaedrus:: He certainly seemed to, Socrates. In any case, you are surely aware yourself that the most powerful and renowned politicians are ashamed to compose speeches or leave any writings behind; they are afraid that in later times they may come to be known as “sophists.”

Socrates:: Phaedrus, you don’t understand the expression “Pleasant Bend”—it originally referred to the long bend of the Nile. And, besides the bend, you also don’t understand that the most ambitious politicians love speechwriting and long for their writings to survive. In fact, when they write one of their speeches, they are so pleased when people praise it that they add at the beginning a list of its admirers everywhere.

Phaedrus:: What do you mean? I don’t understand.

Socrates:: Don’t you know that the first thing politicians put in their writings is the names of their admirers?

Phaedrus:: How so?

Socrates:: “Resolved,” the author often begins, “by the Council” or “by the People” or by both, and “So-and-so said”—meaning himself, the writer, with great solemnity and self-importance. Only then does he go on with what he has to say, showing off his wisdom to his admirers, often composing a very long document. Do you think there’s any difference between that and a written speech?

Phaedrus:: No, I don’t.

Socrates:: Well, then, if it remains on the books, he is delighted and leaves the stage a poet. But if it is struck down, if he fails as a speech writer and isn’t considered worthy of having his work written down, he goes into deep mourning, and his friends along with him.

Phaedrus:: He certainly does.

Socrates:: Clearly, then, they don’t feel contempt for speechwriting; on the contrary, they are in awe of it.

Phaedrus:: Quite so.

Socrates:: There's this too. What of an orator or a king who acquires enough power to match Lycurgus, Solon, or Darius as a lawgiver and acquires immortal fame as a speech writer in his city? Doesn't he think that he is equal to the gods while he is still alive? And don't those who live in later times believe just the same about him when they behold his writings?

Phaedrus:: Very much so.

Socrates:: Do you really believe then that any one of these people, whoever he is and however much he hates Lysias, would reproach him for being a writer?

Phaedrus:: It certainly isn't likely in view of what you said, for he would probably be reproaching his own ambition as well.

Socrates:: This, then, is quite clear: Writing speeches is not in itself a shameful thing.

Phaedrus:: How could it be?

Socrates:: It's not speaking or writing well that's shameful; what's really shameful is to engage in either of them shamefully or badly.

Phaedrus:: That is clear.

Socrates:: So what distinguishes good from bad writing? Do we need to ask this question of Lysias or anyone else who ever did or will write anything—whether a public or a private document, poetic verse or plain prose?

Phaedrus:: You ask if we need to? Why else should one live, I say, if not for pleasures of this sort? Certainly not for those you cannot feel unless you are first in pain, like most of the pleasures of the body, and which for this reason we call the pleasures of slaves.

Socrates:: It seems we clearly have the time. Besides, I think that the cicadas, who are singing and carrying on conversations with one another in the heat of the day above our heads, are also watching us. And if they saw the two of us avoiding conversation at midday like most people, diverted by their song and, sluggish of mind, nodding off, they would have every right to laugh at us, convinced that a pair of slaves had come to their resting place to sleep like sheep gathering around the spring in the afternoon. But if they see us in conversation, steadfastly navigating around them as if they were the Sirens, they will be very pleased and immediately give us the gift from the gods they are able to give to mortals.

Phaedrus:: What is this gift? I don't think I have heard of it.

Socrates:: Everyone who loves the Muses should have heard of this. The story goes that the cicadas used to be human beings who lived before the birth of the Muses. When the Muses were born and song was created for the first time, some of the people of that time were so overwhelmed with the pleasure of singing that they forgot to eat or drink; so they died without even realizing it. It is from them that the race of the cicadas came into being; and, as a gift from the Muses, they have no need of nourishment once they are born. Instead, they immediately burst into song, without food or drink, until it is time for them to die. After they die, they go to the Muses and tell each one of them which mortals have honored her. To Terpsichore they report those who have honored her by their devotion to the dance and thus make them dearer to her. To Erato, they report those who honored her by dedicating themselves to the affairs of love, and so too with the other Muses, according to the activity that honors each. And to Calliope, the oldest among them, and Urania, the next after her, who preside over the heavens and all discourse, human and divine, and sing with the sweetest voice, they report those who honor their special kind of music by leading a philosophical life.

There are many reasons, then, why we should talk and not waste our afternoon in sleep.

Phaedrus:: By all means, let's talk.

Socrates:: Well, then, we ought to examine the topic we proposed just now: When is a speech well written and delivered, and when is it not?

Phaedrus:: Plainly.

Socrates:: Won't someone who is to speak well and nobly have to have in mind the truth about the subject he is going to discuss?

Phaedrus:: What I have actually heard about this, Socrates, my friend, is that it is not necessary for the intending orator to learn what is really just, but only what will seem just to the crowd who will act as judges. Nor again what is really good or noble, but only what will seem so. For that is what persuasion proceeds from, not truth.

Socrates:: Anything that wise men say, Phaedrus, "is not lightly to be cast aside"; we must consider whether it might be right. And what you just said, in particular, must not be dismissed.

Phaedrus:: You're right.

Socrates:: Let's look at it this way, then.

Phaedrus:: How?

Socrates:: Suppose I were trying to convince you that you should fight your enemies on horseback, and neither one of us knew what a horse is, but I happened to know this much about you, that Phaedrus believes a horse is the tame animal with the longest ears—

Phaedrus:: But that would be ridiculous, Socrates.

Socrates:: Not quite yet, actually. But if I were seriously trying to convince you, having composed a speech in praise of the donkey in which I called it a horse and claimed that having such an animal is of immense value both at home and in military service, that it is good for fighting and for carrying your baggage and that it is useful for much else besides—

Phaedrus:: Well, that would be totally ridiculous.

Socrates:: Well, which is better? To be ridiculous and a friend? Or clever and an enemy?

Phaedrus:: The former.

Socrates:: And so, when a rhetorician who does not know good from bad addresses a city which knows no better and attempts to sway it, not praising a miserable donkey as if it were a horse, but bad as if it were good, and, having studied what the people believe, persuades them to do something bad instead of good—with that as its seed, what sort of crop do you think rhetoric can harvest?

Phaedrus:: A crop of really poor quality.

Socrates:: But could it be, my friend, that we have mocked the art of speaking more rudely than it deserves? For it might perhaps reply, "What bizarre nonsense! Look, I am not forcing anyone to learn how to make speeches without knowing the truth; on the contrary, my advice, for what it is worth, is to take me up only after mastering the truth. But I do make this boast: even someone who knows the truth couldn't produce conviction on the basis of a systematic art without me."

Phaedrus:: Well, is that a fair reply?

Socrates:: Yes, it is—if, that is, the arguments now advancing upon rhetoric testify that it is an art. For it seems to me as if I hear certain arguments approaching and protesting that that is a lie and that rhetoric is not an art but an artless practice. As the Spartan said, there is no genuine art of speaking without a grasp of truth, and there never will be.

Phaedrus:: We need to hear these arguments, Socrates. Come, produce them, and examine them: What is their point? How do they make it?

Socrates:: Come to us, then, noble creatures; convince Phaedrus, him of the beautiful offspring, that unless he pursues philosophy properly he will never be able to make a proper speech on any subject either. And let Phaedrus be the one to answer.

Phaedrus:: Let them put their questions.

Socrates:: Well, then, isn't the rhetorical art, taken as a whole, a way of directing the soul by means of speech, not only in the law courts and on other public occasions but also in private? Isn't it one and the same art whether its subject is great or small, and no more to be held in esteem— if it is followed correctly—when its questions are serious than when they are trivial? Or what have you heard about all this?

Phaedrus:: Well, certainly not what you have! Artful speaking and writing is found mainly in the law courts; also perhaps in the Assembly. That's all I've heard.

Socrates:: Well, have you only heard of the rhetorical treatises of Nestor and Odysseus—those they wrote in their spare time in Troy? Haven't you also heard of the works of Palamedes?

Phaedrus:: No, by Zeus, I haven't even heard of Nestor's—unless by Nestor you mean Gorgias, and by Odysseus, Thrasymachus or Theodorus.

Socrates:: Perhaps. But let's leave these people aside. Answer this question yourself: What do adversaries do in the law courts? Don't they speak on opposite sides? What else can we call what they do?

Phaedrus:: That’s it, exactly.

Socrates:: About what is just and what is unjust?

Phaedrus:: Yes.

Socrates:: And won’t whoever does this artfully make the same thing appear to the same people sometimes just and sometimes, when he prefers, unjust?

Phaedrus:: Of course.

Socrates:: And when he addresses the Assembly, he will make the city approve a policy at one time as a good one, and reject it—the very same policy—as just the opposite at another.

Phaedrus:: Right.

Socrates:: Now, don’t we know that the Eleatic Palamedes is such an artful speaker that his listeners will perceive the same things to be both similar and dissimilar, both one and many, both at rest and also in motion?

Phaedrus:: Most certainly.

Socrates:: We can therefore find the practice of speaking on opposite sides not only in the law courts and in the Assembly. Rather, it seems that one single art—if, of course, it is an art in the first place—governs all speaking. By means of it one can make out as similar anything that can be so assimilated, to everything to which it can be made similar, and expose anyone who tries to hide the fact that that is what he is doing.

Phaedrus:: What do you mean by that?

Socrates:: I think it will become clear if we look at it this way. Where is deception most likely to occur—regarding things that differ much or things that differ little from one another?

Phaedrus:: Regarding those that differ little.

Socrates:: At any rate, you are more likely to escape detection, as you shift from one thing to its opposite, if you proceed in small steps rather than in large ones.

Phaedrus:: Without a doubt.

Socrates:: Therefore, if you are to deceive someone else and to avoid deception yourself, you must know precisely the respects in which things are similar and dissimilar to one another.

Phaedrus:: Yes, you must.

Socrates:: And is it really possible for someone who doesn't know what each thing truly is to detect a similarity—whether large or small—between something he doesn't know and anything else?

Phaedrus:: That is impossible.

Socrates:: Clearly, therefore, the state of being deceived and holding beliefs contrary to what is the case comes upon people by reason of certain similarities.

Phaedrus:: That is how it happens.

Socrates:: Could someone, then, who doesn't know what each thing is ever have the art to lead others little by little through similarities away from what is the case on each occasion to its opposite? Or could he escape this being done to himself?

Phaedrus:: Never.

Socrates:: Therefore, my friend, the art of a speaker who doesn't know the truth and chases opinions instead is likely to be a ridiculous thing— not an art at all!

Phaedrus:: So it seems.

Socrates:: So, shall we look for instances of what we called the artful and the artless in the speech of Lysias you carried here and in our own speeches?

Phaedrus:: That’s the best thing to do—because, as it is, we are talking quite abstractly, without enough examples.

Socrates:: In fact, by some chance the two speeches do, as it seems, contain an example of the way in which someone who knows the truth can toy with his audience and mislead them. For my part, Phaedrus, I hold the local gods responsible for this—also, perhaps, the messengers of the Muses who are singing over our heads may have inspired me with this gift: certainly I don’t possess any art of speaking.

Phaedrus:: Fine, fine. But explain what you mean.

Socrates:: Come, then—read me the beginning of Lysias’ speech.

Phaedrus:: “You understand my situation: I’ve told you how good it would be for us, in my opinion, if we could work this out. In any case, I don’t think I should lose the chance to get what I am asking for, merely because I don’t happen to be in love with you. A man in love will wish he had not done you any favors—”

Socrates:: Stop. Our task is to say how he fails and writes artlessly. Right?

Phaedrus:: Yes.

Socrates:: Now isn’t this much absolutely clear: We are in accord with one another about some of the things we discourse about and in discord about others?

Phaedrus:: I think I understand what you are saying; but, please, can you make it a little clearer?

Socrates:: When someone utters the word “iron” or “silver,” don’t we all think of the same thing?

Phaedrus:: Certainly.

Socrates:: But what happens when we say “just” or “good”? Doesn’t each one of us go in a different direction? Don’t we differ with one another and even with ourselves?

Phaedrus:: We certainly do.

Socrates:: Therefore, we agree about the former and disagree about the latter.

Phaedrus:: Right.

Socrates:: Now in which of these two cases are we more easily deceived? And when does rhetoric have greater power?

Phaedrus:: Clearly, when we wander in different directions.

Socrates:: It follows that whoever wants to acquire the art of rhetoric must first make a systematic division and grasp the particular character of each of these two kinds of thing, both the kind where most people wander in different directions and the kind where they do not.

Phaedrus:: What a splendid thing, Socrates, he will have understood if he grasps that!

Socrates:: Second, I think, he must not be mistaken about his subject; he must have a sharp eye for the class to which whatever he is about to discuss belongs.

Phaedrus:: Of course.

Socrates:: Well, now, what shall we say about love? Does it belong to the class where people differ or to that where they don't?

Phaedrus:: Oh, surely the class where they differ. Otherwise, do you think you could have spoken of it as you did a few minutes ago, first saying that it is harmful both to lover and beloved and then immediately afterward that it is the greatest good?

Socrates:: Very well put. But now tell me this—I can't remember at all because I was completely possessed by the gods: Did I define love at the beginning of my speech?

Phaedrus:: Oh, absolutely, by Zeus, you most certainly did.

Socrates:: Alas, how much more artful with speeches the Nymphs, daughters of Achelous, and Pan, son of Hermes, are, according to what you say, than Lysias, son of Cephalus! Or am I wrong? Did Lysias too, at the start of his love-speech, compel us to assume that love is the single thing that he himself wanted it to be? Did he then complete his speech by arranging everything in relation to that? Will you read its opening once again?

Phaedrus:: If you like. But what you are looking for is not there.

Socrates:: Read it, so that I can hear it in his own words.

Phaedrus:: "You understand my situation: I've told you how good it would be for us, in my opinion, if we could work this out. In any case, I don't think I should lose the chance to get what I am asking for, merely because I don't happen to be in love with you. A man in love will wish he had not done you any favors, once his desire dies down—"

Socrates:: He certainly seems a long way from doing what we wanted. He doesn't even start from the beginning but from the end, making his speech swim upstream on its back. His first words are what a lover would say to his boy as he was concluding his speech. Am I wrong, Phaedrus, dear heart?

Phaedrus:: Well, Socrates, that was the end for which he gave the speech!

Socrates:: And what about the rest? Don't the parts of the speech appear to have been thrown together at random? Is it evident that the second point had to be made second for some compelling reason? Is that so for any of the parts? I at least—of course I know nothing about such matters—thought the author said just whatever came to mind next, though not without a certain noble willfulness. But you, do you know any principle of speech-composition compelling him to place these things one after another in this order?

Phaedrus:: It's very generous of you to think that I can understand his reasons so clearly.

Socrates:: But surely you will admit at least this much: Every speech must be put together like a living creature, with a body of its own; it must be neither without head nor without legs; and it must have a middle and extremities that are fitting both to one another and to the whole work.

Phaedrus:: How could it be otherwise?

Socrates:: But look at your friend's speech: Is it like that or is it otherwise? Actually, you'll find that it's just like the epigram people say is inscribed on the tomb of Midas the Phrygian.

Phaedrus:: What epigram is that? And what's the matter with it?

Socrates:: It goes like this:

A maid of bronze am I, on Midas' tomb I lie As long as water flows, and trees grow tall Shielding the grave where many come to cry That Midas rests here I say to one and all I'm sure you notice that it makes no difference at all which of its verses comes first, and which last.

Phaedrus:: You are making fun of our speech, Socrates.

Socrates:: Well, then, if that upsets you, let's leave that speech aside— even though I think it has plenty of very useful examples, provided one tries to emulate them as little as possible—and turn to the others. I think it is important for students of speechmaking to pay attention to one of their features.

Phaedrus:: What do you mean?

Socrates:: They were in a way opposite to one another. One claimed that one should give one's favors to the lover; the other, to the non-lover.

Phaedrus:: Most manfully, too.

Socrates:: I thought you were going to say "madly," which would have been the truth, and is also just what I was looking for: We did say, didn't we, that love is a kind of madness?

Phaedrus:: Yes.

Socrates:: And that there are two kinds of madness, one produced by human illness, the other by a divinely inspired release from normally accepted behavior?

Phaedrus:: Certainly.

Socrates:: We also distinguished four parts within the divine kind and connected them to four gods. Having attributed the inspiration of the prophet to Apollo, of the mystic to Dionysus, of the poet to the Muses, and the fourth part of madness to Aphrodite and to Love, we said that the madness of love is the best. We used a certain sort of image to describe love's passion; perhaps it had a measure of truth in it, though it may also have led us astray. And having whipped up a not altogether implausible speech, we sang playfully, but also appropriately and respectfully, a story-like hymn to my master and yours, Phaedrus—to Love, who watches over beautiful boys.

Phaedrus:: And I listened to it with the greatest pleasure.

Socrates:: Let's take up this point about it right away: How was the speech able to proceed from censure to praise?

Phaedrus:: What exactly do you mean by that?

Socrates:: Well, everything else in it really does appear to me to have been spoken in play. But part of it was given with Fortune's guidance, and there were in it two kinds of things the nature of which it would be quite wonderful to grasp by means of a systematic art.

Phaedrus:: Which things?

Socrates:: The first consists in seeing together things that are scattered about everywhere and collecting them into one kind, so that by defining each thing we can make clear the subject of any instruction we wish to give. Just so with our discussion of love: Whether its definition was or was not correct, at least it allowed the speech to proceed clearly and consistently with itself.

Phaedrus:: And what is the other thing you are talking about, Socrates?

Socrates:: This, in turn, is to be able to cut up each kind according to its species along its natural joints, and to try not to splinter any part, as a bad butcher might do. In just this way, our two speeches placed all mental derangements into one common kind. Then, just as each single body has parts that naturally come in pairs of the same name (one of them being called the right-hand and the other the left-hand one), so the speeches, having considered unsoundness of mind to be by nature one single kind within us, proceeded to cut it up—the first speech cut its left-hand part, and continued to cut until it discovered among these parts a sort of love that can be called "left-handed," which it correctly denounced; the second speech, in turn, led us to the right-hand part of madness; discovered a love that shares its name with the other but is actually divine; set it out before us, and praised it as the cause of our greatest goods.

Phaedrus:: You are absolutely right.

Socrates:: Well, Phaedrus, I am myself a lover of these divisions and collections, so that I may be able to think and to speak; and if I believe that someone else is capable of discerning a single thing that is also by nature capable of encompassing many, I follow “straight behind, in his tracks, as if he were a god.” God knows whether this is the right name for those who can do this correctly or not, but so far I have always called them “dialecticians.” But tell me what I must call them now that we have learned all this from Lysias and you. Or is it just that art of speaking that Thrasymachus and the rest of them use, which has made them masters of speechmaking and capable of producing others like them—anyhow those who are willing to bring them gifts and to treat them as if they were kings?

Phaedrus:: They may behave like kings, but they certainly lack the knowledge you’re talking about. No, it seems to me that you are right in calling the sort of thing you mentioned dialectic; but, it seems to me, rhetoric still eludes us.

Socrates:: What are you saying? Could there be anything valuable which is independent of the methods I mentioned and is still grasped by art? If there is, you and I must certainly honor it, and we must say what part of rhetoric it is that has been left out.

Phaedrus:: Well, there’s quite a lot, Socrates: everything, at any rate, written up in the books on the art of speaking.

Socrates:: You were quite right to remind me. First, I believe, there is the Preamble with which a speech must begin. This is what you mean, isn’t it—the fine points of the art?

Phaedrus:: Yes.

Socrates:: Second come the Statement of Facts and the Evidence of Witnesses concerning it; third, Indirect Evidence; fourth, Claims to Plausibility. And I believe at least that excellent Byzantine word-wizard adds Confirmation and Supplementary Confirmation.

Phaedrus:: You mean the worthy Theodorus?

Socrates:: Quite. And he also adds Refutation and Supplementary Refutation, to be used both in prosecution and in defense. Nor must we forget the most excellent Evenus of Paros, who was the first to discover Covert Implication and Indirect Praise and who—some say—has even arranged Indirect Censures in verse as an aid to memory: a wise man indeed! And Tisias and Gorgias? How can we leave them out when it is they who realized that what is likely must be held in higher honor than what is true; they who, by the power of their language, make small things appear great and great things small; they who express modern ideas in ancient garb, and ancient ones in modern dress; they who have discovered how to argue both concisely and at infinite length about any subject? Actually, when I told Prodicus this last, he laughed and said that only he had discovered the art of proper speeches: What we need are speeches that are neither long nor short but of the right length.

Phaedrus:: Brilliantly done, Prodicus!

Socrates:: And what about Hippias? How can we omit him? I am sure our friend from Elis would cast his vote with Prodicus.

Phaedrus:: Certainly.

Socrates:: And what shall we say of the whole gallery of terms Polus set up—speaking with Reduplication, Speaking in Maxims, Speaking in Images—and of the terms Licymnius gave him as a present to help him explain Good Diction?

Phaedrus:: But didn’t Protagoras actually use similar terms?

Socrates:: Yes, Correct Diction, my boy, and other wonderful things. As to the art of making speeches bewailing the evils of poverty and old age, the prize, in my judgment, goes to the mighty Chalcedonian. He it is also who knows best how to inflame a crowd and, once they are inflamed, how to hush them again with his words' magic spell, as he says himself. And let's not forget that he is as good at producing slander as he is at refuting it, whatever its source may be.

As to the way of ending a speech, everyone seems to be in agreement, though some call it Recapitulation and others by some other name.

Phaedrus:: You mean, summarizing everything at the end and reminding the audience of what they've heard?

Socrates:: That's what I mean. And if you have anything else to add about the art of speaking—

Phaedrus:: Only minor points, not worth making.

Socrates:: Well, let's leave minor points aside. Let's hold what we do have closer to the light so that we can see precisely the power of the art these things produce.

Phaedrus:: A very great power, Socrates, especially in front of a crowd.

Socrates:: Quite right. But now, my friend, look closely: Do you think, as I do, that its fabric is a little threadbare?

Phaedrus:: Can you show me?

Socrates:: All right, tell me this. Suppose someone came to your friend Eryximachus or his father Acumenus and said: "I know treatments to raise or lower (whichever I prefer) the temperature of people's bodies; if I decide to, I can make them vomit or make their bowels move, and all sorts of things. On the basis of this knowledge, I claim to be a physician; and I claim to be able to make others physicians as well by imparting it to them." What do you think they would say when they heard that?

Phaedrus:: What could they say? They would ask him if he also knew to whom he should apply such treatments, when, and to what extent.

Socrates:: What if he replied, “I have no idea. My claim is that whoever learns from me will manage to do what you ask on his own”?

Phaedrus:: I think they’ say the man’s mad if he thinks he’s a doctor just because he read a book or happened to come across a few potions; he knows nothing of the art.

Socrates:: And suppose someone approached Sophocles and Euripides and claimed to know how to compose the longest passages on trivial topics and the briefest ones on topics of great importance, that he could make them pitiful if he wanted, or again, by contrast, terrifying and menacing, and so on. Suppose further that he believed that by teaching this he was imparting the knowledge of composing tragedies—

Phaedrus:: Oh, I am sure they too would laugh at anyone who thought a tragedy was anything other than the proper arrangement of these things: They have to fit with one another and with the whole work.

Socrates:: But I am sure they wouldn’t reproach him rudely. They would react more like a musician confronted by a man who thought he had mastered harmony because he was able to produce the highest and lowest notes on his strings. The musician would not say fiercely, “You stupid man, you are out of your mind!” As befits his calling, he would speak more gently: “My friend, though that too is necessary for understanding harmony, someone who has gotten as far as you have may still know absolutely nothing about the subject. What you know is what it’s necessary to learn before you study harmony, but not harmony itself.”

Phaedrus:: That’s certainly right.

Socrates:: So Sophocles would also tell the man who was showing off to them that he knew the preliminaries of tragedy, but not the art of tragedy itself. And Acumenus would say his man knew the preliminaries of medicine, but not medicine itself.

Phaedrus:: Absolutely.

Socrates:: And what if the “honey-tongued Adrastus” (or perhaps Pericles) were to hear of all the marvelous techniques we just discussed— Speaking Concisely and Speaking in Images and all the rest we listed and proposed to examine under the light? Would he be angry or rude, as you and I were, with those who write of those techniques and teach them as if they are rhetoric itself, and say something coarse to them? Wouldn’t he—being wiser than we are—reproach us as well and say, “Phaedrus and Socrates, you should not be angry with these people—you should be sorry for them. The reason they cannot define rhetoric is that they are ignorant of dialectic. It is their ignorance that makes them think they have discovered what rhetoric is when they have mastered only what it is necessary to learn as preliminaries. So they teach these preliminaries and imagine their pupils have received a full course in rhetoric, thinking the task of using each of them persuasively and putting them together into a whole speech is a minor matter, to be worked out by the pupils from their own resources”?

Phaedrus:: Really, Socrates, the art these men present as rhetoric in their courses and handbooks is no more than what you say. In my judgment, at least, your point is well taken. But how, from what source, could one acquire the art of the true rhetorician, the really persuasive speaker?

Socrates:: Well, Phaedrus, becoming good enough to be an accomplished competitor is probably—perhaps necessarily—like everything else. If you have a natural ability for rhetoric, you will become a famous rhetorician, provided you supplement your ability with knowledge and practice. To the extent that you lack any one of them, to that extent you will be less than perfect. But, insofar as there is an art of rhetoric, I don't believe the right method for acquiring it is to be found in the direction Lysias and Thrasymachus have followed.

Phaedrus:: Where can we find it then?

Socrates:: My dear friend, maybe we can see now why Pericles was in all likelihood the greatest rhetorician of all.

Phaedrus:: How is that?

Socrates:: All the great arts require endless talk and ethereal speculation about nature: This seems to be what gives them their lofty point of view and universal applicability. That's just what Pericles mastered—besides having natural ability. He came across Anaxagoras, who was just that sort of man, got his full dose of ethereal speculation, and understood the nature of mind and mindlessness—just the subject on which Anaxagoras had the most to say. From this, I think, he drew for the art of rhetoric what was useful to it.

Phaedrus:: What do you mean by that?

Socrates:: Well, isn't the method of medicine in a way the same as the method of rhetoric?

Phaedrus:: How so?

Socrates:: In both cases we need to determine the nature of something— of the body in medicine, of the soul in rhetoric. Otherwise, all we'll have will be an empirical and artless practice. We won't be able to supply, on the basis of an art, a body with the medicines and diet that will make it healthy and strong, or a soul with the reasons and customary rules for conduct that will impart to it the convictions and virtues we want.

Phaedrus:: That is most likely, Socrates.

Socrates:: Do you think, then, that it is possible to reach a serious understanding of the nature of the soul without understanding the nature of the world as a whole?

Phaedrus:: Well, if we're to listen to Hippocrates, Asclepius' descendant, we won't even understand the body if we don't follow that method.

Socrates:: He speaks well, my friend. Still, Hippocrates aside, we must consider whether argument supports that view.

Phaedrus:: I agree.

Socrates:: Consider, then, what both Hippocrates and true argument say about nature. Isn't this the way to think systematically about the nature of anything? First, we must consider whether the object regarding which we intend to become experts and capable of transmitting our expertise is simple or complex. Then, if it is simple, we must investigate its power: What things does it have what natural power of acting upon? By what things does it have what natural disposition to be acted upon? If, on the other hand, it takes many forms, we must enumerate them all and, as we did in the simple case, investigate how each is naturally able to act upon what and how it has a natural disposition to be acted upon by what.

Phaedrus:: It seems so, Socrates.

Socrates:: Proceeding by any other method would be like walking with the blind. Conversely, whoever studies anything on the basis of an art must never be compared to the blind or the deaf. On the contrary, it is clear that someone who teaches another to make speeches as an art will demonstrate precisely the essential nature of that to which speeches are to be applied. And that, surely, is the soul.

Phaedrus:: Of course.

Socrates:: This is therefore the object toward which the speaker's whole effort is directed, since it is in the soul that he attempts to produce conviction. Isn't that so?

Phaedrus:: Yes.

Socrates:: Clearly, therefore, Thrasymachus and anyone else who teaches the art of rhetoric seriously will, first, describe the soul with absolute precision and enable us to understand what it is: whether it is one and homogeneous by nature or takes many forms, like the shape of bodies, since, as we said, that's what it is to demonstrate the nature of something.

Phaedrus:: Absolutely.

Socrates:: Second, he will explain how, in virtue of its nature, it acts and is acted upon by certain things.

Phaedrus:: Of course.

Socrates:: Third, he will classify the kinds of speech and of soul there are, as well as the various ways in which they are affected, and explain what causes each. He will then coordinate each kind of soul with the kind of speech appropriate to it. And he will give instructions concerning the reasons why one kind of soul is necessarily convinced by one kind of speech while another necessarily remains unconvinced.

Phaedrus:: This, I think, would certainly be the best way.

Socrates:: In fact, my friend, no speech will ever be a product of art, whether it is a model or one actually given, if it is delivered or written in any other way—on this or on any other subject. But those who now write Arts of Rhetoric—we were just discussing them—are cunning people: they hide the fact that they know very well everything about the soul. Well, then, until they begin to speak and write in this way, we mustn't allow ourselves to be convinced that they write on the basis of the art.

Phaedrus:: What way is that?

Socrates:: It's very difficult to speak the actual words, but as to how one should write in order to be as artful as possible—that I am willing to tell you.

Phaedrus:: Please do.

Socrates:: Since the nature of speech is in fact to direct the soul, whoever intends to be a rhetorician must know how many kinds of soul there are. Their number is so-and-so many; each is of such-and-such a sort; hence some people have such-and-such a character and others have such-and-such. Those distinctions established, there are, in turn, so-and-so many kinds of speech, each of such-and-such a sort. People of such-and-such a character are easy to persuade by speeches of such-and-such a sort in connection with such-and-such an issue for this particular reason, while people of such-and-such another sort are difficult to persuade for those particular reasons.

The orator must learn all this well, then put his theory into practice and develop the ability to discern each kind clearly as it occurs in the actions of real life. Otherwise he won't be any better off than he was when he was still listening to those discussions in school. He will now not only be able to say what kind of person is convinced by what kind of speech; on meeting someone he will be able to discern what he is like and make clear to himself that the person actually standing in front of him is of just this particular sort of character he had learned about in school—to that he must now apply speeches of such-and-such a kind in this particular way in order to secure conviction about such-and-such an issue. When he has learned all this—when, in addition, he has grasped the right occasions for speaking and for holding back; and when he has also understood when the time is right for Speaking Concisely or Appealing to Pity or Exaggeration or for any other of the kinds of speech he has learned and when it is not—then, and only then, will he have finally mastered the art well and completely. But if his speaking, his teaching, or his writing lacks any one of these elements and he still claims to be speaking with art, you'll be better off if you don't believe him.

"Well, Socrates and Phaedrus," the author of this discourse might say, "do you agree? Could we accept an art of speaking presented in any other terms?"

Phaedrus:: That would be impossible, Socrates. Still, it's evidently rather a major undertaking.

Socrates:: You're right. And that's why we must turn all our arguments every which way and try to find some easier and shorter route to the art: we don't want to follow a long rough path for no good reason when we can choose a short smooth one instead.

Now, try to remember if you've heard anything helpful from Lysias or anybody else. Speak up.

Phaedrus:: It's not for lack of trying, but nothing comes to mind right now.

Socrates:: Well, then, shall I tell you something I've heard people say who care about this topic?

Phaedrus:: Of course.

Socrates:: We do claim, after all, Phaedrus, that it is fair to give the wolf's side of the story as well.

Phaedrus:: That's just what you should do.

Socrates:: Well, these people say that there is no need to be so solemn about all this and stretch it out to such lengths. For the fact is, as we said ourselves at the beginning of this discussion, that one who intends to be an able rhetorician has no need to know the truth about the things that are just or good or yet about the people who are such either by nature or upbringing. No one in a law court, you see, cares at all about the truth of such matters. They only care about what is convincing. This is called “the likely,” and that is what a man who intends to speak according to art should concentrate on. Sometimes, in fact, whether you are prosecuting or defending a case, you must not even say what actually happened, if it was not likely to have happened—you must say something that is likely instead. Whatever you say, you should pursue what is likely and leave the truth aside: the whole art consists in cleaving to that throughout your speech.

Phaedrus:: That’s an excellent presentation of what people say who profess to be expert in speeches, Socrates. I recall that we raised this issue briefly earlier on, but it seems to be their single most important point.

Socrates:: No doubt you’ve churned through Tisias’ book quite carefully. Then let Tisias tell us this also: By “the likely” does he mean anything but what is accepted by the crowd?

Phaedrus:: What else?

Socrates:: And it’s likely it was when he discovered this clever and artful technique that Tisias wrote that if a weak but spunky man is taken to court because he beat up a strong but cowardly one and stole his cloak or something else, neither one should tell the truth. The coward must say that the spunky man didn’t beat him up all by himself, while the latter must rebut this by saying that only the two of them were there, and fall back on that well-worn plea, “How could a man like me attack a man like him?” The strong man, naturally, will not admit his cowardice, but will try to invent some other lie, and may thus give his opponent the chance to refute him. And in other cases, speaking as the art dictates will take similar forms. Isn't that so, Phaedrus?

Phaedrus:: Of course.

Socrates:: Phew! Tisias—or whoever else it was and whatever name he pleases to use for himself—seems to have discovered an art which he has disguised very well! But now, my friend, shall we or shall we not say to him—

Phaedrus:: What?

Socrates:: This: "Tisias, some time ago, before you came into the picture, we were saying that people get the idea of what is likely through its similarity to the truth. And we just explained that in every case the person who knows the truth knows best how to determine similarities. So, if you have something new to say about the art of speaking, we shall listen. But if you don't, we shall remain convinced by the explanations we gave just before: No one will ever possess the art of speaking, to the extent that any human being can, unless he acquires the ability to enumerate the sorts of characters to be found in any audience, to divide everything according to its kinds, and to grasp each single thing firmly by means of one form. And no one can acquire these abilities without great effort—a laborious effort a sensible man will make not in order to speak and act among human beings, but so as to be able to speak and act in a way that pleases the gods as much as possible. Wiser people than ourselves, Tisias, say that a reasonable man must put his mind to being pleasant not to his fellow slaves (though this may happen as a side effect) but to his masters, who are wholly good. So, if the way round is long, don't be astonished: we must make this detour for the sake of things that are very important, not for what you have in mind. Still, as our argument asserts, if that is what you want, you'll get it best as a result of pursuing our own goal.

Phaedrus:: What you've said is wonderful, Socrates—if only it could be done!

Socrates:: Yet surely whatever one must go through on the way to an honorable goal is itself honorable.

Phaedrus:: Certainly.

Socrates:: Well, then, that's enough about artfulness and artlessness in connection with speaking.

Phaedrus:: Quite.

Socrates:: What's left, then, is aptness and ineptness in connection with writing: What feature makes writing good, and what inept? Right?

Phaedrus:: Yes.

Socrates:: Well, do you know how best to please god when you either use words or discuss them in general?

Phaedrus:: Not at all. Do you?

Socrates:: I can tell you what I've heard the ancients said, though they alone know the truth. However, if we could discover that ourselves, would we still care about the speculations of other people?

Phaedrus:: That's a silly question. Still, tell me what you say you've heard.

Socrates:: Well, this is what I've heard. Among the ancient gods of Naucratis in Egypt there was one to whom the bird called the ibis is sacred. The name of that divinity was Theuth, and it was he who first discovered number and calculation, geometry and astronomy, as well as the games of checkers and dice, and, above all else, writing.

Now the king of all Egypt at that time was Thamus, who lived in the great city in the upper region that the Greeks call Egyptian Thebes; Thamus they call Ammon. Theuth came to exhibit his arts to him and urged him to disseminate them to all the Egyptians. Thamus asked him about the usefulness of each art, and while Theuth was explaining it, Thamus praised him for whatever he thought was right in his explanations and criticized him for whatever he thought was wrong.

The story goes that Thamus said much to Theuth, both for and against each art, which it would take too long to repeat. But when they came to writing, Theuth said: “O King, here is something that, once learned, will make the Egyptians wiser and will improve their memory; I have discovered a potion for memory and for wisdom.” Thamus, however, replied: “O most expert Theuth, one man can give birth to the elements of an art, but only another can judge how they can benefit or harm those who will use them. And now, since you are the father of writing, your affection for it has made you describe its effects as the opposite of what they really are. In fact, it will introduce forgetfulness into the soul of those who learn it: they will not practice using their memory because they will put their trust in writing, which is external and depends on signs that belong to others, instead of trying to remember from the inside, completely on their own. You have not discovered a potion for remembering, but for reminding; you provide your students with the appearance of wisdom, not with its reality. Your invention will enable them to hear many things without being properly taught, and they will imagine that they have come to know much while for the most part they will know nothing. And they will be difficult to get along with, since they will merely appear to be wise instead of really being so.”

Phaedrus:: Socrates, you’re very good at making up stories from Egypt or wherever else you want!

Socrates:: But, my friend, the priests of the temple of Zeus at Dodona say that the first prophecies were the words of an oak. Everyone who lived at that time, not being as wise as you young ones are today, found it rewarding enough in their simplicity to listen to an oak or even a stone, so long as it was telling the truth, while it seems to make a difference to you, Phaedrus, who is speaking and where he comes from. Why, though, don't you just consider whether what he says is right or wrong?

Phaedrus:: I deserved that, Socrates. And I agree that the Theban king was correct about writing.

Socrates:: Well, then, those who think they can leave written instructions for an art, as well as those who accept them, thinking that writing can yield results that are clear or certain, must be quite naive and truly ignorant of Ammon's prophetic judgment: otherwise, how could they possibly think that words that have been written down can do more than remind those who already know what the writing is about?

Phaedrus:: Quite right.

Socrates:: You know, Phaedrus, writing shares a strange feature with painting. The offspring of painting stand there as if they are alive, but if anyone asks them anything, they remain most solemnly silent. The same is true of written words. You' think they were speaking as if they had some understanding, but if you question anything that has been said because you want to learn more, it continues to signify just that very same thing forever. When it has once been written down, every discourse roams about everywhere, reaching indiscriminately those with understanding no less than those who have no business with it, and it doesn't know to whom it should speak and to whom it should not. And when it is faulted and attacked unfairly, it always needs its father's support; alone, it can neither defend itself nor come to its own support.

Phaedrus:: You are absolutely right about that, too.

Socrates:: Now tell me, can we discern another kind of discourse, a legitimate brother of this one? Can we say how it comes about, and how it is by nature better and more capable?

Phaedrus:: Which one is that? How do you think it comes about?

Socrates:: It is a discourse that is written down, with knowledge, in the soul of the listener; it can defend itself, and it knows for whom it should speak and for whom it should remain silent.

Phaedrus:: You mean the living, breathing discourse of the man who knows, of which the written one can be fairly called an image.

Socrates:: Absolutely right. And tell me this. Would a sensible farmer, who cared about his seeds and wanted them to yield fruit, plant them in all seriousness in the gardens of Adonis in the middle of the summer and enjoy watching them bear fruit within seven days? Or would he do this as an amusement and in honor of the holiday, if he did it at all? Wouldn't he use his knowledge of farming to plant the seeds he cared for when it was appropriate and be content if they bore fruit seven months later?

Phaedrus:: That's how he would handle those he was serious about, Socrates, quite differently from the others, as you say.

Socrates:: Now what about the man who knows what is just, noble, and good? Shall we say that he is less sensible with his seeds than the farmer is with his?

Phaedrus:: Certainly not.

Socrates:: Therefore, he won't be serious about writing them in ink, sowing them, through a pen, with words that are as incapable of speaking in their own defense as they are of teaching the truth adequately.

Phaedrus:: That wouldn't be likely.

Socrates:: Certainly not. When he writes, it's likely he will sow gardens of letters for the sake of amusing himself, storing up reminders for himself "when he reaches forgetful old age" and for everyone who wants to follow in his footsteps, and will enjoy seeing them sweetly blooming. And when others turn to different amusements, watering themselves with drinking parties and everything else that goes along with them, he will rather spend his time amusing himself with the things I have just described.

Phaedrus:: Socrates, you are contrasting a vulgar amusement with the very noblest—with the amusement of a man who can while away his time telling stories of justice and the other matters you mentioned.

Socrates:: That's just how it is, Phaedrus. But it is much nobler to be serious about these matters, and use the art of dialectic. The dialectician chooses a proper soul and plants and sows within it discourse accompanied by knowledge—discourse capable of helping itself as well as the man who planted it, which is not barren but produces a seed from which more discourse grows in the character of others. Such discourse makes the seed forever immortal and renders the man who has it as happy as any human being can be.

Phaedrus:: What you describe is really much nobler still.

Socrates:: And now that we have agreed about this, Phaedrus, we are finally able to decide the issue.

Phaedrus:: What issue is that?

Socrates:: The issue which brought us to this point in the first place: We wanted to examine the attack made on Lysias on account of his writing speeches, and to ask which speeches are written artfully and which not. Now, I think that we have answered that question clearly enough.

Phaedrus:: So it seemed; but remind me again how we did it.

Socrates:: First, you must know the truth concerning everything you are speaking or writing about; you must learn how to define each thing in itself; and, having defined it, you must know how to divide it into kinds until you reach something indivisible. Second, you must understand the nature of the soul, along the same lines; you must determine which kind of speech is appropriate to each kind of soul, prepare and arrange your speech accordingly, and offer a complex and elaborate speech to a complex soul and a simple speech to a simple one. Then, and only then, will you be able to use speech artfully, to the extent that its nature allows it to be used that way, either in order to teach or in order to persuade. This is the whole point of the argument we have been making.

Phaedrus:: Absolutely. That is exactly how it seemed to us.

Socrates:: Now how about whether it's noble or shameful to give or write a speech—when it could be fairly said to be grounds for reproach, and when not? Didn't what we said just a little while ago make it clear—

Phaedrus:: What was that?

Socrates:: That if Lysias or anybody else ever did or ever does write— privately or for the public, in the course of proposing some law—a political document which he believes to embody clear knowledge of lasting importance, then this writer deserves reproach, whether anyone says so or not. For to be unaware of the difference between a dream-image and the reality of what is just and unjust, good and bad, must truly be grounds for reproach even if the crowd praises it with one voice.

Phaedrus:: It certainly must be.

Socrates:: On the other hand, take a man who thinks that a written discourse on any subject can only be a great amusement, that no discourse worth serious attention has ever been written in verse or prose, and that those that are recited in public without questioning and explanation, in the manner of the rhapsodes, are given only in order to produce conviction. He believes that at their very best these can only serve as reminders to those who already know. And he also thinks that only what is said for the sake of understanding and learning, what is truly written in the soul concerning what is just, noble, and good can be clear, perfect, and worth serious attention: Such discourses should be called his own legitimate children, first the discourse he may have discovered already within himself and then its sons and brothers who may have grown naturally in other souls insofar as these are worthy; to the rest, he turns his back. Such a man, Phaedrus, would be just what you and I both would pray to become.

Phaedrus:: I wish and pray for things to be just as you say.

Socrates:: Well, then: our playful amusement regarding discourse is complete. Now you go and tell Lysias that we came to the spring which is sacred to the Nymphs and heard words charging us to deliver a message to Lysias and anyone else who composes speeches, as well as to Homer and anyone else who has composed poetry either spoken or sung, and third, to Solon and anyone else who writes political documents that he calls laws: If any one of you has composed these things with a knowledge of the truth, if you can defend your writing when you are challenged, and if you can yourself make the argument that your writing is of little worth, then you must be called by a name derived not from these writings but rather from those things that you are seriously pursuing.

Phaedrus:: What name, then, would you give such a man?

Socrates:: To call him wise, Phaedrus, seems to me too much, and proper only for a god. To call him wisdom's lover—a philosopher—or something similar would fit him better and be more seemly.

Phaedrus:: That would be quite appropriate.

Socrates:: On the other hand, if a man has nothing more valuable than what he has composed or written, spending long hours twisting it around, pasting parts together and taking them apart—wouldn't you be right to call him a poet or a speech writer or an author of laws?

Phaedrus:: Of course.

Socrates:: Tell that, then, to your friend.

Phaedrus:: And what about you? What shall you do? We must surely not forget your own friend.

Socrates:: Whom do you mean?

Phaedrus:: The beautiful Isocrates. What are you going to tell him, Socrates? What shall we say he is?

Socrates:: Isocrates is still young, Phaedrus. But I want to tell you what I foresee for him.

Phaedrus:: What is that?

Socrates:: It seems to me that by his nature he can outdo anything that Lysias has accomplished in his speeches; and he also has a nobler character. So I wouldn't be at all surprised if, as he gets older and continues writing speeches of the sort he is composing now, he makes everyone who has ever attempted to compose a speech seem like a child in comparison. Even more so if such work no longer satisfies him and a higher, divine impulse leads him to more important things. For nature, my friend, has placed the love of wisdom in his mind.

That is the message I will carry to my beloved, Isocrates, from the gods of this place; and you have your own message for your Lysias.

Phaedrus:: So it shall be. But let’s be off, since the heat has died down a bit.

Socrates:: Shouldn’t we offer a prayer to the gods here before we leave?

Phaedrus:: Of course.

Socrates:: O dear Pan and all the other gods of this place, grant that I may be beautiful inside. Let all my external possessions be in friendly harmony with what is within. May I consider the wise man rich. As for gold, let me have as much as a moderate man could bear and carry with him.

Do we need anything else, Phaedrus? I believe my prayer is enough for me.

Phaedrus:: Make it a prayer for me as well. Friends have everything in common.

Socrates:: Let’s be off.

## The Phaedrus.

Translated by Thomas Taylor.

*PERSONS OF THE DIALOGUE.*

Socrates AND Phædrus.

SCENE,—THE BANKS OF THE ILISSUS.

Socrates:: Whither are you going, my dear Phædrus, and from whence came you?

Phaedrus:: From Lysias, the son of Cephalus, Socrates; but I am going, for the sake of walking, beyond the walls of the city. For I have been sitting with him a long time, indeed from very early in the morning till now. But being persuaded by Acumenus, who is your associate as well as mine, to take some exercise, I determined upon that of walking. For he said that this kind of exercise was not so laborious, and at the same time was more healthful, than that of the course.

Socrates:: He speaks well, my friend, on this subject: and so Lysias then, as it seems, was in the city.

Phaedrus:: He was. For he dwells with Epicrates in this house of Moryehus, which is next to that of Olympius.

Socrates:: But what was his employment there? Or did not Lysias treat you with a banquet of orations?

Phaedrus:: You shall hear, if you have but leisure to walk along with me, and attend.

Socrates:: But what, do you not think that I, according to Pindar, would consider as a thing superior to business, the relation of your conversation with Lysias?

Phaedrus:: Go on then.

Socrates:: Begin the relation then.

Phaedrus:: And indeed, Socrates, the hearing of this is proper for you. For I do not know how it happened so, but our discourse was amatory. For Lysias, through the persuasion of some beautiful person, though not one of his lovers, had composed an oration on love, and this in a very elegant manner: in the course of which he asserts that one who does not love ought to be gratified rather than a lover.

Socrates:: Generous man! I wish he had likewise asserted that this should be the case with the poor rather than the rich, the old than the young, and so in all the rest, that thus I myself, and many more of us, might be gratified: for then his discourse would have been both polite and publicly useful. I am therefore so desirous of hearing his oration, that if you should even walk as far as to Megara, and, like Herodicus, when you had reached the walls, immediately turn back again, I should not leave you.

Phaedrus:: What do you say, most excellent Socrates? Do you think me so much of an idiot as to suppose myself capable of relating, in such a manner as it deserves, a discourse which Lysias, the most skilful writer of the present age, was a long time in composing at his leisure? I am certainly very far from entertaining such a supposition: though I would rather be able to do this than be the possessor of a great quantity of gold.

Socrates:: O Phædrus, if I do not know Phædrus, I am likewise forgetful of myself; but neither of these happens to be the case. For I well know that he has not only heard the discourse of Lysias once, but that he has desired him to repeat it often: and that Lysias willingly complied with his request. But neither was this sufficient for Phædrus; but having at length obtained the book, he considered that which he mostly desired to see. And sitting down to peruse it very early in the morning, he continued his employment, till being fatigued, he went out for a walk; and, by the dog, as it appears to me committed it to memory, unless perhaps it was too long for this purpose. But he directed his course beyond the walls, that he might meditate on this oration. Meeting, however, with one who was madly fond of discourse, he rejoiced on beholding him, because he should have a partner in his corybantic fury; and desired him to walk on. But when that lover of discourse requested him to repeat the oration, he feigned as if he was unwilling to comply; but though he was unwilling that any one should hear him voluntarily, he was at length compelled to the relation. I therefore entreat, Phædrus, that you will quickly accomplish all I desire.

Phaedrus:: Well then, I will endeavor to satisfy you in the best manner I am able; for I see you will not dismiss me till I have exerted my utmost abilities to please you.

Socrates:: You perfectly apprehend the truth respecting me.

Phaedrus:: I will therefore gratify you; but, in reality, Socrates, I have not learned by heart the words of this oration, though I nearly retain the sense of all the arguments by which he shows the difference between a lover and one who does not love; and these I will summarily relate to you in order, beginning from the first.

Socrates:: But show me first, my friend, what you have got there in your left hand, under your cloak: for I suspect that you have got the oration itself. And if this be the case, think thus with yourself respecting me, that I perfectly esteem you; but that, when Lysias is present, it is by no means my intention to listen to you. And therefore show it me.

Phaedrus:: You ought to desist: for you have destroyed those hopes, Socrates, which I entertained respecting you;

the hopes I mean of contesting with you. But where are you willing we should sit, while we read?

Socrates:: Let us, turning hither, direct our steps towards the river Ilissus: and afterwards, when you shall think proper to rest, we will sit down.

Phaedrus:: And this will be very seasonable, as it appears, for I am at present without shoes; but this is always the case with you. It will be easy, therefore, for us to walk by the side of the brook, moistening our feet; nor will it be unpleasant, especially at this season of the year, and this time of the day.

Socrates:: Go on then, and at the same time look out for a place where we may sit down.

Phaedrus:: Do you see that most lofty plane tree?

Socrates:: Why, what then?

Phaedrus:: For there, there is a cool shade, moderate breezes of wind, and soft grass, upon which we may either sit, or, if you are so disposed, lie down.

Socrates:: Let us go then.

Phaedrus:: But inform me, Socrates, whether this is not the place in which Boreas is reported to have ravished Orithya from Ilissus.

Socrates:: It is reported so indeed.

Phaedrus:: Was it not just here then? for the brooks hereabouts appear to be grateful to the view, pure and transparent, and very well adapted to the sports of virgins.

Socrates:: It was not, but two or three stadia lower down, where we meet with the temple of Diana, and in that very place there is a certain altar sacred to Boreas.

Phaedrus:: I did not perfectly know this. But tell me, by Jupiter, Socrates, are you persuaded that this fabulous narration is true?

Socrates:: If I should not believe in it, as is the case with the wise, I should not be absurd: and afterwards, speaking sophistically, I should say that the wind Boreas hurled from the neighboring rocks Orithya, sporting with Pharmacia; and that she dying in consequence of this, was said to have been ravished by Boreas, or from the hill of Mars. There is also another report that she was not ravished from this place, but from that. But for my own part, Phædrus, I consider interpretations of this kind as pleasant enough, but at the same time, as the province of a man vehemently curious and laborious, and not entirely happy; and this for no other reason, than because after such an explanation, it is necessary for him to correct the shape of the Centaurs and Chimæra. And, besides this, a crowd of Gorgons and Pegasuses will pour upon him for an exposition of his kind, and of certain other prodigious natures, immense both in multitude and novelty. All which, if any one, not believing in their literal meaning, should draw to a probable sense, employing for this purpose a certain rustic wisdom, he will stand in need of most abundant leisure. With respect to myself indeed, I have not leisure for such an undertaking; and this because I am not yet able, according to the Delphic precept, to know myself. But it appears to me to be ridiculous, while I am yet ignorant of this, to speculate things foreign from the knowledge of myself. Hence, bidding farewell to these, and being persuaded in the opinion which I have just now mentioned respecting them, I do not contemplate these, but myself, considering whether I am not a wild beast, possessing more folds than Typhon, and far more raging and fierce; or whether I am a more mild and simple animal, naturally participating of a certain divine and modest condition. But are we not, my friend, in the midst of our discourse arrived at our destined seat? and is not yonder the oak to which you was to lead us?

Phaedrus:: That indeed is it.

Socrates:: By Juno, a beautiful retreat. For the plane-tree very widely spreads its shady branches, and is remarkably tall; and the height and opacity of the willow, are perfectly beautiful, being now in the vigor of its vegetation, and, on this account, filling all the place with the most agreeable odor. Add too, that a most pleasant fountain of extreme cool water flows under the plane-tree, as may be inferred from its effect on our feet, and which appears to be sacred to certain nymphs, and to Achelous, from the virgins and statues with which it is adorned. Then again, if you are so disposed, take notice how lovely and very agreeable the air of the place is, and what a summer-like and sonorous singing resounds from the choir of grasshoppers. But the most elegant prospect of all is that of the grass, which in a manner so extremely beautiful, naturally adapts itself to receive on the gradual steep the reclining head. So that, my dear Phædrus, you have led me hither as a guest in the most excellent manner.

Phaedrus:: But you, O wonderful man, appear to act most absurdly; for by your discourse one might judge you to be some stranger and not a native of the place. And, indeed, one might conclude that you had never passed beyond the bounds of the city, nor ever deserted its walls.

Socrates:: Pardon me, most excellent Phædrus, for I am a lover of learning: and, hence I consider that fields and trees are not willing to teach me any thing; but that this can be effected by men residing in the city. You indeed appear to me to have discovered an enchantment capable of causing my departure from hence. For as they lead famished animals whither they please, by extending to them leaves or certain fruits; so you, by extending to me the discourses contained in books, may lead me about through all Attica, and indeed wherever you please. But now, for the present, since we are arrived hither, I for my part am disposed to lie down; but do you, assuming whatever position you think most convenient, begin to read.

Phaedrus:: Hear then.—“You are well acquainted with the state of my affairs, and you have heard, I think, that it is most conducive to my advantage for them to subsist in this manner. But if appears to me that I am not unworthy to be deprived of what I wish to obtain, because I am not one of your lovers: for lovers, when their desires cease, repent themselves of the benefits which they have bestowed; but there is no time in which it is proper for those void of love to repent their beneficence; since they do not consult from necessity, but voluntarily, and in the best manner about their own affairs, and do good as far as their circumstances will admit. Besides, lovers sometimes reflect, how negligently they have attended, through love, to their own concerns, what benefits they have bestowed, to their own loss, and what labors they have undergone; and therefore think they have conferred favors worthy the objects of their love. But those void of love, neither blame themselves for neglecting their affairs, nor complain of past labors, or disagreement with their familiars, as produced by some beloved object. So that such mighty evils being removed, nothing else remains for them than to perform with willingness and alacrity whatever they think will be acceptable to the objects of their beneficent exertions. Besides, if it is said that lovers make much of the party beloved, because they love in the most eminent degree, and are always prepared, both in words and actions, to comply with the desires of their beloved, though they should offend others by so doing; it is easy to know that this is not the truth, because lovers far more esteem the posterior than the prior objects of their love; and if the more recently beloved party thinks fit, they are even willing to treat injuriously the former subjects of their regard. But to what else is it proper to ascribe such a conduct, except that calamity, love; a conduct which he who had never experienced this passion would never suppose possible to exist. And besides this, lovers themselves confess that they are rather diseased than prudent, and that they know their ill condition with respect to prudence, but are unable to subdue it. But how can such as are properly prudent approve the desires of such as are thus diseased? Besides, if you should wish to choose among lovers the best associate, your choice must be confined to a few; but if you desire to find among others one most accommodated to yourself, you may choose out of many, And there are much more hopes of finding one worthy of your friendship among a many than a few. If, therefore, you reverence the established law, and are afraid lest the infamy of offenders should be your portion, it is proper to remember that lovers, who consider themselves as loved with a mutual regard, are accustomed to boast that they have not bestowed their labor in vain; but that such as are not infected with love, being better than these, content themselves with enjoying that which is best rather than the opinion of men. But still further, when the multitude perceive lovers following the objects of their affection, and bellowing all possible assiduity in this employment, they are necessarily persuaded that when they perceive them discoursing with each other, the desire of coition has either then taken place, or is about to do so: but they do not attempt to reproach the familiarity of such as are without love, as they know it is necessary that they must either discourse through friendship, or some other pleasure unconnected with coition. And, indeed, if in consequence of this doctrine you are afraid that it will be difficult for friendship to remain, and that disagreements, by some means or other arising, will become a common destruction to both; at the same time premising that you shall thus suffer a great injury in most of your transactions; if this is the case, you ought with much greater reason to be afraid of lovers. For there are many things afflictive to these, and they consider every thing as happening to their disadvantage. Hence, they prohibit the objects of their regard from associating with other lovers, dreading lest the wealthy should surpass them in wealth, and the learned in knowledge; and, as far as they are able, preserve them from the company of those who possess any thing good. And thus, by persuading them to abstain from such as these, they cause them to abandon their friends. If, therefore, you consider your own advantage, you will be wiser than these, and will entirely disagree with them in opinion. But such as are not your lovers, but who act in a becoming manner through virtue, will not envy your association with others, but will rather hate those who are unwilling to be your familiars; thinking that you are despised by such as these, but that you are benefited by your associates. So that there is much more reason to hope that friendship will be produced by this means, than that enmity will arise from such a connection. Add to this, that the most part of lovers desire the possession of the body before they know the manners, or have made trial of any thing else belonging to the beloved object: so that it is uncertain whether they will still wish to be friends to them, when the desire produced by love is no more. But it is probable that such as are without love, since from the commencement of their friendship they acted without regarding venereal delight,—

it is probable that they will act with less ardor, but that they will leave their actions as monuments of their conduct in futurity. Besides, it will be more advantageous to you to be persuaded by me than by a lover. For lovers will praise both your sayings and actions beyond all measure; some through fear, lest they should offend you; but others, in consequence of being depraved in their judgment, through desire. For love will point you out to be such. It likewise compels the unfortunate to consider as calamitous things which cause no molestation to others, and obliges the fortunate to celebrate as pleasant, things which are not deserving of delight: so that it is much more proper to commiserate than emulate lovers. But if you will be persuaded by me, in the first place I will associate with you, without caring for present pleasure, but for the sake of future advantage; not vanquished by love, but subduing myself; nor for mere trifles exciting severe enmity, but indulging a very little anger, and this but slowly even for great offences: pardoning, indeed, involuntary faults, and endeavoring to turn you from the commission of such as are voluntary. For these are the marks of a friendship likely to endure for a very extended period of time. However, if it should appear to you that friendship cannot be firm unless it is united with the lover, you should consider that, according to this, we ought not to be very fond of our children or parents, nor reckon those friends faithful, who became such, not from desire, but from studies of a different kind. But further still, if it is requisite to gratify in the most eminent degree those who are in want, it is proper to benefit, not the best of men, but the most needy: for, being liberated from the greatest evils, they will render them the most abundant thanks. And besides this, in the exertions of your own private benevolence, it is not proper to call your friends, but mendicants and those who stand in need of alimentary supplies. For these will delight in you, and follow you; will stand before your doors, and testify the most abundant satisfaction; render you the greatest thanks, and pray for your prosperity. But, perhaps, it is proper not to be pleased with those who are vehemently needy, but rather with those who are able to repay you with thanks, nor with lovers only but with those deserving your attention. Nor again, with those who enjoy the beauty of your youth, but with such as may participate your kindness when you are old. Nor with those who, when their desire is accomplished, are ambitious of obtaining others, but with those who through modesty are silent towards all men. Nor with those who officiously attend upon you for a short time, but with those who are similarly your friends through the whole of life. Nor, lastly, with those who, when desire is extinguished, seek after occasions of enmity; but with those who, when the flower of your beauty is decayed, will then exhibit their virtue and regard. Do you, therefore, remember what I have said, and consider that friends admonish lovers, that they are engaged in a base pursuit; but that those void of love are never blamed by any of their familiars, as improperly consulting about themselves, through a privation of love. Perhaps you will ask me whether I persuade you to gratify all who are not lovers. But I think that even a lover would not exhort you to be equally affected towards all your lovers: for neither would this deserve equal thanks from the receiver; nor would you, who are desirous to conceal yourself from others, be able to accomplish this with equal facility towards all. It is, however, necessary that you should receive no injury from your lover; but that some advantage should accrue to both. To me it appears, therefore, that I have said sufficient; but if you think any thing should be added, inform me what it is."

How does this discourse appear to you, Socrates? Is not the oration composed in a transcendent manner, both as to the sentiments and the structure of the words?

Socrates:: Divinely indeed, my friend, so as that I am astonished. And in the same transcendent manner am I affected towards you, Phædrus, while I behold you, because you appeared to me in the course of reading the oration to be transported with delight. As I considered, therefore, that you was more skilful in such affairs than myself, I followed you; and, in following, was agitated together with you, O divine head! with Bacchic fury.

Phaedrus:: Are you disposed to jest in this manner?

Socrates:: Do I appear then to you to jest, and not to speak seriously?

Phaedrus:: You by no means appear to be serious, Socrates. But, by Jupiter, who presides over friendship, tell me whether you think that any one of the Greeks could say any thing greater and more copiously on this subject?

Socrates:: But what, do you think that a discourse ought to be praised by you and me, because its composer has said what is sufficient? and not for this alone, that he has artificially fashioned every word clear, and round, and accurate? For, if it is necessary, this must be granted for your sake: For it is concealed from me, through my nothingness. Hence, I only attended to the eloquence of the composer; for, as to the other particular, I do not believe that even Lysias will think himself sufficient. And indeed to me, Phædrus, it appears (unless you say otherwise) that he has twice and thrice repeated the same things, as if he did not possess a great copiousness of discourse upon the same subject: or, perhaps, he took no great care about a thing of this kind. And besides this, he seems to me to act in a juvenile manner, by showing that he can express the same thing in different ways, and yet at the same time, according to each mode, in the best manner possible.

Phaedrus:: You speak nothing to the purpose, Socrates: for this oration possesses a copiousness of sentiment in the most eminent degree. For he has omitted nothing belonging to his subject, which he could with propriety introduce: so that, besides what has been said by him, no one could ever be able to discourse, either more abundantly or more to the purpose, on the same subject, than he has done.

Socrates:: I cannot grant you this: for the wise of old, both men and women, who have discoursed and written on this subject, would confute me, if I should admit this for the sake of gratifying you.

Phaedrus:: Who are those ancients? and where have you heard better things than these?

Socrates:: I do not sufficiently remember at present; but it is manifest that I have somewhere heard of some of these, such as the beautiful Sappho, or the wise Anacreon, or certain other writers. But from whence do I derive this conjecture? Because, O divine man! finding my breast full of conceptions, I perceive that I have something to say in addition to what has been already delivered, and this not of an inferior nature. I well know, indeed, that I understand nothing about such things from myself, as I am conscious of my own ignorance. It remains therefore, I think, that I myself, like a vessel, should be filled with knowledge, through hearing, from the fountains of others; but that, through my dullness of apprehension, I should again forget how, and from whom, I received the information.

Phaedrus:: You speak, most generous man, in the most excellent manner. For you cannot inform me, though I should command you to do so, how, and from whom, you derived your knowledge; but this which you speak of you are able to accomplish, since you possess more abundant and more excellent conceptions than those contained in the oration of Lysias. And if you are but able to accomplish this, I promise you, after the manner of the nine Archons, to place a golden statue of an equal measure at Delphi, not of myself only, but likewise of you.

Socrates:: You are of a most friendly disposition, Phædrus, and truly golden, if you suppose me to have asserted that Lysias was perfectly faulty, and that something better might have been said than the whole of this: for I do not think that this can ever happen, even to the worst of writers. But to the point in hand, about this oration: Do you think that any one who asserts that it is more proper to gratify one who does not love than a lover can have any thing to say besides his assertion, if he omits to prove that he who is void of love is prudent, but the lover is not so; and praises the one, but blames the other? But I think that omissions of this kind are to be suffered, and even pardoned, in a writer; and that it is not the invention of these discourses, but the elegance of the composition, which ought to be praised. But in things which are not necessary, and which are difficult to discover, I think that not only the composition, but likewise the invention, should be praised.

Phaedrus:: I assent to what you say: for you appear to me to speak modestly. I will therefore allow you to suppose that a lover is more diseased than one who is void of love; but, if in what remains you speak more copiously and more to the purpose than Lysias, you shall stand in Olympia, artificially fabricated, near the Cypselidæ.

Socrates:: You are serious, Phædrus, because I have found fault with a man who is exceedingly beloved by you; and you think that I have in reality attempted to speak something more copious than what his wisdom has produced.

Phaedrus:: In this affair, my friend, you have afforded me a similar handle to that which I some time since afforded you, and it is necessary for you to speak upon this subject in the best manner you are able. And that we may not be compelled to adopt that troublesome method of comedians, by answering one another, take care of yourself; and do not oblige me to retort upon you “If I, O Socrates! am ignorant of Socrates, I am also forgetful of myself.” And, “that he desires to speak, indeed, but feigns to be unwilling.” In short, assure yourself that we shall not depart from hence before you have disclosed to me that which you keep concealed in your breast. For there is none but us two; we are in a solitary place; and I am both stronger and younger than you. From all this, then, understand what I say; and by no means dispose yourself to be forced to speak, rather than to discourse of your own accord.

Socrates:: But, O blessed Phædrus! it would certainly be ridiculous in me, who am but an idiot, to contend with that excellent writer, and this too extemporary.

Phaedrus:: Do you know how the case stands? Cease your boasting before me: for I have nearly got a secret in my possession, which, when told, will force you to speak.

Socrates:: Do not tell it, therefore, I beseech you.

Phaedrus:: Not tell it? But indeed I shall. For my secret is an oath. And therefore I swear to you, by some one of the Gods, or, if you will, be this plane-tree, that unless you deliver to me a discourse the very contrary to that of Lysias, I will never at any time either show or read to you another oration.

Socrates:: O you wicked man! how well have you found out a method of compelling a lover of literature to act as you please!

Phaedrus:: Why then, since it is so, do you hesitate about complying?

Socrates:: I shall not indeed any longer, since you have sworn in this manner. For how is it possible for any one to abstain from such feasts as you are capable of supplying?

Phaedrus:: Begin then.

Socrates:: Do you know what I mean to do?

Phaedrus:: About what?

Socrates:: Why, I mean to speak covered with my garment, that I may rapidly run through my discourse, and that, by not looking at you, I may not be hindered through shame.

Phaedrus:: Do but speak; and as to the rest, you may act as you please.

Socrates:: Inspire me then, O ye Muses? whether you are so called from the melody of singing, or from the musical tribe of shrill sounds; and so assist me in the discourse which this best of men compels me to deliver, that his associate, who formerly appeared to him to be wise, may now appear to him to be still more so.

There was a certain youth, or rather a delicate young man, extremely beautiful, and who possessed a multitude of lovers. Among these there was one of a fraudulent disposition; who, though he did not love less than the rest, yet persuaded the youth that he was not one of his lovers. And asking him on a certain time to satisfy his desire, he endeavored to convince him that one who was not a lover ought to be gratified before one who was. But he spoke to this effect: In every thing, young man, one principle, to those who are about to consult in a becoming manner, is, to know that about which they consult, or else it is necessary that they should perfectly wander from the truth. But the multitude are ignorant that they do not know the essence of every particular. Hence in the beginning of their disquisitions, they do not trouble themselves to declare what the essence of a thing is, as if they were very knowing in matters of this kind; but in the course of their inquiry they exhibit nothing more than probable reasons; and thus they are neither consistent with themselves, nor with others. With respect to you and me, therefore, lest we should suffer that which we condemn in others, in our inquiry, whether the engagement of friendship ought to be entered upon with one who does not love, rather than with one who does, we ought to know what love is, and what power it possesses, mutually agreeing in our definition respecting it; and looking towards, and referring our discourse to this, we should consider whether it is the cause of advantage or detriment. That love, therefore, is a certain desire, is manifest to every one; and we are not ignorant that those who are void of love, are desirous of beautiful things. That we may be able, therefore, to distinguish a lover from one who is not so, it is requisite to know that there are two certain ideas in each of us, endued with a ruling and leading power, and which we follow wherever they conduct us. One of these is the innate desire of pleasures; but the other an acquired opinion, desirous of that which is best. But these sometimes subsist in us in a state of amity, and sometimes in a state of opposition and discord. And sometimes the one conquers, and sometimes the other. When opinion, therefore, is led by reason to that which is best, and vanquishes, it is denominated, from its vanquishing, temperance. But when desire irrationally allures to pleasure, and rules within us, it is called from its dominion, injury. But injury possesses a multitude of appellations: For it is multiform, and consists of many species. And of these ideas that which subsists in the most remarkable degree, causes that in which it resides to receive its appellation, and does not suffer it to be denominated any thing graceful or worthy. For when, with respect to food, desire of eating vanquishes the reason of that which is best, and rules over the other desires, then this desire is called gluttony; which likewise subjects its possessor to the same appellation. But that which tyrannizes about intoxication, and which through this leads its possessor wherever it pleases, evidently confers on him its own appellation. And it is sufficiently manifest. how the sisters of these, and the names of the filter-desires when they rule with absolute sway, ought to be called. But that for the sake of which all this has been said is now nearly evident: though it will certainly be in every respect more clear if enunciated, than if not. For the desire which without reason rules over opinion tending to that which is right, which draws it down towards the pleasure of beauty, and being vehemently invigorated by its kindred desires about the beauty of body, leads and subdues it: this desire, receiving an appellation from its strength, is called love. But, my dear Phædrus, do I appear to you, as I do to myself, to suffer a certain divine passion?

Phaedrus:: Indeed, Socrates, you possess a certain fluency of expression, beyond what is usual to you.

Socrates:: Hear me then in silence. For in reality the place appears to be divine. If, therefore, during my discourse, I should be often hurried away by the inspiring influence of the Nymphs, you must not be surprised. For the words which burst from me at present are not very remote from dithyrambic verse.

Phaedrus:: You speak most truly.

Socrates:: But of this you are the cause. However, hear the rest; for perhaps that which now possesses me may depart. But this will be taken care of by divinity. Let us, therefore, again direct our discourse to the young man. What that is then, which was the object of consultation, has been, declared and defined. But looking towards this, let us consider with respect to what remains, what assistance or detriment will very properly happen to him who is gratified by a lover, and to him who is gratified by one who is not so.

It is necessary then that a man who is enslaved by desire, or who is in subjection to pleasure, should render the object of his love as agreeable to himself as possible. But to one diseased every thing is pleasant which does not oppose his disease; but that which is better and equal is troublesome. Hence the lover is never willing that the object of his love should possess any thing more excellent than himself, or any thing approaching to an equality with himself; but that, as much as possible, he should be inferior to, and more indigent than himself. Thus, he is desirous that through ignorance he may become inferior to the wise, through timidity inferior to the bold, through inability to speak, to rhetoricians, and through dullness, to the acute. And when these, and far more numerous ills than these, according to the conceptions of the lover, are naturally inherent, or are produced in the beloved object, the lover rejoices, and even endeavors to introduce others, that he may not be deprived of his desired pleasure. Hence it is necessary that the lover should be envious of his beloved, and should endeavor by all possible means to exclude him from an association with others, through whom he may become a most excellent man; and thus in reality he is the cause of a mighty injury to his beloved. But the greatest injury, which he is the cause of, is that of depriving his beloved of the means of becoming eminently prudent. But he becomes most prudent through divine philosophy, from which the lover is necessarily compelled to withdraw his beloved, through the fear of being despised. And besides this, he is obliged to a variety of other artifices, that his beloved, by becoming ignorant of every thing, may place all his admiration upon him; and may thus become most acceptable to his lover, but most pernicious to himself. And thus with respect to things relating to the rational part, an association with a lover is by no means advantageous, but prejudicial to the party beloved. But after this it is necessary to consider how he, who is compelled to prefer the pleasant to the good, would take care of the body of his beloved, if it was committed to his charge. Indeed he would endeavor that it should not become firm and vigorous, but effeminate and soft; and that it should not be nourished in the pure light of the sun, but under the mingled shade; and that he should be educated without having any experience of manly labors and dry sweats; but on the contrary should be continually accustomed to a delicate and effeminate mode of living, and be adorned with foreign colors and ornaments, through the want of his own proper decorations: and that he should be studious of every thing else, which is consequent to cares of this kind. All which, as they are unworthy of a longer narration, having summarily defined, we shall proceed to what remains of our discourse. Enemies, therefore, in battle, and other mighty necessities, will confidently assault such a body, but friends and lovers will be in fear for its safety. But this, as sufficiently evident, we shall dismiss. Let us then, in the next place, declare what advantage or detriment, with respect to possessions, arises to us from the familiarity and guardianship of a lover. But this indeed is manifest to every one, but especially to a lover, that he desires above all things that his beloved may be deprived of the most friendly, most dear, and divine possessions: for he wishes to receive him destitute of parents, kindred and friends, thinking that these will impede and reprehend his most pleasant association with his beloved. Besides, he considers that the object of his love, if rich in gold, or any other possession, cannot be easily taken, and, if taken, will not be tractable to his desires. From all which it is necessary that a lover should envy his beloved the possession of abundance, and should rejoice in his adversity. Further yet, he will wish the youth to live for a long time without a wife, without children, and without a proper home, desiring for a very extended period to enjoy those pleasures which he is capable of affording. There are, indeed, other evils besides these, but a certain dæmon immediately mingles pleasure with most of them: as in that dreadful beast, and mighty detriment, a flatterer, nature at the same time mingles a pleasure by no means inelegant and rude. And, indeed, some one may revile a harlot, and other cattle, and studies of this kind, which we are daily accustomed to delight in, as noxious; but he who is a lover of young men, besides his being detrimental, is in his familiar converse the most unpleasant of all men. For equal, according to the proverb, rejoices in equal. For, as it appears to me, since equality of time leads to equal pleasures, it produces also friendship, through similitude. But at the same time, the association of these is connected with satiety; and necessity is said to be grievous to every one in every concern. But this is most eminently the case in the dissimilitude of a lover towards his beloved. For an old man adhering to a young one, does not willingly leave him, either by night or by day, but is agitated by necessity and fury, which always affording him pleasure, lead him about, through seeing, hearing, touching, and in any manner apprehending his beloved; so that he assiduously follows him with unceasing delight. But what solace or pleasures can he afford his beloved, so as to prevent him, during the period of mutual converse, from suffering the most extreme molestation? And this when he beholds his countenance aged and deformed, together with other particulars consequent to this, which are not only unpleasant to be engaged with, but even to hear; necessity always proposing to him such a survey. For in order to oblige him to this, he is always watched by suspicious guards in all his actions; and is under a necessity of hearing the unseasonable and immoderate praises and reproaches of his lover; which when he is sober, are indeed intolerable, but when he is intoxicated, are not only intolerable, but base, through his employing confidence, satiety, and repetition in his discourse. Besides, while he loves, he is pernicious and importunate. But when he ceases to love, he is afterwards unfaithful to the former object of his love, whom he had persuaded to comply with his request, by employing many oaths, prayers, and promises; and whom, after all, he had scarcely been able to induce, by the hope of advantage, to bear with his troublesome familiarity. And, lastly, when he ought to repay him for his kindness, then receiving another ruler and patron in himself, viz. intellect and temperance, instead of love and fury, and thus becoming entirely changed, he deceives his once beloved object. And then the beloved calling to mind the former actions and discourses of his lover, desires to be thanked for his kindness, as if he was discoursing with the same person as before. But the other, through shame, dares not say that he is changed, nor does he know how to free himself from the oaths and promises which his former stupid dominion over him produced, now he has acquired the possession of intellect and temperance; fearing lest, if he should act as formerly, he should again become such as he was before. Hence it necessarily comes to pass that he flies from the former object of his love, the shell being turned; but the other is compelled to pursue him, grievously enduring his change, and loading him with imprecations, as being ignorant from the beginning that a lover, and one who is necessarily insane, ought not to be gratified, but much rather one who does not love, and who is endued with intellect. For otherwise it would be necessary that he should give himself up to a man unfaithful, morose, envious, and unpleasant; detrimental with respect to the possession of things, and the habit of the body, but much more pernicious with respect to the discipline of the soul, than which nothing really is, or ever will be more venerable, both among Gods and men. It is necessary, therefore, my young friend, to consider all this, and to know that the friendship of a lover does not subsist with benevolence, but, like one who is hungry, is exerted only for the sake of being full. For;

The eager lover to the boy aspires,
Just as the wolf the tender lamb desires.

This is that which I predicted to you, O Phædrus, nor will you hear, me speak any further; for my discourse to you has now arrived at its conclusion.

Phaedrus:: But to me it appears that you have accomplished no more than the half, and that you should speak equally as much concerning one who is not a lover; that he of the two ought rather to be gratified; and that, for this purpose, the advantages which he possesses should be enumerated. Why, therefore, Socrates, do you now desist from speaking?

Socrates:: Have you not taken notice, blessed man, that I now speak in verse, but that it is no longer dithyrambic; and that I have done this, though my discourse has been full of reproach? But what do you think I should be able to accomplish, if I should begin to praise the other? Do you not perceive that, being then urged by you, and assisted by Providence, I should be most evidently agitated by the fury of the Nymphs? I say then, in one word, that as many goods are inherent in the one as we have numbered evils in the other. But what occasion is there of a long discourse? for enough has been said concerning both. And every thing proper to the oration has been introduced. I will, therefore, cross over the river and depart, before I am compelled by you to accomplish something greater than this.

Phaedrus:: Not yet, Socrates, till the heat is over. Do you not see that mid-day, as it is called, stably remains almost, even now? Let us, therefore, stay here, and discourse together about what has been said, and immediately as it begins to grow cool we will depart.

Socrates:: You are divine, Phædrus, with respect to discourse, and sincerely admirable. For I think that no one has been the occasion of more, of the orations which exist at present, than yourself; whether by speaking of your own accord, or in some way or other by compelling others. I except only Simmias the Theban. For you far surpass all the rest. And now you appear to be the cause of my commencing another discourse, though you did not announce war, as the consequence of my refusal.

Phaedrus:: But how have I been the cause? and what new discourse is this?

Socrates:: When I was about to pass over the river, excellent man, a dæmoniacal and usual signal was given me; and whenever this takes place, it always prohibits me from accomplishing what I was about to do. And in the present instance I seemed to hear a certain voice, which would not suffer me to depart till I had made an expiation, as if I had offended in some particular a divine nature. I am therefore a prophet, indeed, but not such a one as is perfectly worthy; but just as those who know their letters in a very indifferent manner, alone sufficient for what concerns myself. I clearly, therefore, now understand my offence: for even yet, my friend, there is something prophetic in my soul, which disturbed me during my former discourse. And this caused me to fear lest, perhaps, according to Ibycus, I should offend the Gods, but acquire glory among men. But now I perceive in what I have offended.

Phaedrus:: Will you not inform me what it is?

Socrates:: You, O Phædrus, have repeated a dire, dire discourse, and have Compelled me to utter the same.

Phaedrus:: But how?

Socrates:: The discourse has been foolish, and in a certain respect impious. And can any thing be more dire, than this?

Phaedrus:: Nothing, if you speak the truth.

Socrates:: What then? Do you not think that Love is the son of Venus and a certain God?

Phaedrus:: So it is said.

Socrates:: Yet this was neither acknowledged by Lysias, nor in your discourse, which was deduced by you, as by a certain charm, through my mouth. But if Love, as is really the case, is a God, or a certain something divine, he cannot, be in any respect evil: and yet in our discourse about him he has been spoken of as evil. In this, therefore, we have offended against Love. But, besides this, our disputations, though polite, appear to have been very foolish: for though they asserted nothing sound or true, yet they boasted as if they did, and as if they should accomplish something considerable, by gaining the approbation of some trifling deluded men. It is necessary, therefore, my friend, that I should purify myself. But there is an ancient purification for those who offend in matters respecting mythology, which Homer did not perceive, but which was known to Stesichorus. For, being deprived of his eyes through his accusation of Helen, he was not like Homer, ignorant of the cause of his blindness, but knew it, as being a musician. So that he immediately composed the following lines:

False was my tale; thou ne’er across the main
In beauteous ships didst fly, Troy’s lofty towers to gain.

And thus having composed a poem directly contrary to what he had before published, and which is called a recantation, he immediately recovered his lost sight. I am, therefore, in the present instance wiser than both these: for before I suffer any damage through my accusation of love, I will endeavor to present him with my recantation, and this with my head uncovered, and not as before veiled through shame.

Phaedrus:: You cannot, Socrates, say any thing which will be more pleasing to me than this.

Socrates:: For, my good friend, you must be sensible how imprudent the oration was which you repeated, and how shamefully I myself also spoke concerning a lover. For, if any one of a generous disposition and elegant manners, who either loves, or had formerly loved, such a one as himself, had heard us, when we said that lovers often excited the greatest enmities for the most trifling occasions, and that they were envious of, and injurious to, their beloved, would he not have thought that he was hearing men educated in ships, and who were perfectly unacquainted with liberal love? or do you think that he would by any means have assented to our accusation of love?

Phaedrus:: By Jupiter, Socrates, perhaps he would not.

Socrates:: Reverencing, therefore, such a man as this, and fearing Love himself, I desire, as it were with a potable oration, to wash away that salt and bitter discourse which we have lately heard. And I would advise Lysias himself, for similar reasons, to write as soon as possible that a lover ought rather to be gratified than one who is without love.

Phaedrus:: You may be well assured that he will do so; for, after you have spoken in praise of a lover, it will be necessary that Lysias should be compelled by me to do the same.

Socrates:: This indeed I believe, while you remain affected as you are at present.

Phaedrus:: Speak then confidently.

Socrates:: But will you not permit me to suppose that the same young man is present, to whom I addressed my former discourse, lest, in consequence of not hearing my recantation, he should rashly gratify one who is not a lover?

Phaedrus:: He will always be very nearly present with you, when you are willing he should be so.

Socrates:: In this manner then, O beautiful young man, understand that the former discourse was that of Phædrus the Myrrhinusian, the offspring of Pythocles; but that this which I am now about to deliver is the discourse of Stesichorus the Imeræan, and the son of Euphemus. But he began his oration as follows:

“The discourse is not true which asserts that, though a lover should be present, one who is not a lover ought to be gratified before him, because the one is agitated with fury, but the other is prudent in his conduct. For if it was simply true that mania is evil, this would be beautifully asserted. But now the greatest goods are produced for us through mania, and are assigned to as by a divine gift. For the predicting prophetess at Delphi, and the priestesses in Dodona have, when insane procured many advantages, both privately and publicly, to the Greeks; but when they have been in a prudent state, they have been the cause of very trifling benefits, or indeed of none at all. And if we should speak of the Sibyl, and others who have employed deific prophecy, rightly predicting many things to many respecting futurity, we should be too prolix, and at the same time only speak of that which is manifest to every one. This indeed is worthy of being testified, that such of the ancients as gave names to things, did not consider mania as either base or disgraceful. For they did not connect the appellation of mania with that most beautiful art, by which we are enabled to judge of the future, as if it was something noxious; but they gave it a name of this kind, as something beneficial, when it subsists through a divine allotment. But men of the present day, being ignorant of what is becoming, by the insertion of the letter τ, call it μαντικη, or the art of divining. Indeed the investigations of futurity, by prudent men, which take place through birds, and a variety of other tokens, as proceeding from the dianoëtic part through human intelligence, they denominated intellect and *intellective opinion*; which the moderns, through a reverence of the ω, denominate *augurial*, or pertaining to augury. By how much more perfect and honorable, therefore, prophecy is than augury, and the name and operation of the one than the name and operation of the other, by so much did the ancients testify that mania proceeding from divinity is more beautiful than prudence which, proceeds from men. But indeed, in the greatest diseases and labors to which certain persons are sometimes subject through the indignation of the Gods in consequence of guilt, mania when it takes place, predicting what they stand in need of, discovers a liberation from such evils, by flying to prayer and the worship of the Gods. Hence, obtaining by this means purifications and the advantages of initiation, it renders him who possesses it free from disasters, both for the present and future time, by discovering to him who is properly insane and possessed by divinity a solution of his present evils. But the third species is a possession and mania descending from the Muses, which receiving a soul tender and solitary, rouses and agitates it with Bacchic fury, according to odes and other species of poetry; in consequence of which, by adorning the infinite actions of antiquity, it becomes, the means of instructing posterity. But he who approaches to the poetic gates without the mania of the Muses, persuading himself that he can become a poet, in a manner perfectly sufficient from art alone, will, both as to himself and his poetry, be imperfect; since the poetry which is produced by prudence vanishes before that which is the progeny of mania. So many then are the beautiful works arising from divine mania, and still more than these, which, if it was requisite, I should relate. So that we ought not to be afraid of mania; nor should any reason disturb us, which endeavors to evince that we ought to prefer a prudent friend to one who is divinely agitated: for he who asserts this, ought likewise to show, in order to gain the victory, that love was not sent from the Gods for the utility of the lover and his beloved. But, on the contrary, it must now be shown by us that a mania of this kind was sent by the Gods, for the purpose of producing the greatest felicity. The demonstration, indeed, will be to the unworthy incredible, but to the wise, an object of belief. It is necessary, therefore, in the first place, that, beholding the passions and operations of the divine and human soul, we should understand the truth concerning the nature of each. Let this then be the beginning of the demonstration:

Every soul is immortal: for that which is perpetually moved is eternal. But that which moves another and is moved by another, when it has a cessation of motion, has also a cessation of life. Hence that alone which moves itself, because it does not desert itself, never ceases to be moved; but this also is the fountain and principle of motion to other things which are moved. But a principle is unbegotten: for every thing which is generated, is necessarily generated from a principle, while the principle itself is incapable of being generated. For neither could it any longer be a principle, if it was generated from an external cause. Since then it is unbegotten, it is also necessary that it should be incorruptible: for, should the principle become extinct, it could neither renew its being from another, nor generate another from itself, since it is necessary that all things should be generated from that which is the principle. And thus the beginning of motion is derived from that which moves itself: and this can neither be destroyed nor generated. For, if this were admitted, all heaven and earth falling together must stop; nor could any force be found, whence being moved, they would be again generated. Since then it appears that a self-motive nature is immortal, he who asserts that this is the very essence and definition of soul, will have no occasion to blush. For every body to which motion externally accedes, is inanimate. But that to which motion is inherent from itself, is animated; as if this was the very nature of soul. And if there is nothing else which moves itself except soul, soul is necessarily without generation, and immortal. And thus much may suffice, concerning the immortality of the soul.

But respecting its idea we must: speak after the following manner: To give a perfect description of its nature, would indeed be the employment of a narration every way prolix and divine; but to describe a certain similitude of this idea is the business of a human and shorter discourse. Let it then be similar to the kindred power of a winged chariot and charioteer. All the horses and chariots of the Gods are indeed good, and composed from things good; but those of other natures are mixed. And, in the first place, our principal part governs the reins of its two-yoked car. In the next place, one of the horses is good and beautiful, and is composed from things of this kind; but the other is of a contrary nature, and is composed of contrary qualities: and on this account our course is necessarily difficult and hard. But we must endeavor to explain why it is called in a certain respect a mortal and immortal animal. Every soul takes care of every thing which is inanimate, and revolves about the whole of heaven, becoming situated at different times in different forms. While it is perfect, indeed, and winged, its course is sublime, and it governs the universe. But the soul whose wings suffer a defluxion verges downward, till something solid terminates its descent; whence it receives a terrene body, as its destined receptacle, which appears to move itself through the power of the soul: and the whole is called an animal composed from soul and body, and is surnamed a mortal animal. But that which is immortal is perceived by no rational deduction, except that which is hypothetical and feigned: since we neither see, nor sufficiently understand, that a God is a certain immortal animal endued with a soul, and possessing a body naturally conjoined with soul, through the whole of time. These things however are asserted, and may exist, as it pleases divinity. But let us now declare the cause through which the wings were cast aside, and fell from the soul. And this is of the following kind: There is a natural power in the wings of the soul, to raise that which is weighty on high, where the genus of the Gods resides. But of every thing subsisting about body, the soul most participates of that which is divine. But that which is divine is beautiful, wise, and good, and whatever can be asserted of a similar kind. And with these indeed the winged nature of the soul is especially nourished and increased: but it departs from its integrity, and perishes, through that which is evil and base, and from contraries of a similar kind. Likewise Jupiter, the mighty leader in the heavens, driving his winged chariot, begins the divine procession, adorning and disposing all things with providential care. The army of Gods and dæmons, distributed into eleven parts, follows his course: but Vesta alone remains in the habitation of the Gods. But each of the other Gods belonging to the twelve, presides over the office committed to his charge. There are many, therefore, and blessed spectacles and processions within the heavens, to which the genus of the blessed Gods is converted as each accomplices the proper employment of his nature. But will and power are the perpetual attendants of their processions: for envy is far distant from the divine choir of Gods. But when they proceed to the banquet, and the enjoyment of delicious food, they sublimely ascend in their progression to the subcelestial arch. And, indeed, the vehicles of the Gods being properly adapted to the guiding reins, and equally balanced, proceed with an easy motion: but the vehicles of other natures are attended in their progressions with difficulty and labor. For the horse, participating of depravity, becomes heavy; and when he has not been properly disciplined by the charioteers, verges and gravitates to the earth. And in this case labor, and an extreme contest, are proposed to the soul. But those who are denominated immortals, when they arrive at the summit, proceeding beyond the extremity of heaven, stand on its back: and while they are established in this eminence, the circumference carries them round, and they behold what the region beyond the heavens contains. But the supercelestial place has not yet been celebrated by any of our poets, nor will it ever be praised according to its dignity and worth. It subsists, however, in the following manner; for we should dare to affirm the truth, especially when speaking concerning the truth: without color, without figure, and without contact, subsisting as true essence, it alone uses contemplative intellect, the governor of the soul; about which essence, the genus of true science, resides. As the dianoëtic power, therefore, of divinity revolves with intellect and immaculate science, so likewise the dianoëtic power of every soul, when it receives a condition accommodated to its nature, perceiving being through time, it becomes enamored with it, and contemplating truth, is nourished and filled with joy, till the circumference by a circular revolution brings it back again to its pristine situation. But in this circuit it beholds justice herself, it beholds temperance, and science herself: not that with which generation is present, nor in which one thing has a particular local residence in another, and to which we give the appellation of beings; but that which is science in *true being*. And, besides this, contemplating and banqueting on other true beings in the same manner, again entering within the heavens, it returns to its proper home. But, when it returns, the charioteer, stopping his horses at the manger, presents them with ambrosia, and together with it, nectar for drink. And this is the life of the Gods.

But, with respect to other souls, such as follow divinity in the best manner, and become similar to its nature, raise the head of the charioteer into the supercelestial place; where he is borne along with the circumference; but is disturbed by the course of the horses, and scarcely obtains the vision of perfect realities. But other souls at one time raise, and at another time depress, the head of the charioteer: and, through the violence of the horses, they partly see indeed, and are partly destitute of vision. And again, other souls follow, all of them affecting the vision of this superior place: but from being unable to accomplish this design; they are carried round in a merged condition, spurning against and rushing on each other, through a contention of precedency in their course. Hence the tumult, contest, and perspiration, are extreme. And here, indeed, many become same through the fault of the charioteers, many break many of their wings, and all of them, involved in mighty labor, depart destitute of the perception of reality; but after their departure they use an aliment composed from opinion; through which there is a great endeavor to behold where the plain of truth is situated. For, from a meadow of this kind, that which is best in the soul receives convenient nutriment; and from this the nature of the wing is nourished, by which the soul is enabled to ascend. And this is the law of Adrastia, that whatever soul attending on divinity has beheld any thing of reality shall be free from damage, till another period takes place: and that if she is always able to accomplish this, she shall be perpetually free from the incursions of evil. But if, through an impotency of accomplishing this end, she has not perceived reality, and from some misfortune, and being filled with oblivion and depravity, she becomes heavy and drowsy, breaks her wings, and falls again on the earth, then this law prevents her in her first generation from being implanted in some brutal nature, but commands the soul which has seen the most, to inform the body of a philosopher, or of one desirous of beauty; of a musician, or of one devoted to love. But it orders the soul, whose perceptions rank in the second class, to descend into a legitimate king, or a man studious of empire and war. But it distributes a soul of the third order into the governor of a republic, or the ruler of a family, or the master of a trade. And again, it distributes a soul of the fourth rank into one engaged in gymnastic exercise, or in procuring remedies, and taking care of the body: but souls of the fifth order it distributes into prophets and mystics. In the sixth, it makes a distribution into a poetic life. In the seventh, into a geometrician or artificer. In the eighth, into a sophist or popular character. And in the ninth, into a tyrant. But in all these, he who passes his life justly will afterwards obtain a better condition of being: but he who acts unjustly will pass into a worse state of existence. For no soul will return to its pristine condition till the expiration of ten thousand years: since it will not recover the use of its wings before this period; except it is the soul of one who has philosophized sincerely, or together with philosophy has loved beautiful forms. These, indeed, in the third period of a thousand years, if they have thrice chosen this mode of life in succession, and have thus restored their wings to their natural vigor, shall in the three thousandth year, fly away to their pristine abode. But other souls, having arrived at the end of their first life, shall be judged. And of those who are judged, some proceeding to a subterranean place of judgment, shall there sustain the punishments they have deserved. But others, in consequence of a favorable judgment, being elevated into a certain celestial place, shall pass their time in a manner becoming the life they have lived in a human shape. And in the thousandth year, both the kinds of those who have been judged, returning to the lot and election of a second life, shall each of them receive a life agreeable to his desire. Here also the human soul shall pass into the life of a beast, and from that of a beast again into a man, if it has first been the soul of a man. For the soul which has never perceived the truth, cannot pass into the human form. Indeed it is necessary to understand man, denominated according to species, as a being proceeding from the information of many senses to a perception contracted into one by the reasoning power. But this is a recollection of what our soul formerly saw with divinity, when in a perfect condition of being; and when she despised what we now consider as realities, and was supernally elevated to the contemplation of that which is true. On this account, the dianoëtic power alone of the philosopher is justly winged. For the philosophic memory perpetually adheres as much as possible to those concerns, by an application to which even a God becomes divine. But he who properly uses meditations of this kind, being always initiated in perfect mysteries, alone acquires true perfection. And such a one being separated from human studies and pursuits, and adhering to that which is divine, is accused by the multitude as insane, while in the mean time, from being filled with divine enthusiasm, he is concealed from the multitude. This whole discourse, therefore, which respects the fourth kind of fury, tends to the means by which any one, on perceiving a portion of terrene beauty, from a reminiscence of that which is true, may recover his wings, and, when he has recovered them, may struggle to fly away. But since he cannot accomplish this according to his wish, like a bird looking on high and despising inferior concerns, he is accused as one insanely affected. This enthusiasm, therefore, is of all enthusiasms the best, and is composed from the best, both to the possessor and the participant: and he who is under the influence of this mania when he loves beautiful objects, is denominated a lover. For, as we have before observed, the soul of every man has from its nature perceived realities, or it could not have entered into the human form. But to recollect superior natures from objects of sense, is not easy to all men; neither to those who then were engaged but a short time in the contemplation of those divine objects; nor to those who descending hither have been unfortunate; nor to such as, turning to injustice from certain associations, have become oblivious of the sacred mysteries which they once beheld. And hence but a few remain whose memory is sufficient for this exalted purpose. But these, when they behold any similitude of supernal forms, they are astonished, and as it were rapt above themselves: and at the same time they are ignorant what this passion may be, because they are not endued with a sufficient perception. Indeed, we behold no splendor in similitudes which are here, of justice, temperance, and whatever else is precious in the soul; but very few are able, and even to these it is difficult, through certain dark instruments, to perceive from these images the genus of that which is represented. But we then saw splendid beauty, when we obtained together with that happy choir, this blessed vision and contemplation. And we indeed beheld it together with Jupiter, but others in conjunction with some other God; at the same time being initiated in those mysteries which it is lawful to call the most blessed of all mysteries. And these divine orgies were celebrated by us while we were perfect, and free from those evils which awaited us in a succeeding period of time. We likewise were initiated in, and became spectators of, entire, simple, quietly stable, and blessed visions, resident in a pure light; being ourselves pure, and liberated from this surrounding vestment, which we denominate body, and to which we are now bound, like an oyster to its shell.

With these speculations, therefore, we should gratify our memory; for the sake of which, and through a desire of those realities which we once be held, I have given such an extent to my discourse. But beauty, as we have said, shone upon us during our progressions with the Gods; but on our arrival hither we possessed the power of perceiving it, shining most perspicuously, through the clearest of our senses. For sight is the most acute of all our corporeal senses; though even through this wisdom cannot be perceived. If indeed it could, what vehement love would it excite, by presenting to the eye some perspicuous image of itself! And the same may be said of every thing else which is the object of love. But now beauty alone is allotted the privilege of being the most apparent and lovely of all things. He, therefore, who has not recently descended hither, or whose manners are depraved, will not very swiftly be excited from hence thither to a survey of the beautiful itself, by beholding that among sensible objects which receives the same appellation. Hence, he will not reverence it while he beholds it; but, giving himself up to pleasure, he will endeavor to walk about and generate after the manner of a quadruped: and, injuriously converting with others, he will neither be afraid nor ashamed of pursuing pleasure contrary to nature. But he who has been recently initiated, and who formerly was a spectator of many blessed visions, when he beholds some deiform countenance, elegantly imitative of beauty, or some incorporeal idea, at first indeed he is struck with horror, and feels something of that terror which formerly invaded him; but, from all after survey, he venerates it as a God: and if it was not for the dread of being thought vehemently insane, he would sacrifice to his beloved, as to a statue and a God. But, in consequence of surveying this beautiful object, he experiences a mutation in his feelings, a perspiration and unaccustomed heat, such as horror produces. For, receiving the influx of beauty through his eyes, he becomes hot, and this irrigates the nature of his wings; but when heated, whatever belongs to the germinating of his pinions liquefies, and which formerly being compressed through hardness restrained the vigor of their shoots. But an influx of nutriment taking place, the quill of the wing swells, and endeavors to burst forth, through the whole form of the soul: for the whole was formerly winged. The whole, therefore, in this case, becomes fervid, and leaps upward. And as infants, during the growth of their teeth, are tormented with the friction and pain of their gums, in the same manner is the soul affected with respect to the mooting forth of its wings: For it becomes subject to an immoderate heat, titillation, and torment. When, therefore, it beholds the beauty of some human form, then imbibing the parts which flow from thence, and which is on this account called desire, it becomes irrigated and heated, ceases to be in pain, and rejoices. But when it is separated from this vision of beauty, and becomes dry through heat, then the orifices of the passages through which the feathers endeavored to shoot forth, being closed, impede the offspring of the wing. But these being shut in together with desire, and leaping about like things subject to palpitation strike against the avenues of their progression. Hence, the whole soul, becoming pierced on all sides in a circle, is agitated with fury, and tormented; but, through the memory of the beautiful, again exults with delight. But, from the mixture of both these, it is grievously tormented, through the novelty of the passion, and becomes dubious and raging; and, while it is thus furious, can neither sleep by night, nor abide any where by day; but runs about agitated by desire, wherever there is any probability of obtaining the vision of beauty. But beholding the beloved beautiful object, and deducing desire, as through a channel, it now frees from confinement what was before enclosed; and, by this means enjoying the benefit of respiration, is liberated from its incitements and parturitions. For the present, therefore, it reaps the advantage of this most delicious pleasure; by which it is so charmed, that it would never voluntarily depart from its allurements, nor does it esteem any thing so much as this beloved beauty, but delivers over to oblivion its parents, brethren, and friends; and, besides this, considers the dissipation of its possessions through negligence as a thing of no consequence, and perfectly despises those legal institutions and decencies in which it formerly gloried; and is always prepared for every kind of servitude and subjection, so that it may be near to the object of its desire. For, besides reverencing that which possesses beauty, it finds that this alone is the physician of its greatest diseases.

This passion therefore, O beautiful youth, which is the subject of my present discourse, is called, by men Love: but if you should hear how it is denominated by the Gods, you would probably laugh, on account of your youth. But I think that certain Homerics assert, from some recondite verses, that there are two poems upon Love, one of which calls him perfectly injurious, and not very elegant; but they celebrate him as follows:

By men Love's flying called; but, forced to fly,
He's named the winged, by the powers on high.

In these it is partly lawful to believe, and partly not. This however is the cause, and the passion of lovers. When any one, therefore, of the attendants upon Jupiter is taken captive, such a one is able to bear with greater firmness the burthen of this winged God: but such as are subservient to Mar's, and revolve in conjunction with that deity, when they are ensnared by love, and think that they are in any respect treated unjustly by their beloved, they are easily incited to slaughter, and are ready to destroy both themselves and the objects of their regard. And thus every one honors the God, round whom he harmoniously revolves, and imitates his life as much as possible, and as long as he remains free from corruption: and after this manner he lives here his first: generation, and associates with, and conducts himself towards, his beloved and others. Every one, therefore, chooses the love of beauty after his own fashion, and, as if he considered it with respect to himself a God, he fabricates and adorns it like a statue, and as that which is the object of his adoration and sacrifice. Such, therefore, as are the followers of Jupiter seek after a soul belonging to this God for the object of their affection. Hence, they consider whether he is naturally philosophic, and adapted to command; and when they find their beloved with' such dispositions, they endeavor by all possible means to render him completely such. If, therefore, they have not already endeavored to obtain what they desire, then, through the incitements of love, they anxiously strive for its possession; learning by what means it may be acquired; and investigating by themselves how to discover the nature of their proper deity, they at length find it, through being compelled to look with vehemence towards their presiding God. But when they become connected with him through memory, and are agitated by a divine influence, they receive from him manners and pursuits, as far it is possible for man to participate of divinity. And as they consider the object of their love as the cause of all this, their love becomes still more vehement. If, too, they draw their afflatus from Jupiter, then, like the female priestesses of Bacchus, they pour their enthusiasm into the soul of their beloved, and by this means become as much as possible most similar to their ruling God. But such as follow Juno seek after a royal soul; which when they have discovered, they act in every respect towards it in a manner similar to the attendant on Jupiter. But the followers of Apollo, and of each of the other Gods, imitating their several deities, seek after a beloved object who is naturally affected like themselves. This when they have obtained, both by imitation, persuasion, and elegant manners, they endeavor by all means to lead their beloved to the pursuits and idea of their peculiar God; not, indeed, by employing envy and illiberal malevolence towards the objects of their affection, but by endeavoring to conduct them to a perfect similitude to the God whom they particularly adore. The willing desire, therefore, and end of true lovers, if they obtain the object of their pursuit, is such as I have described: and thus they become illustrious and blessed, through the fury of love towards the beloved, when the beloved object is once obtained.

But every one who is allured is captivated in the following manner. In the beginning of this fable, we aligned a triple division to every soul; and we established two certain species as belonging to the form of the horses, and considered the charioteer as the third species. Let this division, therefore, remain the same for us at present. But one of the horses, we said, was good, and the other not. But we have not yet declared what the virtue is of the good horse, or the vice of the bad one; it is therefore proper that we should now declare it. The good horse, therefore, subsists in a more beautiful condition, is erect, well-articulated, has its neck lofty, its nose somewhat aquiline, its color white, and its eyes black. It is likewise a lover of honor, together with temperance and modesty; is the companion of true opinion, is not whipped, and is only to be governed by exhortation and reason. But the bad one is crooked, various, rash in its motions, stiff and short-necked, flat-nosed, of a black color, having its eyes gray, and being full of blood; is the companion of injury and arrogance, has its ears hasty and deaf, and is scarcely obedient to the whip and the spur. When, therefore, the charioteer beholds the amatory eye inflaming all the soul, through sensible perception, and filling it with the incentives of titillation and desire, then, as always, the horse which is obedient to the charioteer, violently checking its motions, through shame restrains itself from leaping on the beloved object. But the other cannot be held back, either by the spur or whip of the charioteer; but hurries along violently, leaping and exulting, and, fully employing the charioteer and its associate, compels both of them to rush along with it to venereal delight. Both these, however, resist its violence from the beginning, and indignantly endure to be thus compelled to such dire and lawless conduct. But at length, when there is no end of the malady, in consequence of being borne along by compulsion, they now give way, content to do what they are ordered, and deliver themselves up to the survey of the splendid aspect of the beloved. But the charioteer, from a vision of this kind, recovers the memory of the nature of beauty, and again perceives it firmly established, together with temperance, in a pure, and holy seat. In consequence, however, of such a perception he is terrified, and through reverence falls supine, and at the same time is compelled to draw back the reins with such vehemence, that both the horses fall upon their hips; the one indeed willingly, through his not making any resistance; but the other with arrogant opposition, through his extreme unwillingness to comply. But when they have departed to a greater distance in their course, the one, through shame and astonishment, moistens all the soul with sweat; but the other, being liberated from the pain which he had suffered through the bridle and the fall, is scarcely able to breathe, and, full of anger, reviles the charioteer and his partner in the course, as deserting order and the compact through effeminacy and fear; and again compelling them to proceed, though perfectly unwilling, he scarcely complies with them, requesting some delay. But when the appointed time for which the delay was granted arrives, and which they feign themselves to have forgotten, then the vicious horse, violently urging, neighing, and hurrying them away, compels them to address the beloved again in the same language as before. When, therefore, they approach near, then bending and extending his tail, and champing the bridle, he draws them along with importunate impudence. But the charioteer, being still more affected in this manner, and falling down as it were from the goal, pulls back the reins with still greater violence from the teeth of the injurious horse, represses his reviling tongue and bloody jaws, fixes his legs and hips on the ground, and thus torments him for his behavior. But when the vicious horse has often endured a punishment of this kind, he is at length rendered humble and submissive, and follows the providential directions of the charioteer; so that he is lost as it were on seeing a beautiful object. Hence it sometimes happens, that the soul of a lover follows its beloved with reverence and fear, and that the lover pays it every kind of observance and attention as if it was equal to a God; and this not with any dissimulation, but in consequence of being really thus affected: so that, when the beloved happens to be naturally a friend, then his friendship conspires into one with that of his obsequious lover.

If, therefore, in some former period of time, he has been deceived by his associates, or by some other persons, asserting that it was base to be familiar with a lover, and has on this account rejected his lover; yet advancing age, and the wants of nature, lead him to the converse of love.

For it was never decreed by fate, either that the evil should be a friend to the evil, or that the good should not be a friend to the good. When, therefore, the youth admits his lover to an intimate familiarity with him, then the benevolence of the lover astonishes the beloved, in consequence of perceiving that all other friends and associates exhibit no portion of friendship which can be compared with that of a friend divinely inspired. But when the lover continues to act in this manner for a long space of time, living with his beloved in high familiarity, frequently touching him in gymnastics and other associations, then the fountain of that effluxion which Jupiter, when enamored with Ganymedes, denominated *desire*, streaming abundantly towards the lover, is partly infused into him, and partly through its exuberance flows forth externally. And as air, or a certain echo, when received by smooth and solid bodies, is again impelled to the place from whence it proceeded; so this effluxion of beauty, flowing back again to the beautiful through the eyes, as it is naturally adapted to penetrate into the soul, and stimulate the avenues of the wings, now irrigates, and excites them to moot forth their feathers, and fills the soul of the beloved with love. Hence he loves, but is doubtful concerning what he loves; and neither knows what he suffers, nor is able to relate it: but just like an eye infected with the vision of another eye which is diseased, he is unable to assign the cause of his malady, and is ignorant that he beholds himself in his lover, as in a mirror. Hence, when his lover is present, he, like him, ceases to be in pain; but, when he is absent, he desires in the same manner as he is desired, possessing, instead of love, nothing more than an image of love; and he denominates it, and thinks that it is not love, but friendship. He desires, therefore, in a manner similar to his lover, though more feebly, to see, to touch, to love, to sit together; and, as it is reasonable to suppose, he performs all this afterwards with the greatest celerity. Hence, in their most intimate associations, the intemperate horse of the lover calls on the charioteer, and tells him that he ought to be gratified with a small degree of pleasure, as the reward of such mighty labors: but the same horse of the beloved has, indeed, nothing to say; but, distended and dubious, it embraces the lover, full of vehement benevolence towards him, and is prepared to comply in every respect with the desires of the beloved. But the conjoined horse, together with the charioteer, resists this familiarity through reason and shame. If, therefore, the better parts of the dianoëtic power obtaining the victory lead the lovers to an orderly and philosophic mode of conduct, then they pass through the present life with felicity and concord, subduing themselves, and adorned with modest manners; the vicious part of the soul being in subjection, and the virtuous, free. But, arriving at the end of the present life, they become winged and light, in consequence of being victors in one of the truly Olympic contests; a greater good than which, neither human temperance, nor divine fury, can extend to man. But if they lead a more arrogant and unphilosophic life, but at the same time united with ambition, their intemperate horse will perhaps lead their unguarded souls into intoxication, or some other indolent habits; cause them to embrace those delights which the multitude consider as the most blessed of all pleasures; and will fix them in continual endeavors to gain the object of their desire. They will, therefore, exercise themselves in these delights, but this, however, rarely; because the whole of the dianoëtic nature does not consent to such enjoyments. These too will live in friendship with each other, as well as the former, through the external effluxion of love, but in a less fervent degree; thinking that they ought both to give and receive from each other the greatest confidence, which it is unlawful to dissolve, and by this means become enemies instead of friends. But, in their exit from the present body, they will not be winged indeed, but will be excited to emit their pinions; so that they will carry with them no small reward of amatory fury. For the law forbids those who are now beginning the celestial progression, to enter into darkness, and the subterranean journey; but orders them, in consequence of leading a splendid life, to be happy with each other during their progressions; and that, when they are similarly winged, this shall take place for the sake of love. Such then, O young man, so numerous, and so divine are the benefits which the friendship of a lover will confer on you. But the familiarity of one who is void of love, being mingled with mortal temperance, and dispensing mortal and niggardly concerns, will generate in the soul of its friendly associate that illiberality which is considered as virtue by the vulgar, and will cause it to wander for nine thousand years with a rolling motion upon and under the earth.

And thus, O beloved Love, through the impulse of Phædrus, we have rendered and extended to thee a recantation, clothed in poetic figures and expressions, in the most beautiful and best manner we are able to accomplish. Wherefore, pardoning what we before asserted, and gratefully receiving our present discourse, continue benignantly and propitiously the amatory art which you have conferred on me, neither taking away nor diminishing its possession through avenging anger. But grant, that among such as are beautiful I may yet be more honored than at present. And if Phædrus and I have formerly said any thing severe against thy divinity, grant that, accusing Lysias as the author of such a discourse, we may desist from all such assertions in future; and besides this, graciously convert him to the study of philosophy, like his brother Polemarchus, so that this lover of his may no longer tend hither and thither, without any stability, as is the case at present, but may ingenuously pass his life in future, in conjunction with love and philosophic discourses.

Phaedrus:: I unite with you in prayer, Socrates, if it is better that all this should happen to us. But I have some time since wondered at your discourse; as it so far surpasses that which was formerly delivered, that I am afraid, lest Lysias himself should appear but mean, if he is desirous to enter the lists against another. And, indeed, but lately a very principal person in the commonwealth branded him with this very epithet; calling him, through the whole of his accusation, nothing more than a composer of orations. Perhaps, therefore, he will desist through ambition from writing any more.

Socrates:: You assert, O young man, a ridiculous opinion; and you very much wander from the intention of your associate, if you think him so extremely timid: but perhaps you think that his reviler has spoken the truth in what he has said against him.

Phaedrus:: To me it appears so indeed, Socrates: and you yourself know, that the most powerful and venerable in a city are ashamed to compose orations, and to leave their writings behind them, dreading the opinion of posterity, lest they should be called sophists.

Socrates:: You are ignorant, Phædrus, that the proverb, *A couch is pleasant*, is derived from that long curvature which is about the Nile: and, besides this, you are ignorant that the most prudent of politicians particularly love to compose orations, and to leave their writings behind them; and are so fond of those who extol their works, as to give the first place in their writings to such as celebrate their productions every where.

Phaedrus:: How do you mean? For I do not understand you.

Socrates:: What, do not you know that, in the beginning of a politician’s book, the very first thing that makes its appearance is the person by whom the book is praised?

Phaedrus:: How?

Socrates:: Why, it says, that it is approved by the council, or the people, or by both. And he who says this, says it, at the same time extremely reverencing and celebrating himself as the author. But after this he speaks in such a manner as to show his wisdom to his admirers, and sometimes accomplishes this in a very long discourse. Does this, therefore, appear to you to be any thing else than a written oration?

Phaedrus:: It does not.

Socrates:: If, therefore, this happens to be approved, he departs rejoicing from the theatre, like a poet. But if it should be rejected, and he should be excluded from composing orations, and should be considered as unworthy to be an author, both he and his friends are afflicted on the account.

Phaedrus:: And, indeed, very much so.

Socrates:: In this, therefore, it is sufficiently evident, that they do not despise a study of this kind, but hold it in the highest estimation.

Phaedrus:: Entirely so.

Socrates:: But what, when a rhetorician, or a king, acquires an ability like that of Lycurgus, or Solon, or Darius, so as to be reckoned an immortal writer by the city, will he not think himself equal to a God, while he is yet alive? and will not posterity entertain the same opinion respecting him, upon surveying his writings?

Phaedrus:: Very much so.

Socrates:: Do you think then that any such person, however malevolent he may be, would revile Lysias, merely because he is a writer?

Phaedrus:: It does not seem probable from what you have said: for he would revile, as it appears, his own pursuit.

Socrates:: From hence, therefore, it must be evident to every one, that no one is scandalous merely from composing orations.

Phaedrus:: For how should he?

Socrates:: But this I think is in reality shameful, not to write and speak in a becoming manner, but shamefully and viciously.

Phaedrus:: Evidently so. What then is the mode of writing well and ill?

Socrates:: Have we not occasion, Phædrus, to inquire this of Lysias or of some other, who has either at any time written any thing, or is about to write; whether his composition is political, or on private subjects; whether it is in measure like the works of a poet, or without measure like those of a private person?

Phaedrus:: Do you ask, if we have not occasion? For what purpose, as I may say, is our very life, but for the sake of pleasures of this kind? For, certainly, it is not for the sake of those pleasures which pain must, necessarily antecede, or else no pleasure would subsist; which is nearly the case with all pleasures respecting the body. And, on this account, they are very justly denominated servile.

Socrates:: But we have leisure, as it appears: and the grasshoppers seem to me singing over our heads, as in the heat, and, discoursing with one another, to look also upon us. If, therefore, they should behold us, like the multitude, not discoursing in mid-day, but sleeping and allured by their singing, through the indolence of our dianoëtic power, they might very justly deride us; thinking that certain slaves had taken up their abode with them, in order to sleep like cattle by the side of the fountain during the fervor of the meridian sun. But if they perceive us engaged in discourse, and not captivated by their allurements as if they were Syrens, but sailing by them to our destined port, perhaps they will rejoice to bestow upon us that gift which, by the consent of the Gods, they are able to deliver to men.

Phaedrus:: But what gift is this which they possess? For I do not recollect that I ever heard what it is.

Socrates:: And yet it is not proper that a man studious of the Muses should be ignorant of things of this kind. But it is said that these insects were formerly men, before the Muses had a being; that when the Muses made their appearance, and had given birth to the song, some of these were so ensnared by the pleasure which it produced, that through singing they neglected the proper sustenance of the body, and, thus wasting away, at length perished: but that from these the race of grasshoppers was produced, who received this gift from the Muses, that they should never want nutriment, but should continue singing without meat or drink till they died; and that after death they should depart to the Muses, and inform them what Muse was honored by some particular person among us. Hence that, by acquainting Terpsichore with those who reverence her in the dance, they render her propitious to such. By informing Erato of her votaries, they render her favorable in amatory concerns; and the rest in a similar manner, according to the species of veneration belonging to each. But that they announce to the most ancient Calliope, and after her to Urania, those who have lived in the exercise of philosophy, and have cultivated the music over which they preside; these Muses more than all the rest being conversant with the heavens, and with both divine and human discourse; and sending forth the most beautiful voice. On many accounts, therefore, it is necessary to say something, and not to sleep in mid-day.

Phaedrus:: It is necessary, indeed.

Socrates:: Let us, therefore, consider what we lately spoke of, viz. after what manner any one may both speak and write properly, or improperly.

Phaedrus:: By all means.

Socrates:: Is it not, therefore, necessary, that he who is about to speak with propriety should possess a true dianoëtic perception of that which is the subject of his discourse?

Phaedrus:: I have heard, my dear Socrates, that it is not necessary that he who engages in the profession of an orator should learn what is truly just, but only that which appears so to the multitude, who undertake to judge; nor, again, what is truly good or beautiful, but only what appears to be so: for that persuasion is derived from these, and not from truth.

Socrates:: The sayings of the wise, Phædrus, are by no means to be despised, but we should rather consider the meaning of their assertions; and, consequently, we must not pass by what you have now said.

Phaedrus:: You speak properly.

Socrates:: Let us then consider this matter as follows.

Phaedrus:: How?

Socrates:: Suppose I should persuade you to fight your enemies on horse-back, but at the same time both of us should be ignorant what a horse is; and that I only should know respecting you, that Phædrus thinks a horse is an animal which has the greatest ears of all domestic animals.

Phaedrus:: This would be ridiculous indeed, Socrates.

Socrates:: Not yet; but when I should earnestly persuade you to do this by a discourse composed in praise of an ass, calling him a horse, and asserting that he is a most excellent animal, useful for domestic and military purposes, able to carry burdens, and adapted for a variety of other employments.

Phaedrus:: This, indeed, would be perfectly ridiculous.

Socrates:: Is it not, therefore, better that a friend should be ridiculous, than that he should be wicked, and an enemy?

Phaedrus:: It appears so.

Socrates:: When an orator, therefore, who is ignorant of good and evil, endeavors to persuade a city in a like condition, not indeed by praising the shadow of an ass, as if it was that of a horse, but by praising evil, as if it was good, being anxiously solicitous about the opinion of the multitude, and thus persuades them to do evil instead of good; what crop do you think the orator can reap after such a semination?

Phaedrus:: Not a very good one.

Socrates:: Have we not therefore, my friend, reviled the art of speaking in a more rustic manner than is becoming? For the art itself will, perhaps, thus address us: “What delirium, O wonderful men, has invaded you? For I compel no one who is ignorant of truth to learn how to speak: but if any one will take my advice, he will then only employ me, when he has acquired the possession of truth. This, then, I assert as a thing of great consequence, that without me even he who knows realities will not, for all this, be able to procure persuasion.” Will not the art, therefore, speak justly, by making such a declaration?

Phaedrus:: I confess it, if our subsequent reasons evince that rhetoric is an art. For I think I have heard some arguments, which assert that it deceives, and that it is not an art, but an unartificial exercise. But the true art of speaking, says Laco, never was, nor ever will be unaccompanied by truth. This then is what they say, Socrates. But, bringing them hither, let us inquire of them what they assert, and in what manner.

Socrates:: Be present then, ye generous animals, and persuade the beautiful youth, Phædrus, that unless he philosophizes sufficiently, he will never sufficiently speak about any thing. But let Phædrus answer to the interrogations. Is not the whole rhetorical art that which leads the soul by discourses, not in judicial matters only, and other public concerns, but also in private affairs, and these whether trifling or important? And is there any thing more honorable than to act according to the true rules of this art, both in important and inconsiderable affairs? Or have you not heard that this is the case?

Phaedrus:: I am not, by Jupiter, perfectly acquainted with all this. But it is spoken of, and written about, as an art for the most part conversant with judicial matters and speeches; but I have not heard that it extends any further.

Socrates:: What, have you heard of the rhetorical art which Nestor and Ulysses exercised at Troy, but have never heard about that of Palamedes?

Phaedrus:: I have indeed, by Jupiter, heard about the orations of Nestor: unless you will prove that Gorgias is a certain Nestor, or Thrasymachus and Theodorus a certain Ulysses.

Socrates:: Perhaps they may be so; but let us drop any further discourse about these. And do you inform me what litigators do in judicial matters: do they not contradict? Or shall we say they do any thing else?

Phaedrus:: Nothing else.

Socrates:: But are not their contradictions about just and unjust?

Phaedrus:: Certainly.

Socrates:: But does not he who accomplishes this by art, cause the same thing to appear to the same persons, whenever he pleases, at one time just, and at another time unjust?

Phaedrus:: But what then?

Socrates:: And in his oration does he not cause the same things to appear to the city at one time good, and at another time just the contrary?

Phaedrus:: Certainly.

Socrates:: And do we not know that the Eleatic Palamedes is reported to have been able by his art to cause the same things to appear to his hearers, both similar and dissimilar, one and many, abiding and borne along?

Phaedrus:: Certainly.

Socrates:: The contradictory art, therefore, takes place, not only in judicial matters and orations, but, as it appears, about every thing which is the subject of discourse; since it is one art, enabling us to assimilate every thing to every thing, both such things as are capable of assimilation, and those to which they are able to be assimilated; and, besides this, to lead them into light, notwithstanding their being assimilated and concealed by something else.

Phaedrus:: How do you mean?

Socrates:: My meaning will appear in the following inquiries: Does deception subsist in things which differ much, or but a little, from each other?

Phaedrus:: In things which differ but a little.

Socrates:: But, by making a transition according to small advances, you will effect a greater concealment, while passing on to that which is contrary, than you will by a transition according to great advances.

Phaedrus:: How should it not be so?

Socrates:: It is necessary, therefore, that he who is about to deceive another should accurately know the similitude and dissimilitude of things.

Phaedrus:: It is necessary.

Socrates:: Is it possible, therefore, that he who is ignorant of the truth of every thing can judge concerning the similitude, whether great or small, which subsists in other things?

Phaedrus:: It is impossible.

Socrates:: It is evident, therefore, that such as conceive opinions contrary to the truth of things, and who are deceived, are thus affected through certain similitudes.

Phaedrus:: The case is so.

Socrates:: Can, therefore, he who is ignorant about the nature of each particular, artificially deliver any thing, by pairing according to small advances into its contrary, through similitudes? Or can such a one avoid falling into error?

Phaedrus:: He cannot.

Socrates:: Hence then, my friend, he who is ignorant of truth, and is led by opinion, will, as it appears, exhibit a ridiculous and inartificial rhetoric.

Phaedrus:: It appears so.

Socrates:: Are you willing, therefore, both in the oration of Lysias, which you now carry about you, and in that which we delivered, to see what we have asserted without art, and what is agreeable to art?

Phaedrus:: I am above all things willing. For we speak at present in a trifling manner, as we are without sufficient examples.

Socrates:: But, indeed, as it appears, some reasons have been given, through the assistance of a certain fortune, which have all the force of examples, evincing that he who knows the truth will, even while he jests in his discourse, attract his auditors. And I consider, O Phædrus, the local Gods as the cause of this. Perhaps, also, the interpreters of the Muses, singing over our heads, have inspired us with this ability: for I myself participate of no art belonging to discourse.

Phaedrus:: Let it be as you say; only render what you assert evident.

Socrates:: Come then, read over the beginning of Lysias's oration.

Phaedrus:: "You are well acquainted with the state of my affairs; and you have heard, I think, that it is most conducive to my advantage for them to subsist in this manner. But it appears to me, that I am not unworthy to be deprived of what I wish to obtain, because I am not one of your lovers: for lovers, when their desires cease, repent themselves of the benefits which they have bestowed."

Socrates:: Stop there: are we not then to show, in what he is faulty, and in what respect he has acted without art?

Phaedrus:: Certainly.

Socrates:: Is it not, therefore, manifest to every one, that when we speak upon certain subjects we are unanimous in our conceptions; but when upon others, that we are discordant in our opinions?

Phaedrus:: I seem to understand what you say; but, notwithstanding this, speak more plainly.

Socrates:: When any one pronounces the name of iron or silver, do we not all understand the same thing?

Phaedrus:: Entirely so.

Socrates:: But when we pronounce that of the just, or the good, are we not of different opinions? and do we not doubt both with others and ourselves?

Phaedrus:: Very much so.

Socrates:: In some things, therefore, we agree in sentiments, and in others not.

Phaedrus:: We do so.

Socrates:: Where, then, are we more easily deceived? And in which of these is rhetoric able to accomplish the most?

Phaedrus:: Evidently in those about which we are dubious.

Socrates:: He, therefore, who is about to pursue the rhetorical art, ought first of all to distinguish these in order; to consider the character of each species; and to perceive in what the multitude must necessarily be dubious, and in what not.

Phaedrus:: He who is able to accomplish this, Socrates, will understand a beautiful species.

Socrates:: Afterwards, I think, he ought not to be ignorant when he comes to particulars, but to perceive acutely to what genus the subject of his future discourse belongs.

Phaedrus:: What then?

Socrates:: With respect to Love, shall we say that it belongs to things dubious, or to such as are not so?

Phaedrus:: To things dubious, certainly.

Socrates:: Do you think he would permit you to assert that respecting him which you have now asserted, that he is pernicious both to the beloved and the lover; and again, that he is the greatest of all goods?

Phaedrus:: You speak in the best manner possible.

Socrates:: But inform me also of this (for, through the enthusiastic energy, I do not perfectly remember), whether I defined love in the beginning of my discourse.

Phaedrus:: By Jupiter you did, and that in a most wonderful manner.

Socrates:: O how much more sagacious do you declare the Nymphs of Achelous, and Pan the son of Mercury, to be, than Lysias the son of Cephalus, with respect to orations! Or do I say nothing to the purpose? But did not Lysias, in the beginning of his discourse, compel us to conceive of love, as a certain something such as he wished it to be, and, referring what followed to this, complete in this manner the whole of his oration? Are you willing that we should again read over the beginning of his oration?

Phaedrus:: If you are so disposed; though you will not find what you seek for there.

Socrates:: Read, however, that I may again hear it.

Phaedrus:: “You are well acquainted with the state of my affairs, and you have heard, I think, that it is most conducive to my advantage for them to subsist in this manner. But it appears to me, that I am not unworthy to be deprived of what I wish to obtain, because I am not one of your lovers: for lovers, when their desires cease, repent themselves of the benefits which they have bestowed.”

Socrates:: He seems here to have been very far from accomplishing what we are now seeking after; since he endeavors to pass through his discourse, not commencing from the beginning, but from the end, after a certain contrary and resupine mode of proceeding; and begins from what the lover, now ceasing to be such, says to his once beloved. Or perhaps, my dear Phædrus, I say nothing to the purpose.

Phaedrus:: But it is the end, Socrates, which is the subject of his discourse.

Socrates:: But what, do not all the other parts of the discourse appear to be promiscuously scattered? Or does it appear to you, that what is asserted in the second place ought to rank as second from a certain necessity; or any thing else which he says? For to me, as a person ignorant of every thing, it appears, that nothing ought to be carelessly asserted by a writer. But do you not possess a certain necessary method of composing orations, according to which he thus disposed the parts of his oration in succession to each other?

Phaedrus:: You are pleasant, Socrates, in supposing that I am sufficient to judge concerning compositions so accurate as his.

Socrates:: But I think this is evident to you, that every discourse ought in its structure to resemble an animal, and should have something which can be called its body; so that it may be neither without a head, nor be destitute of feet, but may possess a middle and extremes, adapted to each other, and to the whole.

Phaedrus:: How should it not be so?

Socrates:: Consider, therefore, the discourse of your associate, whether it subsists with these conditions, or otherwise; and you will find, that it is in no respect different from that epigram which certain persons report was composed on the Phrygian Midas.

Phaedrus:: What was the epigram, and what are its peculiarities?

Socrates:: It was as follows;

A brazen virgin traveler am I.
Whom fate decrees in Midas' tomb to lie:
And while streams flow, and trees luxuriant bloom,
I here shall stay within the mournful tomb;
And this to every passenger attest.
That here the ashes of king Midas rest.

But that it is of no consequence as to the connection, which part of it is read first or last, you yourself, I doubt not, perceive.

Phaedrus:: You deride our oration, Socrates.

Socrates:: Lest you should be angry, therefore, let us drop it; though it appears that many examples might be found in it, from an inspection of which we might derive the advantage of not attempting to imitate them. But let us proceed to the discussion of other orations: for they contain something, as it appears to me, which it is proper for those to perceive who are willing to speculate about orations.

Phaedrus:: But what is this something?

Socrates:: That they are in a certain respect contrary to each other. For one kind asserts that the lover, and the other that he who is void of love, ought to be gratified.

Phaedrus:: And it asserts this, indeed, most strenuously.

Socrates:: I should have thought that you would have answered more truly, "and indeed furiously so." But what I inquire after is this—Do we say that love is a certain mania, or not?

Phaedrus:: A mania, certainly.

Socrates:: But there are two species of mania; the one arising from human diseases; but the other from a divine mutation, taking place in a manner different from established customs.

Phaedrus:: Entirely so.

Socrates:: But there are four parts of the divine mania, distributed according to the four divinities which preside over these parts. For we assign prophetic inspiration to Apollo, telestic or mystic to Bacchus, poetic to the Muses; and the fourth or amatory mania, which we assert to be the best of all, to Venus and Love. And I know not how, while we are representing by images the amatory passion, we perhaps touch upon a certain truth; and perhaps we are at the same time hurried away elsewhere. Hence, mingling together an oration not perfectly improbable, we have produced a certain fabulous hymn, and have with moderate abilities celebrated your lord and mine, Phædrus, viz. Love, who is the inspective guardian of beautiful youths.

Phaedrus:: And this, indeed, so as to have rendered it far from unpleasant to me your auditor.

Socrates:: Let us, therefore, from this endeavor to understand how our discourse has passed from censure to praise.

Phaedrus:: What do you mean by this?

Socrates:: To me we seem to have really been at play with respect to the other parts of our discourse: but I think that if any one is able to comprehend, according to art, these two species which we have spoken of, through a certain fortune, he will not be an ungraceful person.

Phaedrus:: How do you mean?

Socrates:: By looking to one idea, to bring together things every way dispersed; that, by thus defining each, he may always render manifest that which he is desirous to teach: just as we acted at present with respect to our definition of Love, whether good or bad. For certainly our discourse by this means became more clear, and more confident with itself.

Phaedrus:: But what do you say respecting the other species, Socrates?

Socrates:: That this again should be cut into species according to members, naturally; not by breaking any member, like an unskillful cook, but, as in the above discourse, receiving the foam of the dianoëtic energy, as one common species. But as, in one body, members which are double and synonymous are called right or left, so our discourse considered the species of delirium within us as naturally one. And dividing the one part into that which is on the left hand, and giving this another distribution, it did not cease till it there found a certain sinister Love, and, when found, reviled it, as it deserves. But the other part conducted us to the right hand of mania, where we found a certain divine Love synonymous to the former; and, extending our praise, we celebrated him as the cause of the greatest good to us.

Phaedrus:: You speak most true.

Socrates:: But I, O Phædrus, am a lover of such divisions and compositions as may enable me both to speak and understand. And if I think that any other is able to behold the one and the many, according to the nature of things, this man I follow, pursuing his footsteps as if he were a God. But whether or not I properly denominate those who are able to accomplish this, Divinity knows. But

I have hitherto called them men conversant with dialectic. Tell me, therefore, by what name it is proper to call them, according to your opinion and that of Lysias. Or is this that art of speaking, which Thrasymachus and others employing, became themselves wise in oratory, and rendered others such, who were willing to bestow gifts on them, as if they had been kings?

Phaedrus:: Those were indeed royal men, but yet not skilled in the particulars about which you inquire. But you appear to me to have properly denominated this species in calling it dialectic; but the rhetorical art appears as yet to have escaped us.

Socrates:: How do you say? Can there be any thing beautiful which is destitute of these particulars, and yet be comprehended by art? If this be the case, it is by no means to be despised by me and you; but we must relate what remains of the rhetorical art.

Phaedrus:: And there are many things, Socrates, which are delivered in books about the art of speaking.

Socrates:: You have very opportunely reminded me. For I think you would say that the proœmium ought to be called the first part of the oration; and that things of this kind are the ornaments of the art.

Phaedrus:: Certainly.

Socrates:: And, in the second place, a certain narration; and this accompanied with testimonies. In the third place, the reasoning. In the fourth, probable arguments: and besides this, I think that a certain Byzantine, the best artificer of orations, introduces confirmation and approbation.

Phaedrus:: Do you not mean the illustrious Theodorus?

Socrates:: I do. For he discovered how confutation, both in accusation and defense, might not only take place, but also be increased. But why should we not introduce the most excellent Evenus, the Parian? For he first discovered sub-declarations, and the art of praising: and, according to the reports of some persons, he delivered his reprehensions in verse for the sake of assisting the memory. For he is a wise man. But shall we suffer Tisias and Gorgias to sleep, who placed probabilities before realities; and, through the strength of their discourse, caused small things to appear large, and the large small; likewise old things new, and the new old; and who besides this discovered a concise method of speaking, and, again, an infinite prolixity of words? All which when Prodicus once heard me relate, he laughed, and asserted that he alone had discovered what words this art required; and that it required neither few nor many, but a moderate quantity.

Phaedrus:: You was, therefore, most wise, O Prodicus.

Socrates:: But shall we not speak of Hippias? for I think that he will be of the same opinion with the Elean guest.

Phaedrus:: Why should we not?

Socrates:: But what shall we say of the musical composition of Polus, who employed the doubling of words, a collection of sentences, similitudes, and elegance of appellations, in order to give splendor to his orations, according to the instruction which he had received from Lycimnion?

Phaedrus:: But were not the orations of Protagoras, Socrates, of this kind?

Socrates:: His diction was indeed proper, and contained besides this many other beautiful properties: but the Chalcedonian orator excelled in exciting commiseration from the distresses of poverty, and the infirmities of old-age. He was besides most skilful in rousing the multitude to anger, and when enraged appearing them, as he said, by enchantment; and highly excelled in framing and dissolving calumnies, from whence the greatest advantage might be derived. But all seem to agree in opinion with respect to the conclusion of the oration, which some call the repetition, but others give it a different denomination.

Phaedrus:: Do you say that the conclusion summarily recalls into the memory of the auditors all that had been said before?

Socrates:: I do, and any thing else besides, which you may have to say about this art.

Phaedrus:: What I have to say is but trifling, and not worth mentioning.

Socrates:: Let us, therefore, dismiss trifling observations, and rather behold in the clear light, in what particulars the power of this art prevails, and when it does so.

Phaedrus:: Its power, Socrates, is most prevalent in the association of the multitude.

Socrates:: It is so. But, O dæmoniacal man, do you also see, whether their web appears to you, as it does to me, to have its parts separated from each other?

Phaedrus:: Show me how you mean.

Socrates:: Tell me then: If any one addressing your associate Eryximachus, or his father Acumenus, should say, I know how to introduce certain things to the body, by which I can heat and cool it when I please; and besides this, when I think proper I can produce vomiting, and downward ejection, and a variety of other things of this kind, through the knowledge of which I profess myself a physician, and able to make any one else so, to whom I deliver the knowledge of these particulars;—what do you think he who heard him ought to reply?

Phaedrus:: What else, than inquiring whether he knows to whom, when, and how far, each of these ought to be applied?

Socrates:: If, therefore, he should say that he by no means understands all this, but that he who is instructed by him ought to do so and so; what then would be his answer?

Phaedrus:: He would answer, I think, that the man was mad; and that, having heard from some book about things of this kind, or met with some remedies, he thought he might become a physician without knowing any thing about the art.

Socrates:: But what if any one, addressing Sophocles and Euripides, should say that he knew how to compose a prolix discourse on a very trifling subject, and a very short one on a great occasion; and that when he pleased he could excite pity, and its contrary, horror and threats, and other things of this kind; and that by teaching these he thought that he delivered the art of tragic poetry?

Phaedrus:: And these also, I think, Socrates, would deride him, who should fancy that a tragedy was any thing else than the composition of all these, so disposed as to be adapted to each other, and to the whole.

Socrates:: And I think they would not rustically accuse him; but, just as if a musician should meet with a man who believes himself skilled in harmony, because he knows how to make a chord sound sharp and flat, he would not fiercely say to him, O miserable creature, you are mad; but, as being a musician, he would thus address him more mildly: O excellent man! it is necessary that he who is to be a musician should indeed know such things as these; but at the same time nothing hinders us from concluding, that a man affected as you are may not understand the least of harmony: for you may know what is necessary to be learned prior to harmony, without understanding harmony itself.

Phaedrus:: Most right.

Socrates:: In like manner, Sophocles would reply to the person who addressed him, that he possessed things previous to tragedy, rather than tragedy itself: and Acumenus, that the medical pretender understood things previous to medicine, and not medicine itself.

Phaedrus:: Entirely so.

Socrates:: But what if the mellifluous Adrastus, or Pericles, should hear those all-beautiful artificial inventions, concise discourses, similitudes, and other things which we said should be discussed in the light, do you think that they would be angry, as we were through our rusticity, with those who wrote about and taught such things as if they were the same with rhetoric? Or rather, as being wiser than us, would they not thus reprove us? It is not proper, Phædrus and Socrates, to be angry with such characters; but you ought rather to pardon those who, being ignorant of oratory, are unable to desire what rhetoric is, and who in consequence of this passion, from possessing a knowledge of things previous to the art, think that they have discovered rhetoric itself; and, by teaching these to others, imagine that they teach rhetoric in perfection: but who at the same time leave to the proper industry of their disciples the art of disposing each of these, so as to produce persuasion, and of composing the whole oration, as if nothing of this kind was necessary for them to accomplish.

Phaedrus:: Such indeed, Socrates, does that art appear to be which these men teach and write about as rhetoric; and you seem to me to have spoken the truth: but how and from whence shall we be able to acquire the art of true rhetoric and persuasion?

Socrates:: It is probable, Phædrus, and perhaps also necessary, that the perfect may be obtained in this as in other contests. For, if you naturally possess rhetorical abilities, you will become a celebrated orator, by the assistance of science and exercise: but if you are destitute of any one of these, you will be imperfect through this deficiency. But the method employed by Lysias and Thrasymachus does not appear to me to evince the magnitude of this art.

Phaedrus:: But what method then does?

Socrates:: Pericles, most excellent man, appears with great propriety to have been the most perfect of all in the rhetorical art.

Phaedrus:: Why?

Socrates:: All the great arts require continual meditation, and a discourse about the sublime parts of nature. For an elevation of intellect, and a perfectly efficacious power, appear in a certain respect to proceed from hence; which Pericles possessed in conjunction with his naturally good disposition. For meeting, I think, with Anaxagoras, who had these requisites, he was filled with elevated discourse, and comprehended the nature of intellect and folly, which Anaxagoras diffusely discussed: and from hence he transferred to the art of discourse whatever could contribute to its advantage.

Phaedrus:: How Is this?

Socrates:: In a certain respect the method of the rhetorical and medicinal art is the same.

Phaedrus:: But how?

Socrates:: In both it is requisite that a distribution should be made, in one of the nature of body, in the other of the foal, if you are desirous in the first instance of giving health and strength by introducing medicine and nutriment according to art, and not by exercise and experience alone; and in the second instance, if you wish to introduce persuasion and virtue into the soul, by reason and legitimate institutions.

Phaedrus:: It is probable it should be so, Socrates.

Socrates:: But do you think that the nature of the soul can be sufficiently known without the nature of the universe?

Phaedrus:: If it is proper to be persuaded by Hippocrates, the successor of Æsculapius, even the nature of body cannot be known without this method.

Socrates:: He speaks in a becoming manner, my friend. But it is necessary, besides the authority of Hippocrates, to examine our discourse, and consider whether it is consistent.

Phaedrus:: I agree with you.

Socrates:: Consider, then, what Hippocrates and true reason assert concerning nature. Is it not, therefore, necessary to think respecting the nature of every thing, in the first place, whether that is simple or multiform about which we are desirous, both that we ourselves should be artists, and that we should be able to render others so? And, in the next place, if it is simple, ought we not to investigate its power, with respect to producing any thing naturally, or being naturally passive? And if it possesses many species, having numbered these, ought we not to speculate in each, as in one, its natural power of becoming active and passive?

Phaedrus:: It appears we should, Socrates.

Socrates:: The method, therefore, which proceeds without these, is similar to the progression of one blind.

But he who operates according to art, ought not to be assimilated either to the blind or the deaf; but it is evident that whoever accommodates his discourses to any art, ought accurately to exhibit the essence of that nature to which he introduces discourses and this is doubtless the soul.

Phaedrus:: Without doubt.

Socrates:: Will not, therefore, all the attention of such a one be directed to this end, that he may produce persuasion in the soul?

Phaedrus:: Certainly.

Socrates:: It is evident, therefore, that Thrasymachus, and any other person who applies himself to the study of the rhetorical art, ought first, with all possible accuracy, to describe, and cause the soul to perceive whether she is naturally one and similar, or multiform according to the form of body: for this is what we call evincing its nature.

Phaedrus:: Entirely so.

Socrates:: But, in the second place, he ought to show what it is naturally capable of either acting or suffering.

Phaedrus:: Certainly.

Socrates:: In the third place, having orderly distinguished the genera of discourses and of the soul, and the passions of these, he should pass through all the causes, harmonizing each to each, and teaching what kind of soul will be necessarily persuaded by such particular discourses, and through what cause; and again, what kind of soul such discourses will be unable to persuade.

Phaedrus:: Such a method of proceeding will, as it appears, be most beautiful.

Socrates:: He, therefore, who acts in a different manner will neither artificially write nor discourse upon this or any other subject. But writers on the art of rhetoric of the present day (whom you yourself have heard) are crafty, and conceal from us that their knowledge of the soul is most beautiful. However, till they both speak and write according to this method, we shall never be persuaded that they write according to art.

Phaedrus:: What method do you mean?

Socrates:: It will not be easy to mention the very words themselves which ought to be employed on this occasion; but as far as I am able I am willing to tell you how it is proper to write, if we desire to write according to art.

Phaedrus:: Tell me then.

Socrates:: Since the power of discourse is attractive of the soul, it is necessary that the future orator should know how many species soul contains: but these are various, and souls possess their variety from these. Souls, therefore, of such a particular nature, in consequence of certain discourses, and through a certain cause, are easily persuaded to such and such particular? But such as are differently affected are with difficulty persuaded through these means. It is necessary, therefore, that he who sufficiently understands all this, when he afterwards perceives these particulars taking place in actions, should be able to follow them with great celerity through sensible inspection; or otherwise he will retain nothing more than the words which he once heard from his preceptor. But when he is sufficiently able to say, who will be persuaded by such and such discourses, and sagaciously perceives that the person present is such by nature as was spoken of before, and that he may be incited by certain discourses to certain actions; then, at length, such a one will be a perfect master of this art, when to his former attainments he adds the knowledge of opportunely speaking, or being silent, the use or abuse of concise, discourse, of language plaintive and vehement, and of the other parts of rhetoric delivered by his masters; but never till this is accomplished. But he who fails in any of these particulars, either in speaking, teaching, or writing, and yet asserts that he speaks according to art, is vanquished by the person he is unable to persuade. But what then (perhaps a writer of orations will say to us); does it appear to you, Phædrus and Socrates, that the art of speaking is to be obtained by this method, or otherwise?

Phaedrus:: It is impossible, Socrates, that it should be obtained otherwise, though the acquisition seems to be attended with no small labor.

Socrates:: You speak the truth. And, for the sake of this, it is necessary, by tossing upwards and downwards all discourses, to consider whether any easier and shorter way will present itself to our view for this purpose; lest we should in vain wander through a long and rough road, when we might have walked through one short and smooth. If, therefore, you can afford any assistance, in consequence of what you have heard from Lysias, or any other, endeavor to tell it me, by recalling it into your mind.

Phaedrus:: I might indeed do this for the sake of experiment, but I cannot at present.

Socrates:: Are you willing, therefore, that I should relate to you the discourse which I once heard concerning things of this kind?

Phaedrus:: How should I not?

Socrates:: It is said therefore, Phædrus, to be just, to tell what is reported of the wolf.

Phaedrus:: Do you therefore act in the same manner.

Socrates:: They say, then, that there is no occasion to extol and magnify these particulars in such a manner, nor to deduce our discourse from on high, and afar of. For, as we said in the beginning of this discourse, he who intends to be sufficiently skilful in rhetoric ought not to participate the truth respecting things just and good, or men who are such, either from nature or education. For, in judicial matters, no attention whatever is paid to the truth of these, but to persuasion alone; and that this is the probable, which ought to be studied by him who is to speak according to art. For he ought never to speak of transactions, unless they are probable; but both in accusation and defense probabilities should always be introduced: and, in short, he who speaks should pursue the probable, and, if he speaks much, should bid farewell to truth. For, when this method is observed through the whole of a discourse, it causes all the perfection of the art.

Phaedrus:: You have related those particulars, Socrates, which are asserted by the skilful in rhetoric; for I remember that we briefly touched upon this in the former part of our discourse. But to such as are conversant with these matters, this appears to be a thing of great consequence: but you have indeed severely reviled Tisias himself.

Socrates:: Let then Tisias himself tell us, whether he calls the probable any thing else than that which is apparent to the multitude.

Phaedrus:: What else can he call it?

Socrates:: He also appears to have discovered and written about the following crafty and artificial method: that if some imbecile but bold man should knock down one who is robust but timid, taking from him at the same time a garment, or something else, and should be tried for the assault, then neither of these ought to speak the truth; but that the coward should say, the bold man was not alone when he gave the assault; and that the bold man should deny this, by asserting that he was alone when the pretended assault was given, and should at the same time artfully ask, How is it possible that a man so weak as I am could attack one so robust as he is? That then the other should not acknowledge his cowardice, but should endeavor, by deviling some false allegation, to accuse his opponent. And in other instances, things of this kind must be said according to art. Is not this the case, Phædrus?

Phaedrus:: Entirely so.

Socrates:: O how craftily does Tisias appear to have discovered an abstruse art, or whoever else was the inventor, and in whatever other name he delights! But shall we, my friend, say this or not?

Phaedrus:: What?

Socrates:: This: O Tisias, some time since, before your arrival, we affirmed that the probable, with which the multitude are conversant, subsisted through its similitude to truth: and we just now determined that similitudes might every where be found in the most beautiful manner, by him who was acquainted with truth. So that, if you assert any thing else about the art of discourse, we shall readily listen to you; but if not, we shall be persuaded by our present determinations, that unless a person enumerates the different dispositions of his auditors, and distributes things themselves into their species, and again is able to comprehend the several particulars in one idea, he will never be skilled in the art of speaking to that degree which it is possible for man to attain. But this degree of excellence can never be obtained without much labor and study; and a prudent man will not toil For its acquisition, that he may speak and act so as to be pleasing to men; but rather that, to the utmost of his ability, he may speak and act in such a manner as may be acceptable to the Gods.

For men wiser than us, O Tisias, say that he who is endued with intellect ought not to make it the principal object of his study how he may gratify his fellow servants, but how he may please good masters, and this from good means. So that, if the circuit is long, you ought not to wonder: For it is not to be undertaken in the manner which seems proper to you, but for the sake of mighty concerns. And these, if any one is so disposed, will be most beautifully effected by this mean, as reason herself evinces.

Phaedrus:: This appears to me, Socrates, to be most beautifully said, if there is but a possibility that any one can accomplish the arduous undertaking.

Socrates:: But to endeavor after beautiful attainments is beautiful, as likewise to endure whatever may happen to be the result of our endeavors.

Phaedrus:: very much so.

Socrates:: And thus much may suffice concerning a knowledge and ignorance of the art of rhetoric.

Phaedrus:: Certainly.

Socrates:: Does it not therefore remain, that we should speak concerning the elegance and inelegance of writing?

Phaedrus:: Certainly.

Socrates:: Do you know how you may in the highest degree please the divinity of discourse both in speaking and acting?

Phaedrus:: Not at all. Do you?

Socrates:: I have heard certain particulars delivered by the ancients, who were truly knowing. But if we ourselves should discover this, do you think we should afterwards be at all solicitous about human opinions?

Phaedrus:: Your question is ridiculous; but relate what you say you have heard.

Socrates:: I have heard then, that about Naucratis, in Egypt, there was one of their ancient Gods, to whom a bird was sacred, which they call This; but the name of the dæmon himself was Theuth. According to tradition, this God first discovered number and the art of reckoning, geometry and astronomy, the games of chess and hazard, and likewise letters. But Thamus was at that time king of all Egypt, and resided in that great city of the Upper Egypt which the Greeks call Egyptian Thebes; but the God himself they denominate Ammon. Theuth, therefore, departing to Thamus, showed him his arts, and told him that he ought to distribute them amongst the other Egyptians. But Thamus asked him concerning the utility of each; and upon his informing him, he approved what appeared to him to be will said, but blamed that which had a contrary aspect. But Theuth is reported to have fully unfolded to Thamus many particulars respecting each art, which it would be too prolix to mention. But when they came to discourse upon letters, This discipline, O king, says Theuth, will render the Egyptians wiser, and increase their powers of memory. For this invention is the medicine of memory and wisdom. To this Thamus replied, O most artificial Theuth, one person is more adapted to artificial operations, but another to judging what detriment or advantage will arise from the use of these productions of art: and now you who are the father of letters, through the benevolence of your disposition, have affirmed just the contrary of what letters are able to effect. For these, through the negligence of recollection, will produce oblivion in the soul of the learner; because, through trusting to the external and foreign marks of writing, they will not exercise the internal powers of recollection. So that you have not discovered the medicine of memory, but of admonition. You will likewise deliver to your disciples an opinion of wisdom, and not truth. For, in consequence of having many readers without the instruction of a master, the multitude will appear to be knowing in many things of which they are at the same time ignorant; and will become troublesome associates, in consequence of possessing an opinion of wisdom, instead of wisdom itself.

Phaedrus:: You with great facility, Socrates, compose Egyptian discourses, and those of any other nation, when you are so disposed.

Socrates:: But, my friend, those who reside in the temple of Dodonean Jupiter assert that the first prophetic discourses issued from the oak. It was sufficient, therefore, for those ancients, as they were not so wise as you moderns, to listen to oaks and rocks, through their simplicity, if these inanimate things did but utter the truth. But you perhaps think it makes a difference who speaks, and to what country he belongs. For you do not alone consider, whether what is asserted is true or false.

Phaedrus:: You have very properly reproved me; and I think the case with respect to letters is just as the Theban Thamus has stated it.

Socrates:: Hence, he who thinks to commit an art to writing, or to receive it, when delivered by this mean, so that something clear and firm may result from the letters, is endued with great simplicity, and is truly ignorant of the prophecy of Ammon; since he is of opinion, that something more is contained in the writing than what the things themselves contained in the letters admonish the scientific reader.

Phaedrus:: Most right.

Socrates:: For that which is committed to writing contains something very weighty, and truly similar to a picture. For the offspring of a picture project as if they were alive; but, if you ask them any question, they are silent in a perfectly venerable manner. Just so with respect to written discourses, you would think that they spoke as if they possessed some portion of wisdom. But if, desirous to be instructed, you interrogate them about any thing which they assert, they signify one thing only, and this always the same. And every discourse, when it is once written, is every where similarly rolled among its auditors, and even among those by whom it ought not to be heard; and is perfectly ignorant, to whom it is proper to address itself, and to whom not. But when it is faulty or unjustly reviled, it always requires the assistance of its father. For, as to itself, it can neither resist its adversary, nor defend itself.

Phaedrus:: And this, also, you appear to have most rightly asserted.

Socrates:: But what, shall we not consider another discourse, which is the genuine brother of this, how legitimate it is, and how much better and more powerful it is born than this?

Phaedrus:: What is this? and how do you say it is produced?

Socrates:: That which, in conjunction with science, is written in the soul of the learner, which is able to defend itself, and which knows to whom it ought to speak, and before whom it ought to be silent.

Phaedrus:: You speak of the living and animated discourse of one endued with knowledge; of which written discourse may be justly called a certain image.

Socrates:: Entirely so. But answer me with respect to this also: Will the husbandman, who is endued with intellect, scatter such seeds as are most dear to him, and from which he wishes fruit should arise? Will he scatter them in summer in the gardens of Adonis, with the greatest diligence and attention, rejoicing to behold them in beautiful perfection within the space of eight days? Or rather, when he acts in this manner, will he not do so for the sake of some festive day, or sport? But, when seriously applying himself to the business of agriculture, will he not sow where it is proper, and be sufficiently pleased, if his sowing receives its consummation within the space of eight months?

Phaedrus:: He would doubtless act in this manner, Socrates, at one time sowing seriously, and at another time for diversion.

Socrates:: But shall we say that the man who possesses the science of things just, beautiful and good, is endued with less intellect than a husbandman, with respect to the seeds which he sows?

Phaedrus:: By no means.

Socrates:: He will not, therefore, with anxious and hasty diligence write them in black water, sowing them by this mean with his pen in conjunction with discourses; since it is thus impossible to assist them through speech, and impossible sufficiently to exhibit the truth.

Phaedrus:: This, therefore, is not proper.

Socrates:: Certainly not. He will, therefore, sow and write in the gardens which letters contain for the sake of sport, as it appears; and when he has written, having raised monuments as treasures to himself, with a view to the oblivion of old-age, if he should arrive to it, and for the like benefit of others who tread in the same steps, he is delighted on beholding his delicate progeny of fruits; and while other men pursue other diversions, irrigating themselves with banquets, and other entertainments which are the sisters of these, he on the contrary passes his time in the delights which conversation produces.

Phaedrus:: You speak, Socrates, of a most beautiful diversion, and not of a vile amusement, as the portion of him who is able to sport with discourse, and who can mythologize about justice, and other particulars which you speak of.

Socrates:: For it is indeed so, my dear Phædrus. But, in my opinion, a much more beautiful study will result from discourses, when some one employing the dialectic art, and receiving a soul properly adapted for his purpose, plants and sows in it discourses, in conjunction with science; discourses which are sufficiently able to assist both themselves and their planter, and which are not barren, but abound with seed; from whence others springing up in different manners, are always sufficient to extend this immortal benefit, and to render their possessor blessed in as high a degree as is possible to man.

Phaedrus:: This which you speak of is still far more beautiful.

Socrates:: But now, Phædrus, this being granted, are we able to distinguish and judge about what follows?

Phaedrus:: What is that?

Socrates:: Those particulars for the sake of knowing which we came hither; that we might inquire into the disgrace of Lysias in the art of writing; and that we might investigate those discourses which are either written with or without art. To me, therefore, it appears that we have moderately evinced that which is artificial, and that which is not so.

Phaedrus:: It appears so.

Socrates:: But again we ought to remember that no one can acquire perfection in the art of speaking, either with respect to teaching or persuading, till he is well acquainted with the truth of the particulars about which he either speaks or writes: till he is able to define the whole of a thing; and when defined, again knows how to divide it according to species, as far as to an indivisible: and, according to this method, contemplating the soul, and discovering a species adapted to the nature of each, he thus disposes and adorns his discourse; accommodating various and all-harmonious discourses to a soul characterized by variety; but such as are simple, to one of a simple disposition.

Phaedrus:: It appears to be so in every respect.

Socrates:: But what shall we say to the question, whether it is beautiful or base to speak and write orations; and in what respect this employment may be blamable or not? unless what we have said a little before is sufficient for this purpose.

Phaedrus:: What was that?

Socrates:: That whether Lysias, or any other, has at any time written, or now writes, so as to establish laws, either privately or publicly, composing a political work, and thinking that it contains great stability and clearness; this is base in a writer, whether any one says so or not. For to be ignorant of the difference between true visions and the delusions of sleep, between just and unjust, evil and good, cannot fail of being really base, though the whole rout of the vulgar should unite in its praise.

Phaedrus:: It cannot be otherwise.

Socrates:: But he who in a written oration thinks that there is a great necessity for amusement, and who considers no discourse, whether in prose or verse. deserving of much study in its composition or recital, like those rhapsodists, who without judgment and learning recite verses for the sake of persuasion, while in reality the best of those discourses were written for the sake of admonishing the skilful; but who thinks, that the clear, the perfect, and the serious, ought only to take place in discourses which teach and are delivered for the sake of learning, and which are truly written in the soul, about the just, the beautiful and the good; and who judges that discourses of this kind ought to be called his legitimate offspring; that, in the first place, which is inherent in himself, if he should find it there, and afterwards whatever offspring, or brethren, spring in a becoming manner from this progeny of his own soul in the souls of others, bidding at the same time farewell to all others;—a man of this kind, Phædrus, appears to be such a one as you and I should pray that we may be.

Phaedrus:: I perfectly desire and pray for the possession of what you speak of.

Socrates:: We have, therefore, moderately spoken thus much about discourses, as it were in play: it only remains that you tell Lysias, that, descending with intellect to the stream of the Nymphs and Muses, we heard certain discourses, which they ordered us to acquaint Lysias with, and every other writer of orations, likewise Homer, and any other who may compose either naked poetry, or that which is adorned with the song; and in the third place Solon, and all who may commit political institutions to writing;—that if their compositions result from knowing the truth, and if they are able to defend their writings against the objections of adversaries who declare that they can evince the improbity of their discourses,—then, they ought not to be denominated from works of this kind, but from what they have seriously written.

Phaedrus:: What appellations, then, will you assign them?

Socrates:: To call them wise, Phædrus, appears to me to be a mighty appellation, and adapted to a God alone; but to denominate them philosophers, or something of this kind, seems to be more convenient and proper.

Phaedrus:: There is nothing indeed unbecoming in such an epithet.

Socrates:: He, therefore, who cannot exhibit any thing more honorable than what he has written, and who turns upwards and downwards his composition, for a considerable space of time, adding and taking away,—may not such a one be justly called a poet, or a writer of orations or laws?

Phaedrus:: Certainly.

Socrates:: Relate these particulars, therefore, to your associate.

Phaedrus:: But what will you do? For it is not proper that your companion should be neglected.

Socrates:: Who is he?

Phaedrus:: The worthy Isocrates. What will you tell him, Socrates? and what character shall we assign him?

Socrates:: Isocrates as yet, Phædrus, is but a young man; but I am willing to tell you what I prophesy concerning him.

Phaedrus:: What?

Socrates:: He appears to me to possess such excellent natural endowments, that his productions ought not to be compared with the orations of Lysias. Besides this, his manners are more generous; so that it will be by no means wonderful, if, when he is more advanced in age, he should far surpass, in those orations which are now the objects of his study, all the other boys who ever meddled with orations; or, if he should not be content with a pursuit of this kind, I think that a more divine impulse will lead him to greater attainments: for there is naturally, my friend, a certain philosophy in the dianoëtic part of this man. Tell, therefore, my beloved Isocrates this, as a piece of information which I have received from the Gods of this place; and do you likewise acquaint Lysias with the particulars which respect his character and pursuits, as a person who is the object of your warmed attachment.

Phaedrus:: Be it so; but let us depart, since the heat has now abated its fervor.

Socrates:: But it is proper we should pray before we depart.

Phaedrus:: Undoubtedly.

Socrates:: O beloved Pan, and all ye other Gods, who are residents of this place, grant that I may become beautiful within, and that whatever I possess externally may be friendly to my inward attainments! Grant, also, that I may consider the wise man as one who abounds in wealth; and that I may enjoy that portion of gold, which no other than a prudent man is able either to bear, or properly manage! Do we require any thing else, Phædrus? for to me it appears that I have prayed tolerably well.

Phaedrus:: Pray also in the same manner for me: for the possessions of friends are common.

Socrates:: Let us then depart.

THE END OF THE PHÆDRUS.

## Phaedrus

Translated by J. Wright.

Socrates, Phaedrus

Socrates:: Whence come you, friend Phaedrus, and whither are you bound?

Phaedrus:: I come from Lysias, the son of Cephalus; and I am going for a walk outside the walls, as I have been sitting with him a long time, in fact ever since daybreak. And it is by the advice, Socrates, of our common friend Acumenus, that I take my walks in the open roads; for he tells me they are more refreshing than the covered promenades.

Socrates:: And he’s right there, my good friend. So Lysias, it appears, was in the city.

Phaedrus:: Yes, staying with Epicrates at the Morychian mansion yonder, close by the Olympian.

Socrates:: Well, how did you pass your time there? though I can hardly doubt that Lysias regaled you with his speeches.

Phaedrus:: You shall hear, if you are not too much engaged to join me in my walk.

Socrates:: Engaged, indeed? don’t you believe that in the words of Pindar I would count it a matter far above all engagement to hear what passed between you and Lysias?

Phaedrus:: Come on then.

Socrates:: If you will begin your tale.

Phaedrus:: I will; and I can assure you, Socrates, you will find it very much in your way. For the speech which engaged our attention was in a certain fashion of an amatory character; that is to say, Lysias introduced one of our beautiful boys as being courted, but not by a lover; in fact, this is the very point on which he has displayed his ingenuity, as he maintains that favor ought to be shown to one who is not in love, rather than to one who is.

Socrates:: What a generous man! I wish he would maintain that poverty has a better claim than wealth, and age than youth; and in short, that the preference ought to be given to all the other properties that belong to myself in common with the bulk of mankind. In that case his speeches would indeed be delightful, and a public boon. But whether he does so or not, I have conceived such a desire to hear what he says, that even if you extend your walk to Megara, and, as Herodicus prescribes, go close up to the wall and then turn back again, you will not shake me off, I can promise you.

Phaedrus:: What are you talking about, my good friend Socrates? It took Lysias, the cleverest writer of the day, a long while to compose this speech at his leisure; and do you imagine that a novice like myself could repeat it from memory without doing injustice to the author?

No, that I am very sure I could not; and yet I would sooner be able to do so than come into the possession of a large sum of money.

Socrates:: My good friend Phaedrus, if I do not know Phaedrus, I do not know myself any longer. But neither the one nor the other is the case; I do know Phaedrus; I know full well that on hearing Lysias read the speech, he was not content with hearing it once only, but kept urging him to repeat it again and again;

and Lysias was quite as eager to comply. Phaedrus however was not satisfied even with this, but at last took the book from the other s hands, and looked over again the parts he especially fancied. And being wearied with sitting all the morning thus engaged, he set out for a walk, though not, I fully believe, till he had learnt the entire speech by heart, unless it was a very long one. And he was going outside the walls to con it over by himself. But on his way he met with a man who is afflicted with a weakness for listening to speeches, and when he saw him he was charmed (oh so charmed) at the sight, for says he, I shall now have a friend to share in my raptures. So he requested his friend to join him in his walk. When however this lover of speeches asked him to commence, he began to be coy, as though disinclined, albeit determined I am sure, if he could get no willing hearer, to speak out at last even to unwilling ears. Do you therefore, Phaedrus, request him to do at once what at all events he is sure to do presently.

Phaedrus:: My wisest plan, there seems little doubt, is to repeat the speech as well as I am able; for I believe you have made up your mind on no account to let me go, till I have given it you in some way or other.

Socrates:: You have defined my intentions to a nicety.

Phaedrus:: Well then I’ll do my best, though really, Socrates, I can assure you that I have not learnt the words by heart; but if you are content with a general view of the points of difference, as Lysias laid them down, between the claims of the impassioned and unimpassioned suitor, I am ready to go through them in order under their several heads, beginning where he began.

Socrates:: Thank you, my obliging friend; not till you have shown me though, what it is you have got there in your left hand beneath your cloak, as I have a shrewd suspicion that it is the speech itself. If so, I must beg you to understand that, fond as I am of you, I have yet no intention at all of lending myself for you to practice upon, while Lysias is also present. So let us see what you have got.

Phaedrus:: Enough, Socrates, I confess; you have dashed down the hope I entertained of practicing my memory on you. But where would you like us to sit down and read the speech?

Socrates:: Let us turn aside here, and go down by the Ilissus, and then wherever we find a spot to our taste we will sit down and rest.

Phaedrus:: How lucky that I happened to come out without my shoes and you, Socrates, we know never wear them. Our easiest plan then is to walk along the streamlet with our feet in the water, and we shall find it by no means disagreeable, considering the season of the year, and the hour of the day.

Socrates:: Come on then, and keep at the same time a look-out for a seat.

Phaedrus:: Do you see that towering plane-tree yonder?

Socrates:: Of course I do.

Phaedrus:: Well, there we shall find shade and a gentle breeze, and grass enough for a seat, or if we prefer it, for a bed.

Socrates:: Let us walk towards it.

Phaedrus:: Tell me, Socrates, was it not from some where hereabouts on the Ilissus that Boreas is said to have carried off Orithyia?

Socrates:: So the tale goes.

Phaedrus:: Must it not have been from this very spot? So beautiful is the water here, so clear and transparent, and just such as one can fancy maidens loving to play by.

Socrates:: No, not here, but about a quarter of a mile lower down, just where we cross over to the temple of the Huntress. And if I am not mistaken, there is an altar on the spot to Boreas.

Phaedrus:: I have never noticed it. But tell me honestly, Socrates, do you believe this tale of mythology to be true?

Socrates:: Why, I should do nothing strangely out of the way if I were to refuse it credit, as the learned do; and go on in their rationalizing method to say that as the girl was playing with Pharmaesea she was blown over the ad joining cliffs by a blast of the wind Boreas; and that, having met with her death in this manner, she was fabled to have been carried off by the god Boreas either from this place, or if you like from Mars's hill, which, according to another account, was the scene of her adventure. But for my part, Phaedrus, though I consider such explanations sufficiently pretty, yet I esteem them the peculiar province of a very subtle, painstaking, and by no means particularly enviable person; if for no other reason than that he will be called upon, as soon as he has finished this subject, to set us right as to the form of the Hippocentaurs, and again as to that of the Chimaera, and then he will have pouring in upon him a like crowd of Gorgons and Pegasuses, and such a wondrous host of portentous and impossible creations, that if he were to disbelieve them all, and, with a kind of vulgar acuteness, apply to each successively the test of probability, he would require no small amount of time and labor for the task. But I have no leisure for such studies and the reason, my friend, is this; I cannot as yet obey the Delphic inscription, which bids me know myself; and it seems to me ridiculous for one who is still destitute of this knowledge to busy himself with matters which in no wise concern him. I therefore leave these subjects alone, and acquiescing in the received opinion regarding them I devote myself, as I just now said, to the study, not of fables, but of my own self, that I may see whether I am really a more complicated and a more furious monster than Typhon, or a creature of a gentler and a simpler sort, the born heir of a divine and tranquil nature. But by the bye, Phaedrus, was not this the tree to which you were leading me?

Phaedrus:: The very one.

Socrates:: Well, really, this is a glorious resting place. For the plane-tree I find is thick and spreading, as well as tall, and the size and shadiness of the agnus castus here is very beautiful, and being at the height of its flower it must render our retreat most fragrant. How delicious too is this spring trickling under the plane-tree, and how cold its water, to judge by the foot! It would seem from these images and votive offerings that the place is sacred to some nymphs and river-god. Again, how lovely and enjoyable above measure is the airiness of the spot! summer-like and clear there rings an answer to the choir of the cicadas. But the most charming thing of all is this abundant grass, with its gentle slope just made for the head to fall back on luxuriously. Really, Phaedrus, you make a most admirable guide.

Phaedrus:: And you, Socrates, are a most unaccountable being. In fact, as you say, you are just like a stranger who is being shown the beauties of the place, and not like a native of the country; the consequence this of your never leaving the city either to cross the frontier, or even, I do believe, for so much as a walk outside the walls.

Socrates:: You must bear with me, dear Phaedrus I am so fond of learning. Now trees, you know, and fields won't teach me anything, but men in the city will. You, however, would appear to have discovered the charm that can entice me out. For as shepherds draw after them their hungry flocks by shaking branches or grain up and down before their eyes, so could you, I believe, make me follow you, not only all round Attica, but also wherever else you might wish to lead, by simply holding out to me a written speech as a bait. And since we have reached this spot on the present occasion, I cannot do better than lay me down to listen, and do you choose that posture which you think most convenient for reading in, and begin the speech.

Phaedrus:: Attend then;

With the state of my affairs you are acquainted, and that I expect advantage to us both from this arrangement you have heard. Now I claim not to be disappointed in my suit on the ground of my not belonging to the number of your lovers. For they repent of the benefits they have conferred the moment that their desire ceases; but for us, who never love, there is no particular time at which we may be expected to change our minds. For it is not under the influence of a resistless passion, but of our own free choice, that we do you a kindness, consulting what our means will allow, and what is best for our interests to bestow. Again, lovers take into consideration the derangement of their private affairs which their love has occasioned, and the services they have rendered their favorites; and adding all the trouble they have taken to the reckoning, they conceive that by all this they have long ago paid the return which is due to the object of their affection. We, on the other hand, are not able to pretend that we have neglected our fortunes for love; we cannot take into account the labors we have endured, nor plead the domestic quarrels which have resulted from our devotion; so that, as our suit is divested of all such evils as these, we have nothing left us but cheerfully to do what ever we may think we shall please you by per forming. Again, if it be a fair reason for set ting store on a lover, that he professes greater attachment for his favorite than for any one else, and is ready both by word and deed to incur the enmity of all the world beside, if he can but gratify the object of his passion, it is easy to perceive that, if his profession be a true one, all of whom he may hereafter become enamored will be held of greater account than his earlier love; and it is clear that, if the former wish it, he will not hesitate to do even harm to the latter. And how can you think it reasonable to lavish so costly a treasure on one suffering under a fatal infliction, which no man acquainted with its nature would even attempt to avert; when even the sufferer him self owns that his mind is diseased, and that he knows his own folly, but cannot control himself? And when this man is restored to his senses, how can he possibly judge that to be well done about which he was so desirous when in such a state of mind? And further, if you were to select the best from among your lovers, your choice would be made from a small number; but if from the rest of the world you were to select the man who is most suit able to yourself, it would be made from a large number; so that there is far more reason to expect that in the larger number exists the one who is deserving of your attachment. If, moreover, you stand in awe of public opinion, and dread its reproaches on the affair being discovered, it is but natural to suppose that lovers, from an idea that others will deem them as happy as they esteem themselves, will be so elated as to talk of their intimacy, and with ostentatious vanity give all men to know that their labor has not been spent in vain; but that we on the other hand, who by never loving never lose the dominion over ourselves, should prefer what is truly advantageous to any celebrity that is to be had in the world. Again, men cannot help hearing and seeing how lovers run after their favorites, and that too with elaborate parade; so that the mere fact of their being seen talking together is sufficient to give rise to suspicion; whereas no one would think of suspecting us for holding conversation with you, as they know that people cannot help talking with some one or other, either from friendship or for some other pleasure. And further, if you have ever conceived an alarm from remembering how difficult it is for a friendship to last, and from the reflection that in ordinary cases, when a quarrel has taken place, the misfortune is felt equally on both sides; but that in love, as it is you who have lavished what you prize most highly, so it is you who will suffer most deeply by a rupture; let me remind you that here again it is those who are in love that you have most reason to look upon with terror. For many are the causes that irritate lovers, and they think that everything is done to hurt and annoy them. For which reason also they are anxious to deter you from associating with the world, fearing those who are possessed of substance, lest they outbid them with money, and those who are educated, lest they outshine them in ability; and so, whatever may be the advantage a man possesses, they look with suspicion on his influence in that particular. If then they succeed in persuading you to abstain from society, they leave you at last without a friend in the world; but if, with an eye to your own interests, you adopt a different and wiser course, a quarrel will be the inevitable result. By us, on the other hand, who are not in love, but owe to our merit the accomplishment of our desires, no jealousy would be entertained for those who cultivate your acquaintance, but rather dislike for such as avoid it; as we should consider ourselves slighted by the neglect of the latter, but benefited by the intimacy of the former. And such being our feelings, surely you have reason to expect that friendship rather than hatred will result from our intercourse. And further, lovers frequently conceive a desire for the person before they have discovered the character or become acquainted with the other circumstances of their favorites, so that it is impossible for you to tell whether their disposition for friendship will outlast the continuance of their desire. But when passion has never existed, when your favors have been obtained by those who were your friends before, it is not likely that this friendship will be lessened by what has been the source of so much delight rather will the memory of the past be an earnest of future attachment. And further, you must not forget the superior opportunities of improvement which will be afforded you by favoring my suit. Lovers are so neglectful of your best interests, that they praise everything you say and do, partly for fear of giving offence, and partly because their own judgment is debased by their passion. For such are the caprices of love if its victim be unsuccessful, it makes trifles which trouble no one else seem distressing to him; if successful, it exacts-from him admiration for what contains no cause of satisfaction. So that I consider pity to be far more suitable than congratulation for the objects of such an attachment. I on the other hand, if you yield to my wishes, will associate with you on the following terms. Not consulting our present gratification so much as our future advantage; not enslaved by passion, but master of myself; not ready to contract a violent animosity on slight provocation, but slow to conceive a moderate displeasure for serious offences, I will freely pardon all in voluntary faults, while such as are intentional I will endeavor to correct. For such conduct is a sure sign of a friendship that will long endure. But if the thought, as is not unlikely, has suggested itself to you, that it is impossible for attachment to be strong if unaccompanied by passion, you ought to bear in mind, that in that case we should care but little either for our sons or for our fathers and mothers, nor should we ever possess faithful friends on any other footing than an amatory connection. Again, if it is proper to bestow favors most on those who need them most, it follows that from the world in general you ought to select, not the best, but the neediest as the objects of your charity for the greater the misery they are rescued from, the greater is the debt of gratitude they will owe you. Nay, further, when you give an entertainment, you will be expected to ask not friends to your board, but those who beg an invitation and require a meal; for they will be charmed with your kindness, and will follow in your train and throng your doors, and express themselves highly delighted and deeply grateful, and invoke countless blessings on your head. It may be though that this is not the true ground of selection; it may be that you ought to bestow your favors, not on those who need them most, but on those who are best able to repay them; not on lovers merely, but on those who are worthy of the favor in question; not on men who will enjoy the flower of your youth, but on those who in your more advanced years will share with you their fortunes; not on such as when they have achieved their purpose will parade their success to the world, but on such as from feelings of delicacy will never open their mouths on the subject; not on suitors who sue you with a short lived enthusiasm, but on friends who will continue friends all your life long; not on men who, when they are released from their passion, will seek some pretext for a quarrel, but on those who, when your bloom is faded, will then display their own true excellence. Remember now, I pray you, all I have said; and also bear in mind that lovers are taken to task by their friends on the score that their course of life is a bad one; whereas never have those who do not love been reproached by any of their relatives with neglecting on that account their private affairs. You may perhaps ask me whether I recommend you to bestow your favors on all who do not love you. But neither, I imagine, would a lover bid you entertain such sentiments towards all your lovers alike. No, if you view the matter reasonably, you cannot consider such conduct deserving of equal gratitude, nor, however you might wish it, would you be equally able to preserve the affair secret from the world. And harm, you must remember, ought to accrue to neither from the transaction; advantage should rather result to both.

My suit has now been urged with arguments which for my part I deem convincing should you see in them any defect or omission, they are open to any questions you may choose to ask.

Well, Socrates, what do you think of the speech? Is it not wonderfully fine, especially in point of language?

Socrates:: Nay, divinely, my good friend; it quite threw me into an ecstasy. And this sensation I owe to you, Phaedrus; for all the time you were reading, I kept my eye on your face, and saw it glow with rapture under the influence of the speech. And esteeming you a better judge in such matters than myself, I thought I could not do better than follow your example, and so I have shared with you in all your transports, my god-inspired friend.

Phaedrus:: Nay, Socrates, always so bent on jesting?

Socrates:: Jesting! don't you believe I am in earnest?

Phaedrus:: Oh, no more of this, Socrates; but tell me honestly, as you love me, do you believe that any man in Greece could write more ably and fully on the same subject?

Socrates:: How do you mean, Phaedrus? Are we required to praise the speech for the fitness of its subject-matter, or merely on the ground that every word in it is clear, and rounded and polished off with a nice precision? If on the former ground as well, it is only to please you that I can comply; since for my part my incapacity is such, that I observed no excellence of the kind. For I was merely directing my attention to its rhetorical merit, though this I did not imagine even Lysias himself would consider sufficient. In fact, I thought, Phaedrus please correct me if I am wrong that he repeated the same things two or three times over, as though he found it no such easy matter to say much on one subject. Perhaps, though, it was that he did not mind this sort of thing; nay, I could even fancy that he was showing off with a young mans display the power he possessed of expressing his ideas in two different ways, and in both with the finest possible language.

Phaedrus:: You are quite wrong, Socrates; the very merit which you deny is to be found in the speech in even an eminent degree. Of all appropriate topics which the subject contained, it has not omitted a single one; so that I am sure, that after what he has said no one could ever support the same position at greater length, or with arguments of greater value.

Socrates:: On this point, Phaedrus, it will be no longer in my power to agree with you. For wise men and women of old time, who have written and spoken on the subject, will rise up and bear witness against me, if out of complaisance to you I make this concession.

Phaedrus:: Whom do you mean? where have you ever heard the subject better treated?

Socrates:: I cannot say just at the moment, though I am sure I have heard it somewhere, either perhaps by the fair Sappho, or the sage Anacreon, or may be by some prose writer or other. What leads me, you will ask, to this conclusion? The fact is, my worthy Phaedrus, that my breast, I know not how, is full of matter, and I feel that I could be delivered of a speech different from, and in no wise inferior to this. Now that I have invented none of it myself, I am confident, as I am no stranger to my own stupidity. It remains then, I think, that like a pitcher I have been filled, through my ears, from some foreign springs; but here again so stupid am I, that I have quite for gotten both how and where I gained my information.

Phaedrus:: Never mind, Socrates, you have told me most excellent tidings; don't trouble your self about telling me how or from whom you heard it, but just do the very thing that you say. Undertake to produce a speech of equal length and merit with that which I have got written here, without availing yourself of any of its arguments, and for my part I promise you, after the fashion of the nine archons, that I will dedicate to the god at Delphi a golden statue as large as life, not only of myself, but also of you.

Socrates:: You are very kind, Phaedrus, and quite deserve the statue of gold, if you understand me to mean that Lysias missed his mark altogether, and that it is possible to produce a speech which shall contain nothing that he said. No, I do not think this could be done with even the most worthless writer. Since, to take our present subject, do you suppose that any man who was maintaining the superior claims of the unimpassioned to those of the impassioned suitor, would be able to proceed with his arguments if he were to omit lauding the sanity of the one, and blaming the insanity of the other? these being topics which are necessarily inherent in the proposition. No, such arguments ought, I think, to be allowed and conceded to the author; and in all such it is not the invention, but the arrangement that should be admired; whereas in those which, instead of being impossible to miss, are difficult to find, the invention as well as the arrangement may claim our approval.

Phaedrus:: I admit the distinction, as it appears to me to be fairly stated. And what is more, I will act up to it. I will allow you to assume that a man in love is in a more diseased condition than one who is not in love, and if, when this point is put out of the question on both sides, you surpass Lysias in the number and value of your arguments, you may expect to figure in massive gold at Olympia by the side of the offering of the Cypselidas.

Socrates:: You have taken it quite to heart, Phaedrus, that in teasing you I have laid hold upon your favorite; and I see you expect that I shall really attempt, in emulation of his skill, to produce something still more skillfully wrought.

Phaedrus:: For that matter, my friend, you have given me quite as good a hold on you. For speak you must as well as you are able; there is no help for it. But do take care that we are not compelled to have recourse to the vulgar stage-trick of retorting upon each other; pray don’t force me to say as you did just now; My good Socrates, if I don’t know Socrates, I don’t know Phaedrus any longer; and again, Socrates is dying to speak, but affects to be coy. No, make up your mind that we will not stir from this spot, till you have disclosed what you said you had in your breast. For here we are by ourselves in a retired place, and I am the younger and stronger man of the two. All which things being considered, you had better mind what I say, and determine to speak of your own free will rather than by compulsion.

Socrates:: But really, Phaedrus, it would be ludicrous in a novice like me to set myself in comparison with an experienced author, and extemporize on a subject which he has discussed.

Phaedrus:: I'll tell you what it is, Socrates; you must let me have no more of this coquetting, as I am pretty sure I have that to say which will compel you to speak.

Socrates:: Pray don't say it then.

Phaedrus:: Nay, but I will, and here it is. And it shall be in the form of an oath. I swear to you by whom, by what god shall I swear? Shall it be by this plane-tree? Yes, by this plane I swear, that if you do not produce your speech here before her, I will never again either report or recite to you the speech of any author whatsoever.

Socrates:: Ah, wretch, well have you discovered the means of compelling a speech-enamored man to do your bidding, whatever it be!

Phaedrus:: What makes you hang back, then?

Socrates:: I will do so no more, since you, Phaedrus, have sworn this oath. For how could I ever have the heart to exclude myself from such a feast?

Phaedrus:: Begin then.

Socrates:: Shall I tell you what I mean to do?

Phaedrus:: About what?

Socrates:: I mean to speak with my face covered, that I may hurry through the speech as quickly as possible, and not break down for shame, by looking at you.

Phaedrus:: Well, do but speak, and you may settle everything else as you like.

Socrates:: Come now, ye Muses called Ligaean, whether it be to the nature of your song, or to the music-loving race of the Ligyans that ye owe the name, come help me in the tale which my kind friend here is forcing me to tell, in order that his favorite, who even heretofore seemed to him to be wise, may now seem wiser than ever.

There was once upon a time a boy, say rather a youth, of surpassing beauty. Now this youth had very many lovers; but one of them was a cunning fellow, who though he loved him no less warmly than his rivals, had made the youth believe that he loved him not.

And one day as he was urging his suit, he undertook to prove this very point, that the dispassionate suitor had a better claim on his favor than the impassioned lover. And here is his proof.

On every subject, my friend, there is but one mode of beginning for those who would deliberate well. They must know what the thing is on which they are deliberating, or else of necessity go altogether astray. Most men, however, are blind to the fact that they are ignorant of the essential character of each individual thing. Fancying therefore that they possess this knowledge, they come to no mutual understanding at the outset of their inquiry; and in the sequel they exhibit the natural consequence, an inconsistency with themselves and each other. Let not you and me then fall into the error which we condemn in others; but since the question before us is, whether love or the absence of love is desirable in friendship, let us first establish by mutual consent a definition of love that will explain its nature and its powers; and then, with this to look back upon and refer to, let us proceed to consider whether it is profitable or injurious in its results. Now that love is a kind of desire is clear to every one, and equally clear is it on the other hand, that without being in love we desire beautiful objects. How then are we to mark the lover? We should further observe, that in every one of us there are two ruling and directing principles, whose guidance we follow wherever they may lead; the one being an innate desire of pleasure; the other, an acquired judgment which aspires after excellence. Now these two principles at one time maintain harmony; while at another they are at feud within us, and now one and now the other obtains the mastery. When judgment leads us with sound reason to virtue, and asserts its authority, we assign to that authority the name of temperance; but when desire drags us irrationally to pleasures, and has established its sway within us, that sway is denominated excess. Now excess, you must know, is a thing of many names, as it is of many parts and many forms. And of these forms, that which may happen to have obtained the predominance brands its possessor with its own name, and that one neither honorable nor worth possessing. For instance, when desire in regard of eating gets the better of the highest reason and the other desires, it will be termed gluttony, and cause its possessor to be called a glutton. If again it has usurped dominion in the matter of drinking, and drags the individual affected by it in this direction, I need not say what designation it will acquire. And since in general names akin to these names are applied to desires akin to these desires, it is sufficiently clear what is the proper appellation of the desire which for the time being happens to be dominant. Now my motive for introducing these previous remarks must by this time be pretty well evident; but nothing is so clear that it does not admit of becoming clearer by being spoken. When desire, having rejected reason and overpowered judgment which leads to right, is set in the direction of the pleasure which beauty can inspire, and when again under the influence of its kindred desires it is moved with violent motion towards the beauty of corporeal forms, it acquires a surname from this very violent motion, and is called love. But by the way, my dear Phaedrus, do I appear to you, as I do to myself, to have been speaking under some influence divine?

Phaedrus:: There certainly can be no doubt, Socrates, that an unusual kind of fluency has come upon you.

Socrates:: Hearken then in silence to my words, for in very truth the place where we are sitting seems holy ground. So that if haply in the course of my oration I become entranced by the spirits of the spot, you must not marvel thereat; for my present utterance falls no longer far short of a dithyrambic strain.

Phaedrus:: Most true; it does not.

Socrates:: And for this, Phaedrus, you are answer able. But listen to the remainder of my speech, for it may be that I shall escape the trance. This, however, will be as Heaven pleases; for ourselves, we must return in our discourse to the beautiful boy.

Come then, my excellent youth. Since the definition of the subject under discussion has been stated and accurately marked, let us now keep this in our view, while we proceed to consider what advantage or injury is likely to result to you from favoring the wishes of an impassioned and unimpassioned suitor respectively. If a man be governed by desire and the slave of pleasure, he must of necessity, I think, endeavor to render his beloved the source of as much pleasure to himself as he possibly can. Now, to a sick man everything gives pleasure that does not oppose itself to his wishes, but whatever asserts a superiority or even an equality, excites his dislike. A lover, therefore, if he can help it, will not bear his favorite to be either superior to or on a level with himself, but is always striving to lower him and make him inferior. Now ignorance is inferior to learning, cowardice to courage, incapacity as a speaker to oratorical skill, heaviness of intellect to a ready wit. Such, among many others, are the mental defects which a lover must needs rejoice to find in his loved one if they are naturally inherent, and which, if they result from education, he must endeavor to instill, or else forfeit his immediate gratification. The consequence is, that your lover will regard you with a jealous eye, and by debarring you from many valuable acquaintances, the cultivation of which would be most conducive to your growth in manliness, he will do you serious harm, and the greatest harm of all by excluding you from that which would make you most truly wise; I mean the study of Divine Philosophy, from which your lover will be sure to keep you as far as possible asunder, for fear of your there learning to despise him. And not content with this, he will so scheme as to leave you in total ignorance of every subject whatever, so that on every subject you may be compelled to look to him for information; as this is the condition for you to be in that will cause him the keenest delight, but yourself the most ruinous harm. So far then as mental improvement is concerned, you cannot have a less profitable guide and companion than a suitor who is under the influence of love.

Let us now proceed to consider what will be your corporeal habit, and what your course of bodily discipline, if you have for your lord and master a man who cannot help pursuing plea sure in preference to virtue. Such a person will be seen running after a delicate stripling, not hardy in frame nor reared beneath a scorching sun, but fondled under the shade of blending trees; a stranger to manly toil and healthful sweating, but no stranger to the softness of a woman's life, decking his person with false colors and ornaments, in lack of nature s graces, and given in short to all such practices as are the natural concomitants of these. What they are, you know so well that I need not dilate on them further; but, summing them up under one general head, I will proceed to an other branch of my subject. They are such that the youth whose body is trained in them will not fail in time of battle and all serious emergencies to inspire his enemies with confidence, but his friends and even his lovers with alarm.

To pass from these obvious reflections, let us in the next place examine what advantage or what injury to your fortune we may expect to find resulting from the companionship and management of a lover. Clear it must be to every one, and to the lover himself most of all, that there is nothing he would pray for so earnestly as for the object of his attachment to be deprived of his dearest, fondest, and holiest treasures. Gladly would he see him bereft of father and mother, of relations and friends, as in them he views only so many censors and obstacles in the way of that commerce with his beloved which he loves most dearly. More over, if a youth be possessed of property in gold or other kind of substance, he will not appear so ready a prey, nor so easy of management when caught in the toils. And thus it can not possibly be but that a lover will grudge his favorite the possession of fortune, and rejoice sincerely in its loss. Nay more, he would fain have him remain as long as possible without wife, or child, or home, in his desire of reaping for the longest time he can the full enjoyment of his own delights.

There are, I am aware, other evils beside this in the world, though few with which some deity has not mingled a temporary gratification. A parasite, for instance, is a shocking and a baneful monster, yet still nature has infused into his blandishments a not unpolished charm. A mistress moreover may be condemned as a dangerous evil; and the same objection may be made to a variety of similar creatures and pursuits, which are yet capable of affording, for the passing hour at least, the keenest enjoyment. But a lover, beside being detrimental to his favorite, is of all distasteful things the most distasteful in daily intercourse. We are told by an ancient saying, that youth is pleased with youth, and age with age; I suppose be cause a similarity of years, leading to a similarity of pleasures, by virtue of resemblance engenders friendship. But yet the intercourse even of equals is not unattended by satiety. And further, in every transaction every one, it is said, finds compulsion irksome; and this is an evil which, in addition to their want of sympathy, is felt in the highest degree by the favorite in the society of his lover. For an old man is the companion of a young one, never leaving him if he can help it by day or by night, but driven onward by a resistless frenzy, which is all the while ministering to him indeed exquisite pleasure as long as by his sight, his hearing, his touch, his every sense, he is made aware of the presence of the beautiful boy, so that he would love nothing better than to cling to his side unceasingly; but as for the object of that attachment, what kind of solace, I ask, or what pleasure, can he possibly receive in return to save him during all that long companionship from reaching the very extremity of disgust; when he has ever before his eyes the bloomless countenance of age, and that too with all those accompaniments which we cannot hear even spoken of without repugnance, much less feel actually forced upon us by an ever-pressing necessity; when he has, moreover, on every occasion, and in all company, to be on his guard against censorious observation; when he has to listen either to unseasonable and extravagant praises, or, with equal probability, to unendurable reproaches from his lovers sober caprice, while from his drunken excess he may expect an unveiled and loathsome licentiousness of speech, which is not only intolerable, but infamous to hear.

And if, during the continuance of his passion, a lover is at once hurtful and disgusting, as surely, when his passion is over, will he be for the remainder of his life a traitor to one whom with many promises, aye and many an oath and prayer, he could scarcely prevail on to endure the present burden of his society in hope of future advantage. Yes, I say, at the time when payment should be made, he finds that he has received within his breast a new ruler and a new lord, to wit, wisdom and temperance, in the stead of passion and madness, and that he is become a new man, without his favorite being conscious of the change. So the youth demands a return for former favors, and reminds him of all that has passed between them in word and deed, under the impression that he is speaking to the same person. But the other, for very shame, dares neither avow the alteration that has come upon him, nor can he bring himself to fulfill the oaths and promises of that former insensate reign, now that wisdom and temperance have set their throne in his heart, for fear that, if he should act as he did before, he might become like what he was before, and return back again to his old condition. And thus it is that he is a run away, and of necessity a defrauder, where once he was a lover, and in the turning of a potsherd is changed from pursuer into pursued; for the youth is compelled to give chase with indignation and curses, having alas! been ignorant from the very first, that he ought not to bestow his favors on one who was in love, and of consequence a madman, but much rather on one who did not love and retained his senses; as in the former case he would have to surrender himself to a faithless, peevish, jealous wretch, who would do harm to his substance, and harm to his bodily habit, but far the greatest harm to the cultivation of his soul, than which in the eyes both of gods and men there neither is nor ever will be aught more dearly prized. Think deeply, my beautiful boy, on the words I have spoken, and remember that a lovers friendship is no attachment of good will, but that with an appetite which lusts for repletion;

As wolves love lambs, so lovers love their loves.

Ah Phaedrus, the very thing I dreaded! You must not expect to hear another word from me, but be content that my speech should terminate here.

Phaedrus:: Why, Socrates, I thought it was only half finished, and that it would have quite as much to say in supporting the claim of the unimpassioned suitor, and enumerating the advantages which he has to offer in opposition. How is it then that you are leaving off now?

Socrates:: Did you not observe, my learned friend, that I had already got beyond dithyrambics, and was giving utterance to epics, and that too, while engaged in blaming? Pray what do you imagine will become of me, if I commence a panegyric? don't you know that of a certainty I shall be lifted into ecstasy by the nymphs to whose influence you have designedly exposed me? For fear then of such a fate, I tell you in a single word, that for all the evil I have spoken of the one, I attribute just the opposite good to the other. And what need of a protracted discourse, when enough has been said upon both sides? And thus my tale will meet with that reception which it deserves; and for myself I will cross the stream, and go home before you force me into something more serious still.

Phaedrus:: Not yet, Socrates, not till the heat of the day is past. Don't you see that the sun is already near standing still at high noon, as they phrase it? so pray wait, and let us talk over together what has been said, and return home as soon as it becomes cool.

Socrates:: You are a strange person with your speeches, Phaedrus; you quite amaze me. I do believe, that of all the speeches that have been composed during your lifetime, a greater number owe their existence to you than to any other person in the world, whether they be of your own composition, or extorted from some one else by fair means or foul. If we except Simmias of Thebes, there is no one who will bear competition with you. And now again I believe we shall find another speech which will have to thank you for its delivery.

Phaedrus:: No bad tidings these, certainly; but how is this the case, and what speech do you mean?

Socrates:: Just as I was about to cross the river, I was made aware of my divine monitor s wonted sign now it never occurs save to deter me from something or other I am in tending to do and methought therefrom I heard voice from this very spot, forbidding me to depart hence till I had purified myself, as though I had been guilty of some offence against Heaven. Now, you must know, I possess something of prophetic skill, though no very great amount, but, like indifferent writers, just enough for my own purposes. And thus it is that I have now at last a clear perception of my error. I say at last, because I can assure you, my good friend, that the soul too is in some sort prophetic. For mine pricked me some time ago, as I was uttering that speech, and my face, as Ibycus says, was darkened for fear lest I might be purchasing honor on earth by some offence at the high court of heaven. But now I have discovered my sin.

Phaedrus:: And pray what was it?

Socrates:: That was a shocking, shocking speech which you brought here yourself, Phaedrus, and so was the one you forced me to utter.

Phaedrus:: In what way were they shocking?

Socrates:: They were foolish, and somewhat impious withal; and what can be more shocking than this?

Phaedrus:: Nothing, if your charge be a true one.

Socrates:: And is it not? Don’t you believe Love to be the son of Aphrodite, and a god?

Phaedrus:: He is said to be so, certainly.

Socrates:: Certainly not by Lysias, nor by that speech of yours which found utterance through my lips after they had been bewitched by you. No, if Love be, as indeed he is, a god, or of godly sort, he cannot be aught that is evil; yet as such he is represented in both our speeches. This, therefore, is the offence they were guilty of with regard to Love; and not only this, but with a naïveté that is highly amusing, though they do not utter a single sound or true word throughout, they yet talk as gravely as if they were of consequence, on the strength, it may be, of expecting to impose upon some poor simpletons, and win a fair name among them. I therefore, for my part, Phaedrus, must of necessity purify myself. And for all who sin in matter of legends, there is an ancient form of purification with which Stesichorus was acquainted, though Homer was not. For when he was deprived of his eyesight for maligning Helen, he was not ignorant, like Homer, of the cause, but a true votary of the Muses, he learnt his fault, and straightway sang

> False was my tale unpassed the rolling sea,
> And Troy’s proud turrets never viewed by thee.

And so, having composed all his palinode, as it is called, he immediately recovered his sight. I, however, will be wiser than either of those bards in one particular. Ere any evil befall me for my defamation of Love, I will offer him my palinode by way of atonement, with my head bare, and no longer, as before, muffled up for shame.

Phaedrus:: You could not have said anything that would give me greater pleasure than this.

Socrates:: I believe you, my good friend; for you feel as well as I do, how shameless was the tone of both our speeches. For just conceive their being overheard by some gentleman of mild and generous feeling, who is either now, or has at some past time of his life been, enamored of a youth of congenial disposition. If, for instance, he were to hear us maintaining that on slight provocation lovers contract violent animosities, and make both jealous and dangerous companions to their favorites, do you think it possible that he could help fancying himself listening to persons who had been bred among sailors, and had never witnessed an ingenuous passion, and would he not, think you, be very far from admitting the justice of our censures on love?

Phaedrus:: I don't doubt it, Socrates.

Socrates:: Out of delicacy then to such a lover as this, and for fear of the god of love himself, I desire by a fresh and sweet discourse to wash out, so to speak, the brackish taste of the stuff we have just heard. And I would recommend Lysias too to make all the haste he can to prove that, under similar circumstances, the suit of a lover should be preferred to that of one who is not in love.

Phaedrus:: You need have no doubt of this being done, Socrates. If you deliver your panegyric on love, Lysias most certainly shall not escape composing another on the same side.

Socrates:: Well, I can trust you for this, so long as you are the man you are.

Phaedrus:: Speak on then with confidence.

Socrates:: But where, I want to know, is the boy to whom I addressed my former speech, as I should be sorry for him to run away without hearing this as well, and favor in his haste the suit of an unimpassioned wooer.

Phaedrus:: Here he is by your side, quite ready for you when you want him.

Socrates:: You must understand then, my beautiful boy, that my late speech was the production of the gay Phaedrus, son of the fame-loving Pythocles, the nursling of the myrtle-beds of Myrrhinus; but that I am indebted for the one I am now about to deliver to the inspired bard Stesichorus, son of the holy Euphemus, bred at Himera in the mysteries of love. Now, it must begin on this wise;

False is the tale which says that when a lover is present, favor ought rather to be shown to one, who is no lover, on the score, forsooth, of the one being mad and the other sane. For if it were true, without exception, that madness is an evil, there would be no harm in the assertion; but, as it is, we owe our greatest blessings to madness, if only it be granted by Heavens bounty. For the prophetess at Delphi, you are well aware, and the priestesses of Dodona, have in their moments of madness done great and glorious service to the men and the cities of Greece, but little or none in their sober mood. And if we were to speak of the Sibyl and all others, that by exercise of inspired divination have told before hand many things to many men, and thereby guided them aright in their future courses, we should run to a great length in telling only what every one knows. There is one fact, however, to which it would be worth our while solemnly to appeal; I mean that, in the opinion of the name-givers of ancient times, madness was no disgrace or reproach; else they would never have attached this very name to that most glorious art whereby the future is discerned. No, it was because they judged of it as a glorious thing when inspired by Heaven s grace, that they gave it the name of μανικήj; it is only the vulgar taste of a later age, that by inserting the tau has made it μαντική instead. Since you will find, in like manner, that the investigation of the future, which is carried on by people in their senses through the medium of birds and other signs, received at first the name of οἰονοϊστική, inasmuch as by means of thought, men furnished themselves out of their own minds with intelligence and information; but moderns, not content with this word, gave it dignity with their long o, and called it οιωνιστική. As much then as divination is a more perfect and a more precious thing than augury both in name and efficiency, so much more glorious, by the testimony of the ancients, is madness than sober sense, the inspiration of Heaven than the creation of men. Again, for those sore plagues and dire afflictions, which you are aware lingered in certain families as the wraith of some old ancestral guilt, madness devised a remedy, after it had entered into the heart of the proper persons, and to the proper persons revealed its secrets; for it fled for refuge to prayer and services of the gods, and thence obtaining purifications and atoning rites made its possessor whole for time present and time to come, by showing him the way of escape from the evils that encompassed him, if only he were rightly frenzied and possessed. And thirdly, there is a possession and a madness inspired by the Muses, which seizes upon a tender and a virgin soul, and, stirring it up to rapturous frenzy, adorns in ode and other verse the countless deeds of elder time for the instruction of after ages. But whosoever with out the madness of the Muses comes to knock at the doors of poesy, from the conceit that haply by force of art he will become an efficient poet, departs with blasted hopes, and his poetry, the poetry of sense, fades into obscurity before the poetry of madness.

Such, and yet more, are the glorious results I can tell you of as proceeding from a madness inspired by the gods. Let us not therefore regard with apprehension the particular result we are considering, nor be perplexed and frightened by any arguments into the belief that we ought to select the sensible rather than the enraptured man as our friend. No, our opponent must not carry off the palm of victory till he has likewise made it evident, that for no good is love sent from heaven to lover and beloved. With us, on the other hand, rests the proof that such a madness as this is given by God to man for his highest possible happiness. Now my proof, I am aware, will meet with no credit from the subtle disputant, but in the eyes of the truly wise it will be convincing. First of all then I must investigate the truth with regard to the nature of the soul, both human and divine, by observing its conditions and powers. And thus do I begin my demonstration.

Every soul is immortal for whatever is in perpetual motion is immortal. Now the thing which moves another and is by another moved, as it may cease to be moved, may cease also to live; it is only that which moves itself, inasmuch as it never quits itself, that never ceases moving, but is to everything else that is moved a source and beginning of motion. Now a beginning is uncreate; for everything that is created must be created from a beginning, but a beginning itself from nothing whatever; for if a beginning were created from anything, it would not be a beginning. Again, since it is uncreate, it must also of necessity be indestructible. For if a beginning be destroyed, it can neither itself be at any time created from anything, nor can anything else be created from it, if, as is evidently true, everything must be created from a beginning. Thus we see then that that which is self-moved is the beginning of motion, and as being such can neither be created nor destroyed; else must all the universe and all creation collapse and come to a standstill, and never at any time find that whereby they may be again set in motion and come into being. And now that that which is moved by itself has been found to be immortal, none will hesitate to assert that this power of self-motion is implied in the very essence and definition of a soul. For every body which receives motion from without we call soulless; but that, which receives motion from within of itself, we say is possessed of soul, as though in this lay the souls very nature. And if it be true, that that which is self-moved is nothing else than the soul, it follows of necessity that the soul must be a thing both uncreate and immortal. For its immortality let this suffice.

In considering its form let us proceed in the following manner. To explain what the soul is, would be a long and most assuredly a god like labor; to say what it resembles, is a shorter and a human task. Let us attempt then the latter; let us say that the soul resembles the combined efficacy of a pair of winged steeds and a charioteer! Now the horses and drivers of the gods are all both good themselves and of good extraction, but the character and breed of all others is mixed. In the first place, with us men the supreme ruler has a pair of horses to manage, and then of these horses he finds one generous and of generous breed, the other of opposite descent and opposite character. And thus it necessarily follows that driving in our case is no easy or agreeable work. We must at this point endeavor to express what we mean respectively by a mortal and an immortal animal. All that is soul presides over all that is without soul, and patrols all heaven, now appearing in one form and now in another. When it is perfect and fully feathered, it roams in upper air, and regulates the entire universe; but the soul that has lost its feathers is carried down till it finds some solid resting-place; and when it has settled there, when it has taken to itself, that is, an earthly body, which seems capable of self-motion, owing to the power of its new inmate, the name of animal is given to the whole; to this compound, I mean, of soul and body, with the addition of the epithet mortal. The immortal, on the other hand, has received its name from the conclusion of no human reasoning; but without having either seen or formed any adequate conception of a god, we picture him to ourselves as an immortal animal, possessed of soul and possessed of body, and of both in intimate conjunction from all eternity. But this matter I leave to be and to be told as Heaven pleases my task is to discover what is the cause that makes the feathers fall off the soul. It is something, I conceive, of the following kind.

The natural efficacy of a wing is to lift up heavy substances, and bear them aloft to those upper regions which are inhabited by the race of the gods. And of all the parts connected with the body it has perhaps shared most largely (with the soul) in the divine nature. Now of this nature are beauty, wisdom, virtue, and all similar qualities. By these then the plumage of the soul is chiefly fostered and increased; by ugliness, vice, and all such contraries, it is wasted and destroyed. Zeus, the great chieftain in heaven, driving a winged car, travels first, arranging and presiding over all things; and after him comes a host of gods and inferior deities, marshaled in eleven divisions, for Hestia stays at home alone in the mansion of the gods; but all the other ruling powers, that have their place in the number of the twelve, march at the head of a troop in the order to which they have been severally appointed. Now there are, it is true, many ravishing views and opening paths within the bounds of heaven, whereon the family of the blessed gods go to and fro, each in performance of his own proper work; and they are followed by all who from time to time possess both will and power; for envy has no place in the celestial choir. But whenever they go to feast and revel, they forthwith journey by an uphill path to the summit of the heavenly vault. Now the chariots of the gods being of equal poise, and obedient to the rein, move easily, but all others with difficulty; for they are burdened by the horse of vicious temper, which sways and sinks them towards the earth, if haply he has received no good training from his charioteer. Where upon there awaits the soul a crowning pain and agony. For those which we called immortal go outside when they are come to the topmost height, and stand on the outer surface of heaven, and as they stand they are borne round by its revolution, and gaze on the external scene. Now of that region beyond the sky no earthly bard has ever yet sung or ever will sing in worthy strains. But this is the fashion of it; for sure I must venture to speak the truth, especially as truth is my theme. Real existence, colorless, formless, and in tangible, visible only to the intelligence which sits at the helm of the soul, and with which the family of true science is concerned, has its abode in this region. The mind then of deity, as it is fed by intelligence and pure science, and the mind of every soul that is destined to receive its due inheritance, is delighted at seeing the essence to which it has been so long a stranger, and by the light of truth is fostered and made to thrive, until, by the revolution of the heaven, it is brought round again to the same point. And during the circuit it sees distinctly absolute justice, and absolute temperance, and absolute science; not such as they appear in creation, nor under the variety of forms to which we nowadays give the name of realities, but the justice, the temperance, the science, which exist in that which is real and essential being. And when in like manner it has seen all the rest of the world of essence, and feasted on the sight, it sinks down again into the interior of heaven, and returns to its own home. And on its arrival, the charioteer takes his horses to the manger, and sets before them ambrosia, and gives them nectar to drink with it. Such is the life of the gods; but of the other souls, that which follows a god most closely and resembles him most nearly, succeeds in raising the head of its charioteer into the outer region, and is carried round with the immortals in their revolution, though sore encumbered by its horses, and barely able to contemplate the real existences; while another rises and sinks by turns, his horses plunging so violently that he can discern no more than a part of these existences. But the common herd follow at a distance, all of them indeed burning with desire for the upper world, but, failing to reach it, they make the revolution in the moisture of the lower element, trampling on one another, and striking against one another, in their efforts to rush one before the other. Hence ensues the extremest turmoil and struggling and sweating; and herein, by the awkwardness of the drivers, many souls are maimed, and many lose many feathers in the crush; and all after painful labor go away without being blessed by admission to the spectacle of truth, and thenceforth live on the food of mere opinion.

And now will I tell you the motives of this great anxiety to behold the fields of truth. The suitable pasturage for the noblest portion of the soul is grown on the meadows there, and it is the nature of the wing, which bears aloft the soul, to be fostered thereby; and moreover, there is an irrevocable decree, that if any soul has followed a god in close companionship and discerned any of the true essences, it shall continue free from harm till the next revolution, and if it be ever thus successful, it shall be ever thus unharmed; but whenever, from inability to follow, it has missed that glorious sight, and, through some mishap it may have encountered, has become charged with forgetfulness and vice, and been thereby so burdened as to shed its feathers and fall to the earth, in that case there is a law that the soul thus fallen be not planted in any bestial nature during the first generation, but that if it has seen more than others of essential verity, it pass into the germ of a man who is to become a lover of wisdom, or a lover of beauty, or some votary of the Muses and Love; if it be of second rank, it is to enter the form of a constitutional ruler, a warrior, or a man fitted for command; the third will belong to a politician, or economist, or merchant; the fourth, to a laborious professor of gymnastics, or some disciple of the healing art; the fifth will be possessed by a soothsayer, or some person connected with mysteries; the sixth will be best suited by the life of a poet or some other imitative artist; the seventh, by the labor of an artisan or a farmer; the eighth, by the trade of a sophist or a demagogue; and the ninth, by the lot of an absolute monarch. And in all these various conditions those who have lived justly receive afterwards a better lot; those who have lived unjustly, a worse. For to that same place from which each soul set out, it does not return for ten thousand years; so long is it before it recovers its plumage, unless it has belonged to a guileless lover of philosophy, or a philosophic lover of boys. But these souls, during their third millennium, if only they have chosen thrice in succession this form of existence, do in this case regain their feathers, and at its conclusion wing their departure. But all the rest are, on the termination of their first life, brought to trial; and, according to their sentence, some go to the prison-houses beneath the earth, to suffer for their sins; while others, by virtue of their trial, are borne lightly up wards to some celestial spot, where they pass their days in a manner worthy of the life they have lived in their mortal form. But in the thousandth year both divisions come back again to share and choose their second life, and they select that which they severally please. And then it is that a human soul passes into the life of a beast, and from a beast who was once a man the soul comes back into a man again. For the soul which has never seen the truth at all can never enter into the human form; it being a necessary condition of a man that he should apprehend according to that which is called a generic form, which, proceeding from a variety of perceptions, is by reflection combined into unity. And this is nothing more nor less than a recollection of those things which in time past our soul beheld when it travelled with a god, and, looking high over what we now call real, lifted up its head into the region of eternal essence. And thus you see it is with justice that the mind of the philosopher alone recovers its plumage, for to the best of its power it is ever fixed in memory on that glorious spectacle, by the contemplation of which the godhead is divine. And it is only by the right use of such memorials as these, and by ever perfecting himself in perfect mysteries, that a man becomes really perfect. But because such an one stands aloof from human interests, and is rapt in contemplation of the divine, he is taken to task by the multitude as a man demented, because the multitude do not see that he is by God inspired.

Socrates:: It will now appear what conclusion the whole course of our argument has reached with regard to the fourth kind of madness, with which a man is inspired whenever, by the sight of beauty in this lower world, the true beauty of the world above is so brought to his remembrance that he begins to recover his plumage, and feeling new wings longs to soar aloft; but the power failing him gazes upward like a bird, and becomes heedless of all lower matters, thereby exposing himself to the imputation of being crazed. And the conclusion is this, that of all kinds of enthusiasm this is the best, as well in character as in origin, for those who possess it, whether fully or in part; and further, that he who loves beautiful objects must partake of this madness before he can deserve the name of lover. For though, as I said before, every mans soul has by the law of his birth been a spectator of eternal truth, or it would never have passed into this our mortal frame, yet still it is no easy matter for all to be reminded of their past by their present existence. It is hot easy either for those who, during that struggle I told you of, caught but a brief glimpse of upper glories, nor for those who, after their fall to this world, were so unfortunate as to be turned aside by evil associations into the paths of wickedness, and so made to forget that holy spectacle. Few, few only are there left, with whom the world of memory is duly present. And these few, whenever they see here any resemblance of what they witnessed there, are struck with wonder, and can no longer contain themselves, though what it is that thus affects them they know not, for want of sufficient discernment. Now in the likenesses existing here of justice, and temperance, and all else which souls hold precious, there is no brightness; but through the medium of dull dim instruments it is but seldom and with difficulty that people are enabled on meeting with the copies to recognize the character of the original. But beauty not only shone brightly on our view at the time when in the heavenly choir we, for our part, followed in the band of Zeus, as others in the bands of other gods, and saw that blissful sight and spectacle, and were initiated into that mystery which I fear not to pronounce the most blessed of all mysteries; for we who celebrated it were perfect and untainted by the evil that awaited us in time to come, and perfect too, and simple, and calm, and blissful were the visions which we were solemnly admitted to gaze upon in the purest light, ourselves being no less pure, nor as yet entombed in that which we now drag about with us and call the body, being fettered to it as an oyster to his shell. Excuse my so far indulging memory, which has carried me to a greater length than I intended, in my yearning for a happiness that is past. I return to beauty. Not only, as I said before, did she shine brightly among her fellows there, but when we came hither we found her, through the medium of our clearest sense, gleaming far more clearly than them all. For sight is the keenest of our bodily senses, though it fails of distinguishing wisdom. For terrible would be the passion inspired by her, or by any other of those lovely realities, if they exhibited to the eye of sense any such clear resemblance of themselves as is the image afforded by beauty. No, to beauty alone is the privilege given of being at once most conspicuous and most lovely. The man, it is true, whose initiation is of ancient date, or who has lost his purity here, is slow in being carried hence to the essential beauty of the upper world, when he sees that which bears its name in this. Accordingly, he feels no reverence as he gazes on the beautiful object, but, abandoning himself to lust, attempts like a brute beast to gratify his appetite, and in his wanton approaches knows nor fear nor shame at this unnatural pursuit of pleasure But when ever one who is fresh from those mysteries, who saw much of that heavenly vision, beholds in any godlike face or form a successful copy of original beauty, he first of all feels a shuddering chill, and there creep over him some of those terrors that assailed him in that dire struggle; then, as he continues to gaze, he is inspired with a reverential awe, and did he not fear the repute of exceeding madness, he would offer sacrifice to his beloved as to the image of a god. Afterwards follow the natural results of his chill, a sudden change, a sweating and glow of unwonted heat. For he has received through his eyes the emanation of beauty, and has been warmed thereby, and his native plumage is watered. And by the warmth the parts where the feathers sprout are softened, after having been long so closed up by their hardness as to hinder the feathers from growing. But as soon as this nourishing shower pours in, the quill of the feather begins to swell, and struggles to-start up from the root, and spread beneath the whole surface of the soul; for in old time the soul was entirely feathered.

In this process therefore it boils and throbs all over, and exactly the same sensation which is experienced by children when cutting their teeth, a sensation of itching and soreness about their gums, is experienced by the soul of one who is beginning to put forth new wings; it boils and is sore and tingles as it shoots its feathers. Whenever indeed by gazing on the beauty of the beloved object, and receiving from that beauty particles which fall and flow in upon it (and which are therefore called ἵμερος, desire), the soul is watered and warmed, it is relieved from its pain, and is glad; but as soon as it is parted from its love, and for lack of that moisture is parched, the mouths of the outlets, by which the feathers start, become so closed up by drought, that they obstruct the shooting germs; and the germs being thus confined underneath, in company of the desire which has been infused, leap like throbbing arteries, and prick each at the outlet which is shut against it; so that the soul, being stung all over, is frantic with pain. But then again it calls to mind the beautiful one, and rejoices. And both these feelings being combined, it is sore perplexed by the strangeness of its condition, and not knowing what to do with itself becomes frenzied, and in its frenzy can neither sleep by night, nor by day remain at rest, but runs to and fro with wistful look wherever it may expect to see the possessor of the beauty. And after it has seen him, and drunk in fresh streams of desire, it succeeds in opening the stoppages which absence had made, and taking breath it enjoys a respite from sting and throe, and now again delights itself for the time being in that most delicious pleasure. And therefore, if it can help, it never quits the side of its beloved, nor holds any one of more account than him, but forgets mother, and brothers, and friends, and though its substance be wasting by neglect, it regards that as nothing, and of all observances and decorums, on which it prided itself once, it now thinks scorn, and is ready to be a slave and lie down as closely as may be allowed to the object of its yearnings; for, besides its reverence for the possessor of beauty, it has found in him the sole physician for its bitterest pains. Now this affection, my beautiful boy you I mean to whom my speech is addressed is called by mortals Eros (Love); on hearing its name among the gods, your young wit will naturally laugh. There are put forth, if I mistake not, by certain Homerids, out of their secret poems, two verses on Eros, of which the second is quite outrageous, and not at all particularly metrical. Thus they sing;

> Him mortals indeed call winged Eros,
> But immortals Pteros (Flyer), for his flighty nature.

Now these verses you may believe or not believe, as you think proper; but whatever is thought of them the cause of love, and the condition of lovers, is all the same, just such as has been here stated.

Now, if it be one of the former followers of Zeus who is seized by love, he is able to bear in greater weight than others the burden of the wing-named god. But all who were in the service of Ares, and patrolled the heavens in his company, when they are taken captive by Love, and fancy themselves in aught injured by the object of their love, are thirsty of blood, and ready to immolate both themselves and their favorites. And so it is with the follower of the other gods. Every man spends his life in honoring and imitating to the best of his power that particular god of whose choir he was a member, so long as he is exempt from decay, and living his first generation here; and in keeping with the bent thus acquired, he conducts his intercourse and behavior towards the beloved object, as well as all the world. Accordingly, each man chooses himself his love out of the ranks of beauty to suit his peculiar turn; and then, as though his choice were his god, he builds him up for himself, and attires him like a holy image, for the purpose of doing him reverence, and worshipping him with ecstatic festival. They then that belong to Zeus seek to have for their beloved one who resembles Zeus in his soul. And so they look for a youth who is by nature a lover of wisdom, and fitted for command; and when they have found one, and become enamored of him, they strive all they can to make him truly such. And if they have never previously entered upon this task, they now apply themselves to it, both seeking instruction from every possible quarter, and searching in their own souls. And this endeavor to discover the nature of their patron god, by following the track in themselves, is attended with success, by reason of their being ever constrained to gaze upon their god unflinchingly; and when they grasp him with their memory, they are inspired with his inspiration, and take from him their character and habits, so far as it is possible for man to partake of god. And attributing these blessings to their beloved, they love him still more dearly than ever; and whatever streams they may have drawn from Zeus, like the inspired draughts of the Bacchanals, they pour into their darlings soul, thereby making him resemble, as far as possible, the god whom they resemble themselves. Those again who followed in the train of Hera, search out a youth of kingly mould, and when he is found, act towards him in exactly the same manner as the former. And so it is with the adherents of Apollo, and all other gods. Walking themselves in the steps of their own proper god, they look for the youth whom they are to love to be of kindred nature; and when they have gained such an one, both by imitation on their own part, and by urging and attuning the soul of their beloved, they guide him into the particular pursuit and character of that god, so far as they are severally able, not treating him with jealous or illiberal harshness, but using every endeavor to bring him into all possible conformity with themselves and the god whom they adore. So beautiful is the desire of those who truly love; and if they accomplish their desire, so beautiful is the initiation, as I call it, into their holy mystery, and so fraught with blessing at the hand of the friend, whom love has maddened, to the object of the friendship, if he be but won. Now he who is won, is won in the following manner.

As at the commencement of this account I divided every soul into three parts, two of them resembling horses, and the third a charioteer, so let us here still keep to that division. Now of the horses one, if you remember, we said, was good, and the other bad; but wherein consists the goodness of the one, and the badness of the other, is a point which, not distinguished then, must be stated now. That horse of the two which occupies the nobler rank, is in form erect and firmly knit, high necked, hook-nosed, white-colored, black-eyed; he loves honor with temperance and modesty, and, a votary of genuine glory, he is driven without stroke of the whip by voice and reason alone. The bad horse, on the other hand, is crooked, bulky, clumsily put together, with thick neck, short throat, flat face, black coat, gray and bloodshot eyes, a friend to all riot and insolence, shaggy about the ears, dull of hearing, scarce yielding to lash and goad united. Whenever therefore the driver sees the sight which inspires love, and his whole soul being thoroughly heated by sense, is surcharged with irritation and the stings of desire, the obedient horse, yielding then as ever to the check of shame, restrains himself from springing on the loved one; but the other pays heed no longer to his drivers goad or lash, but struggles on with unruly bounds, and doing all violence to his yoke-fellow and master, forces them to approach the beautiful youth, and bethink themselves of the joys of dalliance. And though at first they resist him with indignation at the lawless and fearful crime he is urging, yet at last, when there, is no end to the evil, they move onward as he leads them, having yielded him submission and agreed to do his bidding. So they come up to the beautiful boy, and see his face all gleaming with beauty. But at the sight the driver s memory is carried back to the essence of beauty, and again he sees her by the side of Continence standing on a holy pedestal. And at the sight he shudders, and with a holy awe falls backward to the ground, and falling cannot help pulling back the reins so violently that he brings both the horses on their haunches, the one indeed willingly, because he is not resisting, but the rebel in spite of struggling. And when they are withdrawn to some distance, the former in his shame and ravishment drenches all the soul with sweat; but the other, when he is recovered from the pain which the bit and the fall inflicted, and has with difficulty regained his breath, breaks out into passionate reviling, vehemently railing at his master and his comrade for their treacherous cowardice in deserting their ranks and agreement. And again he urges them, again refusing, to approach, and barely yields a reluctant consent when they beg to defer the attempt to another time. But soon as the covenanted time is come, though they affect forgetfulness, he reminds them of their engagement, and plunging and neighing and dragging, he again obliges them to approach the beautiful youth to make the same proposals. And when they are near, he stoops his head and gets the bit between his teeth, and drags them on incontinently. But the driver experiences, though still more strongly, the same sensation as at first;

backward he falls like racers at the barrier, and with a wrench still more violent than before pulls back the bit from between the teeth of the riotous horse, thereby drenching his jaws and railing tongue with blood; and bruising against the ground his legs and haunches, consigns him to anguish. But as soon as by this treatment oft repeated the evil horse is recovered from his vice, he follows with humbled steps the guidance of his driver, and at sight of the fair one is consumed with terror. So that then, and not till then, does it happen that the soul of the lover follows his beloved with reverence and awe. And the consequence is, that the youth being now worshipped with all the worship of a god by a lover who does not feign the passion, but feels it in his soul, and being himself by nature fondly inclined to his worshipper, even though haply in time past he may have been set against lovers by the remarks of his school fellows or others on the scandal of allowing their approaches, and is therefore disposed to reject his present wooer, yet now that the latter is thus changed he is led in course of time, by the instinct of his years, and the law of destiny, to admit him to familiarity. For surely it was never destined for the bad to be friends of the bad, or the good aught but friendly to the good. But when the advances have been accepted and speech and intercourse allowed, the affection of the lover being brought into near connection with the loved one, strikes him with wonder, as it compels him to feel that the friendship shown him by all the rest of his friends and relations put together is as nothing beside the love of his god-inspired friend. And if he continues long thus to indulge him, and allows him the closest contact both in gymnastic schools and other places of meeting, then it is that the stream of that effluence, to which Zeus when enamored of Ganymedes gave the name of desire, pours upon the lover in a plenteous flood, and partly sinks within him, partly flows off him when he is full; and just as a wind or a noise rebounds from smooth and hard substances and is carried back again to the place from which it came; so the tide of beauty passes back into the beautiful boy through his eyes, the natural channel into his soul; and when it is come there and has fledged it anew, it waters the outlets of the feathers, and forcing them to shoot up afresh fills the soul of the loved one as well as that of his lover with love. He is in love therefore, but with whom he cannot say; nay, what it is that is come over him he knows not, neither can he tell, but like one who has caught a disease in the eye from the diseased gaze of another, he can assign no reason for the affection, but sees him self in his lover, as in a glass, without knowing who it is that he sees. And when they are together, he enjoys the same respite that his lover does from his anguish; but when they are parted, he yearns for him as he himself is yearned for, since he holds in his bosom love s reflected image, love returned. He calls it, however, and believes it to be not love but friendship, albeit, he feels the same desire as the other does, though in a feebler degree, for the sight, the touch, the kiss, the embrace. And consequently, as might be expected, his conduct henceforward is as follows. When they are lying side by side, the lovers unbridled horse has much to say to its driver, and claims as the recompense of many labors a short enjoyment; but the vicious horse of the other has nothing to say, but burning and restless clasps the lover and kisses him as he would kiss a dear friend, and when they are folded in each others embrace, is just of such a temper as not for his part to refuse indulging the lover in any pleasure he might request to enjoy; but his yoke-fellow, on the other hand, joins the driver in struggling against him with chastity and reason. Should it appear then that the better part of their nature has succeeded in bringing both the lover and loved into a life of order and philosophy, and established its own ascendency, in bliss and harmony they live out their existence here, being masters of them selves and decorous before the world, having enslaved that portion of the soul wherein vice is contained, and liberated that where virtue dwells; and at last when they come to die, being winged and lightened, they have in one of their three truly Olympic combats achieved the prize, than which no greater good can either human prudence or godly madness be stow on man. But if they have given in to a coarser habit of life, and one unfriendly to wisdom, though not to honor, it may well happen that in a moment of drunkenness or like abandonment, those two unruly beasts will surprise the souls off their guard, and bringing them together into one place will choose and consummate that practice which the world deems happy, and once consummated will for the future indulge in it, though sparingly, as doing what is not approved by all their mind. Dear, therefore, to each other, though not so dear as the former two, do these continue both while their love is burning and when it is extinct; for they conceive themselves to have given and received the strongest pledges, which it were impious at any time to violate by becoming alienated. And in the end, without their wings it is true, but not without having started feathers, they go forth from the body, so that they carry off no paltry prize for their impassioned madness; for there is a law that the paths of darkness beneath the earth shall never again be trodden by those who have so much as set their foot on the heaven word road, but that walking hand in hand they shall live a bright and blessed life, and when they recover their wings, recover them together for their loves sake.

So great and so godly, my beautiful boy, are the blessings which the affection of a lover will bestow. But the commerce of one who does not love, being alloyed with mortal prudence, and dispensing only mortal and niggardly gifts, will breed in the soul of the loved one a sordidness which the vulgar laud as virtue, and doom it for nine thousand years to be tossed about the earth and under the earth without reason.

Here, to thee, beloved Eros, fair and good as I can make it, I offer and duly pay a recantation, composed perforce for sake of Phaedrus, both in phrase and other points, in a poetic strain. But oh vouchsafe me pardon for my former speech and indulgence for this, and of thy tender mercy neither take from me the art of love, which thou hast given me, nor cripple it in thy wrath, but grant that still more than ever I may find favor in the eyes of the fair. And, if in our former speech, Phaedrus and I said aught offensive to thee, set it to the account of Lysias as the father of the speech, and make him to cease from speeches of this sort, and turn him to philosophy, even as his brother Polemarchus is turned, in order that his lover also here before thee may no longer halt, as now, between two opinions, but heart and soul devote his life to love with philosophic talk.

Phaedrus:: I join with you, Socrates, in praying that, if this lot be better for us, so it may be fall us. With regard to the speech, however, it has been long exciting my admiration, so much more beautiful have you made it than your former one; so much more indeed that I am afraid I shall find Lysias making but a poor figure, if indeed he be willing to match it with another of his own. Which I have my doubts about. For it was only the other day that one of our public men in an attack he was making upon him, reproached him on this very score, and throughout his attack kept calling him a speech-writer. So that perhaps he may be led by a care for his own reputation to desist from the practice.

Socrates:: Your notion is an absurd one, my young gentleman, and you are greatly mistaken in your favorite, if you imagine him to be a person so readily scared. Perhaps too you believe that his assailant meant what he said.

Phaedrus:: He certainly seemed to do so, Socrates; and besides, you must know as well as I do, that men of the greatest influence and consideration in a state are ashamed of writing speeches, and leaving behind them compositions of their own, for fear of obtaining with posterity the reputation and name of sophists.

Socrates:: It has escaped you, Phaedrus, that the phrase A charming bend, is derived from that long and wearisome bend in the Nile; and so it escapes you that under this affected dislike, our most self-satisfied statesmen are especially fond of composing speeches, and leaving behind them writings; so much so in deed, that whenever they write a speech, they conceive such an affection for its supporters, that they write down in an additional clause at its head the names of those who on each occasion accord it their approval.

Phaedrus:: How do you mean? I don’t understand you.

Socrates:: Don’t you understand that at the beginning of a statesman’s writing the name of its supporter is written first?

Phaedrus:: How so?

Socrates:: Approved. Thus, if I am not mistaken, runs the writing; Approved by the council, or people, or both. And the proposer, our speech-writer to wit, naming his worthy self with all pomp and panegyric, proceeds to make a speech, and to show off his wisdom to his supporters, not infrequently by the composition of a very long writing. Or, do you conceive such a production as this to be some thing different from a written speech?

Phaedrus:: No, certainly I don’t.

Socrates:: Well, if the speech stands, our poet goes home from his theatre rejoicing; but if it be erased, and he debarred from speech-writing, and the dignity of authorship, he goes into mourning, himself and his friends.

Phaedrus:: So they do.

Socrates:: Obviously not as disdaining the practice, but as viewing it with admiration.

Phaedrus:: Precisely.

Socrates:: Again, whenever an orator or a monarch has been found equal to the task of assuming the authority of a Lycurgus, or a Solon, or a Darius, and becoming a speechwriter for immortality in a state, does not both he himself, during his lifetime, look upon him self in the light of a god, and do not after ages conceive the same opinion of him, from a survey of his written works?

Phaedrus:: To be sure they do.

Socrates:: Do you believe then that a person of this sort, however strong his antipathy to Lysias, would attack him simply on the score of being a writer?

Phaedrus:: It is not at any rate to be expected that he would from what you say; for in so doing he would to all appearance be attacking his own particular fancy.

Socrates:: It must then, I think, be universally acknowledged, that there is no disgrace in the mere fact of writing speeches.

Phaedrus:: How can there be?

Socrates:: But the disgrace, I imagine, commences when they are composed not well, but awkwardly and ill.

Phaedrus:: Obviously.

Socrates:: What then is the character of good and bad writing? Ought we, think you, Phaedrus, to take on this matter the evidence of Lysias, and of every one else who has either written or means to write a work, political or otherwise, either in meter as a poet, or without meter as a prose-writer?

Phaedrus:: Do you ask if we ought? Why what other object can a man be said to live for, than the enjoyment of such pleasures as these? Surely not for those which must be preceded by pain, before they can be so much as enjoyed, which is the case you know with most of our bodily pleasures, so that they have been justly denominated servile.

Socrates:: Well, we have time it seems to spare; and moreover I cannot help fancying that the cicadas, while chirping and talking together over our heads, as is their wont in the heat of the day, have their eyes upon you and me. Should they see us then, like common men, falling asleep instead of conversing in the middle of the day, and abandoning ourselves in laziness of soul to their lulling music, they would regard us with merited scorn, and fancy themselves looking upon some poor slaves, who had sought the refuge of their retreat, to take like sheep a mid-day nap by the waters of their well. But if they see us proceeding with our conversation, and sailing past them unenchanted by their siren strains, they may perhaps in their admiration confer on us that boon, which they have from the gods to bestow upon men.

Phaedrus:: What boon is that? I do not remember to have heard of it.

Socrates:: A lover of the Muses is the last person who should be ignorant of such matters as this. The story goes, that once upon a time these cicadas were men, of a race that lived before the birth of the Muses. But when the Muses were born, and song appeared, it came to pass that some of that race were so transported with pleasure, that as they sang they forgot to eat and drink, till death came upon them unawares. From them it is that the race of the cicadas are sprung, having received the boon from the Muses, that they should need no nourishment after they were come into the world, but spend their time in singing, without food or drink, from the moment of their birth to the day of their death, when they are to repair to the Muses, and tell each of them of their worshippers here below. Terpsichore they tell of those who have honored her in the dance, and thus make them dearer to her than before; Erato they tell of her votaries in love, and so to each of the other sisters they make their report according to the character of her proper worship. But to Calliope the eldest, and Urania the second of the nine, they bear tidings of those who pass their lives in philosophic study and observance of their peculiar music, these we know being the Muses who, having heaven for their special sphere, and words both divine and human, pour forth the gladdest strains. You see therefore, Phaedrus, there are many reasons why we should talk and not slumber in the middle of the day.

Phaedrus:: Indeed there are.

Socrates:: Let us then, resuming the subject which we proposed to ourselves for consideration, examine in what consists a good or a bad discourse, whether spoken or written.

Phaedrus:: Certainly.

Socrates:: Is it not an essential condition of a good and fine speech being made, that the mind of the speaker be acquainted with the truth of the matter he is going to discuss?

Phaedrus:: Why, I have heard men say on this subject, Socrates, that there is no need at all for the intended orator to learn what is really just, but only what is likely to be considered f just by the multitude who are to sit as judges; nor, again, what is really good and honorable, but only what will appear so; for by such appearances, they add, is persuasion effected, and not by truth.

Socrates:: Sure we must not cast away a saying, Phaedrus, which wise men have uttered, but rather examine whether there be anything in it or not. And so we must not refuse a hearing to your present remark.

Phaedrus:: Certainly not.

Socrates:: Let us consider it then in the following point of view. Suppose I were to set about persuading you to buy a horse for the purposes of war, but neither of us knew what a horse was; only this much I did happen to know, that my friend Phaedrus believed a horse to be that domestic animal which has the longest ears.

Phaedrus:: Why, it would be absurd, Socrates.

Socrates:: Wait a moment. What if I were to proceed in a tone of serious persuasion, and compose a panegyric on the ass, all the while calling him a horse, and saying that he was a creature of infinite value, not only for domestic purposes, but also on military service, as he was both convenient to fight from, and capable of bringing up baggage, and of being made useful in a thousand other ways?

Phaedrus:: Well, there can be no doubt of its being utterly absurd now, at any rate.

Socrates:: Is it not better though to. be absurd, than a dangerous and malevolent friend?

Phaedrus:: Doubtless it is.

Socrates:: Whenever then an orator, who is ignorant of good and evil, finds a people in a state of similar ignorance, and takes upon himself to persuade them by passing an eulogium, not upon a poor ass as though it were a horse, but upon evil as though it were good; and when, by having studied and learned the popular opinions, he has succeeded in persuading them to do that which is evil instead of that which is good, what kind of fruit do you imagine his oratory will hereafter reap as the harvest of the seed she has sown?

Phaedrus:: No very good one, certainly.

Socrates:: Is it not possible though, my good Phaedrus, that we have been somewhat too rough in our attack on rhetoric? may she not turn upon us and say, What's all this trifling, ye wondrous wise? I force no man to learn speaking without a knowledge of the truth; on the contrary, if my advice be worth anything, he will acquire the truth before he comes to me. But what I do insist on is this, that with out my aid he will not be a whit the better able, for all his knowledge of truth, to persuade according to art.

Phaedrus:: And do not you admit the justice of her plea?

Socrates:: I do, provided only the arguments which are coming up to attack her testify to her being an art. For methinks I hear the rustle of certain arguments approaching, and protesting that she is an impostor, and no art at all, but an inartistic knack. But of speaking, says the Spartan, there neither is, nor ever shall be, genuine art without the grasp of truth.

Phaedrus:: We must have your arguments, Socrates; bring them here into court, and examine what it is they say, and how they say it.

Socrates:: Hither then, fine creatures, and persuade Phaedrus, father of a fair progeny like you, that if he be not a competent philosopher, neither at any time will he be a competent speaker on any subject at all. And let Phaedrus reply.

Phaedrus:: Put your questions.

Socrates:: May not rhetoric in general be considered as a method of winning men's souls by means of words, not only in courts of law, and other public assemblies, but also in private conversation indifferently on matters great and small; and is not its correct use held in equal honor whether the subject to which it is applied be trivial or important? Or what have you heard say on the matter?

Phaedrus:: Why nothing at all of this kind, I can assure you. No, the courts of law are the especial sphere of rhetorical art, and it is also employed in addressing deliberative assemblies; but I never heard of its extending further.

Socrates:: What, have you only heard of the arts of speaking composed by Nestor and Ulysses, to while away their leisure before Troy? and have you never heard of those by Palamedes?

Phaedrus:: No, nor of Nestors either, unless you are making a Nestor of Gorgias, and a Ulysses of Thrasymachus or Theodorus.

Socrates:: Possibly I am. However, to leave these gentlemen for the present, answer me this. In a court of justice, what is it that the contending parties do? Contradict each other, do they not?

Phaedrus:: Precisely.

Socrates:: On points of right and wrong?

Phaedrus:: Yes.

Socrates:: And if a man does this by rule of art, he will make the same thing appear to the v same people to be at one time right, and at another, if he pleases, wrong.

Phaedrus:: Of course.

Socrates:: And so in a popular harangue he will make the public believe the same line of conduct to be at one time for their advantage, and at another time just the reverse.

Phaedrus:: Certainly he will.

Socrates:: But do we not also hear of the Eleatic Palamedes speaking by aid of art in such a manner that his hearers believed the same things to be at once like and unlike, one and many, at rest and in motion?

Phaedrus:: Undoubtedly we do.

Socrates:: It appears, then, that the art of debate is not confined either to courts of law or popular assemblies, but that to everything that is said we are able to apply this single art, if art it is, by which we shall be enabled to make all things appear similar that are capable of so appearing, and to drag to the light all such attempts in others, however dexterously concealed.

Phaedrus:: I don’t quite understand what you mean by this.

Socrates:: My meaning will, I think, be apparent, if we conduct our inquiry thus. Is deception more generally practiced in things which differ much or little?

Phaedrus:: In those which differ little.

Socrates:: And you will get round, I conceive, from one side to the other, with less chance of detection, by taking short steps than long ones.

Phaedrus:: Unquestionably.

Socrates:: If one man, then, would fain deceive another, without being deceived himself, he ought to be able to discriminate accurately the resemblances and differences of things.

Phaedrus:: Nay, he must be able.

Socrates:: But if he be ignorant of the true nature of a particular, thing, will he be in a condition to distinguish between a greater and less resemblance to it in other things?

Phaedrus:: Impossible.

Socrates:: Whenever, therefore, people are deceived, and form opinions wide of the truth, it is clear that the error has slid into their minds through the medium of certain resemblances to that truth.

Phaedrus:: Such no doubt is generally the case.

Socrates:: Is it possible, then, for a man ever to possess the art of bringing over the mind of another from truth to falsehood, by leading it from link to link in the chain of resemblances, or to escape such delusion himself, without having first arrived at an understanding of the true nature of each particular thing?

Phaedrus:: No, never.

Socrates:: An art of speaking then, composed by one, who, without a knowledge of the truth, has entrapped men's opinions, will present, I conceive, but a sorry and inartistic appearance.

Phaedrus:: I apprehend so.

Socrates:: Now, Phaedrus, what say you to our taking the speech of Lysias, which you have got in your hand, together with those of mine which followed, and looking for instances in them of what we maintain to be in accordance with, or in violation of, art?

Phaedrus:: I should like it of all things; since there is a sort of baldness in our present way of treating the subject, arising from a want of proper examples.

Socrates:: True, and by some lucky chance, as I take it, both the speeches were made to afford an example of the manner in which an author, who is himself acquainted with the truth, may for mere amusement lead his hearers away from it in discourse. And for my part, Phaedrus, I set this to the account of the deities of the spot; or it may be that the ministers of the Muses, our songsters overhead, have breathed into us this happy gift. For sure I am that I at least am innocent of any art of speaking.

Phaedrus:: Be it as you will only make your meaning clear.

Socrates:: Well, then, read me out the beginning of Lysias's speech.

Phaedrus:: With the state of my affairs you are acquainted, and how I expect advantage to us both from this arrangement you have heard. Now I claim not to be disappointed in my suit on the ground of my not happening to be your lover. For lovers repent.

Socrates:: Stop we are to notice, are we not, any error or violation of art that our author commits?

Phaedrus:: We are.

Socrates:: Well, then, is it not obvious to all the world, that on certain points of this kind we are all agreed, on others all at variance?

Phaedrus:: I think I know what you mean; but explain yourself more clearly.

Socrates:: When a man uses the words iron or silver, do we not all understand by them the same things?

Phaedrus:: To be sure we do.

Socrates:: But what happens when he talks of justice or virtue? Do we not all start off at once in different directions, and quarrel both with one another and ourselves?

Phaedrus:: Too true.

Socrates:: On some things, then, you allow we are agreed, in others not?

Phaedrus:: Just so.

Socrates:: Now in which of these two classes of things is deception more easily practiced; and in which has rhetoric greater power?

Phaedrus:: Clearly in that in which we are liable to go wrong.

Socrates:: Before handling, then, an art of rhetoric, a man ought in the first instance to have methodically distinguished between these two classes, and discovered some characteristic mark of each, of that in which men in general are of necessity in error, and of that where no such necessity exists.

Phaedrus:: A fine generalization certainly, Socrates, would he have devised who had seized on this distinction.

Socrates:: And secondly, I imagine, when he comes to any particular case, he must not be at fault, but perceive with rapidity in which of the two classes the subject of his intended remarks is contained.

Phaedrus:: Exactly.

Socrates:: Now what do you say to Love? Are we to rank him in the debatable, or certain class?

Phaedrus:: In the debatable, without a doubt. For how else do you think he would have allowed you to say all that you have just now said about him, making him out at one time to be a curse both to the lover and his favorite; and then again their chiefest blessing?

Socrates:: Admirably said; but tell me this too for I, you must know, was in such an ecstatic state, that I do not quite remember did I give a definition of Love at the beginning of my speech?

Phaedrus:: Ay, that you did, and a wonderfully thorough one too.

Socrates:: Alas for Lysias, son of Cephalus! far less skilled do you make him in the art of speech-writing than the nymphs of our river and Pan the son of Hermes; or am I altogether wrong, and did Lysias also, at the commencement of his love-speech, compel us to form some one definite conception of love the conception that he himself preferred and then proceed, in strict accordance with this conception, to arrange all the subsequent parts of his discourse till he brought it to a fitting conclusion? Just let us read the opening sentence again.

Phaedrus:: I will if you wish it, though what you are looking for is not there.

Socrates:: Let us hear it, that we may take his own evidence on the point.

Phaedrus:: 1 With the state of my affairs you are acquainted, and that I expect advantage to us both from this arrangement, you have heard. Now I claim not to be disappointed in my suit on the ground of my not belonging to the number of your lovers; for they, indeed, repent of the benefits they have conferred as soon as they are released from their passion.

Socrates:: Yes, we seem to be far indeed from discovering here what we are looking for, when we find our author not even starting from the beginning, but from the end of his subject, and essaying to get through his discourse like a swimmer on his back the wrong way foremost; for you see he commences with what the lover might be supposed to say to his favorite at the end, and not before the end, of his address. Or do you see nothing in my objection, Phaedrus, noble friend?

Phaedrus:: Yes, I must confess, Socrates, that what he is talking about is a natural conclusion of the subject.

Socrates:: And what do you say to the rest? Do not the several parts of his discourse appear to have been thrown together at random? or do you see some necessity for the second sentence occupying the second place, or any other sentence appearing in the position he has assigned it? For my part, I must confess that he seems to me, in my ignorance, to have put down on paper, with a gentlemanly independence, what ever came first into his head; but you, perhaps, are aware of some law of composition which guided his sentences into that particular order.

Phaedrus:: You are too good to suppose me capable of seeing through the design of a Lysias with so critical an eye.

Socrates:: But this I think you will allow, that every speech ought to be put together like a living creature, with a body of its own, lacking neither head nor foot, but having both a middle and extremities in perfect keeping with one another and the whole.

Phaedrus:: Undoubtedly.

Socrates:: Examine, then, whether your friends speech be composed on this principle or not, and you will find it just like the epigram which people say is inscribed on the tomb of Midas, the Phrygian.

Phaedrus:: What is the epigram, and what is there peculiar about it?

Socrates:: It runs thus; I am a maiden of brass, and I lie upon Midas's tomb;

> Ever while water shall flow, and the trees of the forest shall bloom,
> Here will I stay on a grave that is watered with many a tear,
> Telling to all who pass by me that Midas is sepulchered here.

Now, that it is utterly immaterial whether any line of this epigram be put first or last, you must, I should think, have observed.

Phaedrus:: You make very merry with our speech, Socrates.

Socrates:: Well, Phaedrus, to spare your feelings, suppose we pass it by; not but that I conceive it to contain a crowd of examples, which a man might study with advantage to himself, pro vided only he does not at all attempt to imitate them; and let us proceed to the other two speeches, for there was something in them, I imagine, well worthy the attention of those who wish to consider the subject of speaking.

Phaedrus:: What sort of thing do you mean?

Socrates:: If I remember right, they were opposed to each other; the one supporting the claims of the impassioned; and the other, those of the unimpassioned suitor.

Phaedrus:: And right manfully they did their work.

Socrates:: I thought you were going to say, as the truth would warrant, right madly. However, this is the very point I was in quest of. We said that love was a madness, did we not?

Phaedrus:: We did.

Socrates:: And that madness was of two kinds, the one produced by human disease, the other by an inspired departure from established usages.

Phaedrus:: Exactly.

Socrates:: And the inspired we divided into four parts, and distributing them among four heavenly powers, we set down the madness of prophecy to the inspiration of Apollo; of mysteries, to the inspiration of Dionysus; to the Muses again we ascribed the madness of poesy; and the fourth, to Aphrodite and Eros. And this last, the madness of love, we said was the best of all the four; and expressing the affection of love by a strange kind of similitude, wherein we kept, I doubt not, some true principle in our sight, though haply we swerved into error on our path, we compounded a discourse not altogether without plausibility, and sang a mythic hymn in seemly and pious adoration of my lord and thine, Phaedrus of Eros, the patron of beautiful boys.

Phaedrus:: And one, I can assure you, which afforded me no slight pleasure to hear.

Socrates:: Let us now, by an examination of the speech itself, discover how it was that it found means of passing from censure to praise.

Phaedrus:: Well, and how was it?

Socrates:: You must know that I consider speech itself, in its general character, to be nothing more than a sportive effusion; but throughout all that was thus casually uttered, there are two forms of method apparent which would well repay our attention, if we could but obtain a systematic view of their respective efficiency.

Phaedrus:: What are they, pray?

Socrates:: The first consists in comprehending at a glance, whenever a subject is proposed, all the widely scattered particulars connected with it, and bringing them together under one general idea, in order that, by a precise definition, we may make every one understand what is that at the time we are intending to discuss And this plan we just now, as you remember, adopted with regard to love; we defined its nature; and whatever be the merit of the performance, certain it is that to that definition my speech owes its clearness and consistency.

Phaedrus:: And what is your other method, Socrates?

Socrates:: That, on the other hand, enables us to separate a general idea into its subordinate elements, by dividing it at the joints, as nature directs, and not attempting to break any limb in half, after the fashion of a bungling carver. And this plan was followed in my two speeches with regard to mental derangement. Just as from one body there proceed two sets of members, called by the same name, but distinguished as right and left, so when my speeches had formed the general conception of mental derangement, as constituting by nature one class within us, the speech which had to divide the left-hand portion desisted not from dividing it into smaller, and again smaller parts, till it found among them a kind of left-handed love, which it railed at with well-deserved severity; while the other led us to the right-hand side of madness, where it discovered a love bearing indeed the same name as the former, but of an opposite and a godly sort, which it held up to be gazed at and lauded as the author of our greatest blessings.

Phaedrus:: Perfectly true.

Socrates:: Now, not only do I pursue myself, with all a lovers assiduity, these methods of decomposing and combining, but if ever I find any one else whom I judge capable of apprehending the one and the many as they are in nature, that man I follow behind, as though in the track of a god. And to all who are possessed of this power I have been in the habit of giving, whether rightly or wrongly, heaven knows, the name of dialecticians. But tell me, what is the proper name for the disciples of your school and Lysias's? is yours that identical art of words by the use of which Thrasymachus and his compeers have not only become clever speakers themselves, but make such of all their pupils, who are willing to bring them presents, as though they were kings?

Phaedrus:: And men of kingly mould they are, though certainly not acquainted with that about which you are now inquiring. However, you appear to me to be quite right in calling this kind of method dialectical; but the rhetorical, I take it, still eludes our grasp.

Socrates:: Indeed! a fine thing truly that must be which, not comprised in this, is yet apprehended by art. On no account must it be slighted by you and me come now, let us consider what it is that is left to rhetoric.

Phaedrus:: Oh, you'll find plenty of it, I doubt not, Socrates, if you'll only look in the books written on the art of speech-making.

Socrates:: True, and I am obliged to you for reminding me. We must have, in the first place, I think, an exordium delivered at the opening of the speech. This is what you mean is it not? the refinements of the art?

Phaedrus:: Yes.

Socrates:: And next we must have narration, they say, and evidence to back it, and thirdly proofs, and fourthly probabilities; and there's confirmation, if I remember right, and after confirmation to boot, according to that prime tricker out of speeches who comes from Byzantium.

Phaedrus:: Worthy Theodorus, eh?

Socrates:: Exactly. He gives us rules too for refutation and after-refutation, both in charge and defense. But the Parian wonder, Evenus, we must not leave in the background, who was the first to discover sub-intimation and by panegyric; nay, they tell me he repeats his by censures in verse, to aid the memory. So clever is he. Can we pass over in silence either Tisias and Gorgias, who were enabled to see that the probable ought to be more highly prized than the true; who make small things appear great, and great things small, by force of words; who talk of what is new as though it were old, and of what is old as though it were new; and who have invented for every subject a terse brevity and illimitable prolixity? Once though, when I told Prodicus of this, he burst out a-laughing, and said that none. but himself had discovered what kind of speeches were required by art. We must have them, says he, neither long nor short, but of moderate length.

Phaedrus:: Cleverly said, Prodicus.

Socrates:: But we must not forget Hippias; for I fancy our friend from Elis would be on the same side with him of Ceos.

Phaedrus:: Doubtless.

Socrates:: But where shall we find words for all Polus's museum of ornaments his jingle-making, maxim-making, image-making, and all the pretty expressions which he borrowed from his master Licymnius, to create a harmonious diction?

Phaedrus:: Was not this though, Socrates, some thing in the style of Protagoras?

Socrates:: A correctness of diction, young sir, was what he taught, and a great many other fine things too. But in the art of dragging in piteous whining on poverty and age, there never was, I believe, such a master as the hero of Chalcedon. He was a terrible man, too for rousing the passions of a crowd, and lulling them again when roused, by the magic of his song, as he used to say; and at raising or rebutting a calumny on any ground whatsoever, he was eminently expert. To come, however to the conclusion of the speech, that is, I imagine, a point on which all men are agreed, though some call it recapitulation, and. by some different title.

Phaedrus:: You mean, the summarily reminding the hearers at the end of the speech of all that has been said in the course of it.

Socrates:: Yes; and now have you anything else to tell me about the art of speaking?

Phaedrus:: Only a few trifling matters not worth mentioning.

Socrates:: Well, if they are trifling, let us pass them by, and rather hold up these we have got to the light, that we may discern the character and sphere of their efficiency in art.

Phaedrus:: There is no doubt of its being a very powerful one, Socrates; in popular assemblies, at any rate.

Socrates:: None, I am aware; but look at them, my good sir, and see whether you do not observe, as I do, some flaw in their texture.

Phaedrus:: Point it out, will you?

Socrates:: Well, answer me this. Suppose a man were to call upon your friend Eryximachus, or his father Actimenus, and say, I know how to make such applications to the body as will create either heat or cold, as I please; and if I think proper, I can produce vomiting and purging, and a great variety of similar effects. And, on the strength of this knowledge, I flatter myself that I am a physician, and able to make a physician of any one to whom I may communicate the knowledge of these matters. What do you think would be their answer on hearing this?

Phaedrus:: Why, they would, of course, ask him whether he also knew to what objects, at what times, and to what extent, these modes of treatment ought severally to be applied.

Socrates:: And if he were to answer, Oh, I know nothing of the kind; but I expect that my pupil will be able to act in all these matters for himself, as soon as he has learnt the secrets I mentioned.

Phaedrus:: Why then they would doubtless say. The man is mad; he has been hearing some book read, or he has fallen in with some nostrum or other, and fancies himself in consequence a made physician, while in reality he knows nothing at all about the art.

Socrates:: And what if a man were to go up to Sophocles and Euripides, and tell them that he knew how to make a very long harangue on a small matter, and again, a very short harangue on a great matter; that he could write at will in a pathetic or in a bold and menacing tone; that he possessed a variety of similar accomplishments, and that by giving lessons in such he conceived himself to be imparting the power of writing tragedy?

Phaedrus:: Well, they too, I imagine, Socrates, would burst into a laugh at the notion of tragedy being made up of these elements, without regard being paid to their consistency with one another and the whole in the combination.

Socrates:: True, but they would not, I conceive, rail at him coarsely, but would rather adopt the tone a musician would use on meeting with a man who esteemed himself a harmonist, be cause, as he said, he happened to know how to draw from a chord the highest and lowest possible notes. For the musician, I imagine, would not fiercely say to such a person, You wretched fellow, you are stark mad; but, with the gentleness that music inspires, would reply, It is doubtless necessary, my excellent friend, for these matters to be understood by the intended harmonist, but there is nothing in the world to necessary preliminaries to harmony, and not harmony itself.

Phaedrus:: And a very proper answer too.

Socrates:: And in like manner, Sophocles might reply to the tragic pretender, that he knew the preliminaries to tragedy, but not tragedy itself; and Acumenus to the medical pretender, that he knew the preliminaries to medicine, but not medicine itself.

Phaedrus:: Most assuredly.

Socrates:: And lastly, what answer might we expect from the honeyed tones of our Athenian Adrastus, or from the great Pericles himself, were they to hear of the splendid devices which we have just now enumerated, of the maxim-making, image-makings, and all the other makings, of which we concluded the list by remarking they deserved to be scrutinized in a clearer light? Would they follow, do you imagine our rude example, and be so boorish as to give vent to ill-mannered expressions against those who have written on, and give lessons in these artifices, as though they constituted the art of rhetoric: or would they, as being wiser than we, turn upon us reprovingly, and say, Phaedrus and Socrates, you do not well to be angry but should rather make all allowance, if people ignorant of dialectics have been found unable to define what rhetoric is, and, as the natural result of this ignorance have conceived themselves inventors of an art of rhetoric because they happen to possess the acquirements which must of necessity precede the art; and if, again, they believe that by teaching these acquirements to others they have imparted to them rhetoric in perfection, while they say nothing about the power of using each of them persuasively, or of combining them into one general whole, but leave it, as a trifling matter, to the pupils themselves, to furnish, out of their own unaided resources, in the speeches they may have to compose.

Phaedrus:: Well, certainly, Socrates, I am afraid that such is very much the character of the art which these people teach both in lecture and writing; and I must confess I think you have spoken the truth. But do now tell me by what means, and from what source, we may acquire the real art of rhetorical persuasion.

Socrates:: The power, Phaedrus, of becoming a consummate workman therein, is probably, or I should rather say, is of necessity, subject to a universal law. If you are endowed by nature with a genius for speaking, you will be a distinguished speaker, if you add thereto science and practice; but in whichever of these three requisites you are wanting, you will by so much fall short of perfection. However, for all of it that is art, the true method will not, I think, be found on the road whereon Tisias and Thrasymachus are travelling.

Phaedrus:: On what road then?

Socrates:: Pericles would seem, my good friend, not without reason, to have become the most perfect orator that ever lived.

Phaedrus:: How so?

Socrates:: All the higher arts require, over and above their immediate discipline, a subtle and speculative acquaintance with physical science; it being, I imagine, by some such door as this that there enters that elevation of thought and universal mastery over the subject in hand. Now Pericles added these advantages to that of great natural genius. For he fell into the hands, if I mistake not, of Anaxagoras, a teacher of such studies, and being by him stored with abstruse speculation, and led to penetrate into the nature of the intelligent and unintelligent principle subjects which occupied, you are aware, the main place in his master's discourse he draughted from those researches into the art of speaking the investigations suit able for it.

Phaedrus:: How do you mean?

Socrates:: The case, I imagine, is the same with the art of rhetoric as it is with that of medicine.

Phaedrus:: In what way?

Socrates:: In both it is necessary to investigate nature; the nature of the body in the one, and of the soul in the other, if you intend to follow a scientific principle, and not a mere empirical routine, in the application of such medicine and diet to the former as will produce in it health and strength, and of such words and rightful culture to the latter as will impart to it the desired persuasion and virtue.

Phaedrus:: This seems reasonable at any rate, Socrates.

Socrates:: Now, do you conceive it possible to comprehend satisfactorily the nature of the soul without comprehending the nature of the universe?

Phaedrus:: Why, if credit is to be given to Hippo crates, of the line of Aesculapius, the nature of the body even cannot be comprehended with out this investigation.

Socrates:: He says well, Phaedrus. However, we must not be content with the evidence of Hippocrates, but, interrogating the argument itself, observe if it be consistent.

Phaedrus:: True.

Socrates:: Observe, then, with regard to nature what is maintained by Hippocrates and the truth. Is it not thus that they bid us examine into a things nature? In the first place, we are to inquire whether that is simple or manifold in which we wish to be scientifically proficient ourselves, and able to render others such also; secondly, if it be simple, we are to examine what power it possesses by nature of acting, and of acting upon what, or what susceptibility of being acted upon, and what it is that acts upon it; if it comprise a number of kinds, we are to enumerate these kinds, and observe with regard to each of them, as in the simple case, its properties, whether active or passive.

Phaedrus:: Yes, this seems to be the way, Socrates.

Socrates:: At any rate, the method which neglected these investigations would be no better than a blind mans walk. But surely we must never compare the scientific follower of any pursuit to a blind or a deaf man. No; it is evident that whosoever teaches speaking on scientific principles, will accurately explain the essential nature of that to which his pupil will have to address his speeches. And this, if I mistake not, will be the soul.

Phaedrus:: Indisputably.

Socrates:: Against this then all his battle is directed; for in this it is that he endeavors to effect persuasion. Is it not so?

Phaedrus:: Yes.

Socrates:: It is obvious, therefore, that Thrasymachus and every one else who seriously communicates an art of rhetoric, will, in the first place, with all accuracy notice and make apparent whether the soul be single and uniform by nature, or, like the body, of many different kinds this being the process which we maintain to be; revealing a nature.

Phaedrus:: Precisely.

Socrates:: Secondly, he will explain in what part it is active, and upon what it acts; in what part passive, and by what it is acted upon.

Phaedrus:: To be sure he will.

Socrates:: And thirdly, when he has ranged in order, the different kinds of speech and different kinds of soul, and their different conditions, he will enumerate all causes that act, and suiting kind by kind, will show what sort of soul is of necessity persuaded, or not persuaded, by what sort of speech, and for what reason, in either case.

Phaedrus:: At any rate, his work would to all appearance be best done by this method.

Socrates:: Never, I can assure you, my friend, will aught spoken or explained on a different method be spoken or explained on a scientific method, either in this case or any other. But our modern authors, whom you wot of, of arts of rhetoric, are crafty dissemblers, and manage to keep out of view their exquisite insight into the nature of the soul. Till, then, they both speak and write in this manner, let us not accord to them that they speak and write scientifically.

Phaedrus:: What manner do you mean by this?

Socrates:: To dictate the exact forms of expression were no easy task; but the general course that a speaker ought to pursue, if he means to per form his work as scientifically as possible, I am prepared to explain.

Phaedrus:: Do so.

Socrates:: It being admitted that the efficacy of speech is to win men's souls, it follows of necessity that the intended speaker must be acquainted with all kinds of soul that exist. Now of these kinds there are a certain number, each being of a certain sort; whence result different characters in different individuals. And this division being established, there are again a certain number of kinds of speeches, each of a certain character. Persons, therefore, of a certain character are by speeches of a certain character easily persuaded for certain reasons into certain things, while persons of a different character are under the same circumstances hard to be persuaded. These distinctions, then, must be competently understood; but even when understood, our speaker must be able to follow them rapidly with his perceptive faculties, as they fall under his notice in the course and operation of daily life, or as yet he knows no more of his art than the mere speeches he used to hear from his master at school. But when he is in a condition to say what sort of man is likely to be persuaded by what sort of speech, and on meeting with an individual in the world, is able to read his character at a glance, and say to himself, Here is the man, and here the nature, for which I heard those speeches from my master, now actually present before me; him, therefore, I must address with this sort of speech, in this sort of manner, if I mean to persuade him to this sort of thing when, I say, he is possessed of all this know ledge, and has learnt, moreover, the proper time for speaking, and the proper time for being silent, and has further learnt to distinguish between the seasonable and unseasonable use of the style sententious, the style pathetic, the style indignant, and all your other styles of speaking in which he has been instructed, then, I maintain, and not till then, is his art wrought into a beautiful and a perfect work. But if he omit any of these requisites, whether in writing, or teaching, or speaking, while he professes to be performing his work scientifically, the hearer who refuses to be persuaded achieves a victory over him. But, Phaedrus, but, Socrates we shall doubtless hear from our friend the treatise-writer is this to be your sole art of speaking, or may we put up with one conducted on somewhat different principles?

Phaedrus:: None other, I take it, Socrates, can possibly be allowed, and yet this of yours appears no slight undertaking.

Socrates:: True, Phaedrus, it is not slight. And for this reason we ought to turn over all their writings again and again, to see whether there be found anywhere an easier and a briefer road to the art, in order that we may not uselessly travel on a long and rough one when we might go by one both smooth and short. So if you have ever heard of anything available for our purpose, either from Lysias, or any other teacher, make an effort to remember and tell it me.

Phaedrus:: If the effort were sufficient, Socrates, I should be able to do so; as it is, I can remember nothing at the moment.

Socrates:: What say you then to my repeating a statement which I have heard from certain gentlemen who handle the subject?

Phaedrus:: I should like it of all things.

Socrates:: Well, the saying is, you know, Phaedrus, that its fair to state even the wolfs cause.

Phaedrus:: It is, and do you comply with it.

Socrates:: I will. They tell me there is no need in the world to treat the matter so solemnly, or to carry it back to so remote a source, by such long meanderings. For there is not the slightest occasion this we also mentioned at the beginning of our argument for people, intending to be competent speakers, to have anything at all to do with the truth, about actions just or good, or about men who are such either by nature or education. For in courts of justice, they say, no one troubles himself in the least degree with the truth of these matters, but only with what is plausible, that is to say, with what is likely; to this, therefore, you must give all your attention if you mean to speak by rule of art. Nay, there are occasions when you must not even state facts as they have actually happened, if the story be improbable, but only such as are likely, whether in accusation or defense. And, in short, in whatever you say, it is the probable that you must chiefly aim at, and pay no regard at all to the true. For the observance of this, throughout your speech, will supply you with the entire art.

Phaedrus:: Yes, Socrates, this is exactly the language employed by our professed masters in the art of speaking. I remember, that in the early part of our conversation, we did slightly touch upon this sort of principle, and that this is held to be of paramount importance by the gentlemen of the profession.

Socrates:: Nay, Phaedrus, I m sure you have read over and over again the great Tisias himself. So let Tisias tell us in person whether he means anything else by the probable, than what accords with the opinion of the many.

Phaedrus:: What else can I? answers Tisias.

Socrates:: On the strength then, I suppose, of this sapient and scientific discovery, he proceeds to announce, that if a weak, but courageous man, is brought to trial for having knocked down and robbed of his clothes, or purse, a strong and cowardly one, neither accuser nor accused is to tell the truth to the judges, but the coward is to say that the other had assistance when he knocked him down; while the brave man must first prove the fact of their being alone, and then appealing to their favorite probable, exclaim, Why, how could a man like myself have ever thought of attacking a man like that? But the other, you may be sure, is not to plead his own cowardice, but rather essay some fresh false hood, which will, perhaps, supply his adversary with the means of refuting the accusation. And so, whatever be the matter on hand, this, he says, is the style of pleading warranted by art. Is it not so, Phaedrus?

Phaedrus:: It is.

Socrates:: Recondite truly is the art, and wonderful the skill of its inventor, be he Tisias, or who he may, and whatever be the name he delights to be called by. But, Phaedrus, shall we answer him or not?

Phaedrus:: With what?

Socrates:: With this. Long before you joined our conversation, Tisias, we chanced to observe, that this vaunted probability of yours only made itself felt in the minds of the many, by virtue of its resemblance to the truth. And we have since proved, that in all cases the various shades of resemblance are best detected by the man who is best acquainted with the truth in question. So that, if you have anything else to say on the art of speaking, we shall be delighted to hear it; if not, we will abide by our previous position, that unless a speaker has reckoned up the different natures of his hearers, and is able both to separate things into their several kinds, and embrace particulars under one general idea, he will never reach that highest point of excellence in the art which is attainable by the power of man. But this knowledge he can never possibly acquire without great labor; labor which the wise man ought to bestow, not with a view to speaking and acting before the world, but for the sake of making himself able, both by word and deed to please the gods as best he can. For verily, Tisias, so speak wiser men than you or I, it behooves not the reasonable man to study pleasing fellow-bondsmen, save only if he may in passing, but masters good, and of good descent. If, therefore, our circuit be a long one, marvel not; for it is for the sake of high ends that we have to make it, and not for such as you conceive. Still, even yours, as our argument proves, may be best attained, if you choose to derive them from our source.

Phaedrus:: The ends you speak of, Socrates, are very glorious, I know, if a man could but attain to them.

Socrates:: But surely, my friend, if the ends be glorious, all that befalls us in seeking them is glorious also.

Phaedrus:: Indeed it is.

Socrates:: So far, then, as regards the scientific and unscientific treatment of discourse; let this suffice.

Phaedrus:: And well it may.

Socrates:: But the question of propriety and impropriety in writing, and how to make a composition graceful or inelegant, remains to be considered. Does it not?

Phaedrus:: Yes.

Socrates:: Are you aware, Phaedrus, by what conduct or language, with respect to speaking, a man will please God best?

Phaedrus:: Not at all; are you?

Socrates:: At any rate I can tell you a story of the ancients on the subject. Whether it be true or not, they know themselves; but if haply we could find the truth, could we possibly, think you, pay heed any longer to the opinions of men?

Phaedrus:: That would be indeed ridiculous; but pray tell me the story you say you have heard.

Socrates:: Well, I heard that in the neighbor hood of Naucratis, in Egypt, there lived one of the ancient gods of that country; the same to whom that holy bird is consecrated which they call, as you know, Ibis, and whose own name was Theuth. He, they proceed, was the first to invent numbers and arithmetic, and geometry and astronomy; draughts more over, and dice, and, above all, letters. Now the whole of Egypt was at that time under the sway of the god Thamus, who resided near the capital city of the upper region, which the Greeks call Egyptian Thebes. The god himself they call Ammon. To him, there fore, Theuth repaired; and, displaying his inventions, recommended their general diffusion among the Egyptians. The king asked him the use of each, and received his explanations, as he thought them good or bad, with praise or censure. Now on each of the arts Thamus is reported to have said a great deal to Theuth, both in its favor and disfavor. It would take a long story to repeat it all. But when they came to the letters, Theuth began; This invention, O king, will make the Egyptians wiser, and better able to remember, it being a medicine which I have discovered both for memory and wisdom. The king replied; Most ingenious Theuth, one man is capable of giving birth to an art, another of estimating the amount of good or harm it will do to those who are intended to use it. And so now you, as being the father of letters, have ascribed to them, in your fondness, exactly the reverse of their real effects. For this invention of yours will produce forgetfulness in the minds of those who learn it, by causing them to neglect their memory, inasmuch as, from their confidence in writing, they will recollect by the external aid of foreign symbols, and not by the internal use of their own faculties. Your discovery, there fore, is a medicine not for memory, but for recollection, for recalling to, not for keeping in mind. And you are providing for your disciples a show of wisdom without the reality. For, acquiring by your means much information unaided by instruction, they will appear to possess much knowledge, while, in fact, they will, for the most part, know nothing at all; and, more over, be disagreeable people to deal with, as having become wise in their own conceit, in stead of truly wise.

Phaedrus:: You possess a facility, Socrates, for making up tales of Egypt, or any other strange country you please.

Socrates:: We are told, my friend, that the voice of an oak, in the holy ground of Zeus of Dodona, was the first ever gifted with prophecy. The men of those days, not being clever like you moderns, were content, in their simplicity, to listen to an oak or a stone, if only it spoke the truth. But to you, it seems, it makes a difference who the speaker is, and from what country he comes; you do not merely consider whether the fact be, or be not, as he states it.

Phaedrus:: Your reproof is just. And I believe the truth, with regard to letters, to be as the Theban pronounces.

Socrates:: He, therefore, who leaves behind him, and he again who receives an art in writing, with the idea that anything clear or fixed is to proceed from the writing, must be altogether a foolish-minded person, and, in truth, ignorant of Ammons prediction, as he must suppose that written words can do something more than recall the things of which they treat to the mind of one who knows them already.

Phaedrus:: Most true.

Socrates:: For this, I conceive, Phaedrus, is the evil of writing, and herein it closely resembles painting. The creatures of the latter art stand before you as if they were alive, but if you ask them a question, they look very solemn, and say not a word. And so it is with written discourses. You could fancy they speak as though they were possessed of sense, but if you wish to understand something they say, and question them about it, you find them ever repeating but one and the self-same story. Moreover, every discourse, once written, is tossed about from hand to hand, equally among those who understand it, and those for whom it is in no wise fitted; and it does not know to whom it ought, and to whom it ought not, to speak. And when misunderstood and unjustly attacked, it always needs its father to help it; for, unaided, it can neither retaliate, nor defend itself.

Phaedrus:: This again is most true.

Socrates:: But, hold! Is there not another kind of discourse, this ones legitimate brother? Let us see both how it arises, and how far more excellent and efficient than the other it grows.

Phaedrus:: What discourse do you mean, and how does it take its rise?

Socrates:: I mean that which is written with in sight in the learners mind, which is at once able to defend itself, and knows before whom to speak, and before whom to be silent.

Phaedrus:: You mean the wise mans discourse, which is possessed both of life and soul, and of which the written one may fairly be called a shadow.

Socrates:: Most assuredly I do. But come now, answer me this. If a prudent husbandman had seeds which he cared for, and wished to come to fruit, would he seriously sow them in summer-time, in the gardens of Adonis, and delight to behold them growing up finely in eight days  or, if he did this at all, would he not do it as the mere pastime of a holiday; but, with all the aid of his husbandman's art, sow the seeds, on which he set serious store, in their proper soil, and be content to see them in the eighth month arrived at their maturity?

Phaedrus:: Yes, of course, Socrates; he would do the one seriously, and the other, as you say, by way of amusement.

Socrates:: And shall we say that he who has an insight into the just, the beautiful, and the good, shows less wisdom in the treatment of his seeds than the husbandman?

Phaedrus:: God forbid.

Socrates:: He will not then seriously set himself to write them in water, sowing them with ink by means of a pen, with the aid of words that are unable to defend themselves by speaking, and unable adequately to teach the truth.

Phaedrus:: Certainly, we may expect he will not.

Socrates:: Indeed we may. But in the gardens of letters he will sow his seeds, I imagine, and write, when he does write, for mere amusement, treasuring up aids to the memory both for him self, when he comes to the years of forgetfulness, and for all who are following on the same road. And he will please himself with watching his plants in their tender growth And while others are indulging in other recreations refreshing themselves it may be with feast and kindred pleasure, he, if I mistake not will in place of such amusements be spending his holiday m the pastime I mention.

Phaedrus:: And a noble pastime it is, Socrates, by the side of but a poor one, when a man who can make discourses his play diverts himself with telling stories about justice and virtue.

Socrates:: Yes, my dear Phaedrus, it is noble but far nobler, I imagine, is a mans work on these matters, when finding a congenial soul he avails himself of the dialectical art to sow and plant therein scientific words, which are competent to defend themselves, and him who planted them, and are not unfruitful, but bear seed in their turn, from which other words springing up in other minds are capable of preserving this precious seed ever undecaying, and making their possessor ever happy, so far as happiness is possible for man.

Phaedrus:: Yes, Socrates, this is indeed far nobler than the other.

Socrates:: Now then, Phaedrus, that this point is settled, we are in a condition, you will observe, to decide on our former questions.

Phaedrus:: Which do you mean?

Socrates:: Those which led us in our desire to solve them to the point where we are at present arrived; one being to examine the deservedness of the reproach cast on Lysias for writing speeches; the other, to discover, with regard to speeches themselves, what were written according to, and what without, rule of art. Now this distinction appears to me to have been marked with sufficient clearness.

Phaedrus:: And so it did to me; but I should be glad to be reminded of it again.

Socrates:: Before a speaker is acquainted with the true nature of each subject on which he speaks or writes, and is become able to give it a general definition, and then again knows how to divide it into kinds till he reaches the indivisible; before he has investigated in like manner the nature of the soul, and finding the kind of discourse suitable for each kind of soul, orders and embellishes his discourse accordingly; offering to complex souls discourses of complex structure and rich in every harmony; but simple discourses to simple souls; before, I say, he is able to understand and do all this, he cannot possibly handle discourse with the art of which it admits, whether his object be to instruct or persuade, as the whole of our previous argument has tended to prove.

Phaedrus:: Yes, this is pretty nearly just as I thought it was.

Socrates:: But what are we to say with respect to the honor or disgrace of writing and speaking, and the conditions under which they may justly incur or avoid reproach? Have not our late arguments sufficed to show?

Phaedrus:: What?

Socrates:: That if Lysias or any one else has ever written, or means to write, either a private book, or a public document in the shape of a law, with the idea that his writing contains a great certainty and clearness in this case reproach attaches to the writer, whether people say so or not. For a total blindness with regard to justice and injustice, to virtue and vice, escapes not in sooth the charge of being truly disgraceful, even though it has been lauded by all the world.

Phaedrus:: No; indeed it does not.

Socrates:: But whoever believes that in a written discourse, whatever be the subject, there must of necessity be much that is sportive; and that no discourse worthy of serious attention has ever, either in verse or prose, been written or spoken if spoken in the way that our declamations are recited, by rote, without examination or instruction, merely to persuade but that the very best of them are nothing else than reminders to knowledge; whoever believes this, and believes on the other hand, that in discourses, and only in discourses taught, and for the sake of instruction spoken and really written in the soul of the hearer, about things just and beautiful and good, there is found what is clear and perfect, and worthy of attention; and that such discourses ought to be accounted his own legitimate offspring; first, the one in his own mind, if it be there by his own discovery; then those which children or brothers of the former have either after or at the same time sprung up worthily in the minds of others; whoever, I say, thinks this of these discourses, and cares for none beside, will go near, Phaedrus, to be such a man as you and I would pray we might both become.

Phaedrus:: Yes, Socrates, with all my heart I wish and pray for such a lot.

Socrates:: Be we then content to have amused ourselves thus far with the subject of speaking; and go you now, Phaedrus, and tell Lysias, that you and I went down together to the spring and favored haunt of the nymphs, where we heard words which bade us tell Lysias and all writers of speeches; Homer, and all makers of poetry, without music or with; Solon, and all framers of political writings under the name of laws; that if they composed their works with a knowledge of the truth, and with ability to defend them if brought to account, and with the power, moreover, of making by the words of their mouth the writings of their pen appear but poor, they ought not to be named from these holiday productions, but from those which formed their earnest work.

Phaedrus:: What are the names then that you accord them?

Socrates:: To call them wise, Phaedrus, seems to me indeed to be a great matter, and beseeming God alone. Lovers of wisdom (philosophers), or some name of this kind, would both suit them better and be in better taste.

Phaedrus:: And nothing at all out of the way either.

Socrates:: But the man, on the other hand, who has nothing more precious to show than what he long tortured his brain to write or compose with elaborate patching and careful retrenching that man, I conceive, you may justly denominate either poet, or speech-writer, or writer of laws.

Phaedrus:: Justly indeed.

Socrates:: Go then, tell this to your friend.

Phaedrus:: But you, Socrates, what will you do? We must not pass over your friend either.

Socrates:: Whom do you mean?

Phaedrus:: Isocrates the fair. What message will you take him, Socrates? What shall we say that he is?

Socrates:: Isocrates is still young, Phaedrus; what I augur of him, however, I am willing to tell you.

Phaedrus:: What is that, pray?

Socrates:: I think better of his genius than to compare it with the speech-writing of Lysias. Moreover, I account him endued with a nobler nature. So that there will be nothing surprising if, as he advances in years, he will in the art of speaking even, to which he is now applying himself, leave all who have hitherto handled it, far as children behind him; and nothing surprising either if he be not content with such achievements, but be led by a godlier impulse to holier and higher things. For nature, my friend, has implanted a love of wisdom in the mind of the man. This then is the message I will take from the gods of the spot to Isocrates as my favorite, and do you take the one I gave you to Lysias, as yours.

Phaedrus:: It shall be done but let us depart, the rather as the heat of the day is over.

Socrates:: Were it not better to offer up a prayer to these gods before we go?

Phaedrus:: Oh yes.

Socrates:: Beloved Pan, and all ye other gods who here abide, grant me to be beautiful in the inner man, and all I have of outer things to be at peace with those within. May I count the wise man only rich. And may my store of gold be such as none but the good can bear.

Phaedrus, need we anything more? For myself I have prayed enough.

Phaedrus:: For me too pray the same. Friends share and share alike.

Socrates:: Let us go.

### Can Virtue be taught?

In Platonic style of highest contrast, Plato chooses the most famous sophist who claims the greatest ability to teach virtue, while Socrates, who is not a sophist at all, claims that he was uncertain that it can. Protagoras is very serious, but Socrates has a mind to show that he is actually ignorant of the topic. If virtue was knowledge, it can be taught. If it is not knowledge, it cannot be taught. If it cannot be taught, then what is the value of Protagoras' claim? Socrates on the other hand, eventually gets Protagoras to admit that virtue is knowledge.

Plato, as a grammar teacher, who took grammar down to first principles, exactly what it is that you can name, reduced grammar to binary and since he also used geometry to construct paradigms to illustrate grammar with, then Plato was the closes human I know of which was on the tract that grammar forms a grammar matrix from the binary recursion of the intelligible concept of Language, or again, the intelligible definition of a thing. This matrix constructs, Common Grammar, Arithmetic, Algebra and Geometry. Those who claim that one of these grammars is more perfect or better than the other, is wholly illiterate, unaware that binary recursion is not different from itself.

The real point is, since ever system of grammar is afforded by binary recursion, then why is it we still do not have any correct grammar books? It is because ever so called paper trained individual in the world has always been illiterate.

The behavior of the body is perceptible and in the vernacular of Aristotle, it affords us induction; the behavior of a mind is intelligible and again, by Aristotelian jargon, it affords a mind deduction effected through syllogism, or in modern terms, Class Mechanics, but to failures in reasoning, Set Theory, which cannot possible be a theory, as it is a biological fact. Can one say that there are many behaviors of the mind which produce many behaviors of the body, or can one determine the whole proportion between the two as a single concept?

Can the perceptible behavior of the body be performed by a mind incapable of performing that function when the intelligible is absent from a mind? When you ask any so called professional today, about the purpose and function of a mind, have they ever produced a single standard response, or mountains to theories? If a mind is just one thing, can its response be more than just one thing? Can a single agent produce multiple patients? What parses and organizes information? Grammar is the method by which data is organized and responded to, what determines a functional mind?

How many relatives, verbs, reside within a pair of correlatives, noun? Help yourself answer the question by drawing a simple line segment. Is one many and many one?

> Are wisdom and temperance and courage and justice and holiness five names of the same thing? or has each of the names a separate underlying essence and corresponding thing having a peculiar function, no one of them being like any other of them? *Protagoras* by Plato, Jowett.

When it is asked, what a thing is, we have to be able to discern the difference in our answer as to the many and the one, the verb or noun. When we recursively apply the two elements of a thing, we always denote the content by the noun, i.e. recursion is just like counting, we do not call a thing one until we are indeed indicating the container the relative difference resides in. Listing the elements of a set, is not the definition, or noun, by which the set is called.

Every possible grammar is a method of utilizing binary recursion which can be called the Art of Measurement, it can also be called the Art of Judgment, and the Art of Prophecy. Thus, Virtue is actually elliptical for our virtue as a mind and virtue of a mind is simply the ability to do the math. The present moment is a particular, an arithmetic, while the whole of one's life is geometric, a ratio, the present is always a particular set into the ratio of one's life.

> Now suppose that is, happiness to consist in doing or choosing the greater, and in not doing or in avoiding the less, what would be the saving principle of human life? Would not the art of measuring be the saving principle; or would the power of appearance? Is not the latter that deceiving art which makes us wander up and down and take the things at one time of which we repent at another, both in our actions and in our choice of things great and small? But the art of measurement would do away with the effect of appearances, and, showing the truth, would fain teach the soul at last to find rest in the truth, and would thus save our life. Would not mankind generally acknowledge that the art which accomplishes this result is the art of measurement? *Protagoras* by Plato, Jowett.

Thus we see another way to view the distinction between the perceptible and the intelligible. The perceptible is the particular moment, an arithmetic, while the intelligible is geometric, how to proportion the moment to one's future.

As every system of grammar is afforded by binary recursion, Plato makes a statement here, which is the whole of his so called Philosophy which is nothing more than a biological fact:

> "Well, then, my good people: Since it has turned out that our salvation in life depends on the right choice of pleasures and pains, be they more or fewer, greater or lesser, farther or nearer, doesn't our salvation seem, first of all, to be measurement, which is the study of relative excess and deficiency and equality?" *Protagoras* by Plato, Protagoras-Lombardo and Bell.

Which agrees with the Bible, the whole of man's salvation rests upon judgment and judgment, through every possible system of grammar is no more than binary recursion, which, when effected through the grammar of arithmetic, works out to unique binary results.

# Protagoras.

or

The Sophists.

Translated by Henry Cary.

A FRIEND, SOCRATES, HIPPOCRATES, PROTAGORAS, ALCIBIADES, CALLIAS, CRITIAS, PRODICUS, AND HIPPIAS.

Friend:: Whence come you, Socrates? can there be any doubt but that it is from a chase after the beauty of Alcibiades? and to me, indeed, when I saw him lately, the man appeared still beautiful, though between ourselves, Socrates, he is a man and is now getting a pretty thick beard.

Socrates:: But what of that? Do you not approve of Homer, then, who says, that the most graceful age is that of a youth with his first beard, which is now the age of Alcibiades?

Friend:: What have we to do with that now? Do you come from him? And how is the youth disposed towards you?

Socrates:: Very well, I think, and not least so to-day; for he has said many things in my favor, assisting me, and indeed I have just now come from him. However, I have something strange to tell you: for though he was present I paid no attention to him, and even frequently forgot him.

Friend:: But what great affair can have happened between you and him? for surely you have not met with any one else more beautiful, in this city at least?

Socrates:: By far.

Friend:: What say you? A citizen, or a stranger?

Socrates:: A stranger.

Friend:: From whence?

Socrates:: From Abdera.

Friend:: And did this stranger appear to you so beautiful that you thought him more beautiful than the son of Clinias?

Socrates:: But how, my dear friend, can the wisest be thought otherwise than more beautiful?

Friend:: Have you come then, Socrates, from meeting one of our wise men?

Socrates:: Yes, and from the wisest of the present day, if you think Protagoras is the wisest.

Friend:: Ha! What say you? Is Protagoras here?

Socrates:: And has been, these three days.

Friend:: And are you just now come from his company?

Socrates:: I have, and from a very long conversation with him.

Friend:: Why then should you not relate this conversation to us, unless something hinders you, having made this boy rise up, and seating yourself in his place?

Socrates:: Certainly; and I shall be obliged to you if you will listen to me.

Friend:: And we to you, if you will tell us.

Socrates:: The obligation will be mutual. Listen then. This morning, while it was yet dark, Hippocrates, son of Apollodorus and brother of Phason, knocked very hard at my gate with his stick, and as soon as it was opened to him he came in, in great haste, and calling out with a loud voice, said;

Hippocrates:: “Socrates, are you awake or asleep?”

Socrates:: And I, knowing his voice, said, “Hippocrates is here: do you bring any news?”

Hippocrates:: “None, but what is good.”

Socrates:: “You say well, but what is it? and why have you come so early?”

He, standing by my side said;

Hippocrates:: “Protagoras is come.”

Socrates:: “He came the day before yesterday, and have you only just heard of it?”

Hippocrates:: “By the gods, only yesterday evening,”

Socrates:: At the same time feeling about my bed, he sat down at my feet.

Hippocrates:: “Yesterday evening, very late, on my return from the village of Œnoe, for my slave Satyrus ran away, and I was purposing to tell you that I was going in pursuit of him, but something else put it out of my head; but when I had returned, and we had supped, and were going to bed, then my brother told me that Protagoras was arrived, and my first thought was to come immediately to you, but afterwards it appeared to me too late at night. As soon, however, as sleep had refreshed me after my fatigue, I immediately arose and came here.”

Socrates:: And I, knowing his earnestness and excitability, said, “What is this to you? Does Protagoras do you any harm?”

And he, laughing, said;

Hippocrates:: “By the gods, Socrates, he does, because he alone is wise, and does not make me so.”

Socrates:: “But, by Jupiter, if you give him money and persuade him, he will make you wise too.”

Hippocrates:: “Would that, O Jupiter and ye gods, it depended on that, for I would spare nothing of my own or of my friend’s property either, and I have now come to you for this very purpose, that you may speak to him in my behalf. For besides that I am too young, I have never yet seen Protagoras or heard him speak, for I was but a boy when he came here before. However, Socrates, all men praise him, and say that he is the wisest man to speak. But why do we not go to him that we may find him within? He is staying, as I have heard, with Callias son of Hipponicus. Let us go then."

Socrates:: "We will not go there yet my friend, it is too early; but let us rise up and go into our court, and spend the time there walking about, until it is light; then we will go. For Protagoras stays mostly within; therefore cheer up, we shall probably find him at home."

After this we rose and walked about the court, and I in order to try the strength of Hippocrates, examined and questioned him; "Tell me," said I, "Hippocrates, you are now purposing to go to Protagoras, and to pay him money as a fee for teaching you something; to what kind of person do you think you are going, and what do you expect to become? Just as if you thought of going to your own namesake, Hippocrates of Cos, one of the Asclepiads, and were to pay him money as a fee for teaching you, if any one asked you, 'Tell me, Hippocrates, you are about to pay a fee to Hippocrates, in what capacity? what should you answer?"

Hippocrates:: "I should say, in that of a physician."

Socrates:: "And what do you expect to become?"

Hippocrates:: "A physician."

Socrates:: "But if you thought of going to Polycletus the Argive, or Phidias the Athenian, and were to pay them a fee for teaching you, if any one asked you, 'In what capacity do you intend to pay this money to Polycletus and Phidias? what should you answer?"

Hippocrates:: I should say, in that of statuaries."

Socrates:: “And what do you expect to become yourself?”

Hippocrates:: “Clearly, a statuary.”

Socrates:: “Be it so. But we are now going, you and I, to Protagoras, and we are prepared to pay him money as a fee for teaching you, if our money is sufficient for the purpose, and we can persuade him by it; but if not, we mean to borrow from our friends. If, then, some one seeing us thus earnestly bent on this, should ask; ‘Tell me, Socrates and Hippocrates, in what capacity do you intend to pay money to Protagoras? what answer should we give him? What other name do we hear given to Protagoras, as that of statuary is given to Phidias, and that of poet to Homer? What name of this kind do we hear given to Protagoras?”

Hippocrates:: “They call him a sophist, Socrates.”

Socrates:: “As to a sophist, then, we are going to pay him money?”

Hippocrates:: “Assuredly.”

Socrates:: “If, then, any one should ask you this further question, ‘What do you expect to become yourself by going to Protagoras?”

Upon which he said, blushing, for the day was now beginning to dawn, so that I could see him;

Hippocrates:: “If this case is at all like the former, it is evident that I expect to become a sophist.”

Socrates:: “But, by the gods, should you not be ashamed to show yourself as a sophist before the Greeks?”

Hippocrates:: “By Jupiter, I should, Socrates, if I must say what I think.”

Socrates:: “Do you suppose, then, Hippocrates, that the instruction of Protagoras will not be of this kind, but such as you received from a grammarian, a musician, or a teacher of gymnastics? for you were not instructed in each of these for the sake of the art, meaning to become a professor yourself, but by way of accomplishment, as is proper for a private person and a free-man."

Hippocrates:: "Just so, such rather appears to me to be the instruction given by Protagoras!"

Socrates:: "Do you know, then, what you are about to do, or does it escape you?"

Hippocrates:: "About what?"

Socrates:: "That you are about to entrust your soul to the care of a man, who, as you admit, is a sophist; and yet I should wonder if you know what a sophist is. Though, if you are ignorant of this, neither do you know to what you are confiding your soul, whether to a good or a bad thing."

Hippocrates:: "But I think I know."

Socrates:: "Tell me, then, what you think a sophist is."

Hippocrates:: "I think, as the name imports, that he is one learned in wisdom."

Socrates:: "This, however, may be said of painters and architects, that they too are learned in wisdom. And if any one should ask us in what wisdom painters are learned, we should surely say to him, in that which relates to the production of pictures, and so on with respect to the rest. But if any one should ask this question, 'In what wisdom is a sophist learned? what answer should we give him? of what production is he a master?"

Hippocrates:: "What else should we say he is, Socrates, but a master of the art that makes men able speakers?"

Socrates:: "Perhaps, we should say truly, yet not sufficiently. For this answer requires from us another question, about what a sophist makes men able speakers; just as the musician, surely, makes a man speak ably on the subject in which he is learned, on music. Is it not so?"

Hippocrates:: “Yes.”

Socrates:: “Well; on what subject, then, does a sophist make a man an able speaker? clearly on that in which he is learned?”

Hippocrates:: “Apparently.”

Socrates:: “What then is that in which the sophist is both learned himself and makes his pupil learned?”

Hippocrates:: “By Jupiter, I am unable to tell you.”

Socrates:: “What then? are you aware to what danger you are going to expose your soul? if you had occasion to entrust your body to some one, on the risk of its becoming healthy or diseased, should you not consider very carefully whether you ought to entrust it or not, and would you not summon your friends and relations to a consultation, and deliberate many days? But that which you esteem far more than the body, your soul, and on which your all depends, either to fare well or ill, according as it becomes healthy or diseased, concerning this do you neither communicate with your father nor your brother, nor with any of us your friends, whether or not you should commit your soul to this stranger who has arrived here, but having heard of his arrival yesterday evening, as you say, do you come before day- break, and take no thought or advice on the matter, whether it is proper or not to entrust yourself to him, but are ready to spend both your own and your friends’ property, as having already resolved that you must in any event associate with Protagoras, whom you neither know, as you admit, nor have ever spoken to; but you call him a sophist, though what a sophist is, to whom you are about to entrust yourself, you are evidently ignorant?”

And he having heard me, replied;

Hippocrates:: “It seems so, Socrates, from what you say.”

Socrates:: “Is not a sophist, then, Hippocrates, a kind of merchant or retailer of commodities by which the soul is nourished? To me, at least, he appears to be so.”

Hippocrates:: “But by what is the soul nourished, Socrates?”

Socrates:: “By learning, But we must take care, my friend, that the sophist does not deceive us by praising what he sells, as those others do with respect to nutriment for the body, the merchant and the retailer. For neither do they themselves know which of the commodities in which they traffic are good or bad for the body, though they praise all that they sell, nor do those who buy from them, unless one happens to be a professor of gymnastics or a physician. In like manner, those who hawk about learning through cities, and who sell and retail it to every one that desires it, praise all that they sell, though perhaps some of these too, my excellent friend, may be ignorant which of the things they sell is good or bad for the soul; and this also may be the case with those that buy from them, unless some one happen to be skilled in the medicine of the soul. If then you happen to know which of these is good or bad, you may safely buy learning from Protagoras or any one else; but if not, beware my good friend, that you do not hazard and imperil that which is most precious. For there is much greater danger in the purchase of learning than in that of food. For when one has purchased meat and drink from a retailer or merchant one may take them away in different vessels, and, before receiving them into one’s body by eating or drinking, one may set them down at home, and calling in some person who understands the matter, consult him as to what may be eaten and drunk, and what not, and how much and when; so that in this purchase there is no great danger. But it is not possible to carry away learning in a different vessel; but it is necessary, when one has paid the price, having received instruction in the soul itself and learnt it, to depart either injured or benefited. Let us therefore consider these things with persons older than we are: for we are too young to decide on a matter of such importance. Now however, since we have made up our minds, let us go and hear the man, and after we have heard him, let us communicate with others. For not only is Protagoras there, but Hippias of Elis, and I think also Prodicus of Ceos, and many other wise men."

This resolution taken, we set out. When we arrived at the front door, we stopped and discussed a question that had fallen out between us on the way; in order therefore that it might not be left unfinished, but that we might bring it to a conclusion and then enter the house, we stood at the front door talking together until we had agreed with each other. Now it appears to me that the porter, who was a eunuch, overheard us, and he seems from the number of sophists to be out of humor with all who come to the house. For when we had knocked at the door, he having opened it and seeing us, said;

Eunuch:: "Ha, more sophists: he is not at leisure."

Socrates:: And at the same time with both his hands, he slammed to the door with all his might. Thereupon we knocked again, and he answering with the door shut, said;

Eunuch:: "Sirs, did not you hear me say that he is not at leisure?"

Socrates:: "But, my good friend, we are not come to Callias, nor are we sophists; cheer up then: for we are come wanting to see Protagoras: so announce us."

At length, with difficulty the fellow opened the door to us. When we entered, we found Protagoras walking up and down in the portico, and in a line with him, there walked on one side Callias son of Hipponicus, and his brother by the mother's side, Paralus son of Pericles, and Charmides son of Glaucon, and on the other side Xanthippus, the other son of Pericles, and Philippides son of Philomelus, and Antimoerus of Mende, who is the most famous of all the pupils of Protagoras, and who is learning professionally, meaning to become a sophist himself. Behind these there followed others who listened to what was said, the greater part appeared to be strangers, whom Protagoras brings with him from the several cities through which he passes, bewitching them by his voice like Orpheus, and they follow his voice, bewitched. Some of our countrymen also were in the band. I was particularly pleased in observing this band, how well they took care never to be in the way of Protagoras by getting before him, but whenever he and those with him turned round, these listeners, in a good and regular manner, opened to the right and left, and wheeling round, always ranged themselves behind him in admirable order.

"After him I perceived," as Homer says, Hippias of Elis sitting on a high seat in the opposite side of the portico, and round him on benches sat Eryximachus, son of Acumenus, Phædrus of Myrrhine, Andron son of Androtion, and some strangers partly his fellow citizens and others. They appeared to be asking Hippias questions on physics and astronomy; but he, sitting on a high seat, gave answers to each of them and resolved their questions. "Moreover I saw Tantalus;" for Prodicus of Ceos had lately arrived, but he was in a building which Hipponicus had before used as a storeroom, but now, owing to the multitude of guests, Callias had emptied it and turned it into a lodging for strangers. Now Prodicus was still in bed wrapt up in a great number of skins and bed-clothes, as it appeared; and there were seated near him on sofas Pausanias of Ceramis, and with Pausanias a youth, quite a lad, as I thought of an excellent disposition, and of a very beautiful form. I thought I heard them call him Agathon, and I should not wonder if he was Pausanias's favorite. This lad then was there, and the two Adimantuses, the one the son of Cepis, and the other of Leucolophides, and some others. But I was not able to learn from the outside what they were talking about, although I was exceedingly anxious to hear Prodicus; for he appears to me to be a very wise, nay a divine man, but owing to the harshness of his voice a kind of humming in the room made what he said indistinct.

We had just entered, and immediately after us there came in Alcibiades, the beautiful as you say, and as I am persuaded he is, and Critias, son of Callæschrus.

After we had entered, then, and waited a little while and observed what was going on, we went up to Protagoras, and I said;

"Protagoras, I and Hippocrates here have come to see you."

Protagoras:: "Do you wish to speak with me alone, or in the presence of the rest?"

Socrates:: "To us, it makes no difference, but when you have heard on what account we have come, you can determine yourself."

Protagoras:: "What is it then, that you are come for?"

Socrates:: "Hippocrates here is a native of this country, son of Apollodorus, of a great and wealthy family; in natural ability he seems to be a match for the youth of his age; and he appears to me to be desirous of becoming a person of note in the city; and he thinks that he shall most readily become so, if he associates with you. Do you then determine, whether we ought to converse apart with you on this subject, or in the presence of others."

Protagoras:: “You very properly take precautions on my behalf, Socrates. For a stranger who visits powerful cities, and persuades the most distinguished of the youth in them to quit the society of others, both kindred and not kindred, both old and young, and associate with him, in the expectation of being improved by his society, ought in doing this to be very cautious, for things of this kind are attended with no slight jealousies and enmities, and even plots. For my part, I say that the art of a Sophist is ancient, but the men who professed it in ancient times, fearing the odium attached to it, sought to conceal it, and veiled it over, some under the garb of poetry, as Homer, Hesiod, and Simonides, and others under that of the mysteries and prophecies, such as Orpheus and Musseus, and their followers, and some I perceive have veiled it under the gymnastic art, as Iccus of Tarentum, and one of the present day who is a sophist, inferior to none, Herodicus of Selymbria, who was originally of Megara. But your own Agathocles, who was a great sophist, concealed it under the garb of music, as did Pythoclides of Ceos, and many others. All these, as I say, through fear of jealousies, employed these arts as veils. I, however, in this respect, do not agree with any of them; for I think that they did not by any means effect the object they wished; for they did not escape the observation of men of authority in the cities, on whose account they had recourse to these disguises, for the multitude perceive scarcely any thing at all, but whatever the former give out, that they sing. Now to try to escape and not to be able to do so, but to be detected, both shows great folly in the attempt, and necessarily makes men much more hostile: for they think that such a man is moreover an impostor. I therefore have taken a path quite contrary to them, and I acknowledge that I am a sophist and teach men, and I think that this precaution is better than the other, to confess rather than to deny: I have also planned other precautions besides this; so that by God's help I have suffered no harm through confessing that I am a sophist; though I have exercised this art now many years; for my age is very great, and there is not one amongst you all whose father I am not old enough to be. So that it will be by far the most agreeable to me, if you are willing, to discuss this matter in the presence of all who are in the house."

Socrates:: I then, for I suspected that he wished to show and make a display of himself before Prodicus and Hippias, that we had come as his admirers— "Why then, do we not summon Prodicus and Hippias, and their party, to listen to us?"

Protagoras:: "By all means."

Callias:: "Would you wish us to prepare seats, that you may sit down and converse?"

Socrates:: It was agreed that this should be done. And we all of us, in great delight, as being about to listen to wise men, laid hold of the stools, and benches, and couches, and placed them in order near Hippias; for the stools were there already; meanwhile Callias and Alcibiades brought Prodicus and his party with them, having made him get out of bed.

When, therefore, we were all seated;

Protagoras:: "Now Socrates, since they are all here, you may repeat what you just now mentioned to me respecting this youth."

Socrates:: "My commencement, Protagoras, is the same as it was just now, namely, with what design we came to you. Hippocrates here is very desirous of your society, and says he shall be glad to hear what advantage he may expect to derive from associating with you. Such is our errand.”

Protagoras:: “Young man, the advantage which you will derive from associating with me is this, that on the very day of your being with me you will go home a better man than you were before, and the same on the second day, and on each succeeding day you will make some further progress.”

Socrates:: “Protagoras, this is nothing wonderful that you say, but very natural, since you too, old and wise as you are, would become better, if any one should teach you what you do not happen to know. But that is not what we require, but just as if Hippocrates here should on the instant change his mind, and desire to associate with the youth who has lately arrived, Zeuxippus of Heraclea, and coming to him as he now does to you, should be told by him the very same things that he has been by you, that by associating with him he would every day become better, and make further progress; if he should further ask him, ‘In what do you mean I shall become better, and in what make further progress? Zeuxippus would answer him, ‘In the art of painting.’ And if he were to attach himself to Orthagoras of Thebes, and being told by him the very same things that he has been by you, should further ask him in what he would daily become better by associating with him, he would reply, ‘In flute-playing.’ In like manner do you also reply to the youth, and to me who ask for him: Hippocrates here, by associating with Protagoras, on the very day in which he associates will go home a better man, and on each succeeding day will in like manner make further progress; in what Protagoras, and with respect to what?”

Protagoras:: “You put the question fairly, Socrates, and I delight in answering those who put their questions well.

For Hippocrates, if he comes to me, will not be treated as he would be treated if he were to attach himself to any other of the sophists. For others injure youth; for when they have shown an aversion to the arts they drag them back again and force them to study the arts by teaching them arithmetic, astronomy, geometry, and music;

Socrates:: and at the same time he looked aside at Hippias:

Protagoras:: but if he comes to me, he will not learn anything else than that for which he came. The instruction that he will receive is this, the method of consulting well about his domestic affairs, in what way he may best govern his own house, and with respect to public affairs, how he may be best able to act and speak on affairs of state.”

Socrates:: “Do I follow your meaning? For you appear to me to mean the political art, and to promise to make men good citizens.”

Protagoras:: “That, Socrates, is the very profession that I do make.”

Socrates:: “What an admirable skill you possess, if you really do possess it; for I will say nothing else to you but what I think. For I imagined, Protagoras, that this could not be taught, yet since you say so, I know not how to disbelieve you. It is right, however, that I should tell you why I think it cannot be taught, nor acquired by men from men. For I, as well as the other Greeks, say that the Athenians are wise. I see, then, when we are met in the assembly, and when it is necessary for the city to settle any thing respecting architecture, that the architects are sent for and consulted about the buildings, and when respecting ship-building, ship-builders; and so with all other things which they think can be taught and learnt. But should any one else, whom they think is not an artist, attempt to give them advice, even though he may be very honorable, and rich and noble, they pay no more attention to him on this account, but laugh at him and make an uproar, until either he of his own accord desists from speaking, through being hooted down, or the archers drag him away or remove him by order of the prytanes. Thus they proceed with respect to matters which they think pertain to art. But when it is necessary to consult on any matter which relates to the government of the city, any one rises up and gives his advice on such subjects, whether he be a builder, a brazier, a shoemaker, a merchant, a ship's captain, rich, poor, noble or ignoble, and no one objects to them, as to the others, that without having received any instruction, or had any preceptor, they yet attempt to give advice; for it is clear that they think this cannot be taught. And not only are the public in general of this opinion, but privately, the wisest and best of our citizens are unable to impart to others the excellence which they possess: for Pericles, the father of these youths, as far as depended on masters, had them educated liberally and well; but in those things in which he is wise, he neither instructs them himself, nor entrusts them to any one else to be instructed; but they, roaming about, feed as it were without restraint, if by chance they may of themselves light on virtue. If you will too, this very same Pericles, being guardian to Clinias the younger brother of this Alcibiades, and fearing lest he might be corrupted by Alcibiades, separated him from him and sent him to be educated by Ariphron; however, before six months had elapsed, Ariphron, being unable to do any thing with him, returned him to Pericles. I could also mention very many others to you, who being good themselves, have never made any one else better, either of their own kindred or others. I therefore, Protagoras, looking to these things, think that virtue cannot be taught. When, however, I hear you saying what you do, I waver, and am of opinion that there is something in what you say, because I think that you are a man of great experience, and that you have learnt many things and discovered some yourself. If, therefore, you can prove to us, more clearly, that virtue can be taught, do not grudge doing so, but prove it."

Protagoras:: "Indeed, Socrates, I shall not grudge it. But whether shall I prove it by relating a fable to you, as an older to younger men, or shall I discuss it by way of argument?"

Socrates:: Thereupon many of those who sat with him, answered, that he might explain it in any way he pleased. "It appears to me, then," said he, "more agreeable to relate a fable to you.

Protagoras:: "There was once a time, when gods were, but mortal races were not. But when also their destined time of creation came, the gods fashioned them within the earth, composing them of earth and fire, and such things as are mingled with fire and earth. And when they were about to bring them into light, they commanded Prometheus and Epimetheus to adorn them and to distribute to each such faculties as were proper for them. But Epimetheus besought Prometheus that he might make this distribution. 'And,' he said, 'when I have made it, do you examine it.' Having thus persuaded him, he made the distribution, But in his distribution, to some he assigned strength without swiftness, and the weaker he adorned with swiftness; some he armed, but giving to others an unarmed nature, he devised some other faculty for their security: for to such of them as he clad with littleness, he assigned wings to fly with, or a subterranean abode; but such as he increased in magnitude he preserved by this very means; and thus he made the distribution, equalizing all things; he adapted these contrivances taking care that no race should be destroyed.

"When he had supplied them with the means of avoiding mutual destruction, he contrived means to defend them against the seasons, by clothing them with thick hairs and solid skins, sufficient to keep off cold and capable of averting heat, and so that, when they went to rest, these very things might serve each of them as his proper and natural bed; and under their feet he furnished some with hoofs, and some with hairs and solid and bloodless skins. After that he provided different food for different animals, for some, herbs from the earth, for others, the fruit of trees, for others, roots; and to some he gave the flesh of other animals as food: and to these he attached the property of producing few offspring, but to those that are consumed by them, fecundity, providing for the preservation of the race. However, as Epimetheus was not very wise, he ignorantly exhausted all the faculties at his disposal on irrational animals. The human race, therefore, still remained to him unadorned, and he was in doubt what to do. While he is doubting, Prometheus comes to examine the distribution, and sees other animals provided with every thing suitable for them, but man naked and unshod, unbedded and unarmed. But now the destined day was at hand, on which it was necessary that man should go forth from earth to light. Prometheus, therefore, being in doubt what safety he can find for man, steals the artificial wisdom of Vulcan and Minerva, together with fire, for it was impossible that it could be acquired or used by any one without fire, and accordingly he presents it to man. Thus, then, man became possessed of the wisdom pertaining to life, he had not, however, political wisdom; for that was with Jupiter; and Prometheus was no longer permitted to enter the citadel, the habitation of Jupiter; moreover the guards of

Jupiter were terrible; but he secretly enters the common abode of Minerva and Vulcan, in which they practiced their arts, and having stolen the fiery art of Vulcan, and the other that belonged to Minerva, he gives them to man, and from this man derives the means of sustenance, but afterwards, as it is said, through Epimetheus, punishment for the theft overtook Prometheus.

"When, therefore, man had become partaker of a divine condition, first of all through this relationship to deity, he alone of all animals acknowledged gods, and set about building altars and statues of gods: next, by art, he soon articulated sounds and words, and devised houses and garments, and shoes and beds, and food from the earth. Thus provided however, at first men lived dispersed; for cities were not: wherefore they were destroyed by wild beasts, through being every where weaker than them; and the mechanical art was indeed sufficient aid for their support, but was inadequate to the war with wild beasts; for they did not yet possess the political art, of which the military is a part. They sought therefore to collect themselves together, and to preserve themselves by building cities. When, however, they were thus collected, they injured one another, from not possessing the political art; so that, being again dispersed, they were destroyed. Jupiter, therefore, fearing for our race, lest it should entirely perish, sends Hermes to carry shame and justice to men, that they might be ornaments of cities, and bonds to cement friendship. Hermes, therefore, asked Jupiter in what manner he was to give shame and justice to men. 'Whether, as the arts have been distributed, so shall I distribute these also? for they have been distributed thus: one man who possesses the medicinal art is sufficient for many not skilled in it, and so with other craftsmen. Shall I thus dispense shame and justice among men, or distribute them to all? 'To all,' said Jupiter, 'and let all partake of them: for there would be no cities, if a few only were to partake of them, as of other arts. Moreover enact a law in my name, that whosoever is unable to partake of shame and justice shall be put to death as a pest of a city.'

"Thus, then, Socrates, and for these reasons, as well others as the Athenians, when a question arises about excellence in building, or any other mechanical art, think that few only should give their advice; and if any one, who is not of the number of the few, should offer to give advice, they do not allow him, as you say; and properly, as I say: but when they proceed to a consultation respecting political excellence, which ought to depend entirely on justice and temperance, they very properly allow every man to speak, because it is the duty of every one to partake of this excellence, otherwise there can be no cities. This, Socrates, is the cause of this fact.

"And that you may not think that you are deceived, *when you are told* that in reality all men are of opinion that every one partakes of justice, and of the other political excellences, take this additional proof. For in other kinds of excellence, as you say, if any one asserts that he is a good flute-player, or skilled in any other art, of which he is ignorant, they either ridicule him, or are indignant, and his friends go to him and admonish him as a madman; but in justice and other political virtues, even though they know of any man that he is unjust, yet if he himself tells the truth of himself in the presence of many persons, what in the other case they considered prudence, to speak the truth, in this case *they consider* madness; and they say that all men ought to say they are just, whether they are so or not, or that he is mad who does not lay claim to justice, because it is necessary that every one should, in some respect, partake of it, or no longer be a man.

“I say these things to show that they very properly permit every man to give advice concerning this virtue, because they think that every one partakes of it. But that men think that it exists not naturally or spontaneously, but that it is taught and acquired by study, by whomsoever it is acquired, this I will in the next place endeavor to show. For whatever evils men think others respectively have by nature or fortune no one is angry with, nor admonishes, or teaches, or punishes the possessors of them, in order to make them otherwise than they are, but pity them. For instance, who would be so foolish as to attempt to do any of these things to the deformed, or the little, or the weak? For they know, I think, that these things, such as are beautiful and the contraries, happen to men by nature and fortune: but such advantages as they think result to men from study, practice, and instruction, if any one does not possess them but their contrary evils, for these things anger, and punishment, and admonition, are had recourse to: of these one is injustice, and so is impiety, and in short, every thing that is contrary to political virtue. Here, then, every man is angry with and admonishes every other, clearly because he thinks it may be acquired by study and instruction. For if you will consider, Socrates, of what avail it is to punish those who act unjustly, this very thing will teach you that men think virtue is to be acquired. For no one punishes those who act unjustly, merely attending to this and for this reason, that any one has so acted, unless it be one who like a brute avenges himself irrationally; but he who endeavors to punish with reason, does not exact vengeance for the sake of past offence, for what has been done he cannot make undone, but for the sake of the future, that neither this man himself, nor any other who sees him punished, may again act unjustly. And he who entertains such a thought must think that virtue may be taught; he punishes certainly for the sake of deterring from wickedness. All, therefore, have this opinion who inflict punishment, either privately or publicly. Now all other men, and especially the Athenians, your fellow-citizens, inflict punishment on and correct those who they think act unjustly; so that, according to this reasoning, the Athenians also are among the number of those who think that virtue may be acquired and taught. That your fellow-citizens, therefore, very properly allow a brazier and a shoemaker to give advice in political affairs, and that they think that virtue may be taught and acquired, has been sufficiently demonstrated to you, Socrates, at least as it appears to me.

"There still, however, remains a doubt which you entertain respecting those good men, why, in the world they have their sons instructed in such things as depend on masters, and make them wise, but in the virtue which they themselves possess do not make them better than others. With respect to this, then, Socrates, I shall no longer speak to you in fable, but argument. For consider the matter thus. Whether is there some one thing or not, of which it is necessary all the citizens should partake, if a city is to be? for in this or in no other way, the doubt which you entertain is solved. For if there is, and if this one thing is neither the art of a builder, nor of a brazier, nor of a potter, but is justice, and temperance, and holiness, and in a word I call it by one name, the virtue of a man; if this be the thing, of which all must partake, and with which every man if he wishes to learn or do any thing else, must learn or do it, but not without this, or if one who does not partake of it must be taught and punished, whether boy, or man, or woman, till through being punished he becomes better, and he who is not obedient, when punished or taught, is to be banished from cities, or put to death as incurable; if this is the case, and if, notwithstanding this, good men teach their children other things, but not this, consider what strange people those good men are: for we have shown that they think it may be taught, both privately and publicly. But since it may be taught, and acquired by study, do they teach their children other things, for which death is not imposed as a penalty, if they do not know them; but where the penalty of death or exile is imposed on their children, if they are not instructed or exercised in virtue, and besides death, the confiscation of their property, and in short the ruin of their families, *do you think that* they do not teach them these things nor bestow their whole care upon them? We must think they do, Socrates.

"Beginning from childhood they both teach and admonish them as long as they live. For as soon as any one understands what is said, nurse, mother, pedagogue, and the father himself, vie with each other in this, how the boy may become as good as possible; in every word and deed teaching and pointing out to him that this is just, and that unjust, this is honorable and that base, this is holy and that unholy, and this you must do and that you must not do. And if the boy obeys willingly, it is well: but if not, like a tree twisted and bent they make him straight by threats and blows. After this they send him to masters, and give them much more strict injunctions to attend to the children's morals than to their reading and music: and the masters do attend to this, and when the boys have learnt their letters, and are able to understand what is written, as before words spoken, they place before them on their benches to read, and compel them to learn by heart the compositions of good poets, in which there are many admonitions, and many details, and praises, and encomiums, of good men of former times, in order that the boy may imitate them through emulation, and strive to become such himself. Again, the music-masters, in the same way, pay attention to sobriety of behavior, and take care that the boys commit no evil: besides this, when they have learnt to play on the harp, they teach them the compositions of other good poets, and those lyric, setting them to music, and they compel rhythm and harmony to become familiar to the boys' souls, in order that they may become more gentle, and being themselves more rhythmical and harmonious, they may be able both to speak and act; for the whole life of man requires rhythm and harmony. Moreover, besides this, they send them to a teacher of gymnastics, that having their bodies in a better state, they may be subservient to their well-regulated mind, and not be compelled to cowardice, through bodily infirmity, either in war or other actions. And these things they do who are most able; but the richest are the most able, and their sons beginning to frequent masters at the earliest time of life leave them the latest. And when they are set free from masters, the state still further compels them to learn the laws, and to live by them as a pattern, that they may not act at random after their own inclinations, but exactly as writing masters having ruled lines with a pen for those boys who have not yet learnt to write well, so give them the copy-book, and compel them to write according to the direction of the lines, so the state having prescribed laws which were the inventions of good and ancient legislators, compels them both to govern and be governed according to these, but whoso transgresses them, it punishes; and the name given to this chastisement, both among you, and in many other places, is correction, since punishment corrects. So great therefore being the attention paid to virtue, privately and publicly, do you wonder and doubt, Socrates, whether virtue may be taught? There is no need, however, to wonder, but much more if it could not be taught.

"Why then are there many bad sons of good fathers? Learn again the reason of this; for it is not at all wonderful, if what I have before said is true, that, if a state is to subsist, no one must be unskilled in this thing, virtue. For if what I say is the case, and it assuredly is, consider the matter by selecting any other study and subject of instruction whatever. For instance, suppose that a city could not subsist unless we were all of us flute-players, each according to his capacity, and suppose every one should teach his neighbor, both privately and publicly, and should chide any one who did not play well, and should not grudge doing this, as now no one grudges a knowledge of what is just and legal, or conceals it, as is the case in other arts, for mutual justice and virtue are, I think, advantageous to us; and for this reason every one most willingly tells and teaches others what is just and legal. If then in the same way, in flute-playing, we had a perfectly willing and ungrudging disposition to teach each other, do you think, Socrates," said he, "that the sons of good flute-players would become good players, rather than the sons of bad ones? I indeed think not; but the man's son who happened to have the best natural talent for flute-playing, would rise to distinction; and the man's son who had no such natural talent, would be undistinguished; and the son of a good flute-player would often turn out a bad one, and the son of a bad one would often turn out a good one. However, all would be sufficiently good flute-players, compared with those who are untaught, and who know nothing of flute-playing. In like manner think that the man who appears to you to be the most unjust of those who are trained in the laws, and among civilized men, is just and a proficient in justice, when compared with men, who have neither instruction nor courts of justice, nor laws, nor any necessity that constantly compels them to attend to virtue, but may be considered as savages, such as those whom the poet Pherecrates represented last year, at the Lenaean festival. Assuredly, if you should chance to be thrown among such men as the misanthropes in that play, you would rejoice if you met with a Eurybates and a Phrynondas, and you would deplore with regret the depravity of the men here. But now you are fastidious, Socrates, because all are teachers of virtue as far as they are severally able, though no one appears to you to be so. Again, if you were to enquire for a teacher of the Greek language, not one would be found: nor, I think, if you were to enquire for one who could instruct the sons of our artificers in the very art which they have learnt from their father, so far as the father and the father's friends who follow the same art are able to teach it, *if, I say, you were to enquire* for one who could instruct them, I think, Socrates, that a teacher would not easily be found for them, but for those who are utterly unskilled, a teacher would easily be found, and so with respect to virtue and every thing else. But if there is any one who excels us even but a little in advancing others in the road to virtue, we ought to be content. Of these, then, I think I am one, and that far above other men I know certain things by which a man will be made upright and good, and that worth the remuneration which I demand, and even more, as also my pupils think. Therefore I adopt the following method in my demand for remuneration; when any one has learnt from me, if he is willing, he pays the sum that I demand; but if not, having gone to a temple and sworn how much my instructions are worth, he pays that sum.

"Thus much, Socrates, I have said by way of fable and argument, to prove that virtue may be taught, and that the

Athenians are of that opinion, and that it is not at all wonderful that the sons of good fathers should turn out bad, or of bad fathers, good, since even the sons of Polycletus, who are of the same age with Paralus and Xanthippus here, are nothing compared with their father, and so with respect to the sons of Other artists; these youths, however, do not yet deserve to be blamed in this respect; for we have still hopes in them, as they are young."

Socrates:: Protagoras having made such and so long a display, ceased speaking; and I, having continued for a long time enchanted, still looked at him, expecting that he would say something more, and desiring to hear him. But when I perceived that he had in reality ceased, I with difficulty collected myself, and looking towards Hippocrates, said, "O son of Apollodorus, how thankful I am to you for having urged me to come hither; for I esteem it a great privilege to have heard what I have heard from Protagoras; for before this, I thought it was no human care by which good men become good, but now I am persuaded that it is. However, I feel a slight difficulty, which, doubtless, Protagoras will easily explain, since he has explained so much. For if any one should converse with any one of the popular orators on these subjects, he would perhaps hear similar arguments, as from Pericles, for instance, or some other able speaker; but if he should ask them any further questions, like books they are unable either to give an answer or to ask any question themselves. And if one should put any trifling question to them respecting what has been said, as brass when struck sounds for a long time, and prolongs its sound, unless some one lays hold of it, so these orators, when asked some trifling question, answer in a speech drawn out to a great length. But Protagoras here is able to make long and beautiful speeches, as the fact proves, and is also able, when asked a question, to answer briefly, and when questioning, to wait and receive the answer, which are qualities possessed but by a few. Now then, Protagoras, I need a trifle only, so that I shall have all I want if you will answer me this. You say that virtue may be taught; and I, if I could be persuaded by any man, should be persuaded by you. But, what I wondered at your saying, satisfy my mind as to that. For you said that Jupiter sent justice and shame to men; and afterwards, in many parts of your discourse, justice, temperance, holiness, and all qualities of that kind, were spoken of by you, as if they were collectively one thing, virtue. Therefore explain this accurately to me, whether virtue is one thing, and justice, temperance, and holiness, parts of it; or whether these that I have now mentioned are all names of one and the same thing. This is what I still want to know."

Protagoras:: "But it is easy, Socrates, to answer this question, that the qualities about which you ask are parts of virtue, which is one thing."

Socrates:: "Whether, are they parts like the parts of a face, the mouth, nose, eyes, and ears; or like the parts of gold, which in no respect differ from each other and from the whole, except in magnitude and littleness?"

Protagoras:: "Like the former, it appears to me Socrates, as the parts of the face are to the whole face."

Socrates:: "Whether, then, do men possess these parts of virtue, some one and others another part? or is it necessary that he who has received one should have all?"

Protagoras:: "By no means, since many men are brave, but unjust, and again just, but not wise."

Socrates:: "Are these, then, parts of virtue, wisdom and courage?"

Protagoras:: “Most assuredly. And wisdom is chief of all the parts.”

Socrates:: “And is every one of them different from every other?”

Protagoras:: “Yes.”

Socrates:: “And has each of them its proper function, like the parts of the face? For instance, an eye is not like the ears, nor is its function the same; nor is any one of the others like any other, either as to its function, or in any other respect. Thus, then, with the parts of virtue, is not any one like any other, either in itself, or in its function? Is it not clear that such is the case, since it resembles our example?”

Protagoras:: “Such is the case, Socrates.”

Socrates:: “Therefore none of the other parts of virtue are like science, or like justice, or like courage, or like temperance, or like holiness.”

Protagoras:: “No.”

Socrates:: “Come then, let us examine together what the character of each of them is. And first of all, thus; is justice a thing, or not a thing? to me it appears to be a thing; but what does it appear to you to be?”

Protagoras:: “To me also it appears to be a thing.”

Socrates:: “What then? If some one were to ask you and me, ‘Protagoras and Socrates, tell me with respect to this very thing which you have just now named, justice, whether is it in itself just or unjust? I should answer him that it is just: but what decision would you give? the same as mine, or different?”

Protagoras:: “The same.”

Socrates:: “Justice, then, is precisely similar to being just, I should say in answer to one who asked the question. And would not you, too?”

Protagoras:: “Yes.”

Socrates:: “If, then, after this, he should ask us, ‘Do you not also say that holiness is something? we should reply, I think that we do?”

Protagoras:: “Yes.”

Socrates:: “‘Do you not say that this too is a thing?’ should we say it is, or not?”

He allowed that we should say it is.

“‘But whether do you say that this very thing is of such a nature as to be unholy, or holy? I for my part, should be indignant at the question, and should say, ‘Speak properly, my good sir, for scarcely could any thing else be holy, if holiness itself be not holy. But what should you say? should not you give the same answer?”

Protagoras:: “Certainly.”

Socrates:: “If, then, after this, he should ask us, and say, ‘What then did you mean a little while ago? Or did I not hear you aright? For you appeared to me to say that the parts of virtue are so disposed to each other, that no one of them resembles any other; I, for my part should reply, In other respects you heard aright, but in thinking that I too said this, you were mistaken; for Protagoras gave this answer, and I put the question. If then he should say, ‘Does he speak the truth, Protagoras; do you say that no one part of virtue is like any other of its parts? Is this your assertion? what answer would you give him?”

Protagoras:: “I must needs admit it, Socrates.”

Socrates:: “After admitting this, Protagoras, what answer should we give him, if he further asked us, ‘Is not holiness then of such a nature as to be a just thing, nor justice such as to be a holy thing, but such as to be not holy; and holiness such as to be not just, but unjust, and the former unholy? What answer should we give him? I, for myself, should say both that justice is holy, and holiness just. And for you, if you would permit me, I should make the very same answer, that justice is the same with holiness, or very like it, and that justice bears the nearest possible resemblance to holiness, and holiness to justice. But consider whether you would forbid me to give this answer, or does it seem so to you also?”

Protagoras:: “It does not altogether appear to me, Socrates, to be so absolutely true, that I can grant that justice is holy, and holiness just; but there appears to me to be a difference between them. However what matters that? if you wish it, let it be admitted between us that justice is holy, and holiness just.”

Socrates:: “Not so, for I do not require to examine into an ‘If you wish it,’ and ‘If you think so,’ but into what I think and what you think; but in saying ‘what I think and what you think,’ I mean this, I am of opinion that our argument will be best discussed if we put it out of the question altogether.”

Protagoras:: “Well then, justice has some resemblance to holiness, for every thing resembles every other thing in some respect, for white in some sort resembles black, and hard, soft, and so with respect to other things which appear to be most contrary to each other; and the things which we just now said have different functions, and are not the one like the other, as the parts of the face do in a certain respect resemble each other; so that in this way you could prove this, if you pleased, that all things are similar to each other; yet it is not right to call things that have a certain similarity, similar, nor things that have a certain dissimilarity, dissimilar, though the similarity is very trifling."

Socrates:: And I, wondering, said to him, "Do you think then that the just and the holy are so related to each other, that they have but a trifling similarity to one another?"

Protagoras:: "Not quite so, nor on the other hand do I consider them in the same way as you appear to me to do."

Socrates:: "However, since you appear to me to be vexed at this, we will dismiss it, and consider this of the other things that you said. Do you call folly any thing?"

He admitted he did.

"And is not wisdom the direct contrary to this thing?"

Protagoras:: "It appears so to me."

Socrates:: "But when men act rightly and profitably, do they then appear to you to act temperately, in so acting, or the contrary?"

Protagoras:: "To act temperately."

Socrates:: "And are they not temperate by temperance?"

Protagoras:: "Necessarily so."

Socrates:: "Do not they, then, who act wrongly, act foolishly, and are they not intemperate in so acting?"

Protagoras:: "I agree with you."

Socrates:: "Acting foolishly, then, is the contrary to acting temperately."

He said it was.

"Are not, therefore, things which are done foolishly, done through folly, and things done temperately through temperance?"

He agreed.

"If then any thing is done through strength, is it not done strongly, and if through weakness, weakly?"

Protagoras:: “It appears so.”

Socrates:: “And if any thing is done with swiftness, swiftly, and if with slowness, slowly?”

He said it was.

“And if any thing is done in the same manner, is it not done by the same means, and if in a contrary manner by the contrary means?”

He granted it.

“Come then, is there any thing beautiful?”

He admitted there was.

“Is any thing contrary to this except the ugly?”

Protagoras:: “There is not.”

Socrates:: “But what? Is there any thing good?”

Protagoras:: “There is.”

Socrates:: “And is any thing contrary to this except evil?”

Protagoras:: “There is not.”

Socrates:: “What? is there any thing high in voice?”

He said there is.

“And is any thing contrary to this except the low?”

Protagoras:: “There is not.”

Socrates:: “Therefore, to each several contrary there is only one contrary, and not many.”

He granted it.

“Come then, let us reckon up our admissions. We have admitted that one thing only is contrary to one, but not more?”

Protagoras:: “We have.”

Socrates:: “And that what is done contrariwise, is done by contraries?”

He assented.

“We admitted also that what is done foolishly is done contrariwise to that which is done temperately?”

He assented.

“And that what is done temperately is done by temperance, and what foolishly, by folly?”

He agreed.

“If therefore it is done contrariwise, must it not be done by a contrary?”

Protagoras:: “Yes.”

Socrates:: “And the one is done by temperance, and the other by folly?”

Protagoras:: “Yes.”

Socrates:: “Contrariwise?”

Protagoras:: “Certainly.”

Socrates:: “Through contraries therefore?”

Protagoras:: “It appears so.”

Socrates:: “Folly therefore is contrary to temperance?”

Protagoras:: “So it appears.”

Socrates:: “Do you remember, however, that we before admitted that folly is contrary to wisdom?”

He allowed it.

“And that one thing only is contrary to one?”

Protagoras:: “I grant it.”

Socrates:: “Which, then, of these positions must we retract, Protagoras? That which says, that one thing only is contrary to one, or that in which it was asserted, that wisdom is different from temperance, but that each is a part of virtue, and that besides being different, both they and their functions are dissimilar, in the same manner as the parts of the face? Which of these, then, must we retract? for these two positions taken together are not set down in a very musical manner; for they neither accord, nor harmonize with each other. For how can they accord, since it is necessary that one thing only should be contrary to one, but not to more, but wisdom and temperance are found to be contrary to folly, which is one. Is it so, Protagoras, or otherwise?"

He admitted that it was so, though very unwillingly.

"Must not, then, temperance and wisdom be one and the same thing? Before, moreover, justice and holiness were found to be nearly the same. Come, however," said I, "Protagoras, let us not be disheartened, but examine the rest. Does a man who acts unjustly, appear to you to be prudent, because he acts unjustly?"

Protagoras:: "I should be ashamed, Socrates, to acknowledge this, though many men do say so."

Socrates:: "Whether, then, shall I address my argument to them or to you?"

Protagoras:: "If you please, discuss this statement first, the statement of the many."

Socrates:: "But it makes no difference to me, if only you will answer, whether these things appear so to you or not: for I am most anxious to sift the statement itself, though it may possibly happen, that both I who question, and you who answer, may ourselves be sifted."

At first, then, Protagoras began to give himself airs, for he objected that the subject was difficult; afterwards however, he agreed to answer.

"Come then, answer me from the beginning. Do persons who act unjustly, appear to you to be prudent?"

Protagoras:: "Be it so."

Socrates:: "And by being prudent, do you mean thinking rightly?"

He assented.

“And by thinking rightly that they are well advised when they act unjustly?”

Protagoras:: “Be it so.”

Socrates:: “Is this the case, if they fare well in acting unjustly, or if they fare ill?”

Protagoras:: “If they fare well.”

Socrates:: “Do you say then that certain things are good?”

Protagoras:: “I do.”

Socrates:: “Are those things good, then, which are advantageous to men?”

Protagoras:: “By Jupiter, and some things though they are not advantageous to men I call good.”

Socrates:: Protagoras now appeared to me to be ruffled and annoyed, and to be set against answering any more: when, therefore, I saw him in this state, I was cautious, and asked him gently: “Whether,” said I, “Protagoras, do you mean things that are advantageous to no man, or things that are advantageous in no respect whatever? and do you call such things good?”

Protagoras:: “By no means, but I know many things which are useless to men, meats and drinks, and drugs, and ten thousand other things, and some things that are advantageous; and some things that are neither the one nor the other to men, but are to horses, and some to oxen only, and others to dogs, others again to neither of these, but to trees, and others that are good for the roots of trees, but pernicious to their buds, for instance, dung is good when applied to the roots of all plants, but if you were to put it on their branches and young shoots, it destroys the whole. Oil too is very injurious to all plants, and is most destructive to the hairs of all animals except man, but it is of service to the hairs of man, and to the rest of his body. So various and diversified a thing is good, that this very thing is good for the external parts of the human body, but most pernicious to the inward parts. And on this account all physicians forbid the sick to use oil, except only a very small quantity in what they are going to eat, just sufficient to overcome the disagreeable smell of the food and seasoning."

Socrates:: Protagoras having said this, those that were present loudly applauded him, for that he spoke well. And I said, "Protagoras, I happen to be a forgetful sort of man, and if any one makes me a long speech, I forget what the discussion is about. As, therefore, if I happened to be deaf, you would have thought it necessary, if you were about to converse with me, to speak louder than you do to others, so now, since you have met with a forgetful person, curtail your answers for me, and make them briefer, if I am to follow you."

Protagoras:: "How do you bid me answer briefly? Must I answer you more briefly than is requisite?"

Socrates:: "By no means."

Protagoras:: "But at such length as is requisite?"

Socrates:: "Yes."

Protagoras:: "Whether, then, must I answer at such length as I think requisite, or as you?"

Socrates:: "I have heard, that you are both yourself able, and can teach others to make a long speech on the same subject if you please, so as never to be in want of words, and again to speak so briefly, that no one can express himself in fewer words than you. If, therefore, you mean to converse with me, use the other method with me, that of brevity."

Protagoras:: “Socrates, I have ere this entered into discussion with many men, and if I had done what you bid me, that is, had conversed as my antagonist bade me converse, I should not have appeared to excel any one, nor would the name of Protagoras have been celebrated in Greece.”

Socrates:: Then I for I perceived that he was not pleased with his former answers, and that he would not willingly carry on the conversation by answering my questions thinking that I had no longer any business to be present at the conference, said, “Protagoras, I am not anxious to continue our conference contrary to your wish; but whenever you are willing to converse in such a manner that I can follow you, I will then converse with you. For you, as is reported of you, and as you admit yourself, are able to carry on a conference both with prolixity and brevity; for you are wise; but I am unable to follow these long speeches; though I wish that I could. But it was fitting, that you, who are capable of doing both, should yield to me, in order that the conference might continue: now however, since you are not willing and I have business to attend to, and am unable to stay while you are extending your speeches to a great length for I have somewhere to go to, I will take my departure; though otherwise perhaps I might have listened to these things with pleasure.”

And as I spoke thus, I rose to depart. And as I was rising, Callias takes hold of me with his right hand, and with his left seized my cloak, and said;

Callias:: “We shall not let you go, Socrates; for if you go away, our conversation will no longer be the same. I beseech you, therefore, stay with us; for there is no one I would more gladly hear than you and Protagoras conversing together; therefore oblige us all.”

Socrates::—I already stood up ready to go—“Son of Hipponicus, I always admire your love of wisdom; but I now both praise and love it; so that I should wish to gratify you, if you asked me what was possible. But now it is as if you should ask me to keep up with Crison of Himera, a runner in his prime, or to run a race and keep up with one of the long-distance runners or day-couriers; I should say to you, that I wish much more than you do that I could keep pace with these runners, but I cannot, but if you wish to see me and Crison running together, you must request him to slacken his pace; for I am not able to run swiftly, but he is able to run slowly. So if you desire to hear me and Protagoras, you must request him to continue to answer as he did at first, briefly and to the question. But if not, what kind of conversation will arise? I for my part thought that it is one thing to converse together, and another to harangue.”

Callias:: “But you see, Socrates, Protagoras appears to ask what is just, in requiring that he may be allowed to converse as he pleases, and you as you please.”

Socrates:: Alcibiades, thereupon, taking up the discourse, said;

Alcibiades:: “You do not speak fairly, Callias; for Socrates here admits that he has not the faculty of making long speeches, and yields to Protagoras, but in the power of conversing, and knowing how to give and receive a reason, I should wonder if he yielded to any man. If then, Protagoras confesses that he is inferior to Socrates in conversing, that is enough for Socrates; but if he pretends to rival him, let him carry on the conversation by question and answer, not making a long speech in answer to each question, evading the argument and not choosing to give a reason, but prolonging his speech until most of the hearers forget what the question was about. For as for Socrates, I will be his surety that he will not forget, notwithstanding he jests and says he is forgetful. To me, therefore, Socrates appears to make the fairer proposition; for it is right that every one should declare his own opinion."

Socrates:: After Alcibiades, it was Critias, I think, who said;

Critias:: "Prodicus and Hippias, Callias appears to me to be very much on the side of Protagoras; but Alcibiades is always fond of contention, to whatever he applies himself. We, however, ought not to contend with each other, either for Socrates or Protagoras, but we should join in requesting them both not to break up the conference in the middle."

Socrates:: When he had spoken thus, Prodicus said;

Prodicus:: "You seem to me to say well, Critias: for it is right that those who are present at discussions of this kind should be common, but not equal hearers of both speakers. For it is not the same thing: for it is requisite to hear both in common, but not to give equal attention to each of them, but to the wiser more, and to the less learned less. I too, Protagoras and Socrates, beg of you to make concessions to each other, and to argue with one another, but not to wrangle; for friends argue with friends out of good will, but adversaries and enemies wrangle with one another. And thus the conference will be most admirably conducted. For you, the speakers, will thus be highly approved, not praised, by us the hearers; for approbation is felt in the mind of the hearers, and is without deception; but praise is bestowed in words, by persons often who speak untruly, contrary to their real opinion; again, we, the hearers, shall thus be highly delighted, not pleased, for delight takes place when one learns something and acquires wisdom in one's mind, but pleasure when one eats something, or experiences some other agreeable sensation in one's body."

Socrates:: When Prodicus had thus spoken, many of those that were present approved of what he said. But after Prodicus, Hippias the wise spoke:

Hippias:: “My friends who are here present, I regard you all as kinsmen, relatives, and fellow-citizens by nature, though not by law; for like is by nature akin to like, but law being a tyrant over men, compels many things to be done contrary to nature. It were disgraceful, then, for us to know the nature of things, to be the wisest of the Greeks, and in this very character to have met together in the city of Greece, which is the very prytaneum of wisdom, and in the noblest and wealthiest house in this city, and then to exhibit nothing worthy of this high rank, but like the lowest of men to disagree with each other. I therefore both entreat and advise you, Protagoras and Socrates, to come to terms under our authority, who as arbitrators will bring you to an agreement; and neither do you, Socrates, require that exact form of dialogue, which is so very concise, unless it is agreeable to Protagoras, but relax somewhat and give the reins to your discourse, that it may appear to us with more majesty and grace; nor on the other hand, do you, Protagoras, stretching every rope, and carrying all sail, scud to an ocean of words out of sight of land, but both of you keep a middle course. Do thus then, and be persuaded by me to choose a moderator, president, and prytanis, who will oblige you to keep within moderate bounds on either side.”

Socrates:: This pleased those that were present, and all approved, and Callias said that he would not let me go, and they urged me to choose a president. I said therefore;

Socrates:: “that it would be a shame to choose an umpire for our arguments; for if the person chosen should be our inferior, it would not be right that the inferior should preside over his superiors, nor if he should be equal, would this be right; for one that is equal will act the same as we do, so that the choice will be superfluous. But you will choose some one better than we are; in reality I think it impossible for you to choose any one wiser than Protagoras here: but if you should choose one in no respect superior, though you shall affirm that he is, this also will be a disgrace to him, to have a president chosen for him, as if he were a common person: for as to myself it makes no difference. I am willing, then, to act as follows, that our conference and conversation may continue, which you so earnestly desire: if Protagoras is not willing to answer, let him ask questions, and I will answer; and at the same time I will endeavor to show him, how I say one who answers ought to answer. But when I have answered all the questions that he chooses to ask, let him in his turn, in like manner, reply to me. If, however, he should not appear disposed to answer the exact question put to him, both you and I will join in entreating of him, as you now do of me, not to destroy the conversation. And for this purpose there is no occasion for one president to be appointed, but you will all be presidents in common."

It appeared to all that this was what ought to be done. And though Protagoras was not very willing to comply, yet he was compelled to consent to ask questions, and when he had asked enough in his turn to reply to my questions with brevity. He began therefore pretty nearly as follows:

Protagoras:: "I think, Socrates, that the most important part of a man's education consists in being skilled in poetical composition; that is, to be able to understand what has been said by the poets, both what has been correctly composed and what incorrectly, and to know how to distinguish and to give a reason when asked about them. And now the question shall be on the very subject about which you and I have been conversing, virtue, but it shall be transferred to poetry. For Simonides somewhere says to Scopas, son of Creon the Thessalian, ‘That to become a good man is truly difficult, square as to his hands and feet and mind, fashioned without fault. Do you know the ode, or shall I repeat the whole to you?”

Socrates:: “There is no necessity, for I know it, and have studied the ode with great attention.”

Protagoras:: “You say well. Whether, does it appear to you to have been composed beautifully and correctly or not?”

Socrates:: “Certainly, both beautifully and correctly.”

Protagoras:: “But does it appear to you to have been composed beautifully if the poet contradicts himself?”

Socrates:: “Not beautifully.”

Protagoras:: “Consider it, then, more attentively.”

Socrates:: “But my good friend, I have examined it sufficiently.”

Protagoras:: “You know, then, that in the course of the ode he says somewhere, ‘That saying of Pittacus does not please me, though uttered by a wise man, wherein he says, it is difficult to continue to be good. Do you observe, that the same person makes both this and the former remark?”

Socrates:: “I know it.”

Protagoras:: “Does it appear to you then, that the one agrees with the other?”

Socrates:: “It appears so to me.” And at the same time I was afraid lest there should be something in what he said. “But, does not it appear so to you?”

Protagoras:: “How can he who made both these assertions agree with himself, who first of all laid it down in his own person, that it is truly difficult to become a good man, and a little further on this person forgets himself and blames Pittacus for saying the same thing that he had said himself, ‘that it is difficult to be good,’ and asserts that he cannot approve of his saying the very same thing as himself. Surely in blaming a man who says the same things as himself, it is clear that he blames himself, so that in the former or the latter place he does not speak correctly.”

Socrates:: In saying this he elicited applause and praise from many of the hearers. And I, at first, as if I had been hit by a skilful boxer, was blinded, and made giddy, by his saying this, and by the applause of the others; but afterwards, to tell you the truth, that I might have time to consider what the poet meant, I turned to Prodicus, and calling out to him, said, “Prodicus, Simonides was your fellow-citizen; you are bound to assist the man. I seem then, to call upon you, in the same manner as Homer says Scamander, when assailed by Achilles, called upon Simois, saying, ‘Dear brother, let us unite to repel the prowess of this man. So I call upon you, let not Protagoras overthrow Simonides. For the defense of Simonides requires that exquisite skill of yours, by which you distinguish between to will and to desire, as not being the same, and by which you just now established many and beautiful distinctions. And now consider, whether your opinion agrees with mine: for Simonides does not appear to me to contradict himself. But do you, Prodicus, first declare your opinion. Does it appear to you that to become and to be are the same or different?”

Prodicus:: “Different by Jupiter.”

Socrates:: “Has not Simonides himself then, n the first passage, declared his own opinion, that it is in truth difficult to become a good man?”

Prodicus:: “You say truly.”

Socrates:: “But he blames Pittacus, not as Protagoras thinks, for saying the same thing that he had said, but something different. For Pittacus does not say that this is the difficulty, to become a good man, as Simonides does, but this, to be so; but Protagoras, as Prodicus here says, to be and to become are not the same; and if to be and to become are not the same, Simonides does not contradict himself. And perhaps Prodicus here, and many others, may say with Hesiod, ‘that it is difficult to become good; for that the gods have placed sweat before virtue; but when any one has reached its summit it is then easy to acquire, though before it was difficult.’”

Prodicus, on hearing this, commended me; but Protagoras said;

Protagoras:: “Your defense, Socrates, is more erroneous than the passage which you defend.”

Socrates:: “Then I have done ill, as it seems, Protagoras, and I am an absurd physician; in attempting to cure, I make the disease worse.”

Protagoras:: “So it is however.”

Socrates:: “But how?”

Protagoras:: “Great must have been the poet’s ignorance, if he asserts that virtue is so easy a thing to be acquired, whereas it is the most difficult of all, as all men think.”

Socrates:: “By Jupiter, Prodicus here is very opportunely present at our discussion. For the wisdom of Prodicus appears, O Protagoras, to have been of old divine, whether it began with Simonides, or is even still more ancient. But you, who are skilled in many other things, appear to be unskilled in this, and not skilled in it as I am, from being the disciple of this Prodicus. And now you appear to me not to be aware that Simonides probably did not understand this word ‘difficult,’ in the same sense as you understand it; but as with the word δεινὸς, terrible and clever, Prodicus here is continually taking me to task, when in praising you, or any one else, I say, that Protagoras is a wise and terrible man, he asks if I am not ashamed of calling good things terrible, for what is terrible, he says, is evil; hence no one ever speaks of terrible riches, or terrible peace, or terrible health, but every one says terrible disease, and terrible war, and terrible poverty, since whatever is terrible is evil. Perhaps, therefore, the Ceans and Simonides understand by the word difficult either that which is bad, or something else that you are not aware of. Let us then ask Prodicus; for it is right to enquire of him the meaning of words used by Simonides; what, Prodicus, does Simonides mean by the word difficult?"

Prodicus:: "Evil."

Socrates:: "For this reason, then, Prodicus, he blames Pittacus for saying that it is difficult to be good, as if he had heard him say that it is evil to be good."

Prodicus:: "But what else but this, Socrates, do you think Simonides meant and found fault with in Pittacus, that he did not know how to distinguish terms rightly, as being a Lesbian, and educated in a barbarous dialect?"

Socrates:: "Do you hear Prodicus, Protagoras? And have you any objection to make to this?"

Protagoras:: "This is far from being the case, Prodicus; for I am very sure that Simonides meant by the word difficult the same that we all do, not what is evil, but that which is not easy, but is accomplished by much toil."

Socrates:: "And I too think, Protagoras, that Simonides meant this, and that Prodicus here knows he did, but he is jesting, and is willing to try whether you are able to maintain your own assertion. For that Simonides does not by the word difficult mean evil, is strongly confirmed by the expression immediately after this; for he says, that ‘God alone possesses this privilege, not surely meaning that it is evil to be good; then he adds that God alone possesses this, and he attributes this privilege to God alone; for in that case Prodicus would call Simonides a profligate, and by no means a Cean. But I am willing to tell you what appears to me to have been the design of Simonides in this ode, if you think proper to make trial of my poetical skill, as you call it; or if you prefer it, I will listen to you.”

Protagoras, therefore, hearing me speak thus, said;

Protagoras:: “If you please, Socrates;”

Socrates:: but Prodicus, Hippias, and the rest, urged me very much.

“I will endeavor, then, to explain to you what I think of this ode. Philosophy is most ancient and most prevalent in Crete and Lacedæmon of all Greece, and sophists are more numerous there than any where else. They deny it, however, and pretend to be ignorant, in order that they may not be discovered to surpass the rest of the Greeks in wisdom, like those sophists whom Protagoras mentioned, but that they may appear to excel in fighting and courage, thinking that, if it were known in what they excel, all men would engage in the same pursuit. But now, concealing this, they deceive those who affect Spartan manners in other cities, for some, in imitation of them, have their ears bruised, and bind their arms with the thongs of the cestus, and devote themselves to gymnastic exercises, and wear short garments, as if in these things the Lacedaemonians excelled the other Greeks. But the Lacedæmonians, now that they wish to converse without restraint with the sophists among them, and are wearied with conversing with them in secret, expelling these imitators of Spartan manners, and any other stranger that is living in their country, converse with the sophists unknown to all strangers; and they do not suffer any of their young men to go out to other cities, as neither do the Cretans, lest they should unlearn what they have taught them. And in these cities there are not only men that pride themselves on their learning, but women also. And you may know, that in this I speak truly, and that the Lacedaemonians are admirably instructed in philosophy and the art of speaking, from the following circumstance: for if any one wishes to converse with the meanest of the Lacedaemonians, he will find him, for the most part, apparently an ordinary person in conversation, but afterwards, when a proper opportunity presents itself, he sends forth, like a skilful lancer, a notable saying, brief and pointed, so that he who converses with him will appear to be nothing better than a boy. Accordingly some persons, both of the present day and of former times, have observed this very thing, that to imitate Spartan manners consists much more in studying philosophy, than devoting one's-self to gymnastic exercises, since they know that to be able to utter such sayings is a proof of a highly educated man. Among these were Thales of Miletus, Pittacus of Mitylene, Bias of Priene, our own Solon, Cleobulus of Lindus, Myson of Chene, and the seventh among them was reckoned the Lacedæmonian Chilo. These all were emulators, lovers, and disciples of the Lacedæmonian education, and any one may discover that their wisdom was of this kind, brief and memorable sayings uttered by each of them. These men also, having met together, consecrated the first-fruits of their wisdom to Apollo in the temple at Delphi, inscribing those sentences which all men have in their mouths: 'Know thyself, and 'Nothing in extremes.

"But why do I mention these things? To show that this was the mode of philosophy among the ancients, a certain laconic brevity of diction. Amongst the rest this particular saying of Pittacus was noised abroad, being extolled by the wise men: 'It is difficult to be good. Simonides, therefore, as being ambitious of a reputation for wisdom, knew that if he could overthrow this saying, as if it were a famous wrestler, and could master it, he himself would become famous amongst the men of his own time. In opposition to this sentence, therefore, and with this object, designing to put it down, he composed the whole of this ode, as it appears to me.

"Let all of us, however, examine it together, to see whether what I say is true. For the very commencement of the ode would appear to be insane, if, wishing to say that it is difficult to become a good man, he had afterwards inserted the particle 'indeed.' For this appears to have been inserted for no purpose whatever, unless we suppose that Simonides is speaking as if he were quarrelling with the saying of Pittacus; and that when Pittacus says, that 'it is difficult to be good,' he, disputing this, says, 'Not so, but it is indeed difficult, Pittacus, to become good in very truth; not 'truly good.' For he does not use the word truly in this way, as if some men were truly good, and others good indeed, but not truly so, for this would have been silly, and not worthy of Simonides; but it is necessary to transpose the word 'truly' in the ode, understanding the saying of Pittacus somewhat as follows, as if we were to make Pittacus himself speak, and Simonides answer, saying, 'O men, it is difficult to be good, but the latter answers, 'Pittacus, your assertion is not true: for not to be, but to become indeed a good man, square as to one's hands and feet, and mind, fashioned without blame, is truly difficult. Thus it appears that the particle 'indeed' is inserted with good reason, and that the word 'truly' is rightly placed at the end. And all that follows bears witness to this, that such is the meaning. Many things might be said to prove with respect to each several passage in this ode, that it is well composed; for it is very elegant and elaborate; but it would be too long to go through the whole of it in this way. Let us then consider its whole outline and design, which is nothing else than a refutation of the saying of Pittacus throughout the ode. For he says shortly after this, proceeding as if he would say, to become a good man is truly difficult, it is possible however for a certain time: but having become to continue in this condition, and to be a good man, as you say, Pittacus, is impossible and more than human, but God alone possesses this privilege; 'but it cannot be that a man should be otherwise than evil, whomsoever irresistible calamity prostrates.' Whom, then, does irresistible calamity prostrate in the command of a ship? Clearly not a private person, for the private person is always prostrate; as therefore no one can throw down a man who is lying on the ground, but sometimes one may throw down one who is standing upright, so as to make him lie on the ground, but not one already lying there, so an irresistible calamity may sometimes prostrate a skilful man, but never one who is always unskillful; and a violent storm bursting on a pilot may make his skill of no avail, and a bad season befalling a farmer may make his skill of no avail, and the same with a physician: for it befalls a good man to become evil, as is also testified by another poet, who says, 'A good man is sometimes evil, and sometimes good:' but it does not befall the evil to become so, but he must needs always be so. So that when an irresistible calamity prostrates a skilful, wise, and good man, it is not possible for him not to be evil; but you say, Pittacus, that it is difficult to be good; but the difficulty is to become good, though it is possible, but impossible to be so. 'For every man who fares well is good, but evil if he fares ill.' What then is faring well with respect to literature? and what makes a man good in literature? Clearly the being instructed in it. What faring well makes a good physician? Clearly the being instructed in the art of curing the sick. 'And evil if he fares ill.' Who then would become an evil physician? Clearly he to whom it happens first to be a physician, and then a good physician; for he may become an evil physician. But we who are ignorant of the medical art, can never by faring ill become either physicians, or builders, or any thing else of the kind; but whoever cannot become a physician by faring ill, clearly cannot become an evil physician. Thus also a good man may sometime or other become evil, either from length of time, or labor, or disease, or some other accident, for this alone is a faring ill, to be deprived of knowledge, but the evil man can never become evil, for he is always so; but if he is to become evil, it is necessary for him first to become good. So that this part of the ode tends to this, that it is not possible to be a good man, so as to continue good; but that it is possible to become good, and for the same person to become evil: 'and they are for the longest time best whom the gods love.'

"All these things therefore are said against Pittacus, and the following parts of the ode show this still more clearly. For he says, 'Wherefore I shall never, searching for that which cannot be, throw away a portion of my life on an empty impracticable hope, searching for an all-blameless man among us who feed on the fruits of the wide earth. When I have found one, I will inform you;' he adds. So vehemently, and through the whole of the ode, does he attack the saying of Pittacus. 'But I praise and willingly love all who do nothing base; but with necessity not even gods contend.' And this is spoken against that same saying. For Simonides was not so ill informed as to say that he praised those who did no evil willingly, as if there were some who did evil willingly. For I am pretty much of this opinion, that no wise man thinks that any man errs willingly, nor willingly commits base and evil actions, but they well know that all those who do base and evil things, do them unwillingly. Moreover Simonides does not say, that he praises those who do not willingly do evil, but he uses this word 'willingly' of himself. For he thought that a good and upright man is frequently compelled to love and praise a certain person; for instance, it often happens to a man to have a perverse mother or father, or country, or something else of the kind. Now depraved men, when any such thing happens to them, are as it were glad to see it, and blaming make known and divulge the depravity of their parents or country, that when they neglect them, men may not accuse or reproach them for their neglect, so that they blame them still more *than they deserve*, and add voluntary to necessary enmity. But the good conceal the faults and compel themselves to praise, and if they are angry with their parents or country from having been injured by them, they pacify themselves and become reconciled, compelling themselves to love and praise their own connections. And I think Simonides also himself frequently considered it right to praise and extol a tyrant, or some one else of the kind, not willingly, but by compulsion. This, too, he says to Pittacus; I, Pittacus, do not blame you on this account, because I am fond of blaming; for 'it is enough for me if a man is not evil or too helpless, a sane man, acquainted with justice that benefits the state; I will not censure him, for I am not a lover of censure; for the race of fools is infinite;' so that he who delights in blaming may satiate himself in censuring them. 'All things are beautiful with which base things are not mingled.' His meaning in this, is not as if he had said, all things are white with which black is not mingled, for this would be in many ways ridiculous, but that he himself admits of a mean, so as not to blame it. ‘And I do not seek,’ he adds, ‘an all-blameless man, among us who feed on the fruits of the wide earth; when I have found him, I will inform you.’ For this reason, therefore, I shall praise no one, but it is enough for me if a man be moderate, and does no evil, for I ‘love and praise all.’ Here too he uses the language of the Mitylenreans, as speaking to Pittacus, ‘I praise and love all willingly, here it is necessary after ‘willingly’ to distinguish in the pronunciation, ‘who do nothing base,’ but there are some whom I praise and love unwillingly. Thee therefore, Pittacus, if thou hadst spoken with moderate reason and truth, I should never have blamed, but now, since you lie excessively and in matters of the greatest moment, while you think you are speaking the truth, for this reason I blame you. Such appears to me, Prodicus and Protagoras, to have been the design of Simonides in the composition of this ode.”

Upon this Hippias said;

Hippias:: “You seem to me, Socrates, to have given a good explanation of this ode, and I too, have some pretty good remarks to make on it, which I will communicate to you, if you please.”

Alcibiades:: “Do so, Hippias, but at another time; but now it is right to carry out the agreement which Protagoras and Socrates made with each other, and, if Protagoras wishes to ask any more questions, for Socrates to answer, but if he wishes to answer Socrates, then for the latter to ask questions.”

Socrates:: “I leave it to Protagoras to choose whichever is more agreeable to him; but if he is willing, let us have done with odes and poems, but I would gladly, Protagoras, examine with you and come to a conclusion on the subject about which I first questioned you. For a discussion about poetry appears to me very like the festivities of mean and uneducated men; for they, through not being able to converse with one another over their cups, with their own voices and their own words, in consequence of deficiency of education, enhance the pay of female flute-players, and hiring at a great price the foreign voices of flutes, converse with each other through their voices. But when worthy, good, and well educated men meet together at a banquet you will see neither flute-playing women, nor dancing-girls, nor harpists, but you will find that they are able to converse with themselves, with out these trifles and pastimes, by means of their own voices, both speaking and listening to each other in turn, in good order, even though they have drunk a great deal of wine. In like manner, such meetings as the present, when they are composed of such men as most of us profess ourselves to be, have no need of foreign voices, or of poets, of whom it is not possible to ask the meaning of what they say, and most of those who introduce them in their arguments say that the poet means some one thing and some another, disputing about a matter which they can never determine. But they dismiss such topics of conversation as these, and converse with each other through their own resources, and in their discussions receive and give proof of each other's capacity. It appears to me, that you and I ought rather to imitate such persons as these, and setting aside the poets should discourse with each other, from our own resources, and receive proof of the truth and of ourselves. And if you still wish to question me, I am ready to offer myself to answer you; but if you do not wish it, do you offer yourself to me, so that we may bring to a conclusion the subject that we broke off in the middle."

On my saying these and other things of the same kind, Protagoras did not distinctly declare which of the two he would do. Alcibiades, therefore, looking to Callias, said;

Alcibiades:: “Callias, does Protagoras appear to you to act rightly now, in not being willing to declare whether he will answer or not? For to me he does not. But let him either continue the conversation, or say that he is not willing to continue it, that we may know this from him, and that Socrates may converse with some one else, or whoever else wishes to do so with some other.”

Socrates:: And Protagoras, being ashamed, as it seemed to me, when Alcibiades spoke thus and Callias and nearly all who were present entreated him, was with great difficulty prevailed on to renew the conversation and bade me question him, for that he would answer.

I then said to him, “Protagoras, think not that I converse with you with any other design, than to examine thoroughly into things about which I am continually in doubt. For I think that Homer speaks very much to the purpose, when he says, ‘When two come together, one apprehends before the other. For all of us men are thus more prompt in every deed, and word, and thought, but when any one apprehends alone, he immediately goes about and searches for some one to whom he may communicate it, and with whom he may establish it, until he finds him. So I too, for this reason, am better pleased to converse with you than with any one else, thinking that you are best able to investigate both other subjects which a good man is likely to examine into, and especially virtue. For who else can do it but you? Since you not only think yourself to be a good and worthy man, as some others also are virtuous, but are not able to make others so; you however are both good yourself, and are able to make others good, and you have such confidence in yourself, that while others conceal this art, you openly proclaim yourself to all the Greeks designating yourself a sophist, publishing yourself as a professor of erudition and virtue, and you are the first that has thought fit to receive pay for this. How then, is it not right to call upon you to the examination of these matters, and to question and communicate with you respecting them? It cannot be otherwise. Now therefore I am desirous that the questions which I first asked you on these subjects, should, from the commencement, be partly called to mind by you, and partly to consider them with you. The question, I think, was this; whether these, wisdom, temperance, courage, justice, and holiness, which are five names, belong to one thing, or whether a certain peculiar essence is attached to each of these names, and each thing has its own function, and no one of them is the same as any other? You said, then, that these were not names belonging to one thing, but that each of these names was applied to a distinct thing, and that all these are parts of virtue, not in the same manner as the parts of gold are similar to each other, and to the whole of which they are parts, but just as the parts of the face are dissimilar to the whole of which they are parts, and to each other, each possessing its peculiar function. If these things still appear to you as they did then, say so; if otherwise, explain the difference, since I shall not think you in any way accountable, if you happen to speak differently; for I should not wonder if you said these things before for the purpose of trying me."

Protagoras:: "But I, tell you, Socrates, that all these are parts of virtue, and four of them are very like each other, but courage is very different from all these. And thus you will know that I speak the truth; for you will find many men who are most unjust, most unholy, most intemperate, and most ignorant, yet eminently courageous."

Socrates:: “Hold, for what you say is worth examining. Do you mean that courageous men are daring, or some thing else?”

Protagoras:: “I do. And bold to rush headlong on dangers which most men are afraid to encounter.”

Socrates:: “Come then; do you say, that virtue is something beautiful? and as being a beautiful thing do you offer to teach it?”

Protagoras:: “Most beautiful, unless I am out of my senses.”

Socrates:: “Whether then, is one part of it base, and another beautiful, or, is it all beautiful?”

Protagoras:: “All beautiful, surely, in the highest degree.”

Socrates:: “Do you know, then, who boldly dive into wells?”

Protagoras:: “I do, divers.”

Socrates:: “Whether because they know how to do it, or for some other reason?”

Protagoras:: “Because they know how to do it.”

Socrates:: “But who are they that light boldly on horseback? whether good riders or bad?”

Protagoras:: “Good riders.”

Socrates:: “And who with targets? those that are targeteers, or those that are not?”

Protagoras:: “Those that are targeteers. And in every thing else, if this is what you are enquiring about, you will find that those who are skilled, are bolder than the unskilled, and the same men, after they have learnt are bolder than they were before they learnt.”

Socrates:: “But did you ever see any, who, though unskilled in all these things, were yet bold with respect to each of them?”

Protagoras:: “I have. And very bold.”

Socrates:: “Are those bold persons, then, courageous also?”

Protagoras:: “If they were, courage would be a base thing; for these men are mad.”

Socrates:: “How then, do you describe the courageous? did you not say that they are the bold?”

Protagoras:: “And I say so now.”

Socrates:: “Do not those then, who are thus bold appear to be not courageous, but mad? And again, in the former instances, the wise are the boldest, and being the boldest, are most courageous? And according to this reasoning, will not wisdom be courage?”

Protagoras:: “You do not rightly remember, Socrates, what I said, and what answer I gave you? For when asked by you if the courageous were bold, I admitted that they were; but I was not asked, whether the bold also were courageous; for if you had asked me this, I should have said not all. But that the courageous are bold, which was my admission, you have no where shown that I made that admission improperly. In the next place, you show that men, who have skill, surpass themselves in boldness, and others who are unskilled, and from this, you conclude that courage and wisdom are the same. By proceeding in this way, you might also come to the conclusion that strength is wisdom. For, first of all, if proceeding thus you should ask me, whether the strong are powerful. I should say they are; and in the next place, whether those who are skilled in wrestling are more powerful than those who are unskilled, and they than themselves, after they have learnt, than before they learnt, I should say they are; and on my admitting this, by using the same argument, you might allege, that according to my own admission, wisdom is strength: I however, do not here or any where admit that the powerful are strong, but I do that the strong are powerful, for power and strength are not the same; but the one arises from skill, and from madness too, and passion, but strength from nature, and good nurture of the body. In like manner, boldness and courage are not the same; so that it happens that the courageous are bold, but the bold are not all courageous. For boldness, like power, arises in men from skill, and from passion too and madness, but courage arises from nature, and the good culture of the soul."

Socrates:: "Do you allow, Protagoras, that some men live well, and others ill?"

He said he did.

"Does a man, then, appear to you to live well, if he lives in grief and pain?"

He said not.

"But what, if he should die after having passed his life pleasantly, would he not in that case appear to you to have lived well?"

Protagoras:: "To me he would."

Socrates:: "To live pleasantly, then, is a good, but unpleasantly an evil thing."

Protagoras:: "Yes, if he has lived taking pleasure in honest things."

Socrates:: "What then, Protagoras, do you, like the multitude, call some pleasant things evil, and some painful things good? I mean, as far as they are pleasant are they not so far good, unless something else results from them? And again, in the same way with regard to things painful; are they not evil so far as they are painful?"

Protagoras:: “I know not, Socrates, whether I should answer you as absolutely as you ask me, that pleasant things are all good, and painful things all evil; but it appears to me, not only with reference to the present answer, but also with reference to all the rest of my life, to be more safe to answer, that there are some pleasant things which are not good, and again, that there are some painful things which are not evil, and there are some which are a third sort, and which are neither the one nor the other, neither good or evil.”

Socrates:: “But do you not call those things pleasant, which partake of pleasure, or occasion pleasure?”

Protagoras:: “Certainly.”

Socrates:: “I ask this, then, whether they are not good, so far as they are pleasant, meaning to ask whether pleasure itself is not a good thing.”

Protagoras:: “As you frequently say, Socrates, we must examine this, and if the examination shall appear to be connected with our subject, and the same thing shall appear to be both pleasant and good, we must grant it; but if not, we must controvert it.”

Socrates:: “Whether, then, do you wish to take the lead in the examination, or shall I?”

Protagoras:: “You ought to take the lead, for you began the discussion.”

Socrates:: “Do you think, then, that it will become clear to us in the following manner? just as if any one, examining a man from his form either with reference to his health, or any other operations of his body, on beholding his face and hands, should say, Come, strip, and show me your breast and back, that I may examine you more closely; so I require something of the kind in reference to the present enquiry; perceiving that you are so affected as you say you are, with reference to the good and the pleasant, I have need to say some such thing as this, Come, Protagoras, lay your mind open to me on this point, how are you affected with respect to knowledge? Does it appear to you as it does to most men, or otherwise? Most men think of knowledge in some such way as this; that it is not a strong, nor a guiding, nor a governing thing; nor do they conceive of it as being any thing of the kind; but though knowledge is often found in a man, they do not think that knowledge governs him, but something else, at one time passion, at another pleasure, at another pain, sometimes love, and frequently fear, absolutely forming their conceptions of knowledge, as of a slave dragged about by all the rest. Is such your opinion of it, or do you think that knowledge is a noble thing, and able to govern man, and that if a man knows good and evil he can never be overcome by any thing, so as to do any thing else than what knowledge bids him, and that wisdom is sufficient to protect mankind?"

Protagoras:: "It appears to me, as you say, Socrates: and moreover, if for any man, it would be disgraceful for me not to assert that wisdom and knowledge are the most powerful of all human things."

Socrates:: "You say well and with truth. You are aware, however, that most men do not believe you and me, but say that many who know what is best are unwilling to do it, when it is in their power, but do other things. And all of whom I have asked what is the cause of this, have replied, that being overcome by pleasure, or mastered by pain, or some one of the things which I have just now mentioned, those who do these things are led to do them."

Protagoras:: "I think, Socrates, that men say many other things incorrectly."

Socrates:: "Come then, join me in endeavoring to persuade men, and to teach them what that affection of theirs is which they call being overcome by pleasures, and on that account not doing what is best, though they know it. For, perhaps, on our saying, 'You do not speak correctly, my friends, but are deceived, they would ask us, 'Protagoras and Socrates, if this affection is not the being overcome by pleasure, what is it then, and what do you say it is, tell us?"

Protagoras:: "But why, Socrates, need we consider the opinion of the generality of men, who say any thing that occurs to them?"

Socrates:: "I think, that this will be of some service to us towards discovering with respect to courage how it is related to the other parts of virtue. If, therefore, you are willing to abide by what we just now agreed on, that I should take the lead, follow me where I think the matter will become exceedingly clear; but if you had rather not, I will dismiss it, if you please."

Protagoras:: "You say rightly, finish then, as you have begun."

Socrates:: "Again, then, if they were to ask us, 'What do you say this is, which we call being overcome by pleasures?' I, for my part, should answer them as follows: 'Hear then, for Protagoras and I will endeavor to tell you. Do you not say, friends, that this happens to you under the following circumstances? for instance, being often mastered by meats and drinks, and the delights of love, which are pleasant things, though you know that they are baneful, yet do you not indulge in them?' They would say that such is the case. You and I should then ask them again, 'In what respect do you say that they are baneful? Is it because they afford pleasure, and each of them is pleasant, for the moment? or because they occasion diseases for the future, and make way for poverty, and many other things of the kind? or if they make way for none of these things for the future, but only occasion a man to rejoice, are they nevertheless evil, because they make a man rejoice in any way whatever? Can we suppose, Protagoras, that they will give any other answer than that they are not evil from the momentary pleasure which they produce, but on account of the after results, diseases and other things?”

Protagoras:: “I think, that the many would answer thus.”

Socrates:: “‘Do they not, then, by occasioning diseases, occasion pain, and by occasioning poverty, occasion pain? They would admit this, I think.”

Protagoras assented.

“‘Does it not appear to you then, my friends, as Protagoras and I say, that these things are evil, for no other reason than because they end in pain, and deprive you of other pleasures? Would they admit this?”

We both assented.

“If, again, we should reverse the question, In saying, friends, that good things are painful, do you not mean such things as gymnastic exercises, military service, and treatment of diseases by physicians, by cautery, the knife, physic, and starving, that these things are good, but painful? They would say they did.”

He assented.

“Whether, then, do you call them good, because, at the moment, they give extreme pain and torture; or because afterwards health results from them, and a good habit of body, and the safety of cities, and dominion over others, and wealth? They would say, I think, because of the latter.”

He assented.

“‘But are these things good for any other reason than because they end in pleasures, and deliverance from and prevention of pains? or can you mention any other end, to which you look when you call them good, except pleasures and pains? They would say not, I think.”

Protagoras:: “I think so too.”

Socrates:: “‘Do you not, then, pursue pleasure as being good, and avoid pain as evil?”

He assented.

“‘This, then, you esteem to be evil, pain, and pleasure, good, since you say that enjoyment itself is then evil when it deprives of greater pleasures than those it brings with it, or when it makes way for pains greater than the pleasures contained in it: for if you call enjoyment itself evil on any other account, and looking to any other end, you would be able to tell us; but you cannot.”

Protagoras:: “Nor do I think they can.”

Socrates:: “Again, is not the case precisely the same with respect to pain itself? do you not then call pain itself a good, when it delivers from greater pains than those contained in it, or makes way for pleasures greater than the pains? for if you look to any other end than to that which I mention, when you call pain itself a good, you can tell us; but you cannot.”

Protagoras:: “You speak truly.”

Socrates:: “Again, therefore, if you should ask me, my friends, ‘Why in the world do you speak so much and so frequently about this, ‘Pardon me, I should say. For, in the first place, it is not easy to prove what this is which you call being overcome by pleasures; and, in the next place, the whole proof depends on this. But even now you are at liberty to retract, if you are able to say that good is any thing else than pleasure, or evil any thing else than pain;

or is it enough for you to pass your life pleasantly without pain? If it is enough, and you cannot mention any thing else that is good or evil, which does not end in these, hear what follows: for I say to you, that if this be the case, the assertion is ridiculous, when you say that frequently, a man who knows that evil things are evil, nevertheless does them, when it is in his power not to do them, in consequence of being led away and overpowered by pleasures; and again, when you say that a man who knows what is good, is not willing to do it in consequence of immediate pleasures, by which he is overcome. For it will be manifest that these things are ridiculous, if we do not make use of many names, such as pleasant and painful, good and evil, but, since these things appear to be two, call them also by two names, first, good and evil, next, pleasant and painful. Having settled this, let us say, that a man knowing evil to be evil, nevertheless does it. If, then, any one should ask us, 'why? we shall answer, 'because he is overcome. 'By what? he will ask us. But we are no longer at liberty to say, 'by pleasure for it has assumed another name instead of pleasure, namely, good. We must, however, answer him, and say, 'because he is overcome. 'By what? he will ask. 'By good, we shall answer, by Jupiter. Now if he who questions should happen to be somewhat insolent, he will laugh at us and say, 'A ridiculous thing is this you mention, if a man does evil, knowing that it is evil, when he ought not to do it, because he is overcome by good. 'Is it, he will ask, 'because the good is not worthy to overcome the evil in you, or because it is worthy? We shall clearly say in answer, that it is because it is not worthy; for otherwise he would not err whom we say is overcome by pleasures. But perhaps he will ask, 'in what respect are good things unworthy to overcome the evil, or evil to overcome the good? Is it in any other respect than that the one is greater and the other less? or that the one is more, and the other fewer in number? We shall not be able to say any thing else than this. 'It is clear then. he will say, 'that by being overcome you mean to receive greater evil instead of less good. And thus much for this part of the question.

"Let us now change the names, and again apply the words pleasant and painful to these same things, and let us say, that a man does things, we before called them evil, but let us now call them painful, knowing that they are painful, being overcome by pleasant things, clearly such as are unworthy to prevail. And what other value is there of pleasure in comparison with pain, except that of excess or defect in one or the other? that is, of their being greater or less, more or fewer in number, stronger or weaker than one another. For if any one should say, 'But Socrates, immediate pleasure is very different from future pleasure or pain. 'Is it.' I should ask, 'in any thing else than in pleasure and pain?' for it cannot differ in any thing else. But like a man expert at weighing, having put together the pleasant things, and having put together the painful, and having placed those which are near, and those which are remote, in the scales, say which are the more numerous. For if you weigh pleasures with pleasures, the greater and more numerous are always to be chosen, and if pains with pains, the less and the fewer in number. But if you weigh pleasures with pains, if the pains are exceeded by the pleasures, whether those that are near by those that are remote, or those that are remote by those that are near, the same course must be pursued, in whichever the excess is; but if the pleasures are exceeded by the pains, it must not be pursued. 'Can these things be settled in any other way, my friends, I should ask? I know that they could not mention any other."

It seemed so to him likewise.

"Since then, this is the case, I shall say 'Answer me this, do the same magnitudes appear to your sight greater when near, and less when at a distance, or not?' They will say they do. 'And things bulky, and things numerous, in like manner? and are not equal sounds greater when near, but less when at a distance?' They would say they are. If then, our wellbeing consisted in this, in making and choosing great masses, but in avoiding and not making little ones, what means of safety should we seem to have in life? Would it be the art of mensuration, or the faculty of judging by appearances? or would the latter lead us into error, and often cause us? to vary in our choice of the same thing, now choosing one and now another, and to repent both in our actions and our selections of things great and little, but would the art of mensuration do away with this outward show, and making manifest the truth, cause the soul to be at ease, abiding in the truth, and preserve our life? Would the men upon this admit that the art of mensuration preserves us, or some other art?"

Protagoras:: "The art of mensuration."

Socrates:: "'But what, if the safety of our life consisted in the choice of even and odd, when more ought properly to be chosen, and when less, each with reference to itself, or one with reference to the other, whether they might be near or distant, what, in this case, would preserve our life? Would it not be a science? and would it not be one of mensuration, since it is an art of excess and defect? But since it has relation to even and odd, can it be any other than arithmetic? Would the men grant us this, or not?"

It appeared also to Protagoras that they would.

"'Be it so, my friends; but since the safety of our life has appeared to consist in the right choice of pleasure and pain, and of more and fewer, greater and smaller, more distant and nearer; does it not first of all appear to be an art of mensuration, since it is a consideration of excess and defect and equality of these with respect to each other? 'Necessarily so.' 'But since it has to do with mensuration, it must of necessity be an art and a science.' They will assent to this. What then this art and science may be, we will consider hereafter; but that it is a science is sufficient for the proof of that which Protagoras and I had to make good in answer to the question you asked us. You asked, if you remember, when we agreed with each other that nothing is more powerful than knowledge, but that it always gets the mastery, wherever it may be, both of pleasure and every thing else; but you said that pleasure often gets the mastery, even of a man possessed of knowledge, and when we did not agree with you, you thereupon asked us, 'Protagoras and Socrates, if this affection is not the being overcome by pleasure, what is it then, and what do you say it is? tell us.' If, then, we had immediately said to you, that it is ignorance, you would have laughed at us. But now if you laugh at us, you will also laugh at yourselves. For you have admitted that they err through want of knowledge, who err in the choice of pleasures and pains; but these are things good and evil; and not only through want of knowledge, but as you afterwards further admitted, a knowledge of mensuration. Now an erroneous action done without knowledge, as you must yourselves know, is done through ignorance: so that to be overcome by pleasure is the greatest ignorance; of which Protagoras here says he is a physician, and so do Prodicus and Hippias. But you, because you think it is something else than ignorance, neither go yourselves, nor send your children to the teachers of these things, the sophists, as if this knowledge could not be taught, but by saving your money, and not giving it to these men, you fare badly, both in private and public. Such is the answer we should give to the many. But I ask you, Hippias and Prodicus, as well as Protagoras, for let the conversation be common to you all, whether I appear to you to speak the truth, or to speak falsely?"

What had been said appeared to all to be eminently true.

"You admit, then, that the pleasant is good, but the painful evil. But I deprecate Prodicus's verbal distinctions: for whether you call it pleasant, or delightful, or enjoyable, or from whatever derivation or in whatever way you please to denominate such things, most excellent Prodicus, use your own word and answer what I wish."

Prodicus, therefore, laughing, agreed with me, as did the others.

"But what, my friends, do you say to this? All actions that tend to this, that we may live without pain and pleasantly, are they not beautiful? and is not a beautiful action good and profitable?"

They agreed.

"If then, the pleasant is good, no one who either knows or thinks that other things are better than what he is doing, and that they are possible, still continues to do the same, when it is in his power to do the better; nor is to be overcome by one's-self any thing else than ignorance, nor to be master of one's-self any thing else than wisdom."

All agreed to this.

"What then? Do you say that ignorance is a thing of this kind, to have a false opinion, and to be deceived about matters of great importance?"

To this, likewise, all agreed.

"Is it not the case then, that no one willingly sets about things evil, or things which he thinks are evil, nor is this, as it seems, in the nature of man willingly to engage in things which he thinks are evil, instead of such as are good; and when of two evils he is compelled to choose one, no one will choose the greater, when it is in his power to choose the less.”

All these things were assented to by us all.

“What then, do you call dread and fear something? and the same that I do, I address myself to you, Prodicus, I mean by it a certain expectation of evil, whether you call it fear or dread.”

It appeared to Protagoras and Hippias that dread and fear were of this nature, but to Prodicus that dread was, but fear not.

“But, it is of no consequence, Prodicus; but this is; if what we before said is true, will any man deliberately engage in things which he dreads, when it is in his power to engage in things which he does not dread? or is not this impossible from our former admissions? for it has been admitted that what he dreads he considers to be evil; and what he considers to be evil, no one either engages in or willingly receives.”

These things, likewise, were agreed to by all.

“These points, then, being established, Prodicus and Hippias, let Protagoras here defend himself and show us how his first answer is correct, no, not quite the first, for he then said, that there being five parts of virtue, no one of them was like any other, but that each had a peculiar function of its own. I do not however mean this, but what he said afterwards. For afterwards he said, that four of them very much resembled each other, but that one was altogether different from the rest, namely courage. And he said I should know it by the following proof. ‘You will find men, Socrates, who are most unholy, most unjust, most intemperate, and most ignorant, who are yet most courageous; by which you will know that courage differs much from the other parts of virtue. And I indeed, at the moment, was very much astonished at the answer, and I have been still more so since I have discussed these things with you. I therefore asked him if he meant that courageous men are bold? He said he did, and ready to rush headlong. Do you remember, Protagoras, that you gave this answer?"

He admitted it.

"Come then, tell us on what you say the courageous are ready to rush headlong? Is it on the same things as cowards?"

He said not.

"On different things, therefore."

Protagoras:: "Yes."

Socrates:: "But whether do cowards attempt things which they can venture on with confidence, but the courageous on such as are dreadful?"

Protagoras:: "It is said so, Socrates, by the generality of men."

Socrates:: "You say truly. I do not, however, ask this: but on what do you say courageous men are ready to rush headlong, on dreadful things, thinking that they are dreadful, or on such as are not dreadful?"

Protagoras:: "But this, in the arguments which you just now used, was shown to be impossible."

Socrates:: "And in this, you say truly. So that if this point was proved correctly, no one attempts things which he considers to be dreadful, since to be overcome by one's-self was found to be ignorance."

He admitted it.

“All men, however, attempt things in which they have confidence, both the cowardly and the courageous, and thus both the cowardly and the courageous attempt the same things.”

Protagoras:: “But indeed, Socrates, the things which the cowardly and the courageous attempt are quite contrary to each other; for instance, the latter are willing to engage in war, but the former are unwilling.”

Socrates:: “Whether, is it honorable to engage in it, or base?”

Protagoras:: “Honorable.”

Socrates:: “If, therefore, it is honorable, have we not already admitted that it is good, for we have admitted that all honorable actions are good.”

Protagoras:: “You say truly, and I am always of this opinion.”

Socrates:: “Right. But which of the two do you say are unwilling to engage in war, though it is honorable and good?”

Protagoras:: “Cowards.”

Socrates:: “If therefore, it be honorable and good, is it not also pleasant?”

Protagoras:: “That has been granted.”

Socrates:: “Are the cowardly, then, unwilling to attempt what they know to be more honorable and better, and more pleasant?”

Protagoras:: “But, if we admitted this, we should destroy our former admissions.”

Socrates:: “But what with respect to the brave man? Does he not engage in what is more honorable, better, and more pleasant?”

Protagoras:: “It is necessary to admit that he does.”

Socrates:: “On the whole, then, is it not the case, that the courageous when they are afraid, have no base fear, nor are they inspired with base confidence.”

Protagoras:: “True.”

Socrates:: “But if not base, are they not honorable?”

He assented.

“And if honorable, also good?”

Protagoras:: “Yes.”

Socrates:: “And are not the cowardly, and the bold, and the mad, on the contrary, influenced by base fears, and inspired with base confidence?”

He admitted that they are.

“And are they bold in what is base and evil, through any thing else than ignorance and want of knowledge?”

Protagoras:: “So it is.”

Socrates:: “What then? Do you call this, through which cowards are cowardly, cowardice or courage?”

Protagoras:: “Cowardice.”

Socrates:: “But have not cowards appeared to be what they are, through not knowing what is dreadful?”

Protagoras:: “Certainly.”

Socrates:: “They are cowardly then, through this want of knowledge?”

He admitted it.

“But that through which they are cowardly, you have admitted is cowardice?”

He assented.

“Must not, then, the not knowing what is dreadful, and not dreadful, be cowardice?”

He nodded assent.

“However, courage is contrary to cowardice.”

He said it was.

“Is not then the knowledge of what is dreadful, and not dreadful, contrary to a want of knowledge of these things?”

And here he still nodded assent.

“But is not the want of knowing these things cowardice?”

He, here, with great difficulty, nodded assent.

“Is not the knowledge therefore, of what is dreadful, and not dreadful, courage, being contrary to a want of knowledge of these things?”

Here he would no longer nod assent, but was silent.

“Why, Protagoras, do you neither admit nor deny what I ask?”

Protagoras:: “Do you conclude the subject.”

Socrates:: “I have only one more question to ask you, whether some men still appear to you as at first, to be most ignorant, and yet most courageous.”

Protagoras:: “You seem to be very anxious, Socrates, that I should be the person to answer. I will therefore indulge you, and I say, that from what has been granted, it appears to me to be impossible.”

Socrates:: “I ask all these questions, on no other account, than because I wish to examine how the case stands with respect to things pertaining to virtue, and what virtue itself is. For I know that when this is discovered, that other will be clearly ascertained, about which you and I have both of us held so long a discussion, I maintaining that virtue cannot be taught, but you that it can. And the present issue of our discussion appears to me, as if it were a man, to accuse and laugh at us, and if it had a voice, it would say, Absurd men ye are, Socrates and Protagoras; you, who at the outset maintained that virtue cannot be taught, are now contending in opposition to yourself, and endeavoring to show that all things are knowledge, as justice, temperance, and courage, according to which method of proceeding it will certainly appear that virtue may be taught. For if virtue were any thing else than knowledge, as Protagoras endeavors to maintain, it clearly could not be taught; but now, if it shall appear to be altogether knowledge, as you contend, Socrates, it will be wonderful if it cannot be taught. Protagoras on the other hand, who at first insisted that it could be taught, now seems to contend for the contrary, that it may appear to be almost any thing else rather than knowledge; and so can on no account be taught. I therefore, Protagoras, seeing all these things terribly confused, this way and that, am exceedingly anxious that they should be made clear, and should wish, now we have discussed these things, to proceed to enquire what virtue is, and to examine again respecting it, whether it can be taught, or not, lest by chance that Epimetheus of yours should treacherously deceive us in our enquiry, just as he neglected us in the distribution which he made, as you say. Now in the fable, Prometheus pleased me more than Epimetheus, and making use of him, and looking forward with forethought to my whole life, I diligently attend to all these matters; and if you are willing, as I said at the beginning, I would most gladly join with you in examining them thoroughly."

Protagoras:: "I, Socrates, praise your zeal, and your method of unfolding arguments. For I am not in other respects, I think, a bad man, and least of all men envious: indeed I have often said of you to many, that I admire you more than all whom I am in the habit of meeting, and far above those of your own age: and I add, that I should not wonder if you were to rank among men renowned for wisdom. And these matters we will further discuss hereafter, when you please; but it is now time for me to attend to other business.”

Socrates:: “It is right so to do, if you think fit. For I too ought long since to have gone where I had to go, but I staid to oblige the beautiful Callias.”

Having said and heard these things, we departed.

# Protagoras.

Translated by W. K. C. Guthrie.

Socrates, Friend, Hippocrates, Alcibiades, Critias, Callias, Protagoras, Hippias, Prodicus, Eunuch

Friend:: Where have you come from, Socrates? No doubt from pursuit of the captivating Alcibiades. Certainly when I saw him only a day or two ago, he seemed to be still a handsome man, but between ourselves, Socrates, ‘man' is the word. He's actually growing a beard.

Socrates:: What of it? Aren't you an enthusiast for Homer, who says that the most charming age is that of the youth with his first beard, just the age of Alcibiades now?

Friend:: Well what's the news? Have you just left the young man, and how is he disposed toward you?

Socrates:: Very well, I think, particularly today, since he came to my assistance and spoke up for me at some length. For as you guessed, I have only just left him. But I will tell you a surprising thing. Although he was present, I had no thought for him, and often forgot him altogether.

Friend:: Why, what can have happened between you and him to make such a difference? You surely can't have met someone more handsome—not in Athens at least?

Socrates:: Yes, much more.

Friend:: Really? An Athenian or a foreigner?

Socrates:: A foreigner.

Friend:: Where from?

Socrates:: Abdera.

Friend:: And this stranger struck you as such a handsome person that you put him above the son of Clinias in that respect?

Socrates:: Yes. Must not perfect wisdom take the palm for handsomeness?

Friend:: You mean you have just been meeting some wise man?

Socrates:: Say rather the wisest man now living, if you agree that that description fits Protagoras.

Friend:: What? Protagoras is in Athens?

Socrates:: And has been for two days.

Friend:: And you have just now come from seeing him?

Socrates:: Yes, we had a long talk together.

Friend:: Then lose no time in telling me about your conversation, if you are free. Sit down here; the slave will make room for you.

Socrates:: Certainly I shall, and be grateful to you for listening.

Friend:: And I to you for your story.

Socrates:: That means a favor on both sides. Listen then. Last night, a little before daybreak, Hippocrates, son of Apollodorus, Phason's brother, knocked violently on my door with his stick, and when it was opened, came straight in, in a great hurry and shouted out;

Hippocrates:: Socrates, are you awake or asleep?

Socrates:: I recognized his voice and said, That will be Hippocrates. No bad news I hope?

Hippocrates:: Nothing but good.

Socrates:: I'm glad to hear it. What is it then, and what brings you here at such an hour?

Hippocrates:: Protagoras has arrived;

Socrates:: he said, taking his stand beside me.

Socrates:: The day before yesterday. Have you only just found out?

Hippocrates:: Only last evening.

Socrates:: As he said this he felt for the bed and sat by my feet, adding;

Hippocrates:: Yes, yesterday evening, when I got back late from Oenoe. My slave Satyrus had run away from me. I meant to let you know that I was going after him, but something put it out of my head. When I got back and we had had dinner and were just going to bed, my brother mentioned to me that Protagoras had come. Late as it was, I nearly came to see you straightaway; then I decided it was really too far into the night, but as soon as I had slept off my tiredness, I got up at once and came here as you see.

Socrates:: I recognized his determination and the state of excitement he was in, and asked him, What is your concern in this? Has Protagoras done you any harm?

Hippocrates:: Of course he has, Socrates.

Socrates:: replied Hippocrates laughing.

Hippocrates:: He keeps his wisdom to himself instead of sharing it with me.

Socrates:: Not at all. If you pay him sufficient to persuade him, he will make you wise too.

Hippocrates:: If it were only a question of that!

Socrates:: he said despairingly.

Hippocrates:: I shouldn't keep back a penny of my own money, or my friends' money either. But this is just the reason why I have come to you, to persuade you to speak to him on my behalf. For one thing I am too young, and for another I have never seen nor heard Protagoras. Last time he came to Athens I was still a child. But you know, Socrates, everyone is singing his praises and saying that he is the cleverest of speakers. Do let's pay him a visit at once, to make sure of finding him in. He's staying, so I'm told, with Callias, son of Hipponicus. Come on.

Socrates:: My dear Hippocrates, we can't go there at this early hour. Let's come out here into the courtyard and walk around it to pass the time until it gets light. Then we can go. Protagoras spends most of his time indoors, so don't worry; we are pretty sure to catch him there. So then we got up and walked about in the courtyard, and to try Hippocrates' mettle I began to examine and question him. Tell me this, Hippocrates. It is your present intention to go to Protagoras and pay him money as a fee on your behalf. Now whom do you think you are going to, and what will he make of you? Suppose for instance you had it in mind to go to your namesake Hippocrates of Cos, the doctor, and pay him a fee on your own behalf, and someone asked you in what capacity you thought of Hippocrates with the intention of paying him, what would you answer?

Hippocrates:: I should say, in his capacity as a doctor.

Socrates:: And what would you hope to become?

Hippocrates:: A doctor.

Socrates:: And suppose your idea was to go to Polyclitus of Argos or Phidias of Athens and pay them fees for your own benefit, and someone asked you in what capacity you thought of paying this money to them, what would you answer?

Hippocrates:: I should say, in their capacity as sculptors.

Socrates:: To make you what?

Hippocrates:: A sculptor, obviously.

Socrates:: Right. Now here are you and I going to Protagoras prepared to pay him money as a fee for you—our own if it is enough to satisfy him, or if not, our friends' resources thrown in as well. If then, seeing us so full of enthusiasm, someone should ask, Tell me, Socrates and Hippocrates, what do you suppose Protagoras is, that you intend to pay him money? what should we answer him? What particular name do we hear attached to Protagoras in the sort of way that Phidias is called a sculptor and Homer a poet?

Hippocrates:: Well, Sophist, I suppose, Socrates, is the name generally given to him.

Socrates:: Then it is as a Sophist that we will go to him and pay him?

Hippocrates:: Yes.

Socrates:: And if you had to face the further question, What do you yourself hope to become by your association with Protagoras?

He blushed at this—there was already a streak of daylight to betray him—and replied;

Hippocrates:: If this is like the other cases, I must say ‘to become a Sophist.'

Socrates:: But wouldn't a man like you be ashamed, to face your fellow countrymen as a Sophist?

Hippocrates:: If I am to speak my real mind, I certainly should.

Socrates:: Perhaps then this is not the kind of instruction you expect to get from Protagoras, but rather the kind you got from the schoolmasters who taught you letters and music and gymnastics. You didn't learn these for professional purposes, to become a practitioner, but in the way of liberal education, as a layman and a gentleman should.

Hippocrates:: That exactly describes, the sort of instruction I expect from Protagoras.

Socrates:: Well then, do you understand what you are now going to do, or not?

Hippocrates:: In what respect?

Socrates:: I mean that you are going to entrust the care of your soul to a man who is, in your own words, a Sophist, though I should be surprised if you know just what a Sophist is. And yet if you don't know that, you don't know to whom you are entrusting your soul, nor whether he represents something good or bad.

Hippocrates:: I think I know.

Socrates:: Tell me then, what do you think a Sophist is?

Hippocrates:: I suppose, as the name implies, one who has knowledge of wise things.

Socrates:: One could say the same, of painters and builders, that they are those who have knowledge of wise things. But if we were asked what *sort* of wisdom painters understand, we should reply, wisdom concerned with the making of likenesses, and so on with the others. If then we were asked what sort of wise things the Sophist has knowledge of, what should we answer? Of what is he the master?

Hippocrates:: The only answer we could give is that he is master of the art of making clever speakers.

Socrates:: Well, our answer might be true, but would hardly be sufficient. It invites the further question, On what matter does the Sophist make one a clever speaker? For example, the teacher of lyre playing I suppose makes people clever at speaking on his own subject, namely lyre playing, doesn't he?

Hippocrates:: Yes.

Socrates:: Well, on what subject does the Sophist make clever speakers? Obviously on the subject of which he imparts knowledge.

Hippocrates:: Very probably.

Socrates:: And what is this subject on which the Sophist is both an expert himself and can make his pupil expert?

Hippocrates:: I give up. I can't tell you.

Socrates:: Well then, do you realize the sort of danger to which you are going to expose your soul? If it were a case of putting your body into the hands of someone and risking the treatment's turning out beneficial or the reverse, you would ponder deeply whether to entrust it to him or not, and would spend many days over the question, calling on the counsel of your friends and relations. But when it comes to something which you value more highly than your body, namely your soul—something on whose beneficial or harmful treatment your whole welfare depends—you have not consulted either your father or your brother or any of us who are your friends on the question whether or not to entrust your soul to this stranger who has arrived among us. On the contrary, having heard the news in the evening, so you tell me, here you come at dawn, not to discuss or consult me on this question of whether or not to entrust yourself to Protagoras, but ready to spend both your own money and that of your friends as if you had already made up your mind that you must at all costs associate with this man—whom you say you do not know and have never spoken to, but call a Sophist, and then turn out not to know what a Sophist is though you intend to put yourself into his hands.

When he heard this he said;

Hippocrates:: It looks like it, Socrates, from what you say.

Socrates:: Can we say then, Hippocrates, that a Sophist is really a merchant or peddler of the goods by which a soul is nourished? To me he appears to be something like that.

Hippocrates:: But what is it that nourishes a soul?

Socrates:: What it learns, presumably. And we must see that the Sophist in commending his wares does not deceive us, like the wholesaler and the retailer who deal in food for the body. These people do not know themselves which of the wares they offer is good or bad for the body, but in selling them praise all alike, and those who buy from them don't know either, unless one of them happens to be a trainer or a doctor. So too those who take the various subjects of knowledge from city to city, and offer them for sale retail to whoever wants them, commend everything that they have for sale, but it may be, my dear Hippocrates, that some of these men also are ignorant of the beneficial or harmful effects on the soul of what they have for sale, and so too are those who buy from them, unless one of them happens to be a physician of the soul. If then you chance to be an expert in discerning which of them is good or bad, it is safe for you to buy knowledge from Protagoras or anyone else, but if not, take care you don't find yourself gambling dangerously with all of you that is dearest to you. Indeed the risk you run in purchasing knowledge is much greater than that in buying provisions. When you buy food and drink, you can carry it away from the shop or warehouse in a receptacle, and before you receive it into your body by eating or drinking you can store it away at home and take the advice of an expert as to what you should eat and drink and what not, and how much you should consume and when; so there is not much risk in the actual purchase. But knowledge cannot be taken away in a parcel. When you have paid for it you must receive it straight into the soul. You go away having learned it and are benefited or harmed accordingly. So I suggest we give this matter some thought, not only by ourselves, but also with those who are older than we, for we are still rather young to examine such a large problem. However, now let us carry out our plan to go and hear the man, and when we have heard him we can bring others into our consultations also, for Protagoras is not here by himself. There is Hippias of Elis, and I think Prodicus of Ceos too, and many other wise men.

Having agreed on this we started out. When we found ourselves in the doorway, we stood there and continued a discussion which had arisen between us on the way. So that we might not leave it unfinished, but have it out before we went in, we were standing in the doorway talking until we should reach agreement. I believe the porter, eunuch, overheard us, and it seems likely that the crowd of Sophists had put him in a bad temper with visitors. At any rate when we knocked at the door he opened it, saw us and said;

Eunuch:: Ha, Sophists! He's busy.

Socrates:: And thereupon he slammed the door as hard as he could with both hands. We knocked again, and he answered through the closed door;

Eunuch:: Didn't you hear me say he's busy?

Socrates:: My good man, we have not come to see Callias and we are not Sophists. Cheer up. It is Protagoras we want to see, so announce us. So at last the fellow reluctantly opened the door to us.

When we were inside, we came upon Protagoras walking in the portico, and walking with him in a long line were, on one side Callias, son of Hipponicus; his stepbrother Paralus, the son of Pericles; and Charmides, son of Glaucon; and on the other side Pericles' other son, Xanthippus; Philippides, son of Philomelus; and Antimoerus of Mende, the most eminent of Protagoras' pupils, who is studying professionally, to become a Sophist. Those who followed behind listening to their conversation seemed to be for the most part foreigners—Protagoras draws them from every city that he passes through, charming them with his voice like Orpheus, and they follow spellbound—but there were some Athenians in the band as well. As I looked at the party I was delighted to notice what special care they took never to get in front or to be in Protagoras' way. When he and those with him turned round, the listeners divided this way and that in perfect order, and executing a circular movement took their places each time in the rear. It was beautiful.

‘After that I recognized,' as Homer says, Hippias of Elis, sitting on a seat of honor in the opposite portico, and around him were seated on benches Eryximachus, son of Acumenus, and Phaedrus of Myrrhinus and Andron, son of Androtion, with some fellow citizens of his and other foreigners. They appeared to be asking him questions on natural science, particularly astronomy, while he gave each his explanation ex cathedra and held forth on their problems.

‘And there too spied I Tantalus'—for Prodicus of Ceos was also in town, and was occupying a room which Hipponicus used to use for storage, but now owing to the number of people staying in the house Callias had cleared it out and made it into a guest room. Prodicus was still in bed, wrapped up in rugs and blankets, and plenty of them, as far as one could see, and beside him on the neighboring couches sat Pausanias from Cerameis and with him someone who was still a young boy—a lad of fine character I think, and certainly very good-looking. I think I heard that his name is Agathon, and I shouldn't be surprised if

Pausanias is particularly attached to him. Well there was this boy and the two Adimantuses—the son of Cepis and the son of Leucolophides—and a few others. But what they were talking about I couldn't discover from outside, although I was very keen to hear Prodicus, whom I regard as a man of inspired genius. You see, he has such a deep voice that there was a kind of booming noise in the room which drowned the words. Just after we had come in, there entered close on our heels the handsome Alcibiades as you call him—and I quite agree—and Critias, son of Callaeschrus.

When we entered, then, we paused for a few moments to drink in the scene and then approached Protagoras, and I said, Protagoras, this is Hippocrates, and it is you that we have come to see.

Protagoras:: Do you wish to speak to me alone, or with the others?

Socrates:: It is all the same to us. Hear what we have come for and then decide for yourself.

Protagoras:: And what have you come for?

Socrates:: Hippocrates here is one of our citizens, son of Apollodorus. He comes of a great and prosperous family, and is considered the equal of any of his contemporaries in natural gifts. I think he is anxious to make a name for himself in the city, and he believes that the most likely way to success is to become a pupil of yours. So now it is for you to decide whether you think this calls for a conversation between ourselves or with others.

Protagoras:: I appreciate your forethought on my behalf, Socrates. A man has to be careful when he visits powerful cities as a foreigner, and induces their most promising young men to forsake the company of others, relatives or acquaintances, older or younger, and consort with him on the grounds that his conversation will improve them. Such conduct arouses no small resentment and various forms of hostility and intrigue. Personally I hold that the Sophist's art is an ancient one, but that those who put their hand to it in former times, fearing the odium which it brings, adopted a disguise and worked under cover. Some used poetry as a screen, for instance Homer and Hesiod and Simonides; others religious rites and prophecy, like Orpheus and Musaeus and their school; some even—so I have noticed—physical training, like Iccus of Tarentum and in our own day Herodicus of Selymbria, the former Megarian, as great a Sophist as any. Music was used as cover by your own Agathocles, a great Sophist. and Pythoclides of Ceos and many others. All of them, as I say, used these arts as a screen to escape malice. I myself, however, am not of their mind in this. I don't believe they accomplished their purpose, for they did not pass unobserved by the men who held the reins of power in their cities, though it is on their account that these disguises are adopted; the mass of people notice nothing, but simply echo what the leaders tell them. Now to run away and fail to escape, but be discovered instead, turns the attempt into sheer folly, and cannot fail to arouse even greater hostility, for people think that the man who behaves like this is in addition to his other faults an unprincipled rogue. I therefore have always gone the opposite way to my predecessors'. I admit to being a Sophist and an educator, and I consider this a better precaution than the other—admission rather than denial. I have devised other precautions as well, so that, if heaven will forgive the boast, I come to no harm through being a confessed Sophist, though I have been many years in the profession. Indeed I am getting on in life now—so far as age goes I might be the father of any one of you—so if there is anything you want of me, I should much prefer to say my say in front of the whole company.

Socrates:: Thereupon, suspecting that he wanted to display his skill to Prodicus and Hippias and get some glory from the fact that we had come as his professed admirers, I remarked, Then why should we not call Prodicus and Hippias, and the people who are with them, to listen to us?

Protagoras:: By all means.

Callias:: Would you like to make a regular circle, so that you can talk sitting down?

Socrates:: Everyone agreed that this was the thing to do, and at the prospect of listening to wise men we all eagerly took hold of the benches and couches with our own hands and arranged them beside Hippias, where the benches were. Meanwhile Callias and Alcibiades got Prodicus out of bed and fetched him along with his companions.

When we were all seated, Protagoras began;

Protagoras:: Now that these gentlemen are present, Socrates, perhaps you will say something about the matter you mentioned to me just now on this young man's behalf.

Socrates:: I can only begin as I did before, by telling you of our purpose in coming. Hippocrates has a feeling that he would like to become one of your followers. He says therefore that he would be glad to be told what effect it will have on him. That is all we have to say.

Then Protagoras replied;

Protagoras:: Young man, if you come to me, your gain will be this. The very day you join me, you will go home a better man, and the same the next day. Each day you will make progress toward a better state.

Socrates:: On hearing this I said, Protagoras, what you say is not at all surprising, but very natural. Even you, for all your years and wisdom, would become better, if someone were to teach you something that you didn't happen to know. Please don't answer like this, but give us the kind of reply that Hippocrates would get if he suddenly changed his mind and took a fancy to study with that young man who has just lately come to live at Athens, Zeuxippus of Heraclea. Suppose he went to him, just as he has come to you, and heard him say the same thing, that each day he spent with him he would get better and make progress, and asked him the further question, 'What shall I get better at, and where shall I make progress?' Zeuxippus would say, 'In painting.' Or if he were with Orthagoras of Thebes, and having heard the same reply as he got from you, went on to ask in what respect he would get daily better by being with him, Orthagoras would say, 'In playing the flute.' Now give a similar answer to the lad and to me who am putting the question for him. Hippocrates, by becoming a pupil of Protagoras, will, on the very day he joins him, go home a better man, and on each successive day will make similar progress—toward what, Protagoras, and better at what?

Protagoras heard me out and said;

Protagoras:: You put your questions well, and I enjoy answering good questioners. When he comes to me, Hippocrates will not be put through the same things that another Sophist would inflict on him. The others treat their pupils badly; these young men, who have deliberately turned their backs on specialization, they take and plunge into special studies again, teaching them arithmetic and astronomy and geometry and music—here he glanced at Hippias—but from me he will learn only what he has come to learn. What is that subject? The proper care of his personal affairs, so that he may best manage his own household, and also of the state's affairs, so as to become a real power in the city, both as speaker and man of action.

Socrates:: Do I follow you? I take you to be describing the art of politics, and promising to make men good citizens.

Protagoras:: That, is exactly what I profess to do.

Socrates:: Then it is a truly splendid accomplishment that you have mastered, if indeed you have mastered it. I warn you that you will hear nothing from me but my real mind. The fact is, I did not think this was something that could be taught, though when you say otherwise I cannot doubt your word. But it is up to me to say why I believe it cannot be taught nor furnished by one man to another. I hold that the Athenians, like the rest of the Hellenes, are sensible people. Now when we meet in the Assembly, then if the state is faced with some building project, I observe that the architects are sent for and consulted about the proposed structures, and when it is a matter of shipbuilding, the naval designers, and so on with everything which the Assembly regards as a subject for learning and teaching. If anyone else tries to give advice, whom they do not consider an expert, however handsome or wealthy or nobly born he may be, it makes no difference; the members reject him noisily and with contempt, until either he is shouted down and desists, or else he is dragged off or ejected by the police on the orders of the presiding magistrates. That is how they behave over subjects they consider technical. But when it is something to do with the government of the country that is to be debated, the man who gets up to advise them may be a builder or equally well a blacksmith or a shoemaker, merchant or ship-owner, rich or poor, of good family or none. No one brings it up against any of these, as against those I have just mentioned, that here is a man who without any technical qualifications, unable to point to anybody as his teacher, is yet trying to give advice. The reason must be that they do not think this is a subject that can be taught.

And you must not suppose that this is true only of the community at large. Individually also the wisest and best of our countrymen are unable to hand on to others the virtue which they possess. Pericles, for instance, the father of these two boys, gave them the very best education in everything that depends on teaching, but in his own special kind of wisdom he neither trains them himself nor hands them over to any other instructor; they simply browse around on their own like sacred cattle, on the chance of picking up virtue automatically. To take a different example, Clinias, the younger brother of Alcibiades here, is a ward of that same Pericles, who for fear that Alcibiades would corrupt him, took him away and tried to give him a better upbringing by placing him in the household of Ariphron. Before six months were out, Ariphron gave him back; he could make nothing of him. I could mention plenty of others too, excellent men themselves, who never made anyone else better, either their own relatives or others.

With these facts in mind, Protagoras, I do not believe that virtue can be taught. But when I hear you speaking as I do, my skepticism is shaken and I suppose there is truth in what you say, for I regard you as a man of wide experience, deep learning, and original thought. If then you can demonstrate more plainly to us that virtue is something that can be taught, please don't hoard your wisdom but explain.

Protagoras:: I shall not be a miser, Socrates. Now shall I, as an old man speaking to his juniors, put my explanation in the form of a story, or give it as a reasoned argument?

Socrates:: Many of the audience answered that he should relate it in whichever form he pleased.

Protagoras:: Then I think, it will be pleasanter to tell you a story.

Once upon a time, there existed gods but no mortal creatures. When the appointed time came for these also to be born, the gods formed them within the earth out of a mixture of earth and fire and the substances which are compounded from earth and fire. And when they were ready to bring them to the light, they charged Prometheus and Epimetheus with the task of equipping them and allotting suitable powers to each kind. Now Epimetheus begged Prometheus to allow him to do the distribution himself—'and when I have done it,' he said, 'you can review it.' So he persuaded him and set to work. In his allotment he gave to some creatures strength without speed, and equipped the weaker kinds with speed. Some he armed with weapons, while to the unarmed he gave some other faculty and so contrived means for their preservation. To those that he endowed with smallness, he granted winged flight or a dwelling underground; to those which he increased in stature, their size itself was a protection. Thus he made his whole distribution on a principle of compensation, being careful by these devices that no species should be destroyed.

When he had sufficiently provided means of escape from mutual slaughter, he contrived their comfort against the seasons sent from Zeus, clothing them with thick hair or hard skins sufficient to ward off the winter's cold, and effective also against heat, and he planned that when they went to bed, the same coverings should serve as proper and natural bedclothes for each species. He shod them also, some with hoofs, others with hard and bloodless skin.

Next he appointed different sorts of food for them—to some the grass of the earth, to others the fruit of trees, to others roots. Some he allowed to gain their nourishment by devouring other animals, and these he made less prolific, while he bestowed fertility on their victims, and so preserved the species.

Now Epimetheus was not a particularly clever person, and before he realized it he had used up all the available powers on the brute beasts, and being left with the human race on his hands unprovided for, did not know what to do with them. While he was puzzling about this, Prometheus came to inspect the work, and found the other animals well off for everything, but man naked, unshod, unbedded, and unarmed, and already the appointed day had come, when man too was to emerge from within the earth into the daylight. Prometheus therefore, being at a loss to provide any means of salvation for man, stole from Hephaestus and Athena the gift of skill in the arts, together with fire—for without fire it was impossible for anyone to possess or use this skill—and bestowed it on man. In this way man acquired sufficient resources to keep himself alive, but had no political wisdom. This was in the keeping of Zeus, and Prometheus no longer had the right of entry to the citadel where Zeus dwelt; moreover the sentinels of Zeus were terrible. But into the dwelling shared by Athena and Hephaestus, in which they practiced their art, he penetrated by stealth, and carrying off Hephaestus' art of working with fire, and the art of Athena as well, he gave them to man. Through this gift man had the means of life, but Prometheus, so the story says, thanks to Epimetheus, had later on to stand his trial for theft.

Since, then, man had a share in the portion of the gods, in the first place because of his divine kinship he alone among living creatures believed in gods, and set to work to erect altars and images of them. Secondly, by the art which they possessed, men soon discovered articulate speech and names, and invented houses and clothes and shoes and bedding and got food from the earth.

Thus provided for, they lived at first in scattered groups; there were no cities. Consequently they were devoured by wild beasts, since they were in every respect the weaker, and their technical skill, though a sufficient aid to their nurture, did not extend to making war on the beasts, for they had not the art of politics, of which the art of war is a part. They sought therefore to save themselves by coming together and founding fortified cities, but when they gathered in communities they injured one another for want of political skill, and so scattered again and continued to be devoured. Zeus therefore, fearing the total destruction of our race, sent Hermes to impart to men the qualities of respect for others and a sense of justice, so as to bring order into our cities and create a bond of friendship and union.

Hermes asked Zeus in what manner he was to bestow these gifts on men. ‘Shall I distribute them as the arts were distributed—that is, on the principle that one trained doctor suffices for many laymen, and so with the other experts? Shall I distribute justice and respect for their fellows in this way, or to all alike?'

‘To all,' said Zeus. let all have their share. There could never be cities if only a few shared in these virtues, as in the arts. Moreover, you must lay it down as my law that if anyone is incapable of acquiring his share of these two virtues he shall be put to death as a plague to the city.'

Thus it is, Socrates, and from this cause, that in a debate involving skill in building, or in any other craft, the Athenians, like other men, believe that few are capable of giving advice, and if someone outside those few volunteers to advise them, then as you say, they do not tolerate it—rightly so, in my submission. But when the subject of their counsel involves political wisdom, which must always follow the path of justice and moderation, they listen to every man's opinion, for they think that everyone must share in this kind of virtue; otherwise the state could not exist. That, Socrates, is the reason for this.

Here is another proof that I am not deceiving you in saying that all men do in fact believe that everyone shares a sense of justice and civic virtue. In specialized skills, as you say, if a man claims to be good at the flute or at some other art when he is not, people either laugh at him or are annoyed, and his family restrain him as if he were crazy. But when it comes to justice and civic virtue as a whole, even if someone is known to be wicked, yet if he publicly tells the truth about himself, his truthfulness, which in the other case was counted a virtue, is here considered madness. Everyone, it is said, ought to say he is good, whether he is or not, and whoever does not make such a claim is out of his mind, for a man cannot be without some share in justice, or he would not be human.

So much then for the point that men rightly take all alike into their counsels concerning virtue of this sort, because they believe that all have a share in it. I shall next try to demonstrate to you that they do not regard it as innate or automatic, but as acquired by instruction and taking thought. No one is angered by the faults which are believed to be due to nature or chance, nor do people rebuke or teach or punish those who exhibit them, in the hope of curing them; they simply pity them. Who would be so foolish as to treat in that way the ugly or dwarfish or weak? Everyone knows that it is nature or chance which gives this kind of characteristics to a man, both the good and the bad. But it is otherwise with the good qualities which are thought to be acquired through care and practice and instruction. It is the absence of these, surely, and the presence of the corresponding vices, that call forth indignation and punishment and admonition. Among these faults are to be put injustice and irreligion and in general everything that is contrary to civic virtue. In this field indignation and admonition are universal, evidently because of a belief that such virtue can be acquired by taking thought or by instruction. Just consider the function of punishment, Socrates, in relation to the wrongdoer. That will be enough to show you that men believe it possible to impart goodness. In punishing wrongdoers, no one concentrates on the fact that a man has done wrong in the past, or punishes him on that account, unless taking blind vengeance like a beast. No, punishment is not inflicted by a rational man for the sake of the crime that has been committed—after all one cannot undo what is past—but for the sake of the future, to prevent either the same man or, by the spectacle of his punishment, someone else, from doing wrong again. But to hold such a view amounts to holding that virtue can be instilled by education; at all events the punishment is inflicted as a deterrent. This then is the view held by all who inflict it whether privately or publicly. And your fellow countrymen, the Athenians, certainly do inflict punishment and correction on supposed wrongdoers, as do others also. This argument therefore shows that they too think it possible to impart and teach goodness.

I think that I have now sufficiently demonstrated to you, first that your countrymen act reasonably in accepting the advice of smith and shoemaker on political matters, and secondly, that they do believe goodness to be something imparted by teaching. There remains the question which troubles you about good men—why it is that whereas they teach their sons the subjects that depend on instruction, and make them expert in these things, yet in their own brand of goodness they do not make them any better than others. On this, Socrates, I will offer you a plain argument rather than a parable as I did before. Think of it like this. Is there or is there not some one thing in which all citizens must share, if a state is to exist at all? In the answer to this question, if anywhere, lies the solution of your difficulty. If there is, and this one essential is not the art of building or forging or pottery but justice and moderation and holiness of life, or to concentrate it into a single whole, manly virtue—if, I say, it is this in which all must share and which must enter into every man's actions whatever other occupation he chooses to learn and practice; if the one who lacks it, man, woman, or child, must be instructed and corrected until by punishment he is reformed, and whoever does not respond to punishment and instruction must be expelled from the state or put to death as incurable—if all this is true, and in these circumstances our good men teach their sons other accomplishments but not this one thing, then think what extraordinary people good men must be! We have already shown that they believe it can be taught, both publicly and privately. But although virtue can be taught and cultivated, yet it seems they have their sons instructed in other arts, ignorance of which is no matter for capital punishment, but although if they are left ignorant of virtue and morally uncultivated they may be punished by death or exile—and not only death but alienation of property and in a word the ruin of their estates—are we to suppose that they neglect this side of their education? Don't they rather bestow every care and attention upon it? Of course they do, Socrates. They teach and admonish them from earliest childhood and throughout their lives. As soon as a child can understand what is said to him, nurse, mother, tutor, and the father himself vie with each other to make him as good as possible, instructing him through everything he does or says, pointing out, ‘This is right and that is wrong, this honorable and that disgraceful, this holy, that impious; do this, don't do that.' If he is obedient, well and good. If not, they straighten him with threats and beatings, like a warped and twisted plank.

Later on when they send the children to school, their instructions to the masters lay much more emphasis on good behavior than on letters or music. The teachers take good care of this, and when boys have learned their letters and are ready to understand the written word as formerly the spoken, they set the works of good poets before them on their desks to read and make them learn them by heart, poems containing much admonition and many stories, eulogies, and panegyrics of the good men of old, so that the child may be inspired to imitate them and long to be like them.

The music masters by analogous methods instill self-control and deter the young from evil-doing. Arid when they have learned to play the lyre, they teach them the works of good poets of another sort, namely the lyrical, which they accompany on the lyre, familiarizing the minds of the children with the rhythms and melodies. By this means they become more civilized, more balanced, and better adjusted in themselves and so more capable in whatever they say or do, for rhythm and harmonious adjustment are essential to the whole of human life.

Over and above this, they are sent to a trainer, so that a good mind may have a good body to serve it, and no one be forced by physical weakness to play the coward in war and other ordeals.

All this is done by those best able to do it—that is, by the wealthy—and it is their sons who start their education at the earliest age and continue it the longest. When they have finished with teachers, the state compels them to learn the laws and use them as a pattern for their life, lest left to themselves they should drift aimlessly. You know how, when children are not yet good at writing, the writing master traces outlines with the pencil before giving them the slate, and makes them follow the lines as a guide in their own writing; well, similarly the state sets up the laws, which are inventions of good lawgivers of ancient times, and compels the citizens to rule and be ruled in accordance with them. Whoever strays outside the lines, it punishes, and the name given to this punishment both among yourselves and in many other places is correction, intimating that the penalty corrects or guides.

Seeing then that all this care is taken over virtue, both individually and by the state, are you surprised that virtue should be teachable, and puzzled to know whether it is? There is nothing to be surprised at. The wonder would be if it were not teachable.

Why then, you ask, do many sons of good men turn out worthless? I will tell you this too. It is nothing surprising, if what I said earlier was true, that this faculty, virtue, is something in which no one may be a layman if a state is to exist at all. If it is as I say—and most assuredly it is—consider the matter with the substitution of any art you like. Suppose a state could not exist unless we were all flute players to the best of our ability, and everyone taught everyone else that art both privately and publicly, and scolded the bad flute player, and no one held back on this subject any more than anyone now begrudges information on what is right and lawful or makes a secret of it as of certain other techniques. After all, it is to our advantage that our neighbor should be just and virtuous, and therefore everyone gladly talks about it to everyone else and instructs him in justice and the law. If then, as I say, it were so with flute playing, and we all showed equal eagerness and willingness to teach one another, do you think, Socrates, that the sons of good players would become good players in their turn any more than the sons of bad ones? Not so, I think, but whoever had a son with the greatest natural talent for the flute, his son would rise to fame, and a son without this talent would remain in obscurity. The son of a good performer would often be a poor one, and vice versa, but at any rate all would be good enough in comparison with someone who knew nothing of flute playing at all.

Now apply this analogy to our present condition. The man who in a civilized and humane society appears to you the most wicked must be thought just—a practitioner, as one might say, of justice—if one has to judge him in comparison with men who have neither education nor courts of justice nor laws nor any constraint compelling them to be continually heedful of virtue—savages in fact like those whom the playwright Pherecrates brought onto the stage at last year's Lenaea. If you found yourself among such people—people like the man-haters of his chorus—you would be only too glad to meet a Eurybatus and a Phrynondas, and would bitterly regret the very depravity of our own society. But as it is you are spoiled, Socrates, in that all are teachers of virtue to the best of their ability, and so you think that no one is. In the same way if you asked who teaches the Greek language you would not find anyone, and again if you looked for a teacher of the sons of our artisans in the craft which they have in fact learned from their father to the best of their ability, and from his friends in the same trade, there again I don't think it would be easy to point to a master, though in the case of a complete tyro it would be easy enough. Thus it is with virtue and everything else, so that if we can find someone only a little better than the others at advancing us on the road to virtue, we must be content.

My claim is that I am one of these, rather better than anyone else at helping a man to acquire a good and noble character, worthy indeed of the fee which I charge and even more, as my pupils themselves agree. On this account I have adopted the following method of assessing my payment. Anyone who comes to learn from me may either pay the fee I ask for or, if he prefers, go to a temple, state on oath what he believes to be the worth of my instruction, and deposit that amount.

There, Socrates, you have both the parable and the argument by which I have sought to show that virtue is teachable and that the Athenians believe it to be so, and that at the same time it is quite natural for the sons of good fathers to turn out good for nothing, and vice versa. Why, even the sons of Polyclitus, who are contemporaries of Paralus and Xanthippus here, cannot hold a candle to their father, nor can the sons of many other craftsmen. But it is too early to bring such a charge against these two; they are young, and there is still promise in them.

Socrates:: Here Protagoras brought to an end his long and magnificent display of eloquence. For a long time I gazed at him spellbound, eager to catch any further word that he might utter. When I saw that he had really finished, I collected myself with an effort and said, turning to Hippocrates: Son of Apollodorus, how grateful I am to you for inducing me to come here. To have heard what Protagoras has just said is something I value very highly. I used to think that it was by no human diligence that good men acquired their goodness, but now I am convinced.

There is just one small thing holding me back, which Protagoras I know will easily explain, now that he has instructed us on so many points. It is true that if a man talked on these matters with any of our popular orators, he might possibly hear similar discourses from Pericles or some other proficient speaker, but if one asks any of them an additional question, like books they cannot either answer or ask a question on their own account. Ask them the smallest thing supplementary to what they have said, and like a gong which booms out when you strike it and goes on until you lay a hand on it, so our orators at a tiny question spin out a regular Marathon of speech. Protagoras on the other hand, though he is perfectly capable of long and splendid speeches as we have seen, has also the faculty of answering a question briefly, and when he asks one himself, of waiting and listening to the answer—a rare accomplishment.

Now then, Protagoras, there is just one small question left, your answer to which will give me all I want. You say that virtue is teachable, and there is no one I would believe sooner than you. But there is one thing which took me by surprise in your speech, and I should like you to fill this gap in my mind. You said that Zeus bestowed on men justice and respect for their fellows, and again at several points in your discourse justice and self-control and holiness and the rest were mentioned as if together they made up one thing, virtue. This is the point I want you to state for me with more precision. Is virtue a single whole, and are justice and self-control and holiness parts of it, or are these latter all names for one and the same thing? That is what I still want to know.

Protagoras:: Well, that is easy to answer. Virtue is one, and the qualities you ask about are parts of it.

Socrates:: Do you mean, as the parts of a face are parts—mouth, nose, eyes, and ears—or like the parts of a piece of gold, which do not differ from one another or from the whole except in size?

Protagoras:: In the first way, I should say—that is, they are in the relation of the parts of a face to the whole.

Socrates:: Then do men so share in these parts of virtue that some have one and some another, or must a man who possesses one of them possess them all?

Protagoras:: By no means. Many men are brave but unjust, and others are just but not wise.

Socrates:: Are these also parts of virtue. Wisdom, I mean, and courage?

Protagoras:: Most emphatically. Wisdom indeed is the greatest of the parts.

Socrates:: And each of them is different from the others?

Protagoras:: Yes.

Socrates:: Has each also its own function? In a face, the eye is not like the ear nor has it the same function. Nor do the other parts resemble one another in function any more than in other respects. Is this how the parts of virtue differ, both in themselves and in their function? It must be so, I suppose, if the parallel holds good.

Protagoras:: Yes it is so, Socrates.

Socrates:: Then no other part of virtue resembles knowledge or justice or courage or temperance or holiness.

He agreed.

Now let us consider together what sort of thing each is. First of all, is there such a thing as justice or not? I think there is.

Protagoras:: So do I.

Socrates:: Well, if someone asked you and me, 'Tell me, you two, this thing that you mentioned a moment ago—justice—is it itself just or unjust?' I myself should answer that it was just. Which way would you vote?

Protagoras:: The same as you.

Socrates:: Then we would both answer that justice is of such a nature as to be just?

He agreed.

If he next asked, 'You say that there is also such a thing as holiness?' we should agree I suppose?

Protagoras:: Yes.

Socrates:: 'Meaning that holiness too is a thing?' We should still assent?

He agreed again.

'Do you then say that this thing is of a nature to be holy or unholy?' Personally I should be annoyed at this, and say, 'What a blasphemous question! Nothing else could well be holy if we won't allow holiness itself to be so.' What about you? Wouldn't that be your answer?

Protagoras:: Certainly.

Socrates:: Suppose now he went on to ask us, 'But what did you say a few minutes ago? Didn't I hear you rightly? I thought you said that the parts of virtue are so related that one does not resemble the other.' For my part I should reply, 'You have got most of it right, but your ears deceived you if you think I said that myself. It was Protagoras' answer to a question I put.' Now if he asks you, 'Is this true, Protagoras? Is it you who say that one part of virtue does not resemble another? Is this your statement?'—what would you answer?

Protagoras:: I should have to admit it.

Socrates:: Then having agreed about this, what shall we say if he goes on to ask, 'Then it is not the nature of holiness to be something just, nor of justice to be holy; it will be not-holy, and holiness will be not-just—that is, unjust, and justice unholy?' What shall we answer? I should say on my own behalf that justice is holy and holiness just, and on your behalf, if you would allow me, I should make the same reply, that justice is either the same thing as holiness or very like it, and that justice unquestionably resembles holiness and holiness justice. Are you going to prevent me from making this answer, or do you agree with me?

Protagoras:: I don't think it is quite so simple, Socrates. I can't really admit that justice is holy and holiness just; I think there is some difference there. However, what does it matter? If you like, let us assume that justice is holy and holiness just.

Socrates:: Excuse me. It isn't this 'if you like' and 'if that's what you think' that I want us to examine, but you and me ourselves. What I mean is, I think the argument will be most fairly tested, if we take the 'if' out of it.

Protagoras:: Well of course, justice does have some resemblance to holiness. After all, everything resembles everything else up to a point. There is a sense in which white resembles black, and hard soft, and so on with all other things that present the most contrary appearances. Even the parts of the face, which we described earlier as having different functions and not being like each other, have a certain resemblance and are like each other in some way. So by your method you can prove, if you want to, that they too all resemble one another. But it is not right to call things similar because they some one point of similarity, even when the resemblance is very slight, any more than to call things dissimilar that have some point of dissimilarity.

Socrates:: At this I said in some surprise, And is this how you suppose justice to be related to holiness, that there is only a slight resemblance between them?

Protagoras:: Not quite that, but not on the other hand in the way that you seem to believe.

Socrates:: Well, this line of argument doesn't seem to be agreeable to you, so let us drop it and look at something else that you said. You recognize the existence of folly?

Protagoras:: Yes.

Socrates:: Is not wisdom altogether contrary to it?

Protagoras:: Yes.

Socrates:: And when men act rightly and advantageously, do you regard them as acting temperately or not?

Protagoras:: Temperately.

Socrates:: That is to say with temperance?

Protagoras:: Of course.

Socrates:: And those who act wrongly act foolishly, and in doing so do not behave temperately?

He agreed.

Then foolish behavior is the opposite of temperate?

Protagoras:: Yes.

Socrates:: And foolish behavior is the outcome of folly, and temperate of temperance?

Protagoras:: Yes.

Socrates:: If something is done with strength, it is done strongly, and if with weakness weakly, if with speed quickly, and if with slowness slowly?

Protagoras:: Yes.

Socrates:: What is done in the same manner is done by the same agency, and if contrariwise, by the contrary?

He agreed.

Again, you recognize the existence of the fair?

He did.

Has it any contrary except the foul?

Protagoras:: No.

Socrates:: And the good too you recognize?

Protagoras:: Yes.

Socrates:: Has it any contrary except the bad?

Protagoras:: No.

Socrates:: And also high pitch in sound? And has it any other contrary but low?

Protagoras:: No.

Socrates:: In short, to everything that admits of a contrary there is one contrary and no more.

He conceded the point.

Socrates:: Now, let us recapitulate our points of agreement. We agreed that each thing has one contrary and no more, that what is done in a contrary manner is done by a contrary agency, that a foolish action is contrary to a temperate one, and that a temperate action is performed with temperance and a foolish one with folly.

He admitted all this.

If then what is done in a contrary manner is done by a contrary agency, and one action is performed with temperance and the other with folly—in a contrary manner and so by contrary agencies—then folly is the contrary of temperance.

Protagoras:: It seems so.

Socrates:: Now you remember our earlier agreement that folly was the contrary of wisdom?

Protagoras:: Yes.

Socrates:: And that one thing has one contrary?

Protagoras:: Certainly.

Socrates:: Then which statement are we to give up? The dictum ‘one thing one contrary' or the statement that wisdom is a distinct thing from temperance, both being parts of virtue, and that in addition to each being distinct they are dissimilar both in themselves and in their functions, like the parts of a face? Which shall we renounce? The two statements are not very harmonious. They don't chime well together or fit in with each other. How could they, if one thing can have only one opposite, and yet though folly is only one thing, temperance as well as wisdom appears to be contrary to it? Isn't that the way of it, Protagoras?

He agreed, though most reluctantly.

Then must not temperance and wisdom be the same, just as earlier justice and holiness turned out to be much the same? Come now, Protagoras, we must not falter, but complete our inquiry. Do you think that a man who commits an injustice acts temperately in committing it?

Protagoras:: For my part I should be ashamed to agree to that. Of course many people do.

Socrates:: Well, shall I direct my argument against them or against you?

Protagoras:: If you wish, argue first against the proposition of the many.

Socrates:: It is all the same to me, provided you make the replies, whether it is your own opinion or not. It is the argument itself that I wish to probe, though it may turn out that both I who question and you who answer are equally under scrutiny.

At first Protagoras began to make difficulties, alleging that it would be hard to conduct a discussion on these terms, but in the end he agreed to answer.

Good. Now let us start from the beginning. You believe that some people show temperance in doing wrong?

Protagoras:: We will suppose so.

Socrates:: And to show temperance is to show good sense?

Protagoras:: Yes.

Socrates:: Which means that in doing wrong they have planned well?

Protagoras:: So be it.

Socrates:: If their wrongdoing is successful or unsuccessful?

Protagoras:: If it is successful.

Socrates:: You agree that some things are good?

Protagoras:: Yes.

Socrates:: And do you mean by good those things which are beneficial to men?

Protagoras:: Not only those. Even if they are not beneficial to me, I still call them good.

Socrates:: At this point I thought Protagoras was beginning to bristle, ready for a quarrel and preparing to do battle with his answers. Seeing this I became more cautious and proceeded gently with my questioning : Do you mean things which are beneficial to no human being, or things that are not beneficial at all? Do you call them good also?

Protagoras:: Of course no. But I know plenty of things—foods, drinks, drugs, and many others—which are harmful to men, and others which are beneficial, and others again which, so far as men are concerned, are neither, but are harmful or beneficial to horses, and others only to cattle or dogs. Some have no effect on animals, but only on trees, and some again are good for the roots of trees but injurious to the young growths. Manure, for instance, is good for all plants when applied to their roots, but utterly destructive if put on the shoots or young branches. Or take olive oil. It is very bad for plants, and most inimical to the hair of all animals except man, whereas men find it of service both to the hair and to the rest of the body. So diverse and multiform is goodness that even with us the same thing is good when applied externally but deadly when taken internally. Thus all doctors forbid the sick to use oil in preparing their food, except in the very smallest quantities, just enough to counteract the disagreeable smell which food and sauces may have for them.

Socrates:: The audience vigorously applauded this speech. Then said I, I'm a forgetful sort of man, Protagoras, and if someone speaks at length, I lose the thread of the argument. If I were a little deaf, you would recognize the necessity of raising your voice if you wanted to talk to me; so now since you find me forgetful, cut down your answers and make them shorter if I am to follow you.

Protagoras:: What do you mean by ‘make my answers short'? Am I to make them shorter than the subject demands?

Socrates:: Of course not.

Protagoras:: As long as is necessary then?

Socrates:: Yes.

Protagoras:: As long a reply as *I* think necessary, or *you*?

Socrates:: What they told me, is that you have the gift both of speaking yourself and of teaching others to speak, just as you prefer—either at length, so that you never run dry, or so shortly that no one could beat you for brevity. If then you are going to talk to me, please use the second method and be brief.

Protagoras:: Frankly, Socrates, I have fought many a contest of words, and if I had done as you bid me, that is, adopted the method chosen by my opponent, I should have proved no better than anyone else, nor would the name of Protagoras have been heard of in Greece.

Socrates:: I saw that he was dissatisfied with his own performance in the answers he had given, and would not of his own free will continue in the role of answerer, and it seemed to me that it was not my business to remain any longer in the discussions. Well, I said, I have no wish myself to insist on continuing our conversation in a way that you don't approve. I will talk with you another time, when you are willing to converse so that I can follow. You for your part, as others say and you say for yourself, can carry on a discussion both in long and short speeches, for you are a gifted man. I on the other hand cannot manage these long speeches—I wish I could. It was for you, who can do both, to indulge me and so make our discussion possible. But since you would rather not, and I have something to do and could not stay while you spin out your long speeches, I will leave you. I really ought to be going. Otherwise I should probably be glad to hear them.

With these words I got up to leave. As I did so Callias caught my hand with his right hand, and with his left took hold of this old coat of mine and said;

Callias:: We shan't let you go, Socrates. Our talk won't be the same without you. Please stay with us. There is nothing that I would rather listen to than a conversation between you and Protagoras. You will be doing us all a kindness.

Socrates:: I was already standing up to go, and answered, Son of Hipponicus, I have always admired your enthusiasm for wisdom. Believe me. I praise and love you for it now, and would gladly do what you wish, if your request were within my power to fulfill. But it's as if you were to ask me to keep up with Crison, the runner from Himera, when he was in his prime, or to run a race against some three-miler or Marathon champion. I would say that to run with them would please me even more than it would please you, but I can't do it. If you want to see me and Crison running together, you must ask him to lower his standards, for I can't run fast, but he can run slowly. So if you want to hear Protagoras and me, ask him to go on answering me as he did at first, briefly and keeping to the point of my questions. How can we have a discussion otherwise? Personally I thought that companionable talk was one thing, and public speaking another.

Callias:: But don't you see, Socrates? Protagoras is surely right in thinking that he is entitled to talk in the way that suits him, just as much as you are.

Socrates:: Here Alcibiades broke in.

Alcibiades:: No, no, Callias. Socrates admits frankly that long speeches are beyond him and that Protagoras has the better of him there, but in discussion and the intelligent give-and-take of arguments I doubt if he would give any man best. If Protagoras in his turn admits that Socrates beats him in discussion, Socrates will be satisfied. But if he maintains his claim, let him continue the discussion with question and answer, not meeting every question with a long oration, eluding the arguments and refusing to meet them properly, spinning it out until most of his hearers have forgotten what the question was about—not that Socrates will be the one to forget it. I'll guarantee that, in spite of his little joke about being forgetful. I hold then that what Socrates proposes is the more reasonable, and I suppose it's right for each of us to say what he thinks.

Socrates:: After Alcibiades, so far as I remember, it was Critias who spoke, addressing his remarks to Prodicus and Hippias.

Critias:: Callias, seems to me to be very much on the side of Protagoras, and Alcibiades is always out to win when he takes up a cause. But it is not for us to be partisans either of Socrates or of Protagoras. Let us implore them both alike not to break up the discussion in mid-career.

Socrates:: Hearing this, Prodicus began;

Prodicus:: You are quite right, Critias. Those who are present at discussions of this kind must divide their attention between the speakers impartially, but not equally. The two things are not the same. They must hear both alike, but not give equal weight to each. More should be given to the wiser, and less to the other. I add my plea, Protagoras and Socrates, that you should be reconciled. Let your conversation be a discussion, not a dispute. A discussion is carried on among friends with good will, but a dispute is between rivals and enemies. In this way our meeting will be best conducted. You, the speakers, will be esteemed by us—esteemed, I say, not praised, for esteem is a genuine feeling in the hearts of the audience, whereas praise is often on the lips of men belying their true conviction—and we who listen will experience enjoyment rather than pleasure. Enjoyment can result from learning and partaking in the intellectual activity of the mind alone, but pleasure arises rather from eating or other forms of physical indulgence.

Socrates:: So said Prodicus, and a large number of those present expressed agreement. After him the wise Hippias spoke up.

Hippias:: Gentlemen, I count you all my kinsmen and family and fellow citizens—by nature, not by convention. By nature like is kin to like, but custom, the tyrant of mankind, does much violence to nature. For us then who understand the nature of things, who are the intellectual leaders of Greece and in virtue of that very fact are now assembled in Athens, the center and shrine of Greek wisdom, and in this the finest house of that city, it would be a disgrace if we produced nothing worthy of our fame but fell to bickering like the lowest of mankind.

And so my request and my advice to you, Protagoras and Socrates, is to be reconciled, allowing us to act as mediators and bring you together in a compromise. Socrates should not insist on the strict forms of discussion, carried on through the briefest of exchanges, if it is unwelcome to Protagoras, but should give way and slacken the reins of his discourse, so that it may wear for us a more dignified and elegant air, and Protagoras should refrain from shaking out every reef and running before the wind, launching out on a sea of words till he is out of sight of land. Let both take a middle course. Do this, take my advice, and appoint an arbitrator, referee, or president to preserve a moderate length in the speeches of both of you.

Socrates:: This counsel won general consent and a round of applause. Callias refused to let me go and they told us to choose an overseer. But I said that it would be unfitting to choose an arbitrator over our words. If he were a man of lesser attainments, it would be wrong to set him over his betters, and if he were someone like ourselves it would still not be proper, for in resembling us he would act like us, and his appointment would be superfluous.

Well then, you will say, we will choose someone superior. But the fact is, in my opinion, that it would be impossible for you to choose anyone wiser than Protagoras, and if you choose some lesser man and pretend he is better, this again would be to insult him, appointing someone over him as if he were a nobody. For myself I am indifferent. I have another proposal to enable our discussion to proceed as you wish it to. If Protagoras is unwilling to give replies, let him be the questioner and I will answer, and at the same time try to show him how, in my submission, the respondent should speak. When I have answered as many questions as he likes to put, let him in return render similar account to me. Then if he does not seem to wish to answer a question as put, you and I will appeal to him jointly, as you did to me, not to spoil the discussion. For this purpose we have no need of a single arbitrator; you will all keep watch on us together.

Everyone thought this was the right way to proceed. Protagoras was most unwilling, but he had to agree to be the questioner, and then when he had questioned me sufficiently, to submit himself to me in turn and make brief replies.

He began his questions something like this.

Protagoras:: In my view, Socrates, the most important part of a man's education is to become an authority on poetry. This means being able to criticize the good and bad points of a poem with understanding, to know how to distinguish them, and give one's reasons when asked. My question to you therefore will concern the subject of our present discussion, namely virtue, but transferred to the realm of poetry. That will be the only difference. Simonides in one of his poems says to Scopas, son of Creon of Thessaly;

Hard is it on the one hand to become
A good man truly, hands and feet and mind
Foursquare, wrought without blame.

Do you know the piece, or should I recite it all to you?

Socrates:: There is no need, I know it and have given it quite a lot of study.

Protagoras:: Good. Now do you think it a beautiful and well-written poem?

Socrates:: Yes, both beautiful and well written.

Protagoras:: And do you think a poem beautifully written if the poet contradicts himself?

Socrates:: No.

Protagoras:: Then look at it more closely.

Socrates:: But really I have given it enough thought.

Protagoras:: Then you must know that as the poem proceeds he says :

Nor do I count as sure the oft-quoted word
Of Pittacus, though wise indeed he was
Who spoke it. To be noble, said the sage,
Is hard.

You understand that this is the same poet as wrote the previous lines?

Socrates:: Yes.

Protagoras:: Then you think the two passages are consistent?

Socrates:: For my part I do, though not without a fear that he might be right. Don't you?

Protagoras:: How can a man be thought consistent when he says both these things? First he lays it down himself that it is hard for a man to become truly good; then when he is a little further on in the poem he forgets. He finds fault with Pittacus, who said the same thing as he did himself, that it is hard to be noble, and refuses to accept it from him; but in censuring the man who said the same as he does, he obviously censures himself. Either his first or his second statement is wrong.

Socrates:: This sally evoked praise and applause from many of the audience, and at first I was like a man who has been hit by a good boxer; at his words and the applause things went dark and I felt giddy. Then I turned to Prodicus—and to tell you the truth, this was a move to gain time to consider what the poet meant—and appealed to him by name. Prodicus, I said, Simonides is of course your fellow citizen; you ought to come to his aid. I think I will call on you as the river Scamander in Homer called on the Simois when hard pressed by Achilles, with the words :

> Dear brother, let us both together stem the hero's might.

So I appeal to you lest our Simonides be sacked by Protagoras like another Troy, since truly to justify Simonides calls for that art of yours whereby you discern the difference between ‘wish' and ‘desire' and make all those other elegant distinctions which we heard just now. So see whether you agree with me. I don't believe Simonides contradicts himself. Now let us have your opinion first. Do you think ‘to become' and ‘to be' are the same, or different?

Prodicus:: Different, most certainly.

Socrates:: Well, at the beginning Simonides gave his own view, that it is difficult to become a good man, didn't he?

Prodicus:: True.

Socrates:: But as for Pittacus, he censures him not, as Protagoras thinks, for saying the same thing, but something different. According to Pittacus, the difficulty is not to *become* noble, as Simonides said it was, but to *be.* As

Prodicus says, Protagoras, to be and to become are not the same; and if to be is not the same as to become, Simonides is not contradicting himself. I shouldn't be surprised if Prodicus and many others would agree with Hesiod that it is difficult to *become* good—he says, you remember;

> The gods have put sweat on the path to virtue;

but when

> The summit's reached,
> Hard though it was, thenceforth the task is light
> To keep it.

Prodicus commended my explanation, but Protagoras said;

Protagoras:: Your justification, Socrates, involves a greater error than the one it sets out to defend.

Socrates:: It seems then, that I have done harm, and am a contemptible physician, whose cure inflames the disease.

Protagoras:: Well, it is so.

Socrates:: Explain.

Protagoras:: The poet must be very stupid, if he says that it is such a light matter to hold on to virtue, when everyone agrees that there is nothing more difficult.

Socrates:: To this I rejoined, It's a remarkably lucky thing that our friend Prodicus happens to be present at this discussion. I have a notion that his branch of wisdom is an old and god-given one, beginning perhaps with Simonides or going even further back. Your learning covers many things but not, it appears, this. You are not acquainted with it as I have become through being a pupil of Prodicus. So now I don't think you understand that Simonides may not have taken this word ‘hard' as you do. It may be like the word ‘terrible which Prodicus is always scolding me about, when in praising you or someone else I say, Protagoras is a terribly clever person.' He asks me if

I'm not ashamed to call good things terrible. What is terrible, he says, is bad. No one speaks of ‘terrible wealth' or ‘terrible peace,' but rather of ‘a terrible disease,' ‘a terrible war,' ‘terrible poverty.' Perhaps then the Ceans and Simonides understand ‘hard' as connoting something bad, or something else which you don't know. Let's ask Prodicus, for he is the right man to ask about the dialect of Simonides. Prodicus, what does Simonides mean by ‘hard'?

Prodicus:: Bad.

Socrates:: Then that is why he blames Pittacus for saying, ‘It is hard to be noble,' just as if he had heard him saying that it was bad to be noble.

Prodicus:: What else do you suppose Simonides means? He is reproaching Pittacus with not knowing how to distinguish meanings properly, being a Lesbian and brought up in a barbarous dialect.

Socrates:: Do you hear that, Protagoras? Have you anything to say to it?

Protagoras:: It is not at all like that. I know very well that by ‘hard' Simonides meant what the rest of us mean—not ‘bad,' but what is not easy, only accomplished with much effort.

Socrates:: I believe myself that that is what Simonides meant, and I am sure Prodicus knew it. He is joking, and wants to test your ability to stand up for your own opinion. Actually the very next words provide ample proof that Simonides did not equate ‘hard' with ‘bad.' He goes on;

> A god alone can have this privilege;

and presumably he does not first say ‘it is bad to be noble' and then add that only a god could achieve it, and allot it as a privilege entirely divine. That would mean that Prodicus is calling Simonides quite unprincipled and no true Cean. However, I am ready to tell you my own opinion of Simonides' meaning in this song, if you wish to test my skill in poetry, as you call it, but if you prefer it I will listen to you.

Protagoras:: Please speak if you will;

Socrates:: said Protagoras when he heard this, and Prodicus, Hippias, and the others urged me strongly.

Well then, I will try to expound to you the view that I take. The most ancient and fertile homes of philosophy among the Greeks are Crete and Sparta, where are to be found more Sophists than anywhere on earth. But they conceal their wisdom like the Sophists Protagoras spoke of, and pretend to be fools, so that their superiority over the rest of Greece may not be known to lie in wisdom, but seem to consist in fighting and courage. Their idea is that if their real excellence became known, everyone would set to work to become wise. By this disguise they have taken in the pro-Spartans in other cities, who to emulate them go about with bruised ears, bind their hands with thongs, take to physical training, and wear short cloaks, under the impression that these are the practices which have made the Spartans a great power in Greece; whereas the Spartans, when they want to resort freely to their wise men and are tired of meeting them in secret, expel all resident aliens, whether they be sympathizers with the Spartan way of life or not, and converse with the Sophists unbeknown to any foreigners. Conversely they don't allow any of their youths to go abroad, for fear they should forget what they have learned at home. No more do the Cretans. And in these states there are not only men but also women who are proud of their intellectual culture.

Now this is how you may know that I am telling the truth and that the Spartans are the best educated in philosophy and speaking. If you talk to the most ordinary

Spartan, you will find that for most of the time he shows himself a quite unimpressive speaker. But then, at some chance point in the conversation, like a brilliant marksman he shoots in a telling phrase, brief and taut, showing up whoever is talking to him to be as helpless as a child.

Now there are some, both at the present day and in the past, who have tumbled to this fact, namely that to be Spartan implies a taste for intellectual rather than physical exercise, for they realize that to frame such utterances is a mark of the highest culture. Of these were Thales of Miletus, Pittacus of Mytilene, Bias of Priene, our own Solon, Cleobulus of Lindus, and Myson of Chen, and the seventh of their company, we are told, was a Spartan, Chilon. All these were emulators, admirers, and disciples of Spartan culture, and their wisdom may be recognized as belonging to the same category, consisting of pithy and memorable dicta uttered by each. Moreover they met together and dedicated the first fruits of their wisdom to Apollo in his temple at Delphi, inscribing those words which are on everyone's lips, ‘Know thyself' and ‘Nothing too much.'

I mention these facts to make the point that, among the ancients, this Laconic brevity was the characteristic expression of philosophy. In particular this saying of Pittacus, ‘Hard is it to be noble,' got into circulation privately and earned the approval of the wise. It occurred therefore to Simonides, with his philosophical ambitions, that if he could floor this favorite maxim with a triumphant knockout, he would become the favorite of his own day. In my judgment he wrote the whole poem against the saying of Pittacus and on its account, in a deliberate effort to damage its fame.

Now let us all examine it together, to see whether I am right. At the very beginning of the poem, it seems crazy, if he wished to say that it is hard to become a good man, that he should then insert ‘on the one hand.' The insertion seems to make no sense, except on the supposition that Simonides is speaking polemically against the saying of Pittacus. Pittacus said, ‘Hard is it to be noble,' and Simonides replied, disputing the point, ‘No, to *become* a good man is hard truly'—not, by the way, ‘to become truly good'—he does not refer the ‘truly' to that, as if some men were truly good and others good but not truly so. That would strike people as silly and unlike Simonides. We must transpose the word ‘truly' in the poem, thus as it were implying the saying of Pittacus before it, as if he spoke first and Simonides were answering his words. Thus, ‘O men, hard is it to be noble,' and Simonides replies, ‘That is not true, Pittacus; not to *be* but to *become* a good man, foursquare in hands and feet and mind, wrought without blame, that is hard truly.'

On this view we find that ‘on the one hand' comes in reasonably, and that ‘truly' finds its proper place at the end. Everything that follows bears out my opinion that this is the sense. Much could be said about each phrase in the poem to testify to the excellence of its composition—it is indeed an elegant and well-thought-out production—but to go through it in such detail would take too long. Nevertheless let us review its general character and intention, which is undoubtedly to constitute, throughout its length, a refutation of the saying of Pittacus.

A little further on Simonides says, as if he were developing an argument, that although to become a good man is truly difficult, yet it is possible, for a while at least, ‘but having become good, to remain in this state and *be* a good man—which is what you were speaking of, Pittacus—is impossible and superhuman. This is the privilege of a god alone, whereas

He cannot but be bad, whom once
Misfortune irredeemable casts down.'

Now who is cast down by irredeemable misfortune in the management of a ship? Clearly not the passenger, for he has *been* down all the time. You cannot knock down a man who is lying on the ground; you can only knock him down if he is standing, and put him on the ground. In the same way irredeemable misfortune may cast down the resourceful, but not the man who is helpless all the time. The steersman may be reduced to helplessness by the onset of a great storm, the farmer by a bad season, and the doctor from some analogous misfortune. For the good may become bad, as another poet has testified in the line;

The good are sometimes bad and sometimes noble;

but the bad man cannot become bad, but is so of necessity. So it is that the resourceful and wise and good, when irredeemable disaster brings him to naught, cannot but be bad.

You say, Pittacus, 'Hard is it to be noble,' whereas to *become* noble is hard, though possible, but to *be* so is impossible;

For when he fares well every man is good,
But in ill faring, evil.

Now what is faring well in letters, and what makes a man good at them? Clearly the learning of them. And what is the faring well that makes a good doctor? Clearly it is learning how to heal the sick. 'But in ill faring, evil.' Who is it who becomes a bad doctor? Clearly a man who is both a doctor and a good doctor; he might become a bad doctor also. But we who are laymen in medicine could never by faring ill become doctors or builders or any other kind of technician, and he who cannot by faring badly become a doctor cannot, obviously, become a bad doctor. Even so the good man may as easily be made bad, by lapse of time or fatigue or illness or some other accident, seeing that this is the only real ill faring, to be deprived of knowledge. But the bad man cannot be made bad, for he is so all the time. If he is to *become* bad, he must first become good. Thus this part of the poem also teaches the same lesson, that to be a good man—continuing good—is not possible, but a man may *become* good, and the same man bad, and those are best for the longest time whom the gods love.

All this, then, is aimed at Pittacus, and the next bit even more plainly so, for he goes on;

Then never shall I vainly cast away
In hopeless search my little share of life,
Seeking a thing impossible to be,
A man all blameless, among those who reap
The fruit of the broad earth.
But should I find him
I'll send you word.

See how violently, throughout the poem, he attacks the saying of Pittacus—

But all who do no baseness willingly
I praise and love. The gods themselves strive not
Against necessity.

This is all to the same purpose. Simonides was not so ignorant as to say that he praised all who did no evil voluntarily, as if there were any who did evil voluntarily. For myself I am fairly certain that no wise man believes anyone sins willingly or willingly perpetrates any evil or base act. They know very well that all evil or base action is involuntary. So here Simonides is not saying that he praises whoever does no evil willingly. The word ‘willingly' applies to himself. His view was that a good man often forces himself into love and praise, as when someone's mother or father or native land is unsympathetic to him. The less worthy, when they find themselves in such a position, seem to accept it happily and expose the unworthiness of parents or country with reproaches and denunciations, so that they may neglect their duty toward them without thereby incurring the blame or reproaches of others. They even exaggerate their censure and add gratuitous hostility to that which cannot be helped. Good men on the other hand conceal such faults and are constrained to praise, and if they feel anger at some wrong done to them by parents or country, they calm themselves and seek reconciliation, compelling themselves to love and praise their own kin. No doubt Simonides had in mind that he himself had often eulogized a tyrant or someone of that stamp not of his own free will but under compulsion.

This then is addressed to Pittacus in particular, as if to say, My reason for blaming you, Pittacus, is not that I am a faultfinder, for

> to me that man suffices Who is not bad nor
> overweak, but sound In heart and knowing
> righteousness, the weal  Of nations. I shall find no
> fault with him

I am not, he says, a censorious man

> For beyond number is the tribe of fools.

So, he implies, if anyone takes pleasure in faultfinding, he may have his fill in censuring them.

> All is fair that is unmixed with foul.

He does not say this in the sense in which he might say, ‘all is white that is unmixed with black'—that would be ridiculous on many counts —but meaning that for his part he accepts without censure the middle state. I do not seek, he has said;

> A man all blameless, among those who reap
> The fruit of the broad earth.
> But should I find him  I'll send you word.

If I wait for perfection I shall praise no one. For me it is enough if he reach the mean and do no evil, since

I praise and love all—

note that he uses the Lesbian dialect here because he is addressing Pittacus—

I praise and love all willingly

—this is where the pause is to be made in speaking it, at ‘willingly'—

Who do no baseness;

though there are those whom I praise and love against my will. If then you spoke with an even moderate degree of reasonableness and truth, Pittacus, I should never blame you. But as it is you have made an utterly false statement about something of the highest import, and it passes for true. For that I do blame you.

That, gentlemen, I concluded, is my interpretation of the mind of Simonides in writing this poem.

Hippias:: This exposition of yours, seems to me highly meritorious. However, I also have an interesting thesis on the poem, which I will expound to you if you wish.

Alcibiades:: Yes, another time, Hippias. But at present Socrates and Protagoras must carry out their agreement. Let Socrates reply if Protagoras wants to ask further questions, or if he prefers to answer Socrates, then let Socrates do the questioning.

Socrates:: Then, I leave it to Protagoras to do whichever pleases him. But if he is agreeable, I suggest we leave the subject of songs and poems, for I should be glad to reach a conclusion, Protagoras, in a joint investigation with you, on the matters about which I asked you at the beginning. Conversation about poetry reminds me too much of the wine parties of second-rate and commonplace people. Such men, being too uneducated to entertain themselves as they drink by using their own voices and conversational resources, put up the price of female musicians, paying well for the hire of an extraneous voice—that of the pipe—and find their entertainment in its warblings. But where the drinkers are men of worth and culture, you will find no girls piping or dancing or harping. They are quite capable of enjoying their own company without such frivolous nonsense, using their own voices in sober discussion and each taking his turn to speak or listen—even if the drinking is really heavy. In the same way gatherings like our own, if they consist of men such as most of us claim to be, call for no extraneous voices—not even of poets. No one can interrogate poets about what they say, and most often when they are introduced into the discussion some say the poet's meaning is one thing and some another, for the topic is one on which nobody can produce a conclusive argument. The best people avoid such discussions, and entertain each other from their own resources, testing one another's mettle in what they have to say themselves. These are the people, in my opinion, whom you and I should follow, setting the poets aside and conducting the conversation on the basis of our own ideas. It is the truth, and our own minds, that we should be testing. If you want to go on with your questions, I am ready to offer myself as an answerer, or, if you prefer, be my respondent, to bring to its conclusion the discussion which we broke off in the middle.

When I said this, and more to the same effect, Protagoras gave no clear indication of which he would do. Alcibiades then glanced at Callias and said;

Alcibiades:: Do you still approve of what Protagoras is doing, refusing to say whether or not he will be the answerer? I don't. Let him either continue the discussion or tell us that he is unwilling, so that we may know where we are with him, and Socrates can talk to someone else, or any of the rest of us start a conversation.

Socrates:: These words of Alcibiades, and requests from Callias and almost all those present, made Protagoras feel ashamed, or so I thought, and induced him to return reluctantly to the discussion. He said therefore that he would answer and told me to put my questions.

Protagoras, please don't think that I have any other purpose in this discussion than to investigate questions which continually baffle me. I believe Homer hit a nail on the head when he said, If two go together, one perceives before the other.' Somehow we all feel a better fortified in this way for any action or speech or thought. But to continue the quotation, 'If one alone perceive'—why he goes off at once looking for someone to whom he can show his idea and with whom he can confirm it, and will not rest till he finds him. That is why I would rather talk to you than to anyone else, because I think you are the most capable of elucidating the kind of questions that a good man gives his mind to, and in particular the question of virtue. After all, whom else should I look for? Not only are you, as you believe, an excellent member of society yourself—there are some men very good in themselves who cannot pass on their good qualities to others—but you have also the ability to make others good, and with such confidence that although some have made a secret of their art you openly announce yourself to the Greeks by the name of Sophist and set up as a teacher of culture and virtue, the first to claim payment for this service. Naturally I must call on you for assistance in pondering these subjects and enlist you with me by asking you questions. It could not be otherwise.

I want then to go back to the beginning, to my first questions to you on this subject. Some things I want you to remind me of, and others I want to investigate with your help. The question, if I am not mistaken, was this. Wisdom, temperance, courage, justice, and holiness are five terms. Do they stand for a single reality, or has each term a particular entity underlying it, a reality with its own separate function, each different from the other? Your answer was that they are not names for the same thing, but that each of these terms applies to its own separate reality, and that all these things are parts of virtue, not like the parts of a lump of gold all homogeneous with each other and with the whole of which they are parts, but like the parts of a face, resembling neither the whole nor each other and each having a separate function. If you are still of the same mind, say so, but if not, then declare yourself. I certainly shall not hold you to your words if you now express yourself differently. Very likely you spoke as you did to test me.

Protagoras:: No. My view is that all these are parts of virtue, and that four of them resemble each other fairly closely, but courage is very different from all the rest. The proof of what I say is that you can find many men who are quite unjust, unholy, intemperate, and ignorant, yet outstandingly courageous.

Socrates:: Stop. What you say merits investigation. Do you qualify the courageous as confident, or in any other way?

Protagoras:: As confident, yes, and keen to meet dangers from which most men shrink in fear.

Socrates:: Then again, you consider virtue an honorable thing, and it is on the assumption that it is honorable that you offer to teach it?

Protagoras:: Unless I am quite mad, it is the most honorable of all things.

Socrates:: Part base and part honorable, or all honorable?

Protagoras:: All honorable, as honorable as can be.

Socrates:: Now do you know which men plunge fearlessly into tanks?

Protagoras:: Yes, divers.

Socrates:: Is that because they know their job or for some other reason?

Protagoras:: Because they know their job.

Socrates:: And what men feel confidence in a cavalry engagement—trained or untrained riders?

Protagoras:: Trained.

Socrates:: And in fighting with the light shield—peltasts or nonpeltasts?

Protagoras:: Peltasts. And this holds good generally, if that is what you are after. Those with the relevant knowledge have more confidence than those without it, and more when they have learned the job than they themselves had before.

Socrates:: But, have you ever seen men with no understanding of any of these dangerous occupations who yet plunge into them with confidence?

Protagoras:: Indeed yes, with only too much confidence.

Socrates:: Then does not their confidence involve courage too?

Protagoras:: No, for if so, courage would be something to be ashamed of. Such men are mad.

Socrates:: How then do you define the courageous? Did you not say they were the confident?

Protagoras:: Yes, I still maintain it.

Socrates:: Well, those who are thus ignorantly confident show themselves not courageous but mad, and conversely, in the other case it is the wisest that are also most confident, and therefore most courageous? On this argument it is their knowledge that must be courage.

Protagoras:: No, Socrates. You have not remembered rightly what I said in my reply. When you asked me whether the courageous are confident, I agreed, but I was not asked whether the confident are also courageous—if you had asked me that at the time, I should have said ‘not all of them'—and you have nowhere disproved my admission by showing that the courageous are not confident. Further, when you argue that those who have knowledge are more confident than they were before, and also than others who are ignorant, and thereupon conclude that courage and wisdom are the same thing, you might as well go on and conclude that physical strength is knowledge. First of all you would proceed to ask me whether the strong are powerful, and I should agree. Next, whether those who know how to wrestle are more powerful than those who do not, and more powerful after they have learned than before; again I should agree, and it would then be open to you to say, adducing the same proofs, that on my own admission wisdom is physical strength. But here again I nowhere admit that the powerful are strong, only that the strong are powerful. Power and strength are not the same. Power can result from knowledge, and also from madness or passion, whereas strength is a matter of natural constitution and bodily nurture. Similarly in our present discussion, I deny that confidence and courage are the same, and it follows that the courageous are confident but not all the confident are courageous. Confidence, like power, may be born of skill, or equally of madness or passion, but courage is a matter of nature and the proper nurture of the soul.

Socrates:: Well, you speak of some men living well, and others badly?

He agreed.

Socrates:: Do you think then that a man would be living well who passed his life in pain and vexation?

Protagoras:: No.

Socrates:: But if he lived it out to the end with enjoyment, you would count him as having lived well?

Protagoras:: Yes.

Socrates:: Then to live pleasurably is good, to live painfully bad?

Protagoras:: Yes, if one's pleasure is in what is honorable.

Socrates:: What's this, Protagoras? Surely you don't follow the common opinion that some pleasures are bad and some pains good? I mean to say, in so far as they are pleasant, are they not also good, leaving aside any consequence that they may entail? And in the same way pains, in so far as they are painful, are bad?

Protagoras:: I'm not sure Socrates, whether I ought to give an answer as unqualified as your question suggests, and say that everything pleasant is good, and everything painful evil. But with a view not only to my present answer but to the whole of the rest of my life, I believe it is safest to reply that there are some pleasures which are not good, and some pains which are not evil, others on the other hand which are, and a third class which are neither evil nor good.

Socrates:: Meaning by pleasures, what partakes of pleasure or gives it?

Protagoras:: Certainly.

Socrates:: My question then is, whether they are not, qua pleasant, good. I am asking in fact whether pleasure itself is not a good thing.

Protagoras:: Let us, as you are so fond of saying yourself, investigate the question; then if the proposition we are examining seems reasonable, and pleasant and good appear identical, we shall agree on it. If not, that will be the time to differ.

Socrates:: Good. Will you lead the inquiry or should I?

Protagoras:: It is for you to take the lead, since you introduced the subject.

Socrates:: I wonder then, if we can make it clear to ourselves like this. If a man were trying to judge, by external appearance, of another's health or some particular physical function, he might look at his face and hands and then say, 'Let me see your chest and back too, so that I may make a more satisfactory examination.' Something like this is what I want for our present inquiry. Observing that your attitude to the good and the pleasant is what you say, I want to go on something like this. Now uncover another part of your mind, Protagoras. What is your attitude to knowledge? Do you share the common view about that also? Most people think, in general terms, that it is nothing strong, no leading or ruling element. They don't see it like that. They hold that it is not the knowledge that a man possesses which governs him, but something else—now passion, now pleasure. now pain, sometimes love, and frequently fear. They just think of knowledge as a slave, pushed around by all the other affections. Is this your view too, or would you rather say that knowledge is a fine thing quite capable of ruling a man, and that if he can distinguish good from evil, nothing will force him to act otherwise than as knowledge dictates, since wisdom is all the reinforcement he needs?

Protagoras:: Not only is this my view, but I above all men should think it shame to speak of wisdom and knowledge as anything but the most powerful elements in human life.

Socrates:: Well and truly answered. But I expect you know that most men don't believe us. They maintain that there are many who recognize the best but are unwilling to act on it. It may be open to them, but they do otherwise. Whenever I ask what can be the reason for this, they answer that those who act in this way are overcome by pleasure or pain or some other of the things I mentioned just now.

Protagoras:: Well, Socrates. it's by no means uncommon for people to say what is not correct.

Socrates:: Then come with me and try to convince them, and show what really happens when they speak of being overcome by pleasure and therefore, though recognizing what is best, failing to do it. If we simply declare, 'You are wrong, and what you say is false,' they will ask us, 'If it is not being overcome by pleasure, what can it be? What do you two say it is? Tell us.'

Protagoras:: But why must we look into the opinions of the common man, who says whatever comes into his head?

Socrates:: I believe, that it will help us to find out how courage is related to the other parts of virtue. So if you are content to keep to our decision, that I should lead the way in whatever direction I think we shall best see the light, then follow me. Otherwise, if you wish, I shall give it up.

Protagoras:: No, you are right. Carry on as you have begun.

Socrates:: To return then, If they should ask us, 'What is your name for what we called being worsted by pleasure?' I should reply, ‘Listen. Protagoras and I will try to explain it to you. We take it that you say this happens to you when, for example, you are overcome by the desire of food or drink or sex—which are pleasant things—and though you recognize them as evil, nevertheless indulge in them.' They would agree. Then we should ask them, ‘In what respect do you call them evil? Is it because for the moment each of them provides its pleasure and is pleasant, or because they lay up for the future disease or poverty or suchlike? If they led to none of these things, but produced pure enjoyment, would they nevertheless be evils—no matter why or how they give enjoyment?' Can we expect any other answer than this, that they are not evil on account of the actual momentary pleasure which they produce. but on account of their consequences, disease and the rest?

Protagoras:: I believe that would be their answer.

Socrates:: ‘Well, to cause disease and poverty is to cause pain.' They would agree, I think?

He nodded.

‘So the only reason why these pleasures seem to you to be evil is, we suggest, that they result in pains and deprive us of future pleasures.' Would they agree?

We both thought they would.

Now suppose we asked them the converse question. ‘You say also that pains may be good. You mean, I take it, such things as physical training, military campaigns, doctors' treatment involving cautery or the knife or drugs or starvation diet? These, you say, are good but painful?' Would they agree?

Protagoras:: They would.

Socrates:: ‘Do you then call them good in virtue of the fact that at the time they cause extreme pain and agony, or because in the future there result from them health, bodily well-being, the safety of one's country, dominion over others, wealth?' The latter, I think they would agree.

Protagoras thought so too.

‘And are they good for any other reason than that their outcome is pleasure and the cessation or prevention of pain? Can you say that you have any other end in mind, when you call them good, than pleasures or pains?' I think they would say no.

Protagoras:: I too.

Socrates:: ‘So you pursue pleasure as being good, and shun pain as evil?'

He agreed.

‘Then your idea of evil is pain, and of good is pleasure. Even enjoying yourself you call evil whenever it leads to the loss of a pleasure greater than its own, or lays up pains that outweigh its pleasures.

If it is in any other sense, or without anything else in mind, that you call enjoyment evil, no doubt you could tell us what it is, but you cannot.'

Protagoras:: I agree that they cannot.

Socrates:: ‘Isn't it the same when we turn back to pain? To suffer pain you call good when it either rids us of greater pains than its own or leads to pleasures that outweigh them. If you have anything else in mind when you call the actual suffering of pain a good thing, you could tell us what it is, but you cannot.'

Protagoras:: True.

Socrates:: ‘Now my good people,' ‘if you ask me what is the point of all this rigmarole, I beg your indulgence. It isn't easy to explain the real meaning of what you call being overcome by pleasure, and any explanation is bound up with this point. You may still change your minds, if you can say that the good is anything other than pleasure, or evil other than pain. Is it sufficient for you to live life through with pleasure and without pain? If so, and you can mention no good or evil which cannot in the last resort be reduced to these, then listen to my next point.

‘This position makes your argument ridiculous. You say that a man often recognizes evil actions as evil, yet commits them, under no compulsion, because he is led on and distracted by pleasure, and on the other hand that, recognizing the good, he refrains from following it because he is overcome by the pleasures of the moment. The absurdity of this will become evident if we stop using all these names together—pleasant, painful, good, and evil—and since they have turned out to be only two. call them by only two names—first of all good and evil, and only at a different stage pleasure and pain. Having agreed on this, suppose we now say that a man does evil though he recognizes it as evil. Why? Because he is overcome. By what? We can no longer say by pleasure, because it has changed its name to good. Overcome, we say. By what, we are asked. By the good, I suppose we shall say. I fear that if our questioner is ill-mannered, he will laugh and retort, What ridiculous nonsense, for a man to do evil, knowing it is evil and that he ought not to do it, because he is overcome by good. Am Ito suppose that the good in you is or is not a match for the evil? Clearly we shall reply that the good is not a match; otherwise the man whom we speak of as being overcome by pleasure would not have done wrong. And in what way, he may say, does good fail to be a match for evil, or evil for good? Is it not by being greater or smaller, more or less than the other? We shall have to agree. Then by being overcome you must mean taking greater evil in exchange for lesser good.

‘Having noted this result, suppose we reinstate the names pleasant and painful for the same phenomena, thus : A man does—*evil* we said before, but now we shall say *painful* actions, knowing them to be painful, because overcome by pleasures—pleasures, obviously, which were not a match for the pains. And what meaning can we attach to the phrase *not a match for,* when used of pleasure in relation to pain, except the excess or deficiency of one as compared with the other? It depends on whether one is greater or smaller, more or less intense than the other. If anyone objects that there is a great difference between present pleasure and pleasure or pain in the future, I shall reply that the difference cannot be one of anything else but pleasure and pain. So like an expert in weighing, put the pleasures and the pains together, set both the near and distant in the balance, and say which is the greater quantity. In weighing pleasures against pleasures, one must always choose the greater and the more; in weighing pains against pains, the smaller and the less; whereas in weighing pleasures against pains, if the pleasures exceed the pains, whether the distant, the near, or vice versa, one must take the course which brings those pleasures; but if the pains outweigh the pleasures, avoid it. Is this not so, good people?' I should say, and I am sure they could not deny it.

Protagoras agreed.

‘That being so then, answer me this,' I shall go on. ‘The same magnitudes seem greater to the eye from near at hand than they do from a distance. This is true of thickness and also of number, and sounds of equal loudness seem greater near at hand than at a distance.

If now our happiness consisted in doing, I mean in choosing, greater lengths and avoiding smaller, where would lie salvation? In the art of measurement or in the impression made by appearances? Haven't we seen that the appearance leads us astray and throws us into confusion so that in our actions and our choices between great and small we are constantly accepting and rejecting the same things, whereas the metric art would have canceled the effect of the impression, and by revealing the true state of affairs would have caused the soul to live in peace and quiet and abide in the truth, thus saving our life?' Faced with these considerations, would people agree that our salvation would lie in the art of measurement?

He agreed that they would.

‘Again, what if our welfare lay in the choice of odd and even numbers, in knowing when the greater number must rightly be chosen and when the less, whether each sort in relation to itself or one in relation to the other, and whether they were near or distant? What would assure us a good life then? Surely knowledge, and specifically a science of measurement, since the required skill lies in the estimation of excess and defect—or to be more precise, arithmetic, since it deals with odd and even numbers.' Would people agree with us?

Protagoras thought they would.

‘Well then,' I shall say, ‘since our salvation in life has turned out to lie in the correct choice of pleasure and pain—more or less, greater or smaller, nearer or more distant—is it not in the first place a question of measurement, consisting as it does in a consideration of relative excess, defect, or equality?'

Protagoras:: It must be.

Socrates:: ‘And if so, it must be a special skill or branch of knowledge.'

Protagoras:: Yes, they will agree.

Socrates:: ‘What skill, or what branch of knowledge it is, we shall leave till later; the fact itself is enough for the purposes of the explanation which you have asked for from Protagoras and me. To remind you of your question, it arose because we two agreed that there was nothing more powerful than knowledge, but that wherever it is found it always has the mastery over pleasure and everything else. You on the other hand, who maintain that pleasure often masters even the man who knows, asked us to say what this experience really is, if it is not being mastered by pleasure. If we had answered you straight off that it is ignorance, you would have laughed at us, but if you laugh at us now, you will be laughing at yourselves as well, for you have agreed that when people make a wrong choice of pleasures and pains—that is, of good and evil—the cause of their mistake is lack of knowledge. We can go further, and call it, as you have already agreed, a science of measurement, and you know yourselves that a wrong action which is done without knowledge is done in ignorance. So that is what being mastered by pleasure really is—ignorance, and most serious ignorance, the fault which Protagoras. Prodicus, and Hippias profess to cure. You on the other hand, because you believe it to be something else, neither go nor send your children to these Sophists, who are the experts in such matters. Holding that it is nothing that can be taught, you are careful with your money and withhold it from them—a bad policy both for yourselves and for the community.'

That then is the answer we should make to the ordinary run of people, and I ask you—Hippias and Prodicus as well as Protagoras, for I want you to share our discussion—whether you think what I say is true.

They all agreed most emphatically that it was true.

You agree then, that the pleasant is good and the painful bad. I ask exemption from Prodicus' precise verbal distinctions. Whether you call it pleasant, agreeable, or enjoyable, my dear Prodicus, or whatever name you like to apply to it, please answer in the sense of my request.

Prodicus laughed and assented, and so did the others.

Well, here is another point, I continued. All actions aimed at this end, namely a pleasant and painless life, must be fine actions, that is, good and beneficial.

They agreed.

Then if the pleasant is the good, no one who either knows or believes that there is another possible course of action, better than the one he is following, will ever continue on his present course when he might choose the better. To ‘act beneath yourself' is the result of pure ignorance; to ‘be your own master' is wisdom.

All agreed.

And may we define ignorance as having a false opinion and being mistaken on matters of great moment?

They approved this too.

Then it must follow that no one willingly goes to meet evil or what he thinks to be evil. To make for what one believes to be evil, instead of making for the good, is not, it seems, in human nature, and when faced with the choice of two evils no one will choose the greater when he might choose the less.

General agreement again.

Now you recognize the emotion of fear or terror. I wonder if you conceive it as I do? I say this to you, Prodicus. Whether you call it fear or terror, I define it as expectation of evil.

Protagoras and Hippias thought this covered both fear and terror, but Prodicus said it applied to fear but not to terror.

Well, Prodicus, it makes no difference. This is the point. If what I have said is true. will anyone be willing to go to meet what he fears, when it is open to him to go in the opposite direction? Do not our agreed conclusions make this impossible? It is admitted that what he fears he regards as evil, and that no one willingly meets or accepts what he thinks evil.

They all assented.

On this agreed basis, let Protagoras make his defense and show us how his original answer can be right. I don't mean what he said at the very beginning, when he maintained that there were five parts of virtue none of which resembled any other, and that each had its separate function, but what he said later, that four of them are fairly similar, but one, namely courage, is quite different from the rest. This, he said, the following evidence would show me : ‘You will find, Socrates, men who are utterly impious, unjust, licentious, and ignorant, yet very brave, which will show you that courage is quite different from the other parts of virtue.' I was much surprised by this answer at the time, and now that we have had this discussion it surprises me even more. Anyway, I asked him if he described the brave as confident, and he replied, ‘Yes, and eager.' Do you remember saying this, Protagoras?

He admitted it.

Tell me then, in what direction are the brave eager to go? Toward the same things as cowards?

Protagoras:: No.

Socrates:: Toward something else then?

Protagoras:: Yes.

Socrates:: Is it that cowards go to meet what inspires confidence, and brave men to what is terrible?

Protagoras:: So men say, Socrates.

Socrates:: I know they do, but that was not my question. What do you say brave men go eagerly to meet? Is it what is terrible, knowing it to be terrible?

Protagoras:: Your own argument has shown that to be impossible.

Socrates:: True again, so that if my argument was sound, no one goes to meet what he believes to be terrible, since not being one's own master was shown to be due to ignorance.

He admitted this.

But as for what inspires confidence, everyone makes for that, cowards and brave men alike, and thus cowards and brave men make for the same things.

Protagoras:: Whatever you say. What the coward makes for is precisely the opposite of what the brave man makes for. For instance, the brave are willing to enter battle; the others are not.

Socrates:: Is this willingness an honorable thing, or disgraceful?

Protagoras:: Honorable.

Socrates:: Then if honorable, we agreed earlier that it is good, for we agreed that all honorable actions are good.

Protagoras:: That is true, and I still think so.

Socrates:: Quite rightly too. But which class did you say were unwilling to enter battle although that is a fine and good thing to do?

Protagoras:: The cowards.

Socrates:: Well, if it is honorable and good, it is also pleasant.

Protagoras:: We certainly agreed to that.

Socrates:: Then do the cowards act with knowledge when they refuse to approach what is the more honorable and better and pleasanter thing?

Protagoras:: If we say so, we shall confound our former conclusions.

Socrates:: Now take the brave man. He makes for what is more honorable, better, and pleasanter?

Protagoras:: I cannot deny it.

Socrates:: And in general when the brave feel fear, there is no disgrace in their fears, nor in their confidence when they are confident?

Protagoras:: True.

Socrates:: So both are honorable, and if honorable then good?

Protagoras:: Yes.

Socrates:: Cowards on the other hand, and likewise the rash and the mad, feel fears or confidence which are discreditable, and can they exhibit discreditable fear or confidence from any other cause than ignorance?

Protagoras:: No.

Socrates:: Well then, is it cowardice or courage that makes a man a coward?

Protagoras:: Cowardice.

Socrates:: Yet we have seen that it is ignorance of what is to be feared that makes them cowards; and if this ignorance makes them cowards, and you agree that what makes them cowards is cowardice, ignorance of what is and is not to be feared must be cowardice.

He nodded.

Well, courage is the opposite of cowardice.

He agreed.

And knowledge of what is and is not to be feared is the opposite of ignorance of these things.

He nodded again.

Which is cowardice.

Here he assented with great reluctance.

Therefore knowledge of what is and is not to be feared is courage.

At this point he could no longer bring himself to assent, but was silent; so I said, What, Protagoras, won't you say either yes or no to my questions?

Protagoras:: Finish it yourself.

Socrates:: Just one more question first. Do you still believe, as you did at first, that men can be utterly ignorant yet very brave?

Protagoras:: You seem to be bent on having your own way, Socrates, and getting me to give the answers; so to humor you, I will say that on our agreed assumptions it seems to be impossible.

Socrates:: I assure you, that in asking all these questions I have nothing else in view but my desire to learn the truth about virtue and what it is in itself. I know that if we could be clear about that, it would throw the fullest light on the question over which you and I have spun such a coil of argument, I maintaining that virtue was not teachable and you that it was. It seems to me that the present outcome of our talk is pointing at us, like a human adversary, the finger of accusation and scorn. If it had a voice it would say, 'What an absurd pair you are, Socrates and Protagoras. One of you, having said at the beginning that virtue is not teachable, now is bent upon contradicting himself by trying to demonstrate that everything is knowledge—justice, temperance, and courage alike—which is the best way to prove that virtue is teachable. If virtue were something other than knowledge, as Protagoras tried to prove, obviously it could not be taught. But if it turns out to be, as a single whole, knowledge—which is what you are urging, Socrates—then it will be most surprising if it cannot be taught. Protagoras on the other hand, who at the beginning supposed it to be teachable, now on the contrary seems to be bent on showing that it is almost anything rather than knowledge, and this would make it least likely to be teachable.'

For my part, Protagoras, when I see the subject in such utter confusion I feel the liveliest desire to clear it up. I should like to follow up our present talk with a determined attack on virtue itself and its essential nature. Then we could return to the question whether or not it can be taught, thus guarding against the possibility that your Epimetheus might trip us up and cheat us in our inquiry, just as according to the story he overlooked us in the distribution. I liked Prometheus in the myth better than Epimetheus; so I follow his lead and spend my time on all these matters as a means of taking forethought for my whole life. If you should be willing, then as I said at the beginning, you are the one with whom I would most gladly share the inquiry.

Protagoras:: I congratulate you on your keenness, Socrates, and your skill in exposition. I hope I am not too bad a character, and I am the last man to be jealous. I have told a great many people that I never met anyone I admire nearly as much as you, certainly not among your contemporaries, and I say now that I should not be surprised if you became one of our leading philosophers. Well, we will talk of these matters at some future meeting, whenever you like, but now it is time to turn to other things.

Socrates:: So be it, if that is your wish. Indeed I ought long ago to have kept the appointment I mentioned. I only stayed as a concession to the blandishments of Callias.

That was the end of the conversation, and we went away.

## Protagoras.

Translated by Jowett 3rd ed.

*PERSONS OF THE DIALOGUE.*

SOCRATES, *who is the narrator of the Dialogue to his Companion.*
HIPPOCRATES.
ALCIBIADES.
CRITIAS.

PROTAGORAS,
HIPPIAS,
PRODICUS,
*Sophists.*
CALLIAS, *a wealthy Athenian.*

Scene:—The House of Callias.

Friend:: Where do you come from, Socrates? And yet I need hardly ask the question, for I know that you have been in chase of the fair Alcibiades. I saw him the day before yesterday; and he had got a beard like a man,—and he is a man, as I may tell you in your ear. But I thought that he was still very charming.

Socrates:: What of his beard? Are you not of Homer's opinion, who says

'Youth is most charming when the beard first appears'?

And that is now the charm of Alcibiades.

Friend:: Well, and how do matters proceed? Have you been visiting him, and was he gracious to you?

Socrates:: Yes, I thought that he was very gracious; and especially to-day, for I have just come from him, and he has been helping me in an argument. But shall I tell you a strange thing? I paid no attention to him, and several times I quite forgot that he was present.

Friend:: What is the meaning of this? Has anything happened between you and him? For surely you cannot have discovered a fairer love than he is; certainly not in this city of Athens.

Socrates:: Yes, much fairer.

Friend:: What do you mean—a citizen or a foreigner?

Socrates:: A foreigner.

Friend:: Of what country?

Socrates:: Of Abdera.

Friend:: And is this stranger really in your opinion a fairer love than the son of Cleinias?

Socrates:: And is not the wiser always the fairer, sweet friend?

Friend:: But have you really met, Socrates, with some wise one?

Socrates:: Say rather, with the wisest of all living men, if you are willing to accord that title to Protagoras.

Friend:: What! Is Protagoras in Athens?

Socrates:: Yes; he has been here two days.

Friend:: And do you just come from an interview with him?

Socrates:: Yes; and I have heard and said many things.

Friend:: Then, if you have no engagement, suppose that you sit down and tell me what passed, and my attendant here shall give up his place to you.

Socrates:: To be sure; and I shall be grateful to you for listening.

Friend:: Thank you, too, for telling us.

Socrates:: That is thank you twice over. Listen then:—

Last night, or rather very early this morning, Hippocrates, the son of Apollodorus and the brother of Phason, gave a tremendous thump with his staff at my door; some one opened to him, and he came rushing in and bawled out:

Hippocrates:: Socrates, are you awake or asleep?

Socrates:: I knew his voice, and said: Hippocrates, is that you? and do you bring any news?

Hippocrates:: Good news; nothing but good.

Socrates:: Delightful; but what is the news? and why have you come hither at this unearthly hour?

He drew nearer to me and said:

Hippocrates:: Protagoras is come.

Socrates:: Yes; he came two days ago: have you only just heard of his arrival?

Hippocrates:: Yes, by the gods; but not until yesterday evening.

Socrates:: At the same time he felt for the truckle-bed, and sat down at my feet, and then he said:

Hippocrates:: Yesterday quite late in the evening, on my return from Oenoe whither I had gone in pursuit of my runaway slave Satyrus, as I meant to have told you, if some other matter had not come in the way;—on my return, when we had done supper and were about to retire to rest, my brother said to me: Protagoras is come. I was going to you at once, and then I thought that the night was far spent. But the moment sleep left me after my fatigue, I got up and came hither direct.

Socrates:: I, who knew the very courageous madness of the man, said: What is the matter? Has Protagoras robbed you of anything?

He replied, laughing:

Hippocrates:: Yes, indeed he has, Socrates, of the wisdom which he keeps from me.

Socrates:: But, surely, if you give him money, and make friends with him, he will make you as wise as he is himself.

Hippocrates:: Would to heaven, that this were the case! He might take all that I have, and all that my friends have, if he pleased. But that is why I have come to you now, in order that you may speak to him on my behalf; for I am young, and also I have never seen nor heard him; (when he visited Athens before I was but a child;) and all men praise him, Socrates; he is reputed to be the most accomplished of speakers. There is no reason why we should not go to him at once, and then we shall find him at home. He lodges, as I hear, with Callias the son of Hipponicus: let us start.

Socrates:: Not yet, my good friend; the hour is too early. But let us rise and take a turn in the court and wait about there until day-break; when the day breaks, then we will go. For Protagoras is generally at home, and we shall be sure to find him; never fear.

Upon this we got up and walked about in the court, and I thought that I would make trial of the strength of his resolution. So I examined him and put questions to him. Tell me, Hippocrates, as you are going to Protagoras, and will be paying your money to him, what is he to whom you are going? and what will he make of you? If, for example, you had thought of going to Hippocrates of Cos, the Asclepiad, and were about to give him your money, and some one had said to you: You are paying money to your namesake Hippocrates, O Hippocrates; tell me, what is he that you give him money? how would you have answered?

Hippocrates:: I should say that I gave money to him as a physician.

Socrates:: And what will he make of you?

Hippocrates:: A physician.

Socrates:: And if you were resolved to go to Polycleitus the Argive, or Pheidias the Athenian, and were intending to give them money, and some one had asked you: What are Polycleitus and Pheidias? and why do you give them this money?—how would you have answered?

Hippocrates:: I should have answered, that they were statuaries.

Socrates:: And what will they make of you?

Hippocrates:: A statuary, of course.

Socrates:: Well now you and I are going to Protagoras, and we are ready to pay him money on your behalf. If our own means are sufficient, and we can gain him with these, we shall be only too glad; but if not, then we are to spend the money of your friends as well. Now suppose, that while we are thus enthusiastically pursuing our object some one were to say to us: Tell me, Socrates, and you Hippocrates, what is Protagoras, and why are you going to pay him money,—how should we answer? I know that Pheidias is a sculptor, and that Homer is a poet; but what appellation is given to Protagoras? how is he designated?

Hippocrates:: They call him a Sophist, Socrates.

Socrates:: Then we are going to pay our money to him in the character of a Sophist?

Hippocrates:: Certainly.

Socrates:: But suppose a person were to ask this further question: And how about yourself? What will Protagoras make of you, if you go to see him?

He answered, with a blush upon his face (for the day was just beginning to dawn, so that I could see him):

Hippocrates:: Unless this differs in some way from the former instances, I suppose that he will make a Sophist of me.

Socrates:: By the gods, and are you not ashamed at having to appear before the Hellenes in the character of a Sophist?

Hippocrates:: Indeed, Socrates, to confess the truth, I am.

Socrates:: But you should not assume, Hippocrates, that the instruction of Protagoras is of this nature: may you not learn of him in the same way that you learned the arts of the grammarian, or musician, or trainer, not with the view of making any of them a profession, but only as a part of education, and because a private gentleman and freeman ought to know them?

Hippocrates:: Just so; and that, in my opinion, is a far truer account of the teaching of Protagoras.

Socrates:: I wonder whether you know what you are doing?

Hippocrates:: And what am I doing?

Socrates:: You are going to commit your soul to the care of a man whom you call a Sophist. And yet I hardly think that you know what a Sophist is; and if not, then you do not even of the know to whom you are committing your soul and whether the thing to which you commit yourself be good or evil.

Hippocrates:: I certainly think that I do know.

Socrates:: Then tell me, what do you imagine that he is?

Hippocrates:: I take him to be one who knows wise things, as his name implies.

Socrates:: And might you not affirm this of the painter and of the carpenter also: Do not they, too, know wise things? But suppose a person were to ask us: In what are the painters wise? We should answer: In what relates to the making of likenesses, and similarly of other things. And if he were further to ask: What is the wisdom of the Sophist, and what is the manufacture over which he presides?—how should we answer him?

Hippocrates:: How should we answer him, Socrates? What other answer could there be but that he presides over the art which makes men eloquent?

Socrates:: Yes, that is very likely true, but not enough; for in the answer a further question is involved: Of what does the Sophist make a man talk eloquently? The player on the lyre may be supposed to make a man talk eloquently about that which he makes him understand, that is about playing the lyre. Is not that true?

Hippocrates:: Yes.

Socrates:: Then about what does the Sophist make him eloquent? Must not he make him eloquent in that which he understands?

Hippocrates:: Yes, that may be assumed.

Socrates:: And what is that which the Sophist knows and makes his disciple know?

Hippocrates:: Indeed, I cannot tell.

Socrates:: Then I proceeded to say: Well, but are you aware of the danger which you are incurring? If you were going to commit your body to some one, who might do good or harm to it, would you not carefully consider and ask the opinion of your friends and kindred, and deliberate many days as to whether you should give him the care of your body? But when the soul is in question, which you hold to be of far more value than the body, and upon the good or evil of which depends the well-being of your all,—about this you never consulted either with your father or with your brother or with any one of us who are your companions. But no sooner does this foreigner appear, than you instantly commit your soul to his keeping. In the evening, as you say, you hear of him, and in the morning you go to him, never deliberating or taking the opinion of any one as to whether you ought to entrust yourself to him or not;—you have quite made up your mind that you will at all hazards be a pupil of Protagoras, and are prepared to expend all the property of yourself and of your friends in carrying out at any price this determination, although, as you admit, you do not know him, and have never spoken with him: and you call him a Sophist, but are manifestly ignorant of what a Sophist is; and yet you are going to commit yourself to his keeping.

When he heard me say this, he replied:

Hippocrates:: No other inference, Socrates, can be drawn from your words.

Socrates:: Is not a Sophist, Hippocrates, one who deals wholesale or retail in the food of the soul? To me that appears to be his nature.

Hippocrates:: And what, Socrates, is the food of the soul?

Socrates:: Surely, knowledge is the food of the soul; and we must take care, my friend, that the Sophist does not deceive us when he praises what he sells, like the dealers wholesale or retail who sell the food of the body; for they praise indiscriminately all their goods, without knowing what are really beneficial or hurtful: neither do their customers know, with the exception of any trainer or physician who may happen to buy of them. In like manner those who carry about the wares of knowledge, and make the round of the cities, and sell or retail them to any customer who is in want of them, praise them all alike; though I should not wonder, O my friend, if many of them were really ignorant of their effect upon the soul; and their customers equally ignorant, unless he who buys of them happens to be a physician of the soul. If, therefore, you have understanding of what is good and evil, you may safely buy knowledge of Protagoras or of any one; but if not, then, O my friend, pause, and do not hazard your dearest interests at a game of chance. For there is far greater peril in buying knowledge than in buying meat and drink: the one you purchase of the wholesale or retail dealer, and carry them away in other vessels, and before you receive them into the body as food, you may deposit them at home and call in any experienced friend who knows what is good to be eaten or drunken, and what not, and how much, and when; and then the danger of purchasing them is not so great. But you cannot buy the wares of knowledge and carry them away in another vessel; when you have paid for them you must receive them into the soul and go your way, either greatly harmed or greatly benefited; and therefore we should deliberate and take counsel with our elders; for we are still young—too young to determine such a matter. And now let us go, as we were intending, and hear Protagoras; and when we have heard what he has to say, we may take counsel of others; for not only is Protagoras at the house of Callias, but there is Hippias of Elis, and, if I am not mistaken, Prodicus of Ceos, and several other wise men.

To this we agreed, and proceeded on our way until we reached the vestibule of the house; and there we stopped in order to conclude a discussion which had arisen between us as we were going along; and we stood talking in the vestibule until we had finished and come to an understanding. And I think that the door-keeper, who was a eunuch, and who was probably annoyed at the great inroad of the Sophists, must have heard us talking. At any rate, when we knocked at the door, and he opened and saw us, he grumbled:

Eunuch:: They are Sophists—he is not at home;

Socrates:: and instantly gave the door a hearty bang with both his hands. Again we knocked, and he answered without opening:

Eunuch:: Did you not hear me say that he is not at home, fellows?

Socrates:: But, my friend, you need not be alarmed; for we are not Sophists, and we are not come to see Callias, but we want to see Protagoras; and I must request you to announce us. At last, after a good deal of difficulty, the man was persuaded to open the door.

When we entered, we found Protagoras taking a walk in the cloister; and next to him, on one side, were walking Callias, the son of Hipponicus, and Paralus, the son of Pericles, who, by the mother's side, is his half-brother, and Charmides, the son of Glaucon. On the other side of him were Xanthippus, the other son of Pericles, Philippides, the son of Philomelus; also Antimoerus of Mende, who of all the disciples of Protagoras is the most famous, and intends to make sophistry his profession. A train of listeners followed him; the greater part of them appeared to be foreigners, whom Protagoras had brought with him out of the various cities visited by him in his journeys, he, like Orpheus, attracting them by his voice, and they following. I should mention also that there were some Athenians in the company. Nothing delighted me more than the precision of their movements: they never got into his way at all; but when he and those who were with him turned back, then the band of listeners parted regularly on either side; he was always in front, and they wheeled round and took their places behind him in perfect order.

After him, as Homer says, 'I lifted up my eyes and saw' Hippias the Elean sitting in the opposite cloister on a chair of state, and around him were seated on benches Eryximachus, the son of Acumenus, and Phaedrus the Myrrhinusian, and Andron the son of Androtion, and there were strangers whom he had brought with him from his native city of Elis, and some others: they were putting to Hippias certain physical and astronomical questions, and he, *ex cathedrâ*, was determining their several questions to them, and discoursing of them.

Also, 'my eyes beheld Tantalus;' for Prodicus the Cean was at Athens: he had been lodged in a room which, in the days of Hipponicus, was a storehouse; but, as the house was full, Callias had cleared this out and made the room into a guest-chamber. Now Prodicus was still in bed, wrapped up in sheepskins and bedclothes, of which there seemed to be a great heap; and there was sitting by him on the couches near, Pausanias of the deme of Cerameis, and with Pausanias was a youth quite young, who is certainly remarkable for his good looks, and, if I am not mistaken, is also of a fair and gentle nature. I thought that I heard him called Agathon, and my suspicion is that he is the beloved of Pausanias. There was this youth, and also there were the two Adeimantuses, one the son of Cepis, and the other of Leucolophides, and some others. I was very anxious to hear what Prodicus was saying, for he seems to me to be an all-wise and inspired man; but I was not able to get into the inner circle, and his fine deep voice made an echo in the room which rendered his words inaudible.

No sooner had we entered than there followed us Alcibiades the beautiful, as you say, and I believe you; and also Critias the son of Callaeschrus.

On entering we stopped a little, in order to look about us, and then walked up to Protagoras, and I said: Protagoras, my friend Hippocrates and I have come to see you.

Protagoras:: Do you wish to speak with me alone, or in the presence of the company?

Socrates:: Whichever you please; you shall determine when you have heard the purpose of our visit.

Protagoras:: And what is your purpose?

Socrates:: I must explain, that my friend Hippocrates is a native Athenian; he is the son of Apollodorus, and of a great and prosperous house, and he is himself in natural ability quite a match for anybody of his own age. I believe that he aspires to political eminence; and this he thinks that conversation with you is most likely to procure for him. And now you can determine whether you would wish to speak to him of your teaching alone or in the presence of the company.

Protagoras:: Thank you, Socrates, for your consideration of me. For certainly a stranger finding his way into great cities, and persuading the flower of the youth in them to leave the company of their kinsmen or any other acquaintances, old or young, and live with him, under the idea that they will be improved by his conversation, ought to be very cautious; great jealousies are aroused by his proceedings, and he is the subject of many enmities and conspiracies. Now the art of the Sophist is, as I believe, of great antiquity; but in ancient times those who practiced it, fearing this odium, veiled and disguised themselves under various names, some under that of poets, as Homer, Hesiod, and Simonides, some, of hierophants and prophets, as Orpheus and Musaeus, and some, as I observe, even under the name of gymnastic-masters, like Iccus of Tarentum, or the more recently celebrated Herodicus, now of Selymbria and formerly of Megara, who is a first-rate Sophist. Your own Agathocles pretended to be a musician, but was really an eminent Sophist; also

Pythocleides the Cean; and there were many others; and all of them, as I was saying, adopted these arts as veils or disguises because they were afraid of the odium which they would incur. But that is not my way, for I do not believe that they effected their purpose, which was to deceive the government, who were not blinded by them; and as to the people, they have no understanding, and only repeat what their rulers are pleased to tell them. Now to run away, and to be caught in running away, is the very height of folly, and also greatly increases the exasperation of mankind; for they regard him who runs away as a rogue, in addition to any other objections which they have to him; and therefore I take an entirely opposite course, and acknowledge myself to be a Sophist and instructor of mankind; such an open acknowledgment appears to me to be a better sort of caution than concealment. Nor do I neglect other precautions, and therefore I hope, as I may say, by the favor of heaven that no harm will come of the acknowledgment that I am a Sophist. And I have been now many years in the profession—for all my years when added up are many: there is no one here present of whom I might not be the father. Wherefore I should much prefer conversing with you, if you want to speak with me, in the presence of the company.

Socrates:: As I suspected that he would like to have a little display and glorification in the presence of Prodicus and Hippias, and would gladly show us to them in the light of his admirers, I said: But why should we not summon Prodicus and Hippias and their friends to hear us?

Protagoras:: Very good.

Callias:: Suppose, that we hold a council in which you may sit and discuss.—

Socrates:: This was agreed upon, and great delight was felt at the prospect of hearing wise men talk; we ourselves took the chairs and benches, and arranged them by Hippias, where the other benches had been already placed. Meanwhile Callias and Alcibiades got Prodicus out of bed and brought in him and his companions.

When we were all seated, Protagoras said:

Protagoras:: Now that the company are assembled, Socrates, tell me about the young man of whom you were just now speaking.

Socrates:: I will begin again at the same point, Protagoras, and tell you once more the purport of my visit: this is my friend Hippocrates, who is desirous of making your acquaintance; he would like to know what will happen to him if he associates with you. I have no more to say.

Protagoras:: Young man, if you associate with me, on the very first day you will return home a better man than you came, and better on the second day than on the first, and better every day than you were on the day before.

Socrates:: Protagoras, I do not at all wonder at hearing you say this; even at your age, and with all your wisdom, if any one were to teach you what you did not know before, you would become better no doubt: but please to answer in a different way—I will explain how by an example. Let me suppose that Hippocrates, instead of desiring your acquaintance, wished to become acquainted with the young man Zeuxippus of Heraclea, who has lately been in Athens, and he had come to him as he has come to you, and had heard him say, as he has heard you say, that every day he would grow and become better if he associated with him: and then suppose that he were to ask him, 'In what shall I become better, and in what shall I grow?'—Zeuxippus would answer, 'In painting.' And suppose that he went to

Orthagoras the Theban, and heard him say the same thing, and asked him, (In what shall I become better day by day?' he would reply, 'In flute-playing' Now I want you to make the same sort of answer to this young man and to me, who am asking questions on his account. When you say that on the first day on which he associates with you he will return home a better man, and on every day will grow in like manner,—in what, Protagoras, will he be better? and about what?

When Protagoras heard me say this, he replied:

Protagoras:: You ask questions fairly, and I like to answer a question which is fairly put. If Hippocrates comes to me he will not experience the sort of drudgery with which other Sophists are in the habit of insulting their pupils; who, when they have just escaped from the arts, are taken and driven back into them by these teachers, and made to learn calculation, and astronomy, and geometry, and music.

Socrates:: He gave a look at Hippias as he said this;

Protagoras:: But if he comes to me, he will learn that which he comes to learn. And this is prudence in affairs private as well as public; he will learn to order his own house in the best manner, and he will be able to speak and act for the best in the affairs of the state.

Socrates:: Do I understand you; and is your meaning that you teach the art of politics, and that you promise to make men good citizens?

Protagoras:: That, Socrates, is exactly the profession which I make.

Socrates:: Then, you do indeed possess a noble art, if there is no mistake about this; for I will freely confess to you, Protagoras, that I have a doubt whether this art is capable of being taught, and yet I know not how to disbelieve your assertion. And I ought to tell you why I am of opinion that this art cannot be taught or communicated by man to man. I say that the Athenians are an understanding people, and indeed they are esteemed to be such by the other Hellenes. Now I observe that when we are met together in the assembly, and the matter in hand relates to building, the builders are summoned as advisers; when the question is one of ship-building, then the ship-wrights; and the like of other arts which they think capable of being taught and learned. And if some person offers to give them advice who is not supposed by them to have any skill in the art, even though he be good-looking, and rich, and noble, they will not listen to him, but laugh and hoot at him, until either he is clamored down and retires of himself; or if he persist, he is dragged away or put out by the constables at the command of the prytanes. This is their way of behaving about professors of the arts. But when the question is an affair of state, then everybody is free to have a say—carpenter, tinker, cobbler, sailor, passenger; rich and poor, high and low—any one who likes gets up, and no one reproaches him, as in the former case, with not having learned, and having no teacher, and yet giving advice; evidently because they are under the impression that this sort of knowledge cannot be taught. And not only is this true of the state, but of individuals; the best and wisest of our citizens are unable to impart their political wisdom to others: as for example, Pericles, the father of these young men, who gave them excellent instruction in all that could be learned from masters, in his own department of politics neither taught them, nor gave them teachers; but they were allowed to wander at their own free will in a sort of hope that they would light upon virtue of their own accord. Or take another example: there was Cleinias the younger brother of our friend Alcibiades, of whom this very same Pericles was the guardian; and he being in fact under the apprehension that Cleinias would be corrupted by Alcibiades, took him away, and placed him in the house of Ariphron to be educated; but before six months had elapsed, Ariphron sent him back, not knowing what to do with him. And I could mention numberless other instances of persons who were good themselves, and never yet made any one else good, whether friend or stranger. Now I, Protagoras, having these examples before me, am inclined to think that virtue cannot be taught. But then again, when I listen to your words, I waver; and am disposed to think that there must be something in what you say, because I know that you have great experience, and learning, and invention. And I wish that you would, if possible, show me a little more clearly that virtue can be taught. Will you be so good?

Protagoras:: That I will, Socrates, and gladly. But what would you like? Shall I, as an elder, speak to you as younger men in an apologue or myth, or shall I argue out the question?

Socrates:: To this several of the company answered that he should choose for himself.

Protagoras:: Well, I think that the myth will be more interesting.

Once upon a time there were gods only, and no mortal creatures. But when the time came that these also should be created, the gods fashioned them out of earth and fire and various mixtures of both elements in the interior of the earth; and when they were about to bring them into the light of day, they ordered Prometheus and Epimetheus to equip them, and to distribute to them severally their proper qualities. Epimetheus said to Prometheus: ‘Let me distribute, and do you inspect.’ This was agreed, and

Epimetheus made the distribution. There were some to whom he gave strength without swiftness, while he equipped the weaker with swiftness; some he armed, and others he left unarmed; and devised for the latter some other means of preservation, making some large, and having their size as a protection, and others small, whose nature was to fly in the air or burrow in the ground; this was to be their way of escape. Thus did he compensate them with the view of preventing any race from becoming extinct. And when he had provided against their destruction by one another, he contrived also a means of protecting them against the seasons of heaven; clothing them with close hair and thick skins sufficient to defend them against the winter cold and able to resist the summer heat, so that they might have a natural bed of their own when they wanted to rest; also he furnished them with hoofs and hair and hard and callous skins under their feet. Then he gave them varieties of food,—herb of the soil to some, to others fruits of trees, and to others roots, and to some again he gave other animals as food. And some he made to have few young ones, while those who were their prey were very prolific; and in this manner the race was preserved. Thus did Epimetheus, who, not being very wise, forgot that he had distributed among the brute animals all the qualities which he had to give,—and when he came to man, who was still unprovided, he was terribly perplexed. Now while he was in this perplexity, Prometheus came to inspect the distribution, and he found that the other animals were suitably furnished, but that man alone was naked and shoeless, and had neither bed nor arms of defense. The appointed hour was approaching when man in his turn was to go forth into the light of day; and Prometheus, not knowing how he could devise his salvation, stole the mechanical arts of Hephaestus and

Athene, and fire with them (they could neither have been acquired nor used without fire), and gave them to man. Thus man had the wisdom necessary to the support of life, but political wisdom he had not; for that was in the keeping of Zeus, and the power of Prometheus did not extend to entering into the citadel of heaven, where Zeus dwelt, who moreover had terrible sentinels; but he did enter by stealth into the common workshop of Athene and Hephaestus, in which they used to practice their favorite arts, and carried off Hephaestus' art of working by fire, and also the art of Athene, and gave them to man. And in this way man was supplied with the means of life. But Prometheus is said to have been afterwards prosecuted for theft, owing to the blunder of Epimetheus.

Now man, having a share of the divine attributes, was at first the only one of the animals who had any gods, because he alone was of their kindred; and he would raise altars and images of them. He was not long in inventing articulate speech and names; and he also constructed houses and clothes and shoes and beds, and drew sustenance from the earth. Thus provided, mankind at first lived dispersed, and there were no cities. But the consequence was that they were destroyed by the wild beasts, for they were utterly weak in comparison of them, and their art was only sufficient to provide them with the means of life, and did not enable them to carry on war against the animals: food they had, but not as yet the art of government, of which the art of war is a part. After a while the desire of self-preservation gathered them into cities; but when they were gathered together, having no art of government, they evil entreated one another, and were again in process of dispersion and destruction. Zeus feared that the entire race would be exterminated, and so he sent Hermes to them, bearing reverence and justice to be the ordering principles of cities and the bonds of friendship and conciliation. Hermes asked Zeus how he should impart justice and reverence among men:—Should he distribute them as the arts are distributed; that is to say, to a favored few only, one skilled individual having enough of medicine or of any other art for many unskilled ones? ‘Shall this be the manner in which I am to distribute justice and reverence among men, or shall I give them to all?’ ‘To all’ said Zeus; ‘I should like them all to have a share; for cities cannot exist, if a few only share in the virtues, as in the arts. And further, make a law by my order, that he who has no part in reverence and justice shall be put to death, for he is a plague of the state.’

And this is the reason, Socrates, why the Athenians and mankind in general, when the question relates to carpentering or any other mechanical art, allow but a few to share in their deliberations; and when any one else interferes, then, as you say, they object, if he be not of the favored few; which, as I reply, is very natural. But when they meet to deliberate about political virtue, which proceeds only by way of justice and wisdom, they are patient enough of any man who speaks of them, as is also natural, because they think that every man ought to share in this sort of virtue, and that states could not exist if this were otherwise. I have explained to you, Socrates, the reason of this phenomenon.

And that you may not suppose yourself to be deceived in thinking that all men regard every man as having a share of justice or honesty and of every other political virtue, let me give you a further proof, which is this. In other cases, as you are aware, if a man says that he is a good flute-player, or skilful in any other art in which he has no skill, people either laugh at him or are angry with him, and his relations think that he is mad and go and admonish him;

but when honesty is in question, or some other political virtue, even if they know that he is dishonest, yet, if the man comes publicly forward and tells the truth about his dishonesty, then, what in the other case was held by them to be good sense, they now deem to be madness. They say that all men ought to profess honesty whether they are honest or not, and that a man is out of his mind who says anything else. Their notion is, that a man must have some degree of honesty; and that if he has none at all he ought not to be in the world.

I have been showing that they are right in admitting every man as a counselor about this sort of virtue, as they are of opinion that every man is a partaker of it. And I will now endeavor to show further that they do not conceive this virtue to be given by nature, or to grow spontaneously, but to be a thing which may be taught; and which comes to a man by taking pains. No one would instruct, no one would rebuke, or be angry with those whose calamities they suppose to be due to nature or chance; they do not try to punish or to prevent them from being what they are; they do but pity them. Who is so foolish as to chastise or instruct the ugly, or the diminutive, or the feeble? And for this reason. Because he knows that good and evil of this kind is the work of nature and of chance; whereas if a man is wanting in those good qualities which are attained by study and exercise and teaching, and has only the contrary evil qualities, other men are angry with him, and punish and reprove him—of these evil qualities one is impiety, another injustice, and they may be described generally as the very opposite of political virtue. In such cases any man will be angry with another, and reprimand him,—clearly because he thinks that by study and learning, the virtue in which the other is deficient may be acquired. If you will think, Socrates, of the nature of punishment, you will see at once that in the opinion of mankind virtue may be acquired; no one punishes the evil-doer under the notion, or for the reason, that he has done wrong,—only the unreasonable fury of a beast acts in that manner. But he who desires to inflict rational punishment does not retaliate for a past wrong which cannot be undone; he has regard to the future, and is desirous that the man who is punished, and he who sees him punished, may be deterred from doing wrong again. He punishes for the sake of prevention, thereby clearly implying that virtue is capable of being taught. This is the notion of all who retaliate upon others either privately or publicly. And the Athenians, too, your own citizens, like other men, punish and take vengeance on all whom they regard as evil doers; and hence, we may infer them to be of the number of those who think that virtue may be acquired and taught. Thus far, Socrates, I have shown you clearly enough, if I am not mistaken, that your countrymen are right in admitting the tinker and the cobbler to advise about politics, and also that they deem virtue to be capable of being taught and acquired.

There yet remains one difficulty which has been raised by you about the sons of good men. What is the reason why good men teach their sons the knowledge which is gained from teachers, and make them wise in that, but do nothing towards improving them in the virtues which distinguish themselves? And here, Socrates, I will leave the apologue and resume the argument. Please to consider: Is there or is there not some one quality of which all the citizens must be partakers, if there is to be a city at all? In the answer to this question is contained the only solution of your difficulty; there is no other. For if there be any such quality, and this quality or unity is not the art of the carpenter, or the smith, or the potter, but justice and temperance and holiness and, in a word, manly virtue—if this is the quality of which all men must be partakers, and which is the very condition of their learning or doing anything else, and if he who is wanting in this, whether he be a child only or a grown-up man or woman, must be taught and punished, until by punishment he becomes better, and he who rebels against instruction and punishment is either exiled or condemned to death under the idea that he is incurable—if what I am saying be true, good men have their sons taught other things and not this, do consider how extraordinary their conduct would appear to be. For we have shown that they think virtue capable of being taught and cultivated both in private and public; and, notwithstanding, they have their sons taught lesser matters, ignorance of which does not involve the punishment of death: but greater things, of which the ignorance may cause death and exile to those who have no training or knowledge of them—aye, and confiscation as well as death, and, in a word, may be the ruin of families—those things, I say, they are supposed not to teach them,—not to take the utmost care that they should learn. How improbable is this, Socrates!

Education and admonition commence in the first years of childhood, and last to the very end of life. Mother and nurse and father and tutor are vying with one another about the improvement of the child as soon as ever he is able to understand what is being said to him: he cannot say or do anything without their setting forth to him that this is just and that is unjust; this is honorable, that is dishonorable; this is holy, that is unholy; do this and abstain from that. And if he obeys, well and good; if not, he is straightened by threats and blows, like a piece of bent or warped wood. At a later stage they send him to teachers, and enjoin them to see to his manners even more than to his reading and music; and the teachers do as they are desired. And when the boy has learned his letters and is beginning to understand what is written, as before he understood only what was spoken, they put into his hands the works of great poets, which he reads sitting on a bench at school; in these are contained many admonitions, and many tales, and praises, and encomia of ancient famous men, which he is required to learn by heart, in order that he may imitate or emulate them and desire to become like them. Then, again, the teachers of the lyre take similar care that their young disciple is temperate and gets into no mischief; and when they have taught him the use of the lyre, they introduce him to the poems of other excellent poets, who are the lyric poets; and these they set to music, and make their harmonies and rhythms quite familiar to the children's souls, in order that they may learn to be more gentle, and harmonious, and rhythmical, and so more fitted for speech and action; for the life of man in every part has need of harmony and rhythm. Then they send them to the master of gymnastic, in order that their bodies may better minister to the virtuous mind, and that they may not be compelled through bodily weakness to play the coward in war or on any other occasion. This is what is done by those who have the means, and those who have the means are the rich; their children begin to go to school soonest and leave off latest. When they have done with masters, the state again compels them to learn the laws, and live after the pattern which they furnish, and not after their own fancies; and just as in learning to write, the writing-master first draws lines with a style for the use of the young beginner, and gives him the tablet and makes him follow the lines, so the city draws the laws, which were the invention of good lawgivers living in the olden time; these are given to the young man, in order to guide him in his conduct whether he is commanding or obeying; and he who transgresses them is to be corrected, or, in other words, called to account, which is a term used not only in your Country, but also in many others, seeing that justice calls men to account. Now when there is all this care about virtue private and public, why, Socrates, do you still wonder and doubt whether virtue can be taught? Cease to wonder, for the opposite would be far more surprising.

But why then do the sons of good fathers often turn out ill? There is nothing very wonderful in this; for, as I have been saying, the existence of a state implies that virtue is not any man's private possession. If so—and nothing can be truer—then I will further ask you to imagine, as an illustration, some other pursuit or branch of knowledge which may be assumed equally to be the condition of the existence of a state. Suppose that there could be no state unless we were all flute-players, as far as each had the capacity, and everybody was freely teaching everybody the art, both in private and public, and reproving the bad player as freely and openly as every man now teaches justice and the laws, not concealing them as he would conceal the other arts, but imparting them—for all of us have a mutual interest in the justice and virtue of one another, and this is the reason why every one is so ready to teach justice and the laws;—suppose, I say, that there were the same readiness and liberality among us in teaching one another flute-playing, do you imagine, Socrates, that the sons of good flute-players would be more likely to be good than the sons of bad ones? I think not. Would not their sons grow up to be distinguished or undistinguished according to their own natural capacities as flute-players, and the son of a good player would often turn out to be a bad one, and the son of a bad player to be a good one, and all flute-players would be good enough in comparison of those who were ignorant and unacquainted with the art of flute-playing? In like manner I would have you consider that he who appears to you to be the worst of those who have been brought up in laws and humanities, would appear to be a just man and a master of justice if he were to be compared with men who had no education, or courts of justice, or laws, or any restraints upon them which compelled them to practice virtue—with the savages, for example, whom the poet Pherecrates exhibited on the stage at the last year's Lenaean festival. If you were living among men such as the man-haters in his Chorus, you would be only too glad to meet with Eurybates and Phrynondas, and you would sorrowfully long to revisit the rascality of this part of the world. And you, Socrates, are discontented, and why? Because all men are teachers of virtue, each one according to his ability; and you say Where are the teachers? You might as well ask, Who teaches Greek? For of that too there will not be any teachers found. Or you might ask, Who is to teach the sons of our artisans this same art which they have learned of their fathers? He and his fellow-workmen have taught them to the best of their ability,—but who will carry them further in their arts? And you would certainly have a difficulty, Socrates, in finding a teacher of them; but there would be no difficulty in finding a teacher of those who are wholly ignorant. And this is true of virtue or of anything else; if a man is better able than we are to promote virtue ever so little, we must be content with the result. A teacher of this sort I believe myself to be, and above all other men to have the knowledge which makes a man noble and good; and I give my pupils their money's-worth, and even more, as they themselves confess. And therefore I have introduced the following mode of payment:—When a man has been my pupil, if he likes he pays my price, but there is no compulsion; and if he does not like, he has only to go into a temple and take an oath of the value of the instructions, and he pays no more than he declares to be their value.

Such is my Apologue, Socrates, and such is the argument by which I endeavor to show that virtue may be taught, and that this is the opinion of the Athenians. And I have also attempted to show that you are not to wonder at good fathers having bad sons, or at good sons having bad fathers, of which the sons of Polycleitus afford an example, who are the companions of our friends here, Paralus and Xanthippus, but are nothing in comparison with their father; and this is true of the sons of many other artists. As yet I ought not to say the same of Paralus and Xanthippus themselves, for they are young and there is still hope of them.

Socrates:: Protagoras ended, and in my ear

> 'So charming left his voice, that I the while
> Thought him still speaking; still stood fixed to hear.'

At length, when the truth dawned upon me, that he had really finished, not without difficulty I began to collect myself, and looking at Hippocrates, I said to him: O son of Apollodorus, how deeply grateful I am to you for having brought me hither; I would not have missed the speech of Protagoras for a great deal. For I used to imagine that no human care could make men good; but I know better now. Yet I have still one very small difficulty which I am sure that Protagoras will easily explain, as he has already explained so much. If a man were to go and consult Pericles or any of our great speakers about these matters, he might perhaps hear as fine a discourse; but then when one has a question to ask of any of them, like books, they can neither answer nor ask; and if any one challenges the least particular of their speech, they go ringing on in a long harangue, like brazen pots, which when they are struck continue to sound unless some one puts his hand upon them; whereas our friend Protagoras can not only make a good speech, as he has already shown, but when he is asked a question he can answer briefly; and when he asks he will wait and hear the answer; and this is a very rare gift. Now I, Protagoras, want to ask of you a little question, which if you will only answer, I shall be quite satisfied. You were saying that virtue can be taught;—that I will take upon your authority, and there is no one to whom I am more ready to trust. But I marvel at one thing about which I should like to have my mind set at rest. You were speaking of Zeus sending justice and reverence to men; and several times while you were speaking, justice, and temperance, and holiness, and all these qualities, were described by you as if together they made up virtue. Now I want you to tell me truly whether virtue is one whole, of which justice and temperance and holiness are parts; or whether all these are only the names of one and the same thing: that is the doubt which still lingers in my mind.

Protagoras:: There is no difficulty, Socrates, in answering that the qualities of which you are speaking are the parts of virtue which is one.

Socrates:: And are they parts in the same sense in which mouth, nose, and eyes, and ears, are the parts of a face; or are they like the parts of gold, which differ from the whole and from one another only in being larger or smaller?

Protagoras:: I should say that they differed, Socrates, in the first way; they are related to one another as the parts of a face are related to the whole face.

Socrates:: And do men have some one part and some another part of virtue? Or if a man has one part, must he also have all the others?

Protagoras:: By no means; for many a man is brave and not just, or just and not wise.

Socrates:: You would not deny, then, that courage and wisdom are also parts of virtue?

Protagoras:: Most undoubtedly they are; and wisdom is the noblest of the parts.

Socrates:: And they are all different from one another?

Protagoras:: Yes.

Socrates:: And has each of them a distinct function like the parts of the face;—the eye, for example, is not like the ear, and has not the same functions; and the other parts are none of them like one another, either in their functions, or in any other way? I want to know whether the comparison holds concerning the parts of virtue. Do they also differ from one another in themselves and in their functions? For that is clearly what the simile would imply.

Protagoras:: Yes, Socrates, you are right in supposing that they differ.

Socrates:: Then, no other part of virtue is like knowledge, or like justice, or like courage, or like temperance, or like holiness?

Protagoras:: No.

Socrates:: Well then, suppose that you and I enquire into their natures. And first, you would agree with me that justice is of the nature of a thing, would you not? That is my opinion: would it not be yours also?

Protagoras:: Mine also.

Socrates:: And suppose that some one were to ask us, saying, ‘O Protagoras, and you, Socrates, what about this thing which you were calling justice, is it just or unjust?’—and I were to answer, just: would you vote with me or against me?

Protagoras:: With you.

Socrates:: Thereupon I should answer to him who asked me, that justice is of the nature of the just: would not you?

Protagoras:: Yes.

Socrates:: And suppose that he went on to say: 'Well now, is there also such a thing as holiness?'—we should answer, 'Yes,' if I am not mistaken?

Protagoras:: Yes.

Socrates:: Which you would also acknowledge to be a thing—should we not say so?

He assented.

'And is this a sort of thing which is of the nature of the holy, or of the nature of the unholy?' I should be angry at his putting such a question, and should say, 'Peace, man; nothing can be holy if holiness is not holy.' What would you say? Would you not answer in the same way?

Protagoras:: Certainly.

Socrates:: And then after this suppose that he came and asked us, 'What were you saying just now? Perhaps I may not have heard you rightly, but you seemed to me to be saying that the parts of virtue were not the same as one another.' I should reply, 'You certainly heard that said, but not, as you imagine, by me; for I only asked the question; Protagoras gave the answer.' And suppose that he turned to you and said, 'Is this true, Protagoras? and do you maintain that one part of virtue is unlike another, and is this your position?'—how would you answer him?

Protagoras:: I could not help acknowledging the truth of what he said, Socrates.

Socrates:: Well then, Protagoras, we will assume this; and now supposing that he proceeded to say further, 'Then holiness is not of the nature of justice, nor justice of the nature of holiness, but of the nature of unholiness; and holiness is of the nature of the not just, and therefore of the unjust, and the unjust is the unholy:’ how shall we answer him? I should certainly answer him on my own behalf that justice is holy, and that holiness is just; and I would say in like manner on your behalf also, if you would allow me, that justice is either the same with holiness, or very nearly the same; and above all I would assert that justice is like holiness and holiness is like justice; and I wish that you would tell me whether I may be permitted to give this answer on your behalf, and whether you would agree with me.

Protagoras:: I cannot simply agree, Socrates, to the proposition that justice is holy and that holiness is just, for there appears to me to be a difference between them. But what matter? if you please I please; and let us assume, if you will, that justice is holy, and that holiness is just.

Socrates:: Pardon me; I do not want this ‘if you wish’ or ‘if you will’ sort of conclusion to be proven, but I want you and me to be proven: I mean to say that the conclusion will be best proven if there be no ‘if.’

Protagoras:: Well, I admit that justice bears a resemblance to holiness, for there is always some point of view in which everything is like every other thing; white is in a certain way like black, and hard is like soft, and the most extreme opposites have some qualities in common; even the parts of the face which, as we were saying before, are distinct and have different functions, are still in a certain point of view similar, and one of them is like another of them. And you may prove that they are like one another on the same principle that all things are like one another; and yet things which are alike in some particular ought not to be called alike, nor things which are unlike in some particular, however slight, unlike.

Socrates:: I said in a tone of surprise, And do you think, that justice and holiness have but a small degree of likeness?

Protagoras:: Certainly not; any more than I agree with what I understand to be your view.

Socrates:: Well as you appear to have a difficulty about this, let us take another of the examples which you mentioned instead. Do you admit the existence of folly?

Protagoras:: I do.

Socrates:: And is not wisdom the very opposite of folly?

Protagoras:: That is true.

Socrates:: And when men act rightly and advantageously they seem to you to be temperate?

Protagoras:: Yes.

Socrates:: And temperance makes them temperate?

Protagoras:: Certainly.

Socrates:: And they who do not act rightly act foolishly, and in acting thus are not temperate?

Protagoras:: I agree.

Socrates:: Then to act foolishly is the opposite of acting temperately?

He assented.

And foolish actions are done by folly, and temperate actions by temperance?

He agreed.

And that is done strongly which is done by strength, and that which is weakly done, by weakness?

He assented.

And that which is done with swiftness is done swiftly, and that which is done with slowness, slowly?

He assented again.

And that which is done in the same manner, is done by the same; and that which is done in an opposite manner by the opposite?

He agreed.

Once more, is there anything beautiful?

Protagoras:: Yes.

Socrates:: To which the only opposite is the ugly?

Protagoras:: There is no other.

Socrates:: And is there anything good?

Protagoras:: There is.

Socrates:: To which the only opposite is the evil?

Protagoras:: There is no other.

Socrates:: And there is the acute in sound?

Protagoras:: True.

Socrates:: To which the only opposite is the grave?

Protagoras:: There is no other but that.

Socrates:: Then every opposite has one opposite only and no more?

He assented.

Then now, let us recapitulate our admissions. First of all we admitted that everything has one opposite and not more than one?

Protagoras:: We did so.

Socrates:: And we admitted also that what was done in opposite ways was done by opposites?

Protagoras:: Yes.

Socrates:: And that which was done foolishly, as we further admitted, was done in the opposite way to that which was done temperately?

Protagoras:: Yes.

Socrates:: And that which was done temperately was done by temperance, and that which was done foolishly by folly?

He agreed.

And that which is done in opposite ways is done by opposites?

Protagoras:: Yes.

Socrates:: And one thing is done by temperance, and quite another thing by folly?

Protagoras:: Yes.

Socrates:: And in opposite ways?

Protagoras:: Certainly.

Socrates:: And therefore by opposites:—then folly is the opposite of temperance?

Protagoras:: Clearly.

Socrates:: And do you remember that folly has already been acknowledged by us to be the opposite of wisdom?

He assented.

And we said that everything has only one opposite?

Protagoras:: Yes.

Socrates:: Then, Protagoras, which of the two assertions shall we renounce? One says that everything has but one opposite; the other that wisdom is distinct from temperance, and that both of them are parts of virtue; and that they are not only distinct, but dissimilar, both in themselves and in their functions, like the parts of a face. Which of these two assertions shall we renounce? For both of them together are certainly not in harmony; they do not accord or agree: for how can they be said to agree if everything is assumed to have only one opposite and not more than one, and yet folly, which is one, has clearly the two opposites—wisdom and temperance? Is not that true, Protagoras? What else would you say?

He assented, but with great reluctance.

Then temperance and wisdom are the same, as before justice and holiness appeared to us to be nearly the same. And now, Protagoras, we must finish the enquiry, and not faint. Do you think that an unjust man can be temperate in his injustice?

Protagoras:: I should be ashamed, Socrates, to acknowledge this, which nevertheless many may be found to assert.

Socrates:: And shall I argue with them or with you?

Protagoras:: I would rather that you should argue with the many first, if you will.

Socrates:: Whichever you please, if you will only answer me and say whether you are of their opinion or not. My object is to test the validity of the argument; and yet the result may be that I who ask and you who answer may both be put on our trial.

Protagoras at first made a show of refusing, as he said that the argument was not encouraging; at length, he consented to answer.

Begin at the beginning and answer me. You think that some men are temperate, and yet unjust?

Protagoras:: Yes; let that be admitted.

Socrates:: And temperance is good sense?

Protagoras:: Yes.

Socrates:: And good sense is good counsel in doing injustice?

Protagoras:: Granted.

Socrates:: If they succeed or if they do not succeed?

Protagoras:: If they succeed.

Socrates:: And you would admit the existence of goods?

Protagoras:: Yes.

Socrates:: And is the good that which is expedient for man?

Protagoras:: Yes, indeed: and there are some things which may be inexpedient, and yet I call them good.

Socrates:: I thought that Protagoras was getting ruffled and excited; he seemed to be setting himself in an attitude of war. Seeing this, I minded my business, and gently said:—

When you say, Protagoras, that things inexpedient are good, do you mean inexpedient for man only, or inexpedient altogether? and do you call the latter good?

Protagoras:: Certainly not the last; for I know of many things,—meats, drinks, medicines, and ten thousand other things, which are inexpedient for man, and some which are expedient: and some which are neither expedient nor inexpedient for man, but only for horses; and some for oxen only, and some for dogs; and some for no animals, but only for trees; and some for the roots of trees and not for their branches, as for example, manure, which is a good thing when laid about the roots of a tree, but utterly destructive if thrown upon the shoots and young branches; or I may instance olive oil, which is mischievous to all plants, and generally most injurious to the hair of every animal with the exception of man, but beneficial to human hair and to the human body generally; and even in this application (so various and changeable is the nature of the benefit), that which is the greatest good to the outward parts of a man, is a very great evil to his inward parts: and for this reason physicians always forbid their patients the use of oil in their food, except in very small quantities, just enough to extinguish the disagreeable sensation of smell in meats and sauces.

Socrates:: When he had given this answer, the company cheered him. And I said: Protagoras, I have a wretched memory, and when any one makes a long speech to me I never remember what he is talking about. As then, if I had been deaf, and you were going to converse with me, you would have had to raise your voice; so now, having such a bad memory, I will ask you to cut your answers shorter, if you would take me with you.

Protagoras:: What do you mean? How am I to shorten my answers? shall I make them too short?

Socrates:: Certainly not.

Prodicus:: But short enough?

Socrates:: Yes.

Protagoras:: Shall I answer what appears to me to be short enough, or what appears to you to be short enough?

Socrates:: I have heard that you can speak and teach others to speak about the same things at such length that words never seemed to fail, or with such brevity that no one could use fewer of them. Please therefore, if you talk with me, to adopt the latter or more compendious method.

Protagoras:: Socrates, many a battle of words have I fought, and if I had followed the method of disputation which my adversaries desired, as you want me to do, I should have been no better than another, and the name of Protagoras would have been nowhere.

Socrates:: I saw that he was not satisfied with his previous answers, and that he would not play the part of answerer any more if he could help; and I considered that there was no call upon me to continue the conversation; so I said: Protagoras, I do not wish to force the conversation upon you if you had rather not, but when you are willing to argue with me in such a way that I can follow you, then I will argue with you. Now you, as is said of you by others and as you say of yourself, are able to have discussions in shorter forms of speech as well as in longer, for you are a master of wisdom; but I cannot manage these long speeches: I only wish that I could. You, on the other hand, who are capable of either, ought to speak shorter as I beg you, and then we might converse. But I see that you are disinclined, and as I have an engagement which will prevent my staying to hear you at greater length (for I have to be in another place), I will depart; although I should have liked to have heard you.

Thus I spoke, and was rising from my seat, when Callias seized me by the right hand, and in his left hand caught hold of this old cloak of mine. He said:

Callias:: We cannot let you go, Socrates, for if you leave us there will be an end of our discussions: I must therefore beg you to remain, as there is nothing in the world that I should like better than to hear you and Protagoras discourse. Do not deny the company this pleasure.

Socrates:: Now I had got up, and was in the act of departure. Son of Hipponicus, I have always admired, and do now heartily applaud and love your philosophical spirit, and I would gladly comply with your request, if I could. But the truth is that I cannot. And what you ask is as great an impossibility to me, as if you bade me run a race with Crison of Himera, when in his prime, or with some one of the long or day course runners. To such a request I should reply that I would fain ask the same of my own legs; but they refuse to comply. And therefore if you want to see Crison and me in the same stadium, you must bid him slacken his speed to mine, for I cannot run quickly, and he can run slowly. And in like manner if you want to hear me and Protagoras discoursing, you must ask him to shorten his answers, and keep to the point, as he did at first; if not, how can there be any discussion? For discussion is one thing, and making an oration is quite another, in my humble opinion.

Callias:: But you see, Socrates, that Protagoras may fairly claim to speak in his own way, just as you claim to speak in yours.

Socrates:: Here Alcibiades interposed, and said:

Alcibiades:: That, Callias, is not a true statement of the case. For our friend Socrates admits that he cannot make a speech—in this he yields the palm to Protagoras: but I should be greatly surprised if he yielded to any living man in the power of holding and apprehending an argument. Now if Protagoras will make a similar admission, and confess that he is inferior to Socrates in argumentative skill, that is enough for Socrates; but if he claims a superiority in argument as well, let him ask and answer—not, when a question is asked, slipping away from the point, and instead of answering, making a speech at such length that most of his hearers forget the question at issue (not that Socrates is likely to forget—I will be bound for that, although he may pretend in fun that he has a bad memory). And Socrates appears to me to be more in the right than Protagoras; that is my view, and every man ought to say what he thinks.

Socrates:: When Alcibiades had done speaking, some one—Critias, I believe—went on to say:

Critias:: O Prodicus and Hippias, Callias appears to me to be a partisan of Protagoras: and this Alcibiades, who loves opposition, to take the other side. But we should not be partisans either of Socrates or of Protagoras; let us rather unite in entreating both of them not to break up the discussion.

Prodicus:: That, Critias, seems to me to be well said, for those who are present at such discussions ought to be impartial hearers of both the speakers; remembering, however, that impartiality is not the same as equality, for both sides should be impartially heard, and yet an equal meed should not be assigned to both of them; but to the wiser a higher meed should be given, and a lower to the less wise. And I as well as Critias would beg you, Protagoras and Socrates, to grant our request, which is, that you will argue with one another and not wrangle; for friends argue with friends out of good-will, but only adversaries and enemies wrangle. And then our meeting will be delightful; for in this way you, who are the speakers, will be most likely to win esteem, and not praise only, among us who are your audience; for esteem is a sincere conviction of the hearers' souls, but praise is often an insincere expression of men uttering falsehoods contrary to their conviction. And thus we who are the hearers will be gratified and not pleased; for gratification is of the mind when receiving wisdom and knowledge, but pleasure is of the body when eating or experiencing some other bodily delight.

Socrates:: Thus spoke Prodicus, and many of the company applauded his words.

Hippias the sage spoke next. He said:

Hippias:: All of you who are here present I reckon to be kinsmen and friends and fellow-citizens, by nature and not by law; for by nature like is akin to like, whereas law is the tyrant of mankind, and often compels us to do many things which are against nature. How great would be the disgrace then, if we, who know the nature of things, and are the wisest of the Hellenes, and as such are met together in this city, which is the metropolis of wisdom, and in the greatest and most glorious house of this city, should have nothing to show worthy of this height of dignity, but should only quarrel with one another like the meanest of mankind! I do pray and advise you, Protagoras, and you, Socrates, to agree upon a compromise. Let us be your peacemakers. And do not you, Socrates, aim at this precise and extreme brevity in discourse, if Protagoras objects, but loosen and let go the reins of speech, that your words may be grander and more becoming to you. Neither do you, Protagoras, go forth on the gale with every sail set out of sight of land into an ocean of words, but let there be a mean observed by both of you. Do as I say. And let me also persuade you to choose an arbiter or overseer or president; he will keep watch over your words and will prescribe their proper length.

Socrates:: This proposal was received by the company with universal approval; Callias said that he would not let me off, and they begged me to choose an arbiter. But I said; To choose an umpire of discourse would be unseemly; for if the person chosen was inferior, then the inferior or worse ought not to preside over the better; or if he was equal, neither would that be well; for he who is our equal will do as we do, and what will be the use of choosing him? And if you say, 'Let us have a better then'—to that I answer that you cannot have any one who is wiser than Protagoras. And if you choose another who is not really better, and whom you only say is better, to put another over him as though he were an inferior person would be an unworthy reflection on him; not that, as far as I am concerned, any reflection is of much consequence to me. Let me tell you then what I will do in order that the conversation and discussion may go on as you desire. If Protagoras is not disposed to answer, let him ask and I will answer; and I will endeavor to show at the same time how, as I maintain, he ought to answer: and when I have answered as many questions as he likes to ask, let him in like manner answer me; and if he seems to be not very ready at answering the precise question asked of him, you and I will unite in entreating him, as you entreated me, not to spoil the discussion. And this will require no special arbiter—all of you shall be arbiters.

This was generally approved, and Protagoras, though very much against his will, was obliged to agree that he would ask questions; and when he had put a sufficient number of them, that he would answer in his turn those which he was asked in short replies. He began to put his questions as follows:—

Protagoras:: I am of opinion, Socrates, that skill in poetry is the principal part of education; and this I conceive to be the power of knowing what compositions of the poets are correct, and what are not, and how they are to be distinguished, and of explaining when asked the reason of the difference. And I propose to transfer the question which you and I have been discussing to the domain of poetry; we will speak as before of virtue, but in reference to a passage of a poet. Now Simonides says to Scopas the son of Creon the Thessalian:—

> ‘Hardly on the one hand can a man become truly good, built four-square in hands and feet and mind, a work without a flaw.’

Do you know the poem? or shall I repeat the whole?

Socrates:: There is no need; for I am perfectly well acquainted with the ode,—I have made a careful study of it.

Protagoras:: Very well. And do you think that the ode is a good composition, and true?

Socrates:: Yes, both good and true.

Protagoras:: But if there is a contradiction, can the composition be good or true?

Socrates:: No, not in that case

Protagoras:: And is there not a contradiction? Reflect.

Socrates:: Well, my friend, I have reflected.

Protagoras:: And does not the poet proceed to say, 'I do not agree with the word of Pittacus, albeit the utterance of a wise man: Hardly can a man be good?' Now you will observe that this is said by the same poet.

Socrates:: I know it.

Protagoras:: And do you think that the two sayings are consistent?

Socrates:: Yes, I think so (at the same time I could not help fearing that there might be something in what he said). And you think otherwise?

Protagoras:: Why, how can he be consistent in both? First of all, premising as his own thought, 'Hardly can a man become truly good;' and then a little further on in the poem, forgetting, and blaming Pittacus and refusing to agree with him, when he says, 'Hardly can a man be good' which is the very same thing. And yet when he blames him who says the same with himself, he blames himself; so that he must be wrong either in his first or his second assertion.

Socrates:: Many of the audience cheered and applauded this. And I felt at first giddy and faint, as if I had received a blow from the hand of an expert boxer, when I heard his words and the sound of the cheering; and to confess the truth, I wanted to get time to think what the meaning of the poet really was. So I turned to Prodicus and called him. Prodicus, Simonides is a countryman of yours, and you ought to come to his aid. I must appeal to you, like the river Scamander in Homer, who, when beleaguered by Achilles, summons the Simoïs to aid him, saying:

> 'Brother dear, let us both together stay the force of the hero.'

And I summon you, for I am afraid that Protagoras will make an end of Simonides. Now is the time to rehabilitate Simonides, by the application of your philosophy of synonyms, which enables you to distinguish 'will' and 'wish' and make other charming distinctions like those which you drew just now. And I should like to know whether you would agree with me; for I am of opinion that there is no contradiction in the words of Simonides. And first of all I wish that you would say whether, in your opinion, Prodicus, 'being' is the same as 'becoming.'

Prodicus:: Not the same, certainly.

Socrates:: Did not Simonides first set forth, as his own view, that 'Hardly can a man become truly good'?

Prodicus:: Quite right.

Socrates:: And then he blames Pittacus, not, as Protagoras imagines, for repeating that which he says himself, but for saying something different from himself. Pittacus does not say as Simonides says, that hardly can a man become good, but hardly can a man be good: and our friend Prodicus would maintain that being, Protagoras, is not the same as becoming; and if they are not the same, then Simonides is not inconsistent with himself. I dare say that Prodicus and many others would say, as Hesiod says;

> 'On the one hand, hardly can a man become good,
> For the gods have made virtue the reward of toil;
> But on the other hand, when you have climbed the height,
> Then, to retain virtue, however difficult the acquisition, is easy.'

Prodicus heard and approved; but Protagoras said:

Protagoras:: Your correction, Socrates, involves a greater error than is contained in the sentence which you are correcting.

Socrates:: Alas! Protagoras; then I am a sorry physician, and do but aggravate a disorder which I am seeking to cure.

Protagoras:: Such is the fact.

Socrates:: How so?

Protagoras:: The poet could never have made such a mistake as to say that virtue, which in the opinion of all men is the hardest of all things, can be easily retained.

Socrates:: Well, and how fortunate are we in having Prodicus among us, at the right moment; for he has a wisdom, Protagoras, which, as I imagine, is more than human and of very ancient date, and may be as old as Simonides or even older. Learned as you are in many things, you appear to know nothing of this; but I know, for I am a disciple of his. And now, if I am not mistaken, you do not understand the word 'hard' (χαλεπόν) in the sense which Simonides intended; and I must correct you, as Prodicus corrects me when I use the word 'awful' (δεινόν) as a term of praise. If I say that Protagoras or any one else is an 'awfully' wise man, he asks me if I am not ashamed of calling that which is good 'awful'; and then he explains to me that the term 'awful' is always taken in a bad sense, and that no one speaks of being 'awfully' healthy or wealthy, or of 'awful' peace, but of 'awful' disease, 'awful' war, 'awful' poverty, meaning by the term 'awful,' evil. And I think that Simonides and his countrymen the Ceans, when they spoke of 'hard' meant 'evil,' or something which you do not understand. Let us ask Prodicus, for he ought to be able to answer questions about the dialect of Simonides. What did he mean, Prodicus, by the term 'hard'?

Prodicus:: Evil.

Socrates:: And therefore, Prodicus, he blames Pittacus for saying, ‘Hard is the good,’ just as if that were equivalent to saying, Evil is the good.

Prodicus:: Yes, that was certainly his meaning; and he is twitting Pittacus with ignorance of the use of terms, which in a Lesbian, who has been accustomed to speak a barbarous language, is natural.

Socrates:: Do you hear, Protagoras, what our friend Prodicus is saying? And have you an answer for him?

Protagoras:: You are entirely mistaken, Prodicus; and I know very well that Simonides in using the word ‘hard’ meant what all of us mean, not evil, but that which is not easy—that which takes a great deal of trouble: of this I am positive.

Socrates:: I also incline to believe, Protagoras, that this was the meaning of Simonides, of which our friend Prodicus was very well aware, but he thought that he would make fun, and try if you could maintain your thesis; for that Simonides could never have meant the other is clearly proved by the context, in which he says that God only has this gift. Now he cannot surely mean to say that to be good is evil, when he afterwards proceeds to say that God only has this gift, and that this is the attribute of him and of no other. For if this be his meaning, Prodicus would impute to Simonides a character of recklessness which is very unlike his countrymen. And I should like to tell you what I imagine to be the real meaning of Simonides in this poem, if you will test what, in your way of speaking, would be called my skill in poetry; or if you would rather, I will be the listener.

To this proposal Protagoras replied:

Protagoras:: As you please;

Socrates:: —and Hippias, Prodicus, and the others told me by all means to do as I proposed.

Then now, I will endeavor to explain to you my opinion about this poem of Simonides. There is a very ancient philosophy which is more cultivated in Crete and Lacedaemon than in any other part of Hellas, and there are more philosophers in those countries than anywhere else in the world. This, however, is a secret which the Lacedaemonians deny; and they pretend to be ignorant, just because they do not wish to have it thought that they rule the world by wisdom, like the Sophists of whom Protagoras was speaking, and not by velour of arms; considering that if the reason of their superiority were disclosed, all men would be practicing their wisdom. And this secret of theirs has never been discovered by the imitators of Lacedaemonian fashions in other cities, who go about with their ears bruised in imitation of them, and have the caestus bound on their arms, and are always in training, and wear short cloaks; for they imagine that these are the practices which have enabled the Lacedaemonians to conquer the other Hellenes. Now when the Lacedaemonians want to unbend and hold free conversation with their wise men, and are no longer satisfied with mere secret intercourse, they drive out all these laconizers, and any other foreigners who may happen to be in their country, and they hold a philosophical *séance* unknown to strangers; and they themselves forbid their young men to go out into other cities—in this they are like the Cretans—in order that they may not unlearn the lessons which they have taught them. And in Lacedaemon and Crete not only men but also women have a pride in their high cultivation. And hereby you may know that I am right in attributing to the Lacedaemonians this excellence in philosophy and speculation: If a man converses with the most ordinary Lacedaemonian, he will find him seldom good for much in general conversation, but at any point in the discourse he will be darting out some notable saying, terse and full of meaning, with unerring aim; and the person with whom he is talking seems to be like a child in his hands. And many of our own age and of former ages have noted that the true Lacedaemonian type of character has the love of philosophy even stronger than the love of gymnastics; they are conscious that only a perfectly educated man is capable of uttering such expressions. Such were Thales of Miletus, and Pittacus of Mitylene, and Bias of Priene, and our own Solon, and Cleobulus the Lindian, and Myson the Chenian; and seventh in the catalogue of wise men was the Lacedaemonian Chilo. All these were lovers and emulators and disciples of the culture of the Lacedaemonians, and any one may perceive that their wisdom was of this character; consisting of short memorable sentences, which they severally uttered. And they met together and dedicated in the temple of Apollo at Delphi, as the first-fruits of their wisdom, the far-famed inscriptions, which are in all men's mouths,—'Know thyself' and 'Nothing too much.'

Why do I say all this? I am explaining that this Lacedaemonian brevity was the style of primitive philosophy. Now there was a saying of Pittacus which was privately circulated and received the approbation of the wise, 'Hard is it to be good.' And Simonides, who was ambitious of the fame of wisdom, was aware that if he could overthrow this saying, then, as if he had won a victory over some famous athlete, he would carry off the palm among his contemporaries. And if I am not mistaken, he composed the entire poem with the secret intention of damaging Pittacus and his saying.

Let us all unite in examining his words, and see whether I am speaking the truth. Simonides must have been a lunatic, if, in the very first words of the poem, wanting to say only that to become good is hard, he inserted μέν, 'on the one hand' ['on the one hand to become good is hard']; there would be no reason for the introduction of μέν, unless you suppose him to speak with a hostile reference to the words of Pittacus. Pittacus is saying 'Hard is it to be good' and he, in refutation of this thesis, rejoins that the truly hard thing, Pittacus, is to become good, not joining 'truly' with 'good' but with 'hard.' Not, that the hard thing is to be truly good, as though there were some truly good men, and there were others who were good but not truly good (this would be a very simple observation, and quite unworthy of Simonides); but you must suppose him to make a trajection of the word 'truly' (ἀλαθέως), construing the saying of Pittacus thus (and let us imagine Pittacus to be speaking and Simonides answering him): 'O my friends' says Pittacus, 'hard is it to be good' and Simonides answers, 'In that, Pittacus, you are mistaken; the difficulty is not to be good, but on the one hand, to become good, four-square in hands and feet and mind, without a flaw—that is hard truly.' This way of reading the passage accounts for the insertion of μέν, 'on the one hand' and for the position at the end of the clause of the word 'truly' and all that follows shows this to be the meaning. A great deal might be said in praise of the details of the poem, which is a charming piece of workmanship, and very finished, but such minutiae would be tedious. I should like, however, to point out the general intention of the poem, which is certainly designed in every part to be a refutation of the saying of Pittacus. For he speaks in what follows a little further on as if he meant to argue that although there is a difficulty in becoming good, yet this is possible for a time, and only for a time. But having become good, to remain in a good state and be good, as you, Pittacus, affirm, is not possible, and is not granted to man; God only has this blessing; ‘but man cannot help being bad when the force of circumstances overpowers him.’ Now whom does the force of circumstance overpower in the command of a vessel?—not the private individual, for he is always overpowered; and as one who is already prostrate cannot be overthrown, and only he who is standing upright but not he who is prostrate can be laid prostrate, so the force of circumstances can only overpower him who, at some time or other, has resources, and not him who is at all times helpless. The descent of a great storm may make the pilot helpless, or the severity of the season the husbandman or the physician; for the good may become bad, as another poet witnesses:—

> ‘The good are sometimes good and sometimes bad.’

But the bad does not become bad; he is always bad. So that when the force of circumstances overpowers the man of resources and skill and virtue, then he cannot help being bad. And you, Pittacus, are saying, ‘Hard is it to be good.’ Now there is a difficulty in becoming good; and yet this is possible: but to be good is an impossibility—

> ‘For he who does well is the good man, and he who
> does ill is the bad’

But what sort of doing is good in letters? and what sort of doing makes a man good in letters? Clearly the knowing of them. And what sort of well-doing makes a man a good physician? Clearly the knowledge of the art of healing the sick. ‘But he who does ill is the bad.’ Now who becomes a bad physician? Clearly he who is in the first place a physician, and in the second place a good physician; for he may become a bad one also: but none of us unskilled individuals can by any amount of doing ill become physicians, any more than we can become carpenters or anything of that sort; and he who by doing ill cannot become a physician at all, clearly cannot become a bad physician. In like manner the good may become deteriorated by time, or toil, or disease, or other accident (the only real doing ill is to be deprived of knowledge), but the bad man will never become bad, for he is always bad; and if he were to become bad, he must previously have been good. Thus the words of the poem tend to show that on the one hand a man cannot be continuously good, but that he may become good and may also become bad; and again that

> 'They are the best for the longest time whom the gods love.'

All this relates to Pittacus, as is further proved by the sequel. For he adds:—

> 'Therefore I will not throw away my span of life to no purpose in searching after the impossible, hoping in vain to find a perfectly faultless man among those who partake of the fruit of the broad-bosomed earth: if I find him, I will send you word.'

(this is the vehement way in which he pursues his attack upon Pittacus throughout the whole poem):

> 'But him who does no evil, voluntarily I praise and love;—not even the gods war against necessity.'

All this has a similar drift, for Simonides was not so ignorant as to say that he praised those who did no evil voluntarily, as though there were some who did evil voluntarily. For no wise man, as I believe, will allow that any human being errs voluntarily, or voluntarily does evil and dishonorable actions; but they are very well aware that all who do evil and dishonorable things do them against their will. And Simonides never says that he praises him who does no evil voluntarily; the word 'voluntarily' applies to himself. For he was under the impression that a good man might often compel himself to love and praise another, and to be the friend and approver of another; and that there might be an involuntary love, such as a man might feel to an unnatural father or mother, or country, or the like. Now bad men, when their parents or country have any defects, look on them with malignant joy, and find fault with them and expose and denounce them to others, under the idea that the rest of mankind will be less likely to take themselves to task and accuse them of neglect; and they blame their defects far more than they deserve, in order that the odium which is necessarily incurred by them may be increased: but the good man dissembles his feelings, and constrains himself to praise them; and if they have wronged him and he is angry, he pacifies his anger and is reconciled, and compels himself to love and praise his own flesh and blood. And Simonides, as is probable, considered that he himself had often had to praise and magnify a tyrant or the like, much against his will, and he also wishes to imply to Pittacus that he does not censure him because he is censorious.

> 'For I am satisfied,' he says, 'when a man is neither bad nor very stupid; and when he knows justice (which is the health of states), and is of sound mind, I will find no fault with him, for I am not given to finding fault, and there are innumerable fools'

(implying that if he delighted in censure he might have abundant opportunity of finding fault).

> 'All things are good with which evil is unmingled.'

In these latter words he does not mean to say that all things are good which have no evil in them, as you might say 'All things are white which have no black in them' for that would be ridiculous; but he means to say that he accepts and finds no fault with the moderate or intermediate state.

> ['I do not hope' he says, 'to find a perfectly blameless man among those who partake of the fruits of the broad-bosomed earth (if I find him, I will send you word); in this sense I praise no man. But he who is moderately good, and does no evil, is good enough for me, who love and approve every one']

(and here observe that he uses a Lesbian word, ἐπαίνημι (approve), because he is addressing Pittacus,—

> 'Who love and approve every one voluntarily, who does no evil:'

and that the stop should be put after 'voluntarily'); 'but there are some whom I involuntarily praise and love. And you, Pittacus, I would never have blamed, if you had spoken what was moderately good and true; but I do blame you because, putting on the appearance of truth, you are speaking falsely about the highest matters'—And this, I said, Prodicus and Protagoras, I take to be the meaning of Simonides in this poem.

Hippias:: I think, Socrates, that you have given a very good explanation of the poem; but I have also an excellent interpretation of my own which I will propound to you, if you will allow me.

Alcibiades:: Nay, Hippias; not now, but at some other time. At present we must abide by the compact which was made between Socrates and Protagoras, to the effect that as long as Protagoras is willing to ask, Socrates should answer; or that if he would rather answer, then that Socrates should ask.

Socrates:: I wish Protagoras either to ask or answer as he is inclined; but I would rather have done with poems and odes, if he does not object, and come back to the question about which I was asking you at first, Protagoras, and by your help make an end of that. The talk about the poets seems to me like a commonplace entertainment to which a vulgar company have recourse; who, because they are not able to converse or amuse one another, while they are drinking, with the sound of their own voices and conversation, by reason of their stupidity, raise the price of flute-girls in the market, hiring for a great sum the voice of a the poets flute instead of their own breath, to be the medium of intercourse among them: but where the company are real gentlemen and men of education, you will see no flute-girls, nor dancing-girls, nor harp-girls; and they have no nonsense or games, but are contented with one another's conversation, of which their own voices are the medium, and which they carry on by turns and in an orderly manner, even though they are very liberal in their potations. And a company like this of ours, and men such as we profess to be, do not require the help of another's voice, or of the poets whom you cannot interrogate about the meaning of what they are saying; people who cite them declaring, some that the poet has one meaning, and others that he has another, and the point which is in dispute can never be decided. This sort of entertainment they decline, and prefer to talk with one another, and put one another to the proof in conversation. And these are the models which I desire that you and I should imitate. Leaving the poets, and keeping to ourselves, let us try the mettle of one another and make proof of the truth in conversation. If you have a mind to ask, I am ready to answer; or if you would rather, do you answer, and give me the opportunity of resuming and completing our unfinished argument.

I made these and some similar observations; but Protagoras would not distinctly say which he would do. Thereupon Alcibiades turned to Callias, and said:—

Alcibiades:: Do you think, Callias, that Protagoras is fair in refusing to say whether he will or will not answer? for I certainly think that he is unfair; he ought either to proceed with the argument, or distinctly to refuse to proceed, that we may know his intention; and then Socrates will be able to discourse with some one else, and the rest of the company will be free to talk with one another.

Socrates:: I think that Protagoras was really made ashamed by these words of Alcibiades, and when the prayers of Callias and the company were superadded, he was at last induced to argue, and said that I might ask and he would answer.

Socrates:: Do not imagine, Protagoras, that I have any other interest in asking questions of you but that of clearing up my own difficulties. For I think that Homer was very right in saying that

> 'When two go together, one sees before the other,'

for all men who have a companion are readier in deed, word, or thought; but if a man

> 'Sees a thing when he is alone,'

he goes about straightway seeking until he finds some one to whom he may show his discoveries, and who may confirm him in them. And I would rather hold discourse with you than with any one, because I think that no man has a better understanding of most things which a good man may be expected to understand, and in particular of virtue. For who is there, but you?—who not only claim to be a good man and a gentleman, for many are this, and yet have not the power of making others good—whereas you are not only good yourself, but also the cause of goodness in others. Moreover such confidence have you in yourself, that although other Sophists conceal their profession, you proclaim in the face of Hellas that you are a Sophist or teacher of virtue and education, and are the first who demanded pay in return. How then can I do otherwise than invite you to the examination of these subjects, and ask questions and consult with you? I must, indeed. And I should like once more to have my memory refreshed by you about the questions which I was asking you at first, and also to have your help in considering them. If I am not mistaken the question was this: Are wisdom and temperance and courage and justice and holiness five names of the same thing? or has each of the names a separate underlying essence and corresponding thing having a peculiar function, no one of them being like any other of them? And you replied that the five names were not the names of the same thing, but that each of them had a separate object, and that all these objects were parts of virtue, not in the same way that the parts of gold are like virtues one each other and the whole of which they are parts, but as the parts of the face are unlike the whole of which they are parts and one another, and have each of them a distinct function. I should like to know whether this is still your opinion; or if not, I will ask you to define your meaning, and I shall not take you to task if you now make a different statement. For I dare say that you may have said what you did only in order to make trial of me.

Protagoras:: I answer, Socrates that all these qualities are parts of virtue, and that four out of the five are to some other extent similar, and that the fifth of them, which is courage, is very different from the other four, as I prove in this way: You may observe that many men are utterly unrighteous, unholy, intemperate, ignorant, who are nevertheless remarkable for their courage.

Socrates:: Stop. I should like to think about that. When you speak of brave men, do you mean the confident, or another sort of nature?

Protagoras:: Yes; I mean the impetuous, ready to go at that which others are afraid to approach.

Socrates:: In the next place, you would affirm virtue to be a good thing, of which good thing you assert yourself to be a teacher.

Protagoras:: Yes; I should say the best of all things, if I am in my right mind.

Socrates:: And is it partly good and partly bad, or wholly good?

Protagoras:: Wholly good, and in the highest degree.

Socrates:: Tell me then; who are they who have confidence when diving into a well?

Protagoras:: I should say, the divers.

Socrates:: And the reason of this is that they have knowledge?

Protagoras:: Yes, that is the reason.

Socrates:: And who have confidence when fighting on horseback—the skilled horseman or the unskilled?

Protagoras:: The skilled.

Socrates:: And who when fighting with light shields—the peltasts or the nonpeltasts?

Protagoras:: The peltasts. And that is true of all other things, if that is your point: those who have knowledge are more confident than those who have no knowledge, and they are more confident after they have learned than before.

Socrates:: And have you not seen persons utterly ignorant of these things, and yet confident about them?

Protagoras:: Yes, I have seen such persons far too confident.

Socrates:: And are not these confident persons also courageous?

Protagoras:: In that case, courage would be a base thing, for the men of whom we are speaking are surely madmen.

Socrates:: Then who are the courageous? Are they not the confident?

Protagoras:: Yes; to that statement I adhere.

Socrates:: And those who are thus confident without knowledge are really not courageous, but mad; and in that case the wisest are also the most confident, and being the most confident are also the bravest, and upon that view again wisdom will be courage.

Protagoras:: Nay, Socrates, you are mistaken in your remembrance of what was said by me. When you asked me, I certainly did say that the courageous are the confident; but I was never asked whether the confident are the courageous; if you had asked me, I should have answered 'Not all of them:' and what I did answer you have not proved to be false, although you proceeded to show that those who have knowledge are more courageous than they were before they had knowledge, and more courageous than others who have no knowledge, and were then led on to think that courage is the same as wisdom. But in this way of arguing you might come to imagine that strength is wisdom. You might begin by asking whether the strong are able, and I should say 'Yes;' and then whether those who know how to wrestle are not more able to wrestle than those who do not know how to wrestle, and more able after than before they had learned, and I should assent. And when I had admitted this, you might use my admissions in such a way as to prove that upon my view wisdom is strength; whereas in that case I should not have admitted, any more than in the other, that the able are strong, although I have admitted that the strong are able. For there is a difference between ability and strength; the former is given by knowledge as well as by madness or rage, but strength comes from nature and a healthy state of the body. And in like manner I say of confidence and courage, that they are not the same; and I argue that the courageous are confident, but not all the confident courageous. For confidence may be given to men by art, and also, like ability, by madness and rage; but courage comes to them from nature and the healthy state of the soul.

Socrates:: You would admit, Protagoras, that some men live well and others ill?

He assented.

And do you think that a man lives well who lives in pain and grief?

Protagoras:: He does not.

Socrates:: But if he lives pleasantly to the end of his life, will he not in that case have lived well?

Protagoras:: He will.

Socrates:: Then to live pleasantly is a good, and to live unpleasantly an evil?

Protagoras:: Yes, if the pleasure be good and honorable.

Socrates:: And do you, Protagoras, like the rest of the world, call some pleasant things evil and some painful things good?—for I am rather disposed to say that things are good in as far as they are pleasant, if they have no consequences of another the sort, and in as far as they are painful they are bad.

Protagoras:: I do not know, Socrates, whether I can venture to assert in that unqualified manner that the pleasant is the good and the painful the evil. Having regard not only to my present answer, but also to the whole of my life, I shall be safer, if I am not mistaken, in saying that there are some pleasant things which are not good, and that there are some painful things which are good, and some which are not good, and that there are some which are neither good nor evil.

Socrates:: And you would call pleasant, the things which participate in pleasure or create pleasure?

Protagoras:: Certainly.

Socrates:: Then my meaning is, that in as far as they are pleasant they are good; and my question would imply that pleasure is a good in itself.

Protagoras:: According to your favorite mode of speech, Socrates, 'let us reflect about this'; and if the reflection is to the point, and the result proves that pleasure and good are really the same, then we will agree; but if not, then we will argue.

Socrates:: And would you wish to begin the enquiry? Or shall I begin?

Protagoras:: You ought to take the lead; for you are the author of the discussion.

Socrates:: May I employ an illustration? Suppose some one who is enquiring into the health or some other bodily quality of another:—he looks at his face and at the tips of his fingers, and then he says, Uncover your chest and back to me that I may have a better view:—that is the sort of thing which I desire in this speculation. Having seen what your opinion is about good and pleasure, I am minded to say to you: Uncover your mind to me, Protagoras, and reveal your opinion about knowledge, that I may know whether you agree with the rest of the world. Now the rest of the world are of opinion that knowledge is a principle not of strength, or of rule, or of command: their notion is that a man may have knowledge, and yet that the knowledge which is in him may be overmastered by anger, or pleasure, or pain, or love, or perhaps by fear,—just as if knowledge were a slave, and might be dragged about anyhow. Now is that your view? or do you think that knowledge is a noble and commanding thing, which cannot be overcome, and will not allow a man, if he only knows the difference of good and evil, to do anything which is contrary to knowledge, but that wisdom will have strength to help him?

Prodicus:: I agree with you, Socrates; and not only so, but I, above all other men, am bound to say that wisdom and knowledge are the highest of human things.

Socrates:: Good, and true. But are you aware that the majority of the world are of another mind; and that men are commonly supposed to know the things which are best, and not to do them when they might? And most persons whom I have asked the reason of this have said that when men act contrary to knowledge they are overcome by pain, or pleasure, or some of those affections which I was just now mentioning.

Protagoras:: Yes, Socrates; and that is not the only point about which mankind are in error.

Socrates:: Suppose, then, that you and I endeavor to instruct and inform them what is the nature of this affection which they call ‘being overcome by pleasure’ and which they affirm to be the reason why they do not always do what is best. When we say to them: Friends, you are mistaken, and are saying what is not true, they would probably reply: Socrates and Protagoras, if this affection of the soul is not to be called ‘being overcome by pleasure’ pray, what is it, and by what name would you describe it?

Protagoras:: But why, Socrates, should we trouble ourselves about the opinion of the many, who just say anything that happens to occur to them?

Socrates:: I believe, that they may be of use in helping us to discover how courage is related to the other parts of virtue. If you are disposed to abide by our agreement, that I should show the way in which, as I think, our recent difficulty is most likely to be cleared up, do you follow; but if not, never mind.

Protagoras:: You are quite right; and I would have you proceed as you have begun.

Socrates:: Well then, let me suppose that they repeat their question, What account do you give of that which, in our way of speaking, is termed being overcome by pleasure? I should answer thus: Listen, and Protagoras and I will endeavor to show you. When men are overcome by eating and drinking and other sensual desires which are pleasant, and they, knowing them to be evil, nevertheless indulge in them, would you not say that they were overcome by pleasure? They will not deny this. And suppose that you and I were to go on and ask them again: 'In what way do you say that they are evil,—in that they are pleasant and give pleasure at the moment, or because they cause disease and poverty and other like evils in the future? Would they still be evil, if they had no attendant evil consequences, simply because they give the consciousness of pleasure of whatever nature?'—Would they not answer that they are not evil on account of the pleasure which is immediately given by them, but on account of the after consequences—diseases and the like?

Protagoras:: I believe, that the world in general would answer as you do.

Socrates:: And in causing diseases do they not cause pain? and in causing poverty do they not cause pain;—they would agree to that also, if I am not mistaken?

Protagoras assented.

Then I should say to them, in my name and yours: Do you think them evil for any other reason, except because they end in pain and rob us of other pleasures:—there again they would agree?

We both of us thought that they would.

And then I should take the question from the opposite point of view, and say: ‘Friends, when you speak of goods being painful, do you not mean remedial goods, such as gymnastic exercises, and military service, and the physician’s use of burning, cutting, drugging, and starving? Are these the things which are good but painful?’—they would assent to me?

He agreed.

‘And do you call them good because they occasion the greatest immediate suffering and pain; or because, afterwards, they bring health and improvement of the bodily condition and the salvation of states and power over others and wealth?’—they would agree to the latter alternative, if I am not mistaken?

He assented.

‘Are these things good for any other reason except that they end in pleasure, and get rid of and avert pain? Are you looking to any other standard but pleasure and pain when you call them good?’—they would acknowledge that they were not?

Protagoras:: I think so.

Socrates:: ‘And do you not pursue after pleasure as a good, and avoid pain as an evil?’

He assented.

‘Then you think that pain is an evil and pleasure is a good: and even pleasure you deem an evil, when it robs you of greater pleasures than it gives, or causes pains greater than the pleasure. If, however, you call pleasure an evil in relation to some other end or standard, you will be able to show us that standard. But you have none to show.’

Protagoras:: I do not think that they have.

Socrates:: ‘And have you not a similar way of speaking about pain? You call pain a good when it takes away greater pains than those which it has, or gives pleasures greater than the pains: then if you have some standard other than pleasure and pain to which you refer when you call actual pain a good, you can show what that is. But you cannot.’

Protagoras:: True.

Socrates:: Suppose again, that the world says to me: ‘Why do you spend many words and speak in many ways on this subject?’ Excuse me, friends, I should reply; but in the first place there is a difficulty in explaining the meaning of the expression ‘overcome by pleasure;’ and the whole argument turns upon this. And even now, if you see any possible way in which evil can be explained as other than by a lesser pain, or good as other than pleasure, you may still retract. Are you satisfied, then, at having a life of pleasure which is without pain? If you are, and if you are unable to show any good or evil which does not end in pleasure and pain, hear the consequences:—If what you say is true, then the argument is absurd which affirms that a man often does evil knowingly, when he might abstain, because he is seduced and overpowered by pleasure; or again, when you say that a man knowingly refuses to do what is good because he is overcome at the moment by pleasure. And that this is ridiculous will be evident if only we give up the use of various names, such as pleasant and painful, and good and evil. As there are two things, let us call them by two names—first, good and evil, and then pleasant and painful. Assuming this, let us go on to say that a man does evil knowing that he does evil. But some one will ask, Why? Because he is overcome, is the first answer. And by what is he overcome? the enquirer will proceed to ask. And we shall not be able to reply 'By pleasure' for the name of pleasure has been exchanged for that of good. In our answer, then, we shall only say that he is overcome. 'By what?' he will reiterate. By the good, we shall have to reply; indeed we shall. Nay, but our questioner will rejoin with a laugh, if he be one of the swaggering sort, 'That is too ridiculous, that a man should do what he knows to be evil when he ought not, because he is overcome by good. Is that, he will ask, because the good was worthy or not worthy of conquering the evil'? And in answer to that we shall clearly reply, Because it was not worthy; for if it had been worthy, then he who, as we say, was overcome by pleasure, would not have been wrong. 'But how' he will reply, 'can the good be unworthy of the evil, or the evil of the good'? Is not the real explanation that they are out of proportion to one another, either as greater and smaller, or more and fewer? This we cannot deny. And when you speak of being overcome—'what do you mean' he will say, 'but that you choose the greater evil in exchange for the lesser good'? Admitted. And now substitute the names of pleasure and pain for good and evil, and say, not as before, that a man does what is evil knowingly, but that he does what is painful knowingly, and because he is overcome by pleasure, which is unworthy to overcome. What measure is there of the relations of pleasure to pain other than excess and defect, which means that they become greater and smaller, and more and fewer, and differ in degree? For if any one says: 'Yes, Socrates, but immediate pleasure differs widely from future pleasure and pain'—To that I should reply: And do they differ in anything but in pleasure and pain? There can be no other measure of them. And do you, like a skilful weigher, put into the balance the pleasures and the pains, and their nearness and distance, and weigh them, and then say which outweighs the other. If you weigh pleasures against pleasures, you of course take the more and greater; or if you weigh pains against pains, you take the fewer and the less; or if pleasures against pains, then you choose that course of action in which the painful is exceeded by the pleasant, whether the distant by the near or the near by the distant; and you avoid that course of action in which the pleasant is exceeded by the painful. Would you not admit, my friends, that this is true? I am confident that they cannot deny this.

He agreed with me.

Well then, I shall say, if you agree so far, be so good as to answer me a question: Do not the same magnitudes appear larger to your sight when near, and smaller when at a distance? They will acknowledge that. And the same holds of thickness and number; also sounds, which are in themselves equal, are greater when near, and lesser when at a distance. They will grant that also. Now suppose that is, happiness to consist in doing or choosing the greater, and in not doing or in avoiding the less, what would be the saving principle of human life? Would not the art of measuring be the saving principle; or would the power of appearance? Is not the latter that deceiving art which makes us wander up and down and take the things at one time of which we repent at another, both in our actions and in our choice of things great and small? But the art of measurement would do away with the effect of appearances, and, showing the truth, would fain teach the soul at last to find rest in the truth, and would thus save our life. Would not mankind generally acknowledge that the art which accomplishes this result is the art of measurement?

Protagoras:: Yes, the art of measurement.

Socrates:: Suppose, again, the salvation of human life to depend on the choice of odd and even, and on the knowledge of when a man ought to choose the greater or less, either in reference to themselves or to each other, and whether near or at a distance; what would be the saving principle of our lives? Would not knowledge?—a knowledge of measuring, when laws of the question is one of excess and defect, and a knowledge of number, when the question is of odd and even? The world will assent, will they not?

Protagoras himself thought that they would.

Well then, my friends, I say to them; seeing that the salvation of human life has been found to consist in the right choice of pleasures and pains,—in the choice of the more and the fewer, and the greater and the less, and the nearer and remoter, must not this measuring be a consideration of their excess and defect and equality in relation to each other?

Protagoras:: This is undeniably true.

Socrates:: And this, as possessing measure, must undeniably also be an art and science?

Protagoras:: They will agree.

Socrates:: The nature of that art or science will be a matter of future consideration; but the existence of such a science furnishes a demonstrative answer to the question which you asked of me and Protagoras. At the time when you asked the question, if you remember, both of us were agreeing that there was nothing mightier than knowledge, and that knowledge, in whatever existing, must have the advantage over pleasure and all other things; and then you said that pleasure often got the advantage even over a man who has knowledge; and we refused to allow this, and you rejoined: O Protagoras and Socrates, what is the meaning of being overcome by pleasure if not this?—tell us what you call such a state:—if we had immediately and at the time answered 'Ignorance' you would have laughed at us. But now, in laughing at us, you will be laughing at yourselves: for you also admitted that men err in their choice of pleasures and pains; that is, in their choice of good and evil, from defect of knowledge; and you admitted further, that they err, not only from defect of knowledge in general, but of that particular knowledge which is called measuring. And you are also aware that the erring act which is done without knowledge is done in ignorance. This, therefore, is the meaning of being overcome by pleasure;—ignorance, and that the greatest. And our friends Protagoras and Prodicus and Hippias declare that they are the physicians of ignorance; but you, who are under the mistaken impression that ignorance is not the cause, and that the art of which I am speaking cannot be taught, neither go yourselves, nor send your children, to the Sophists, who are the teachers of these things—you take care of your money and give them none; and the result is, that you are the worse off both in public and private life:—Let us suppose this to be our answer to the world in general: And now I should like to ask you, Hippias, and you, Prodicus, as well as Protagoras (for the argument is to be yours as well as ours), whether you think that I am speaking the truth or not?

They all thought that what I said was entirely true.

Then you agree that the pleasant is the good, and the painful evil. And here I would beg my friend Prodicus not to introduce his distinction of names, whether he is disposed to say pleasurable, delightful, joyful. However, by whatever name he prefers to call them, I will ask you, most excellent Prodicus, to answer in my sense of the words.

Prodicus laughed and assented, as did the others.

Then, my friends, what do you say to this? Are not all actions honorable and useful, of which the tendency is to make life painless and pleasant? The honorable work is also useful and good?

This was admitted.

Then, if the pleasant is the good, nobody does anything under the idea or conviction that some other thing would be better and is also attainable, when he might do the better. And this inferiority of a man to himself is merely ignorance, as the superiority of a man to himself is wisdom.

They all assented.

And is not ignorance the having a false opinion and being deceived about important matters?

To this also they unanimously assented.

Then, no man voluntarily pursues evil, or that which he thinks to be evil. To prefer evil to good is not in human nature; and when a man is compelled to choose one of two evils, no one will choose the greater when he may have the less.

All of us agreed to every word of this.

Well, there is a certain thing called fear or terror; and here, Prodicus, I should particularly like to know whether you would agree with me in defining this fear or terror as expectation of evil.

Protagoras and Hippias agreed, but Prodicus said that this was fear and not terror.

Never mind, Prodicus; but let me ask whether, if our former assertions are true, a man will pursue that which he fears when he is not compelled? Would not this be in flat contradiction to the admission which has been already made, that he thinks the things which he fears to be evil; and no one will pursue or voluntarily accept that which he thinks to be evil?

That also was universally admitted.

Then, these, Hippias and Prodicus, are our premises; and I would beg Protagoras to explain to us how he can be right in what he said at first. I do not mean in what he said quite at first, for his first statement, as you may remember, was that whereas there were five parts of virtue none of them was like any other of them; each of them had a separate function. To this, however, I am not referring, but to the assertion which he afterwards made that of the five virtues four were nearly akin to each other, but that the fifth, which was courage, differed greatly from the others. And of this he gave me the following proof. He said: You will find, Socrates, that some of the most impious, and unrighteous, and intemperate, and ignorant of men are among the most courageous; which proves that courage is very different from the other parts of virtue. I was surprised at his saying this at the time, and I am still more surprised now that I have discussed the matter with you. So I asked him whether by the brave he meant the confident. Yes, he replied, and the impetuous or goers. (You may remember, Protagoras, that this was your answer.)

He assented.

Well then, tell us against what are the courageous ready to go—against the same dangers as the cowards?

Protagoras:: No.

Socrates:: Then against something different?

Protagoras:: Yes.

Socrates:: Then do cowards go where there is safety, and the courageous where there is danger?

Protagoras:: Yes, Socrates, so men say.

Socrates:: Very true. But I want to know against what do you say that the courageous are ready to go—against dangers, believing them to be dangers, or not against dangers?

Protagoras:: No; the former case has been proved by you in the previous argument to be impossible.

Socrates:: That, again, is quite true. And if this has been rightly proven, then no one goes to meet what he thinks to be dangers, since the want of self-control, which makes men rush into dangers, has been shown to be ignorance.

He assented.

And yet the courageous man and the coward alike go to meet that about which they are confident; so that, in this point of view, the cowardly and the courageous go to meet the same things.

Protagoras:: And yet, Socrates, that to which the coward goes is the opposite of that to which the courageous goes; the one, for example, is ready to go to battle, and the other is not ready.

Socrates:: And is going to battle honorable or disgraceful?

Protagoras:: Honorable.

Socrates:: And if honorable, then already admitted by us to be good; for all honorable actions we have admitted to be good.

Protagoras:: That is true; and to that opinion I shall always adhere.

Socrates:: True. But which of the two are they who, as you say, are unwilling to go to war, which is a good and honorable thing?

Protagoras:: The cowards.

Socrates:: And what is good and honorable is also pleasant?

Protagoras:: It has certainly been acknowledged to be so.

Socrates:: And do the cowards knowingly refuse to go to the nobler, and pleasanter, and better?

Protagoras:: The admission of that, would belie our former admissions.

Socrates:: But does not the courageous man also go to meet the better, and pleasanter, and nobler?

Protagoras:: That must be admitted.

Socrates:: And the courageous man has no base fear or base confidence?

Protagoras:: True.

Socrates:: And if not base, then honorable?

He admitted this.

And if honorable, then good?

Protagoras:: Yes.

Socrates:: But the fear and confidence of the coward or foolhardy or madman, on the contrary, are base?

He assented.

And these base fears and confidences originate in ignorance and uninstructedness?

Protagoras:: True.

Socrates:: Then as to the motive from which the cowards act, do you call it cowardice or courage?

Protagoras:: I should say cowardice.

Socrates:: And have they not been shown to be cowards through their ignorance of dangers?

Protagoras:: Assuredly.

Socrates:: And because of that ignorance they are cowards?

He assented.

And the reason why they are cowards is admitted by you to be cowardice?

He again assented.

Then the ignorance of what is and is not dangerous is cowardice?

He nodded assent.

But surely courage is opposed to cowardice?

Protagoras:: Yes.

Socrates:: Then the wisdom which knows what are and are not dangers is opposed to the ignorance of them?

To that again he nodded assent.

And the ignorance of them is cowardice?

To that he very reluctantly nodded assent.

And the knowledge of that which is and is not dangerous is courage, and is opposed to the ignorance of these things?

At this point he would no longer nod assent, but was silent.

And why do you neither assent nor dissent, Protagoras?

Protagoras:: Finish the argument by yourself.

Socrates:: I only want to ask one more question. I want to know whether you still think that there are men who are most ignorant and yet most courageous?

Protagoras:: You seem to have a great ambition to make me answer, Socrates, and therefore I will gratify you, and say, that this appears to me to be impossible consistently with the argument.

Socrates:: My only object in continuing the discussion, has been the desire to ascertain the nature and relations of virtue; for if this were clear, I am very sure that the other controversy which has been carried on at great length by both of us—you affirming and I denying that virtue can be taught—would also become clear. The result of our discussion appears to me to be singular. For if the argument had a human voice, that voice would be heard laughing at us and saying: ‘Protagoras and Socrates, you are strange beings; there are you, Socrates, who were saying that virtue cannot be taught, contradicting yourself now by your attempt to prove that all things are knowledge, including justice, and temperance, and courage,—which tends to show that virtue can certainly be taught; for if virtue were other than knowledge, as Protagoras attempted to prove, then clearly virtue cannot be taught; but if virtue is entirely knowledge, as you are seeking to show, then I cannot but suppose that virtue is capable of being taught. Protagoras, on the other hand, who started by saying that it might be taught, is now eager to prove it to be anything rather than knowledge; and if this is true, it must be quite incapable of being taught.’ Now I, Protagoras, perceiving this terrible confusion of our ideas, have a great desire that they should be cleared up. And I should like to carry on the discussion until we ascertain what virtue is, and whether capable of being taught or not, lest haply Epimetheus should trip us up and deceive us in the argument, as he forgot us in the story; I prefer your Prometheus to your Epimetheus, for of him I make use, whenever I am busy about these questions, in Promethean care of my own life. And if you have no objection, as I said at first, I should like to have your help in the enquiry.

Protagoras:: Socrates, I am not of a base nature, and I am the last man in the world to be envious. I cannot but applaud your energy and your conduct of an argument. As I have often said, I admire you above all men whom I know, and far above all men of your age; and I believe that you will become very eminent in philosophy. Let us come back to the subject at some future time; at present we had better turn to something else.

Socrates:: By all means, if that is your wish; for I too ought long since to have kept the engagement of which I spoke before, and only tarried because I could not refuse the request of the noble Callias.

So the conversation ended, and we went our way.

## Protagoras

Translated by Stanley Lombardo and Karen Bell.

Socrates, Friend, Hippocrates, Alcibiades, Critias, Callias,
Protagoras, Hippias, Prodicus, Eunuch

Friend:: Where have you just come from, Socrates? No, don't tell me. It's pretty obvious that you've been hunting the ripe and ready Alcibiades. Well, I saw him just the other day, and he is certainly still a beautiful man—and just between the two of us, 'man' is the proper word, Socrates: his beard is already filling out.

Socrates:: Well, what of it? I thought you were an admirer of Homer, who says that youth is most charming when the beard is first blooming— which is just the stage Alcibiades is at.

Friend:: So what's up? Were you just with him? And how is the young man disposed towards you?

Socrates:: Pretty well, I think, especially today, since he rallied to my side and said a great many things to support me. You're right, of course: I was just with him. But there's something really strange I want to tell you about. Although we were together, I didn't pay him any mind; in fact, I forgot all about him most of the time.

Friend:: How could anything like that have happened to the two of you? You surely haven't met someone else more beautiful, at least not in this city.

Socrates:: Much more beautiful.

Friend:: What are you saying? A citizen or a foreigner?

Socrates:: A foreigner.

Friend:: From where?

Socrates:: Abdera.

Friend:: And this foreigner seems to you more beautiful than the son of Clinias?

Socrates:: How could superlative wisdom not seem surpassingly beautiful?

Friend:: What! Have you been in the company of some wise man, Socrates?

Socrates:: The wisest man alive, if you think the wisest man is Protagoras.

Friend:: What are you saying? Is Protagoras in town?

Socrates:: And has been for two days.

Friend:: And you’ve just now come from being with him?

Socrates:: That’s right, and took part in quite a long conversation.

Friend:: Well, sit right down, if you’re free now, and tell us all about it. Let the boy make room for you here.

Socrates:: By all means. I'd count it a favor if you'd listen.

Friend:: And vice versa, if you'd tell us.

Socrates:: That would make it a double favor then. Well, here’s the story.

This morning just before daybreak, while it was still dark, Hippocrates, son of Apollodoros and Phason’s brother, banged on my door with his stick, and when it was opened for him he barged right in and yelled in that voice of his;

Hippocrates:: “Socrates, are you awake or asleep?”

Socrates:: Recognizing his voice, “Is that Hippocrates? No bad news, I hope.”

Hippocrates:: “Nothing but good news.”

Socrates:: “I'd like to hear it, What brings you here at such an hour?” Standing next to me, Hippocrates replied:

Hippocrates:: “Protagoras has arrived.”

Socrates:: “Day before yesterday, Did you just find out?”

Hippocrates:: “Yes! Just last evening.”

Socrates:: As he said this he felt around for the bed and sat at my feet and continued:

Hippocrates:: “That’s right, late yesterday evening, after I got back from Oenoe. My slave Satyrus had run away from me. I meant to tell you that I was going after him, but something else came up and made me forget. After I got back and we had eaten dinner and were about to get some rest, then my brother tells me Protagoras has arrived. I was getting ready to come right over to see you even then, until I realized it was just too late at night. But as soon as I had slept some and wasn’t dead-tired any more, I got up and came over here right away.”

Socrates:: Recognizing his fighting spirit and his excitement, I asked him: “So what’s it to you? Has Protagoras done anything wrong to you?”

He laughed and said;

Hippocrates:: “You bet he has, Socrates. He has a monopoly on wisdom and won’t give me any.”

Socrates:: “But look, if you meet his price he’ll make you wise too.”

Hippocrates:: “If only it were as simple as that, I'd bankrupt myself and my friends too. But that’s why I’m coming to you, so you will talk to him for me. I’m too young myself, and besides, I’ve never even seen Protagoras or heard him speak. I was still just a child the last time he was in town. He’s such a celebrity, Socrates, and everyone says he’s a terribly clever speaker. Why don’t we walk over now, to be sure to catch him in? I’ve heard he’s staying with Callias, son of Hipponicus. Come on, let’s go.”

Socrates:: “Let’s not go there just yet, It’s too early. Why don’t we go out here into the courtyard and stroll around until it's light? Then we can go. Protagoras spends most of his time indoors, so don't worry; we're likely to catch him in."

So we got up and walked around the courtyard. I wanted to see what Hippocrates was made of, so I started to examine him with a few questions. "Tell me, Hippocrates, You're trying to get access to Protagoras, prepared to pay him a cash fee for his services to you. But what is he, and what do you expect to become? I mean, suppose you had your mind set on going to your namesake, Hippocrates of Cos, the famous physician, to pay him a fee for his services to you, and if someone asked you what this Hippocrates is that you were going to pay him, what would you say?"

Hippocrates:: "I would say a physician."

Socrates:: "And what would you expect to become?"

Hippocrates:: "A physician."

Socrates:: "And if you had a mind to go to Polyclitus of Argos or Phidias of Athens to pay them a fee, and if somebody were to ask you what kind of professionals you had in mind paying, what would you say?"

Hippocrates:: "I would say sculptors."

Socrates:: "And what would you expect to become?"

Hippocrates:: "A sculptor, obviously."

Socrates:: "All right, Here we are, you and I, on our way to Protagoras, prepared to pay him cash as a fee on your behalf, spending our own money, and if that's not enough to persuade him, our friends' money as well. Suppose someone notices our enthusiasm and asks us: Tell me, Socrates and Hippocrates, what is your idea in paying Protagoras? What is he?' What would we say to him? What other name do we hear in reference to Protagoras? Phidias is called a sculptor and Homer a poet. What do we hear Protagoras called?"

Hippocrates:: “A sophist is what they call him, anyway, Socrates.”

Socrates:: “Then it is as a sophist that we are going to pay him?”

Hippocrates:: “Yes.”

Socrates:: “And if somebody asks you what you expect to become in going to Protagoras?”

He blushed in response—there was just enough daylight now to show him up—and said;

Hippocrates:: “If this is at all like the previous cases, then, obviously, to become a sophist.”

Socrates:: “What? You? Wouldn’t you be ashamed to present yourself to the Greek world as a sophist?”

Hippocrates:: “Yes, I would, Socrates, to be perfectly honest.”

Socrates:: “Well, look, Hippocrates, maybe this isn’t the sort of education you expect to get from Protagoras. Maybe you expect to get the kind of lessons you got from your grammar instructor or music teacher or wrestling coach. You didn’t get from them technical instruction to become a professional, but a general education suitable for a gentleman.”

Hippocrates:: “That’s it exactly! That’s just the sort of education you get from Protagoras.”

Socrates:: “Then do you know what you are about to do now, or does it escape you?”

Hippocrates:: “What do you mean?”

Socrates:: “That you are about to hand over your soul for treatment to a man who is, as you say, a sophist. As to what exactly a sophist is, I would be surprised if you really knew. And yet, if you are ignorant of this, you don’t know whether you are entrusting your soul to something good or bad.”

Hippocrates:: “But I think I do know.”

Socrates:: “Then tell me what you think a sophist is.”

Hippocrates:: “I think, that, as the name suggests, he is someone who has an understanding of wise things.”

Socrates:: “Well, you could say the same thing about painters and carpenters, that they understand wise things. But if someone asked us ‘wise in what respect?’ we would probably answer, for painters, ‘wise as far as making images is concerned,’ and so on for the other cases. And if someone asked, ‘What about sophists? What wise things do they understand?’—what would we answer? What are they expert at making?”

Hippocrates:: “What else, Socrates, should we say a sophist is expert at than making people clever speakers?”

Socrates:: “Our answer would then be true, but not sufficient, for it requires another question: On what subject does the sophist make you a clever speaker? For example, a lyre-player makes you a clever speaker on his subject of expertise, the lyre. Right?”

Hippocrates:: “Yes.”

Socrates:: “All right then. On what subject does a sophist make you a clever speaker?”

Hippocrates:: “It’s clear that it’s the same subject that he understands.”

Socrates:: “Likely enough. And what is this subject that the sophist understands and makes his student understand?”

Hippocrates:: “By God, I really don’t know what to say.”

Socrates:: I went on to my next point: “Do you see what kind of danger you are about to put your soul in? If you had to entrust your body to someone and risk its becoming healthy or ill, you would consider carefully whether you should entrust it or not, and you would confer with your family and friends for days on end. But when it comes to something you value more than your body, namely your soul, and when everything concerning whether you do well or ill in your life depends on whether it becomes worthy or worthless, I don't see you getting together with your father or brother or a single one of your friends to consider whether or not to entrust your soul to this recently arrived foreigner. No, you hear about him in the evening—right?—and the next morning, here you are, not to talk about whether it's a good idea to entrust yourself to him or not, but ready to spend your own money and your friends' as well, as if you had thought it all through already and, no matter what, you had to be with Protagoras, a man whom you admit you don't know and have never conversed with, and whom you call a sophist although you obviously have no idea what this sophist is to whom you are about to entrust yourself."

Hippocrates:: "I guess so, Socrates, from what you say."

Socrates:: "Am I right, then, Hippocrates, that a sophist is a kind of merchant who peddles provisions upon which the soul is nourished? That's what he seems like to me."

Hippocrates:: "But what is the soul nourished on, Socrates?"

Socrates:: "Teachings, I would say. And watch, or the sophist might deceive us in advertising what he sells, the way merchants who market food for the body do. In general, those who market provisions don't know what is good or bad for the body—they just recommend everything they sell— nor do those who buy (unless one happens to be a trainer or doctor). In the same way, those who take their teachings from town to town and sell them wholesale or retail to anybody who wants them recommend all their products, but I wouldn't be surprised, my friend, if some of these people did not know which of their products are beneficial and which detrimental to the soul. Likewise those who buy from them, unless one happens to be a physician of the soul. So if you are a knowledgeable consumer, you can buy teachings safely from Protagoras or anyone else. But if you're not, please don't risk what is most dear to you on a roll of the dice, for there is a far greater risk in buying teachings than in buying food. When you buy food and drink from the merchant you can take each item back home from the store in its own container and before you ingest it into your body you can lay it all out and call in an expert for consultation as to what should be eaten or drunk and what not, and how much and when. So there's not much risk in your purchase. But you cannot carry teachings away in a separate container. You put down your money and take the teaching away in your soul by having learned it, and off you go, either helped or injured. Anyway, these are the questions we should look into, with the help of our elders. You and I are still a little too young to get to the bottom of such a great matter. Well, let's do what we had started out to do and go hear this man; and after we have heard him, we can talk with some others also. Protagoras isn't the only one there. There's Hippias of Elis too, and also Prodicus of Ceos, I believe. And many others as well, wise men all."

Having agreed on this, we set out. When we got to the doorway we stood there discussing some point which had come up along the road and which we didn't want to leave unsettled before we went in. So we were standing there in the doorway discussing it until we reached an agreement, and I think the doorman, a eunuch, overheard us. He must have been annoyed with all the traffic of sophists in and out of the house, because when we knocked he opened the door, took one look at us and said;

Eunuch:: "Ha! More sophists! He's busy."

Socrates:: Then he slammed the door in our faces with both hands as hard as he could. We knocked again, and he answered through the locked door;

Eunuch:: “Didn’t you hear me say he’s busy?”

Socrates:: “My good man, we haven’t come to see Callias, and we are not sophists. Calm down. We want to see Protagoras. That’s why we’ve come. So please announce us.” Eventually he opened the door for us.

When we went in we found Protagoras walking in the portico flanked by two groups. On one side were Hipponicus and his brother on his mother’s side, Paralus, son of Pericles, and Charmides, son of Glaucon. On the other side were Pericles’ other son, Xanthippus, Philippides, son of Philomelus, and Antimoerus of Mende, Protagoras’ star pupil who is studying professionally to become a sophist. Following behind and trying to listen to what was being said were a group of what seemed to be mostly foreigners, men whom Protagoras collects from the various cities he travels through. He enchants them with his voice like Orpheus, and they follow the sound of his voice in a trance. There were some locals also in this chorus, whose dance simply delighted me when I saw how beautifully they took care never to get in Protagoras’ way. When he turned around with his flanking groups, the audience to the rear would split into two in a very orderly way and then circle around to either side and form up again behind him. It was quite lovely.

And then I perceived (as Homer says) Hippias of Elis, on a high seat in the other side of the colonnade. Seated on benches around him were Eryximachus, son of Acumenus, Phaedrus of Myrrhinus, Andron, son of Androtion, a number of Elians and a few other foreigners. They seemed to be asking Hippias questions on astronomy and physics, and he, from his high seat, was answering each of their questions point by point.

And not only that, but I saw Tantalus too, for Prodicus of Ceos was also in town. He was in a room which Hipponicus had formerly used for storage, but because of the number of visitors Callias had cleared it out and made it into a guest room. Prodicus was still in bed and looked to be bundled up in a pile of sheepskin fleeces and blankets. Seated on couches next to him were Pausanias from Cerames, and with Pausanias a fairly young boy, well-bred I would say, and certainly good-looking. I think I heard his name is Agathon, and I wouldn't be surprised if he were Pausanias' young love. So this boy was there, and the two Adeimantuses, sons of Cepis and Leucolophides, and there seemed to be some others. What they were talking about I couldn't tell from outside, even though I really wanted to hear Prodicus, a man who in my opinion is godlike in his universal knowledge. But his voice is so deep that it set up a reverberation in the room that blurred what was being said.

We had just arrived when along came Alcibiades the Beautiful (as you call him, and I'm not arguing) and Critias son of Callaeschrus. So when we were inside and had spent a little more time looking at everything, we went up to Protagoras, and "Protagoras, Hippocrates here and I have come to see you."

Protagoras:: "Do you want to talk with me alone or with others present?"

Socrates:: "It doesn't make any difference to us, Listen to what we've come for, and decide for yourself."

Protagoras:: "Well, then, what have you come for?"

Socrates:: "Hippocrates is from here, a son of Apollodoros and a member of a great and well-to-do family. His own natural ability ranks him with the best of anyone his age. It's my impression that he wants to be a man of respect in the city, and he thinks this is most likely to happen if he associates himself with you. So now you must decide. Should we talk about this alone or in the presence of others?”

Protagoras:: “Your discretion on my behalf is appropriate, Socrates. Caution is in order for a foreigner who goes into the great cities and tries to persuade the best of the young men in them to abandon their associations with others, relatives and acquaintances, young and old alike, and to associate with him instead on the grounds that they will be improved by this association. Jealousy, hostility, and intrigue on a large scale are aroused by such activity. Now, I maintain that the sophist’s art is an ancient one, but that the men who practiced it in ancient times, fearing the odium attached to it, disguised it, masking it sometimes as poetry, as Homer and Hesiod and Simonides did, or as mystery religions and prophecy, witness Orpheus and Musaeus, and occasionally, I’ve noticed, even as athletics, as with Iccus of Tarentum and, in our own time, Herodicus of Selymbria (originally of Megara), as great a sophist as any. Your own Agathocles, a great sophist, used music as a front, as did Pythoclides of Ceos, and many others. All of them, as I say, used these various arts as screens out of fear of ill will. And this is where I part company with them all, for I do not believe that they accomplished their end; I believe they failed, in fact, to conceal from the powerful men in the cities the true purpose of their disguises. The masses, needless to say, perceive nothing, but merely sing the tune their leaders announce. Now, for a runaway not to succeed in running away, but to be caught in the open, is sheer folly from the start and inevitably makes men even more hostile than they were before, for on top of everything else they perceive him as a real rogue. So I have come down the completely opposite road. I admit that I am a sophist and that I educate men, and I consider this admission to be a better precaution than denial. And I have given thought to other precautions as well, so as to avoid, God willing, suffering any ill from admitting I am a sophist. I have been in the profession many years now, and I'm old enough to be the father of any of you here. So, if you do have a request, it would give me the greatest pleasure by far to deliver my lecture in the presence of everyone in the house."

Socrates:: It looked to me that he wanted to show off in front of Prodicus and Hippias, and to bask in glory because we had come as his admirers, so I said, "Well, why don't we call Prodicus and Hippias over, and their companions, so that they can listen to us?"

Protagoras:: "By all means!"

Callias:: "Then you want to make this a general session and have everyone take seats for a discussion?"

Socrates:: Callias proposed this, and it seemed like the only thing to do. We were all overjoyed at the prospect of listening to wise men, and we laid hold of the benches and couches ourselves and arranged them over by Hippias, since that's where the benches were already. Meanwhile Callias and Alcibiades had gotten Prodicus up and brought him over with his group.

When we had all taken our seats, Protagoras said;

Protagoras:: "Now, then, Socrates, since these gentlemen also are present, would you please say what it was you brought up to me a little while ago on the young man's behalf."

Socrates:: "Well, Protagoras, as to why we have come, I'll begin as I did before. Hippocrates here has gotten to the point where he wants to be your student, and, quite naturally, he would like to know what he will get out of it if he does study with you. That’s really all we have to say.”

Protagoras took it from there and said;

Protagoras:: “Young man, this is what you will get if you study with me: The very day you start, you will go home a better man, and the same thing will happen the day after. Every day, day after day, you will get better and better.”

Socrates:: When I heard this I said, “What you’re saying, Protagoras, isn’t very surprising, but quite likely. Why, even you, though you are so old and wise, would get better if someone taught you something you didn’t happen to know already. But what if the situation were a little different, and Hippocrates here all of a sudden changed his mind and set his heart on studying with this young fellow who has just come into town, Zeuxippus of Heraclea, and came to him, as he now comes to you, and heard from him the very same thing as from you—that each day he spent with him he would become better and make progress. If Hippocrates asked him in what way he would become better, and toward what he would be making progress, Zeuxippus would say at painting. And if he were studying with Orthagoras of Thebes and he heard from him the same thing as he hears from you and asked him in what he would be getting better every day he studied with him, Orthagoras would say at flute-playing. It is in this way that you must tell me and the young man on whose behalf I am asking the answer to this question: If Hippocrates studies with Protagoras, exactly how will he go away a better man and in what will he make progress each and every day he spends with you?”

Protagoras heard me out and then said;

Protagoras:: “You put your question well, Socrates, and I am only too glad to answer those who pose questions well. If Hippocrates comes to me he will not experience what he would if he studied with some other sophist. The others abuse young men, steering them back again, against their will, into subjects the likes of which they have escaped from at school, teaching them arithmetic, astronomy, geometry, music, and poetry."

Socrates:: —at this point he gave Hippias a significant look—

Protagoras:: "But if he comes to me he will learn only what he has come for. What I teach is sound deliberation, both in domestic matters—how best to manage one's household, and in public affairs—how to realize one's maximum potential for success in political debate and action."

Socrates:: "Am I following what you are saying? You appear to be talking about the art of citizenship, and to be promising to make men good citizens."

Protagoras:: "This is exactly what I claim, Socrates."

Socrates:: "Well, this is truly an admirable technique you have developed, if indeed you have. There is no point in my saying to you anything other than exactly what I think. The truth is, Protagoras, I have never thought that this could be taught, but when you say it can be, I can't very well doubt it. It's only right that I explain where I got the idea that this is not teachable, not something that can be imparted from one human being to another. I maintain, along with the rest of the Greek world, that the Athenians are wise. And I observe that when we convene in the Assembly and the city has to take some action on a building project, we send for builders to advise us; if it has to do with the construction of ships, we send for shipwrights; and so forth for everything that is considered learnable and teachable. But if anyone else, a person not regarded as a craftsman, tries to advise them, no matter how handsome and rich and well-born he might be, they just don’t accept him. They laugh at him and shout him down until he either gives up trying to speak and steps down himself, or the archer-police remove him forcibly by order of the board. This is how they proceed in matters which they consider technical. But when it is a matter of deliberating on city management, anyone can stand up and advise them, carpenter, blacksmith, shoemaker, merchant, ship-captain, rich man, poor man, well-born, low-born—it doesn’t matter—and nobody blasts him for presuming to give counsel without any prior training under a teacher. The reason for this is clear: They do not think that this can be taught. Public life aside, the same principle holds also in private life, where the wisest and best of our citizens are unable to transmit to others the virtues that they possess. Look at Pericles, the father of these young men here. He gave them a superb education in everything that teachers can teach, but as for what he himself is really wise in, he neither teaches them that himself nor has anyone else teach them either, and his sons have to browse like stray sacred cattle and pick up virtue on their own wherever they might find it. Take a good look at Clinias, the younger brother of Alcibiades here. When Pericles became his guardian he was afraid that he would be corrupted, no less, by Alcibiades. So he separated them and placed Clinias in Ariphron’s house and tried to educate him there. Six months later he gave him back to Alcibiades because he couldn’t do anything with him. I could mention a great many more, men who are good themselves but have never succeeded in making anyone else better, whether family members or total strangers. Looking at these things, Protagoras, I just don’t think that virtue can be taught. But when I hear what you have to say, I waver; I think there must be something in what you are talking about. I consider you to be a person of enormous experience who has learned much from others and thought through a great many things for himself. So if you can clarify for us how virtue is teachable, please don't begrudge us your explanation."

Protagoras:: "I wouldn't think of begrudging you an explanation, Socrates, But would you rather that I explain by telling you a story, as an older man to a younger audience, or by developing an argument?"

Socrates:: The consensus was that he should proceed in whichever way he wished.

Protagoras:: "I think it would be more pleasant, if I told you a story.

"There once was a time when the gods existed but mortal races did not. When the time came for their appointed genesis, the gods molded them inside the earth, blending together earth and fire and various compounds of earth and fire. When they were ready to bring them to light the gods put Prometheus and Epimetheus in charge of decking them out and assigning to each its appropriate powers and abilities.

"Epimetheus begged Prometheus for the privilege of assigning the abilities himself. 'When I've completed the distribution,' 'you can inspect it.' Prometheus agreed, and Epimetheus started distributing abilities.

"To some he assigned strength without quickness; the weaker ones he made quick. Some he armed; others he left unarmed but devised for them some other means for preserving themselves. He compensated for small size by issuing wings for flight or an underground habitat. Size was itself a safeguard for those he made large. And so on down the line, balancing his distribution, making adjustments, and taking precautions against the possible extinction of any of the races.

"After supplying them with defenses against mutual destruction, he devised for them protection against the weather. He clothed them with thick pelts and tough hides capable of warding off winter storms, effective against heat, and serving also as built-in, natural bedding when they went to sleep. He also shod them, some with hooves, others with thick pads of bloodless skin. Then he provided them with various forms of nourishment, plants for some, fruit from trees for others, roots for still others. And there were some to whom he gave the consumption of other animals as their sustenance. To some he gave the capacity for few births; to others, ravaged by the former, he gave the capacity for multiple births, and so ensured the survival of their kind.

"But Epimetheus was not very wise, and he absentmindedly used up all the powers and abilities on the nonreasoning animals; he was left with the human race, completely unequipped. While he was floundering about at a loss, Prometheus arrived to inspect the distribution and saw that while the other animals were well provided with everything, the human race was naked, unshod, unbedded, and unarmed, and it was already the day on which all of them, human beings included, were destined to emerge from the earth into the light. It was then that Prometheus, desperate to find some means of survival for the human race, stole from Hephaestus and Athena wisdom in the practical arts together with fire (without which this kind of wisdom is effectively useless) and gave them outright to the human race. The wisdom it acquired was for staying alive; wisdom for living together in society, political wisdom, it did not acquire, because that was in the keeping of Zeus. Prometheus no longer had free access to the high citadel that is the house of Zeus, and besides this, the guards there were terrifying. But he did sneak into the building that Athena and Hephaestus shared to practice their arts, and he stole from Hephaestus the art of fire and from Athena her arts, and he gave them to the human race. And it is from this origin that the resources human beings needed to stay alive came into being. Later, the story goes, Prometheus was charged with theft, all on account of Epimetheus.

"It is because humans had a share of the divine dispensation that they alone among animals worshipped the gods, with whom they had a kind of kinship, and erected altars and sacred images. It wasn't long before they were articulating speech and words and had invented houses, clothes, shoes, and blankets, and were nourished by food from the earth. Thus equipped, human beings at first lived in scattered isolation; there were no cities. They were being destroyed by wild beasts because they were weaker in every way, and although their technology was adequate to obtain food, it was deficient when it came to fighting wild animals. This was because they did not yet possess the art of politics, of which the art of war is a part. They did indeed try to band together and survive by founding cities. The outcome when they did so was that they wronged each other, because they did not possess the art of politics, and so they would scatter and again be destroyed. Zeus was afraid that our whole race might be wiped out, so he sent Hermes to bring justice and a sense of shame to humans, so that there would be order within cities and bonds of friendship to unite them. Hermes asked Zeus how he should distribute shame and justice to humans. 'Should I distribute them as the other arts were? This is how the others were distributed: one person practicing the art of medicine suffices for many ordinary people; and so forth with the other practitioners. Should I establish justice and shame among humans in this way, or distribute it to all?' To all,' said Zeus, 'and let all have a share. For cities would never come to be if only a few possessed these, as is the case with the other arts. And establish this law as coming from me: Death to him who cannot partake of shame and justice, for he is a pestilence to the city.’

“And so it is, Socrates, that when the Athenians (and others as well) are debating architectural excellence, or the virtue proper to any other professional specialty, they think that only a few individuals have the right to advise them, and they do not accept advice from anyone outside these select few. You’ve made this point yourself, and with good reason, I might add. But when the debate involves political excellence, which must proceed entirely from justice and temperance, they accept advice from anyone, and with good reason, for they think that this particular virtue, political or civic virtue, is shared by all, or there wouldn’t be any cities. This must be the explanation for it, Socrates.

“And so you won’t think you’ve been deceived, consider this as further evidence for the universal belief that all humans have a share of justice and the rest of civic virtue. In the other arts, as you have said, if someone claims to be a good flute-player or whatever, but is not, people laugh at him or get angry with him, and his family comes round and remonstrates with him as if he were mad. But when it comes to justice or any other social virtue, even if they know someone is unjust, if that person publicly confesses the truth about himself, they will call this truthfulness madness, whereas in the previous case they would have called it a sense of decency. They will say that everyone ought to claim to be just, whether they are or not, and that it is madness not to pretend to justice, since one must have some trace of it or not be human.

“This, then, is my first point: It is reasonable to admit everyone as an adviser on this virtue, on the grounds that everyone has some share of it. Next I will attempt to show that people do not regard this virtue as natural or self-generated, but as something taught and carefully developed in those in whom it is developed.

“In the case of evils that men universally regard as afflictions due to nature or bad luck, no one ever gets angry with anyone so afflicted or reproves, admonishes, punishes, or tries to correct them. We simply pity them. No one in his right mind would try to do anything like this to someone who is ugly, for example, or scrawny or weak. The reason is, I assume, that they know that these things happen to people as a natural process or by chance, both these ills and their opposites. But in the case of the good things that accrue to men through practice and training and teaching, if someone does not possess these goods but rather their corresponding evils, he finds himself the object of anger, punishment, and reproof. Among these evils are injustice, impiety, and in general everything that is opposed to civic virtue. Offenses in this area are always met with anger and reproof, and the reason is clearly that this virtue is regarded as something acquired through practice and teaching. The key, Socrates, to the true significance of punishment lies in the fact that human beings consider virtue to be something acquired through training. For no one punishes a wrong-doer in consideration of the simple fact that he has done wrong, unless one is exercising the mindless vindictiveness of a beast. Reasonable punishment is not vengeance for a past wrong—for one cannot undo what has been done—but is undertaken with a view to the future, to deter both the wrong-doer and whoever sees him being punished from repeating the crime. This attitude towards punishment as deterrence implies that virtue is learned, and this is the attitude of all those who seek requital in public or in private. All human beings seek requital from and punish those who they think have wronged them, and the Athenians, your fellow citizens, especially do so. Therefore, by my argument, the Athenians are among those who think that virtue is acquired and taught. So it is with good reason that your fellow citizens accept a blacksmith's or a cobbler's advice in political affairs. And they do think that virtue is acquired and taught. It appears to me that both these propositions have been sufficiently proved, Socrates.

"Now, on to your remaining difficulty, the problem you raise about good men teaching their sons everything that can be taught and making them wise in these subjects, but not making them better than anyone else in the particular virtue in which they themselves excel. On this subject, Socrates, I will abandon story for argument. Consider this: Does there or does there not exist one thing which all citizens must have for there to be a city? Here and nowhere else lies the solution to your problem. For if such a thing exists, and this one thing is not the art of the carpenter, the blacksmith, or the potter, but justice, and temperance, and piety—what I may collectively term the virtue of a man, and if this is the thing which everyone should share in and with which every man should act whenever he wants to learn anything or do anything, but should not act without it, and if we should instruct and punish those who do not share in it, man, woman, and child, until their punishment makes them better, and should exile from our cities or execute whoever doesn't respond to punishment and instruction; if this is the case, if such is the nature of this thing, and good men give their sons an education in everything but this, then we have to be amazed at how strangely our good men behave. For we have shown that they regard this thing as teachable both in private and public life. Since it is something that can be taught and nurtured, is it possible that they have their sons taught everything in which there is no death penalty for not understanding it, but when their children are faced with the death penalty or exile if they fail to learn virtue and be nurtured in it— and not only death but confiscation of property and, practically speaking, complete familial catastrophe—do you think they do not have them taught this or give them all the attention possible? We must think that they do, Socrates.

"Starting when they are little children and continuing as long as they live, they teach them and correct them. As soon as a child understands what is said to him, the nurse, mother, tutor, and the father himself fight for him to be as good as he possibly can, seizing on every action and word to teach him and show him that this is just, that is unjust, this is noble, that is. ugly, this is pious, that is impious, he should do this, he should not do that. If he obeys willingly, fine; if not, they straighten him out with threats and blows as if he were a twisted, bent piece of wood. After this they send him to school and tell his teachers to pay more attention to his good conduct than to his grammar or music lessons. The teachers pay attention to these things, and when the children have learned their letters and are getting to understand writing as well as the spoken language, they are given the works of good poets to read at their desks and have to learn them by heart, works that contain numerous exhortations, many passages describing in glowing terms good men of old, so that the child is inspired to imitate them and become like them. In a similar vein, the music teachers too foster in their young pupils a sense of moral decency and restraint, and when they learn to play the lyre they are taught the works of still more good poets, the lyric and choral poets. The teachers arrange the scores and drill the rhythms and scales into the children's souls, so that they become gentler, and their speech and movements become more rhythmical and harmonious. For all of human life requires a high degree of rhythm and harmony. On top of all this, they send their children to an athletic trainer so that they may have sound bodies in the service of their now fit minds and will not be forced to cowardice in war or other activities through physical deficiencies.

“This is what the most able, i.e., the richest, do. Their sons start going to school at the earliest age and quit at the latest age. And when they quit school, the city in turn compels them to learn the laws and to model their lives on them. They are not to act as they please. An analogy might be drawn from the practice of writing-teachers, who sketch the letters faintly with a pen in workbooks for their beginning students and have them write the letters over the patterns they have drawn. In the same way the city has drawn up laws invented by the great lawgivers in the past and compels them to govern and be governed by them. She punishes anyone who goes beyond these laws, and the term for this punishment in your city and others is, because it is a corrective legal action, ‘correction.’

“When so much care and attention is paid to virtue, Socrates, both in public and private, are you still puzzled about virtue being teachable? The wonder would be if it were not teachable.

“Why, then, do many sons of good fathers never amount to anything? I want you to understand this too, and in fact it’s no great wonder, if what I’ve just been saying is true about virtue being something in which no one can be a layman if there is to be a city. For if what I am saying is true— and nothing could be more true: Pick any other pursuit or study and reflect upon it. Suppose, for instance, there could be no city unless we were all flute-players, each to the best of his ability, and everybody were teaching everybody else this art in public and private and reprimanding the poor players and doing all this unstintingly, just as now no one begrudges or conceals his expertise in what is just and lawful as he does his other professional expertise. For it is to our collective advantage that we each possess justice and virtue, and so we all gladly tell and teach each other what is just and lawful. Well, if we all had the same eagerness and generosity in teaching each other flute-playing, do you think, Socrates, that the sons of good flute-players would be more likely to be good flute-players than the sons of poor flute-players? I don't think so at all. When a son happened to be naturally disposed toward flute-playing, he would progress and become famous; otherwise, he would remain obscure. In many cases the son of a good player would turn out to be a poor one, and the son of a poor player would turn out to be good. But as flute-players, they would all turn out to be capable when compared with ordinary people who had never studied the flute. Likewise you must regard the most unjust person ever reared in a human society under law as a paragon of justice compared with people lacking education and law courts and the pervasive pressure to cultivate virtue, savages such as the playwright Pherecrates brought on stage at last year's Lenaean festival. There's no doubt that if you found yourself among such people, as did the misanthropes in that play's chorus, you would be delighted to meet up with the likes of Eurybatus and Phrynondas and would sorely miss the immorality of the people here. As it is, Socrates, you affect delicate sensibilities, because everyone here is a teacher of virtue, to the best of his ability, and you can't see a single one. You might as well look for a teacher of Greek; you wouldn't find a single one of those either. Nor would you be any more successful if you asked who could teach the sons of our craftsmen the very arts which they of course learned from their fathers, to the extent that their fathers were competent, and their friends in the trade. It would be difficult to produce someone who could continue their education, whereas it would be easy to find a teacher for the totally unskilled. It is the same with virtue and everything else. If there is someone who is the least bit more advanced in virtue than ourselves, he is to be cherished.

"I consider myself to be such a person, uniquely qualified to assist others in becoming noble and good, and worth the fee that I charge and even more, so much so that even my students agree. This is why I charge according to the following system: a student pays the full price only if he wishes to; otherwise, he goes into a temple, states under oath how much he thinks my lessons are worth, and pays that amount.

"There you have it, Socrates, my mythic story and my argument that virtue is teachable and that the Athenians consider it to be so, and that it is no wonder that worthless sons are born of good fathers and good sons of worthless fathers, since even the sons of Polyclitus, of the same age as Paralus and Xanthippus here, are nothing compared to their father, and the same is true for the sons of other artisans. But it is not fair to accuse these two yet; there is still hope for them, for they are young."

Socrates:: Protagoras ended his virtuoso performance here and stopped speaking. I was entranced and just looked at him for a long time as if he were going to say more. I was still eager to listen, but when I perceived that he had really stopped I pulled myself together and, looking at Hippocrates, barely managed to say: "Son of Apollodorus, how grateful I am to you for suggesting that I come here. It is marvelous to have heard from Protagoras what I have just heard. Formerly I used to think there was no human practice by which the good become good, but now I am persuaded that there is, except for one small obstacle which Protagoras will explain away, I am sure, since he has explained away so much already. Now, you could hear a speech similar to this from Pericles or some other competent orator if you happened to be present when one of them was speaking on this subject. But try asking one of them something, and they will be as unable to answer your question or to ask one of their own as a book would be. Question the least little thing in their speeches and they will go on like bronze bowls that keep ringing for a long time after they have been struck and prolong the sound indefinitely unless you dampen them. That’s how these orators are: Ask them one little question and they’re off on another long-distance speech. But Protagoras here, while perfectly capable of delivering a beautiful long speech, as we have just seen, is also able to reply briefly when questioned, and to put a question and then wait for and accept the answer—rare accomplishments these.

“Now, then, Protagoras, I need one little thing, and then I’ll have it all, if you’ll just answer me this. You say that virtue is teachable, and if there’s any human being who could persuade me of this, it’s you. But there is one thing you said that troubles me, and maybe you can satisfy my soul. You said that Zeus sent justice and a sense of shame to the human race. You also said, at many points in your speech, that justice and temperance and piety and all these things were somehow collectively one thing: virtue. Could you go through this again and be more precise? Is virtue a single thing, with justice and temperance and piety its parts, or are the things I have just listed all names for a single entity? This is what still intrigues me.”

Protagoras:: ‘This is an easy question to answer, Socrates, Virtue is a single entity, and the things you are asking about are its parts.”

Socrates:: “Parts as in the parts of a face: mouth, nose, eyes, and ears? Or parts as in the parts of gold, where there is no difference, except for size, between parts or between the parts and the whole?”

Protagoras:: “In the former sense, I would think, Socrates: as the parts of the face are to the whole face.”

Socrates:: “Then tell me this. Do some people have one part and some another, or do you necessarily have all the parts if you have any one of them?”

Protagoras:: “By no means, since many are courageous but unjust, and many again are just but not wise.”

Socrates:: “Then these also are parts of virtue—wisdom and courage?”

Protagoras:: “Absolutely, and wisdom is the greatest part.”

Socrates:: “Is each of them different from the others?”

Protagoras:: “Yes.”

Socrates:: “And does each also have its own unique power or function? In the analogy to the parts of the face, the eye is not like the ear, nor is its power or function the same, and this applies to the other parts as well: They are not like each other in power or function or in any other way. Is this how it is with the parts of virtue? Are they unlike each other, both in themselves and in their powers or functions? Is it not clear that this must be the case, if our analogy is valid?”

Protagoras:: “Yes, it must be the case, Socrates.”

Socrates:: “Then, none of the other parts of virtue is like knowledge, or like justice, or like courage, or like temperance, or like piety?”

Protagoras:: “Agreed.”

Socrates:: “Come on, then, and let’s consider together what kind of thing each of these is. Here’s a good first question: Is justice a thing or is it not a thing? I think it is. What about you?”

Protagoras:: “I think so too.”

Socrates:: “The next step, then: Suppose someone asked us, ‘Protagoras and Socrates, tell me about this thing you just named, justice. Is it itself just or unjust?’ My answer would be that it is just. What would your verdict be? The same as mine or different?”

Protagoras:: “The same.”

Socrates:: “Then justice is the sort of thing that is just. That’s how I would reply to the questioner. Would you also?”

Protagoras:: “Yes.”

Socrates:: “Suppose he questioned us further: ‘Do you also say there is a thing called piety?’ We would say we do, right?”

Protagoras:: “Right.”

Socrates:: “‘Do you say this too is a thing?’ We would say we do, wouldn’t we?”

Protagoras:: “That too.”

Socrates:: “Do you say that this thing is by nature impious or pious?’ Myself, I would be irritated with this question and would say, ‘Quiet, man! How could anything else be pious if piety itself is not?’ What about you? “Wouldn’t you answer in the same way?”

Protagoras:: “Absolutely.”

Socrates:: “Suppose he asked us next: ‘Then what about what you said a little while ago? Maybe I didn’t hear you right. I thought you two said that the parts of virtue are related to each other in such a way that no part resembles any other.’ I would answer, ‘There’s nothing wrong with your hearing, except that I didn’t say that. Protagoras here said that in answer to my question.’ If he were to say then, ‘Is he telling the truth, Protagoras? Are you the one who says that one part of virtue is not like another? Is this dictum yours?’ how would you answer him?”

Protagoras:: “I would have to admit it, Socrates.”

Socrates:: “Well, if we accept that, Protagoras, what are we going to say if he asks next, ‘Isn’t piety the sort of thing that is just, and isn’t justice the sort of thing that is pious? Or is it the sort of thing which is not pious? Is piety the sort of thing to be not just, and therefore unjust, and justice impious?’ What are we going to say to him? Personally, I would answer both that justice is pious and piety is just, and I would give the same answer on your behalf (if you would let me), that justice is the same thing as piety, or very similar, and, most emphatically, that justice is the same kind of thing as piety, and piety as justice. What do you think? Will you veto this answer, or are you in agreement with it?”

Protagoras:: “It’s not so absolutely clear a case to me, Socrates, as to make me grant that justice is pious, and piety just. It seems a distinction is in order here. But what’s the difference? If you want, we’ll let justice be pious and piety just.”

Socrates:: “Don’t do that to me! It’s not this ‘if you want’ or ‘if you agree’ business I want to test. It’s you and me I want to put on the line, and I think the argument will be tested best if we take the ‘if’ out.”

Protagoras:: “Well, all right. Justice does have some resemblance to piety. Anything at all resembles any other thing in some way. There is a certain way in which white resembles black, and hard soft, and so on for all the usual polar opposites. And the things we were just talking about as having different powers or functions and not being the same kinds of things— the parts of the face—these resemble each other in a certain way, and they are like each other. So by this method you could prove, if you wanted to, that these things too are all like each other. But it’s not right to call things similar because they resemble each other in some way, however slight, or to call them dissimilar because there is some slight point of dissimilarity.”

Socrates:: I was taken aback, and said to him, “Do you consider the relationship between justice and piety really only one of some slight similarity?”

Protagoras:: “Not exactly, but not what you seem to think it is either.”

Socrates:: “Well, then, since you seem to me to be annoyed about this, let’s drop it and consider another point that you raised. Do you acknowledge that there is such a thing as folly?”

Protagoras:: “Yes.”

Socrates:: “And diametrically opposed to it is wisdom?”

Protagoras:: “It seems so to me.”

Socrates:: “And when people act correctly and beneficially, do they seem to you to be acting temperately or the opposite?”

Protagoras:: “Temperately.”

Socrates:: “Then it is by virtue of temperance that they are temperate?”

Protagoras:: “It has to be.”

Socrates:: “And those who do not act correctly act foolishly, and those who act this way are not temperate?”

Protagoras:: “I agree.”

Socrates:: “And the opposite of acting foolishly is acting temperately?”

Protagoras:: “Yes.”

Socrates:: “And foolish behavior comes from folly, just as temperate behavior comes from temperance?”

Protagoras:: “Yes.”

Socrates:: “And if something is done with strength, it is done strongly; if done with weakness, it is done weakly?”

Protagoras:: “I agree.”

Socrates:: “If it is done with quickness, it is done quickly, and if with slowness, slowly?”

Protagoras:: “Yes.”

Socrates:: “So whatever is done in a certain way is done through the agency of a certain quality, and whatever is done in the opposite way is done through the agency of its opposite?”

Protagoras:: “I agree.”

Socrates:: “Then let’s go. Is there such a thing as beauty?”

Protagoras:: “Yes.”

Socrates:: “Is there any opposite to it except ugliness?”

Protagoras:: “There is not.”

Socrates:: “Is there such a thing as goodness?”

Protagoras:: “There is.”

Socrates:: “Is there any opposite to it except badness?”

Protagoras:: “There is not.”

Socrates:: “Is there such a thing as a shrill tone?”

Protagoras:: “There is.”

Socrates:: “Is there any opposite to it except a deep tone?”

Protagoras:: “No, there is not.”

Socrates:: “So for each thing that can have an opposite, there is only one opposite, not many?”

Protagoras:: “I agree.”

Socrates:: “Suppose we now count up our points of agreement. Have we agreed that there is one opposite for one thing, and no more?”

Protagoras:: “Yes, we have.”

Socrates:: “And that what is done in an opposite way is done through the agency of opposites?”

Protagoras:: “Yes.”

Socrates:: “And have we agreed that what is done foolishly is done in a way opposite to what is done temperately?”

Protagoras:: “We have.”

Socrates:: “And that what is done temperately is done through temperance, and what is done foolishly is done through folly?”

Protagoras:: “Agreed.”

Socrates:: “And it’s true that if it’s done in an opposite way, it is done through the agency of an opposite?”

Protagoras:: “Yes.”

Socrates:: “And one is done through temperance, the other through folly?”

Protagoras:: “Yes.”

Socrates:: “In an opposite way?”

Protagoras:: “Yes.”

Socrates:: “Through opposing agencies?”

Protagoras:: “Yes.”

Socrates:: “Then folly is the opposite of temperance?”

Protagoras:: “It seems so.”

Socrates:: “Well, then, do you recall our previous agreement that folly is the opposite of wisdom?”

Protagoras:: “Yes, I do.”

Socrates:: “And that one thing has only one opposite?”

Protagoras:: “Of course.”

Socrates:: “Then which of these propositions should we abandon, Protagoras? The proposition that for one thing there is only one opposite, or the one stating that wisdom is different from temperance and that each is a part of virtue, and that in addition to being distinct they are dissimilar, both in themselves and in their powers or functions, just like the parts of a face? Which should we abandon? The two statements are dissonant; they are not in harmony with one another. How could they be, if there is one and only one opposite for each single thing, while folly, which is a single thing, evidently has two opposites, wisdom and temperance? Isn't this how it stands, Protagoras?"

He assented, although very grudgingly, and I continued:

"Wouldn't that make wisdom and temperance one thing? And a little while ago it looked like justice and piety were nearly the same thing. Come on, Protagoras, we can't quit now, not before we've tied up these loose ends. So, does someone who acts unjustly seem temperate to you in that he acts unjustly?"

Protagoras:: "I would be ashamed to say that is so, Socrates, although many people do say it."

Socrates:: "Then shall I address myself to them or to you?"

Protagoras:: "If you like, why don't you debate the majority position first?"

Socrates:: "It makes no difference to me, provided you give the answers, whether it is your own opinion or not. I am primarily interested in testing the argument, although it may happen both that the questioner, myself, and my respondent wind up being tested."

At first Protagoras played it coy, claiming the argument was too hard for him to handle, but after a while he consented to answer.

"Let's start all over, then, with this question. Do you think some people are being sensible when they act unjustly?"

Protagoras:: "Let us grant it."

Socrates:: “And by ‘sensible’ you mean having good sense?”

Protagoras:: “Yes.”

Socrates:: “And having good sense means having good judgment in acting unjustly?”

Protagoras:: “Granted.”

Socrates:: “Whether or not they get good results by acting unjustly?”

Protagoras:: “Only if they get good results.”

Socrates:: “Are you saying, then, that there are things that are good?”

Protagoras:: “I am.”

Socrates:: “These good things constitute what is advantageous to people?”

Protagoras:: “Good God, yes! And even if they are not advantageous to people, I can still call them good.”

Socrates:: I could see that Protagoras was really worked up and struggling by now and that he was dead set against answering any more. Accordingly, I carefully modified the tone of my questions.

“Do you mean things that are advantageous to no human being, Protagoras, or things that are of no advantage whatsoever? Do you call things like that good?”

Protagoras:: “Of course not, But I know of many things that are disadvantageous to humans, foods and drinks and drugs and many other things, and some that are advantageous; some that are neither to humans but one or the other to horses; some that are advantageous only to cattle; some only to dogs; some that are advantageous to none of these but are so to trees; some that are good for the roots of a tree, but bad for its shoots, such as manure, which is good spread on the roots of any plant but absolutely ruinous if applied to the new stems and branches. Or take olive oil, which is extremely bad for all plants and is the worst enemy of the hair of all animals except humans, for whose hair it is beneficial, as it is for the rest of their bodies. But the good is such a multifaceted and variable thing that, in the case of oil, it is good for the external parts of the human body but very bad for the internal parts, which is why doctors universally forbid their sick patients to use oil in their diets except for the least bit, just enough to dispel a prepared meal's unappetizing aroma."

Socrates:: When the applause for this speech of Protagoras had died down, I said, "Protagoras, I tend to be a forgetful sort of person, and if someone speaks to me at length I tend to forget the subject of the speech. Now, if I happened to be hard of hearing and you were going to converse with me, you would think you had better speak louder to me than to others. In the same way, now that you have fallen in with a forgetful person, you will have to cut your answers short if I am going to follow you."

Protagoras:: "How short are you ordering me to make my answers? Shorter than necessary?"

Socrates:: "By no means."

Protagoras:: "As long as necessary?"

Socrates:: "Yes."

Protagoras:: "Then should I answer at the length I think necessary or the length you think necessary?"

Socrates:: "Well, I have heard, anyway, that when you are instructing someone in a certain subject, you are able to speak at length, if you choose, and never get off the subject, or to speak so briefly that no one could be briefer. So if you are going to converse with me, please use the latter form of expression, brevity."

Protagoras:: “Socrates, I have had verbal contests with many people, and if I were to accede to your request and do as my opponent demanded, I would not be thought superior to anyone, nor would Protagoras be a name to be reckoned with among the Greeks.”

Socrates:: I could see he was uncomfortable with his previous answers and that he would no longer be willing to go on answering in a dialectical discussion, so I considered my work with him to be finished, and I said so: “You know, Protagoras, I’m not exactly pleased myself that our session has not gone the way you think it should. But if you are ever willing to hold a discussion in such a way that I can follow, I will participate in it with you. People say of you—and you say yourself—that you are able to discuss things speaking either at length or briefly. You are a wise man, after all. But I don’t have the ability to make those long speeches: I only wish I did. It was up to you, who have the ability to do both, to make this concession, so that the discussion could have had a chance. But since you’re not willing, and I’m somewhat busy and unable to stay for your extended speeches— there’s somewhere I have to go—I’ll be leaving now. Although I’m sure it would be rather nice to hear them.”

Having had my say, I stood up as if to go, but as I was getting up, Callias took hold of my wrist with his right hand and grasped this cloak I’m wearing with his left.

Callias:: “We won’t let you go, Socrates, Our discussions wouldn’t be the same without you, so please stay here with us, I beg you. There’s nothing I would rather hear than you and Protagoras in debate. Please do us all a favor.”

Socrates:: By now I was on my feet and really making as if to leave. I said, “Son of Hipponicus, I have always admired your love of wisdom, and I especially honor and hold it dear now. I would be more than willing to gratify you, if you would ask me something that is possible for me. As it is, you might as well be asking me to keep up with Crison of Himera, the champion sprinter, or to compete with the distance runners, or match strides with the couriers who run all day long. What could I say, except that I want it for myself more than you want it for me, but I simply cannot match these runners' pace, and if you want to watch me running in the same race with Crison, you must ask him to slow down to my speed, since I am not able to run fast, but he is able to run slowly. So if you have your heart set on hearing me and Protagoras, you must ask him to answer my questions now as he did at the outset—briefly. If he doesn't, what turn will our dialogue take? To me, the mutual exchange of a dialogue is something quite distinct from a public address."

Callias:: "But you see, Socrates, Protagoras has a point when he says that he ought to be allowed, no less then you, to conduct the discussion as he sees fit."

Socrates:: At this point Alcibiades jumped in and said:

Alcibiades:: "You're not making sense, Callias. Socrates admits that long speeches are beyond him and concedes to Protagoras on that score. But when it comes to dialectical discussion and understanding the give and take of argument, I would be surprised if he yields to anyone. Now, if Protagoras admits that he is Socrates' inferior in dialectic, that should be enough for Socrates. But if he contests the point, let him engage in a question-and-answer dialogue and not spin out a long speech every time he answers, fending off the issues because he doesn't want to be accountable, and going on and on until most of the listeners have forgotten what the question was about, although I guarantee you Socrates won't forget, no matter how he jokes about his memory. So I think that Socrates has a stronger case. Each of us ought to make clear his own opinion."

Socrates:: After Alcibiades it was Critias, I think, who spoke next:

Critias:: “Well, Prodicus and Hippias, it seems to be that Callias is very much on Protagoras’ side, while Alcibiades as usual wants to be on the winning side of a good fight. But there’s no need for any of us to lend partisan support to either Socrates or Protagoras. We should instead join in requesting them both not to break up our meeting prematurely.”

Socrates:: Prodicus spoke up next:

Prodicus:: “That’s well said, Critias. Those who attend discussions such as this ought to listen impartially, but not equally, to both interlocutors. There is a distinction here. We ought to listen impartially but not divide our attention equally: More should go to the wiser speaker and less to the more unlearned. For my part, I think that the two of you ought to debate the issues, but dispense with eristics. Friends debate each other on good terms; eristics are for enemies at odds. In this way our meeting would take a most attractive turn, for you, the speakers, would then most surely earn the respect, rather than the praise, of those of us listening to you. For respect is guilelessly inherent in the souls of the listeners, but praise is all too often merely a deceitful verbal expression. And then, too, we, your audience, would be most cheered, but not pleased, for to be cheered is to learn something, to participate in some intellectual activity, and is a mental state; but to be pleased has to do with eating or experiencing some other pleasure in one’s body.”

Socrates:: Prodicus’ remarks were enthusiastically received by the majority of us, and then the wise Hippias spoke:

Hippias:: “Gentlemen, I regard all of you here present as kinsmen, intimates, and fellow citizens by nature, not by convention. For like is akin to like by nature, but convention, which tyrannizes the human race, often constrains us contrary to nature. Therefore it would be disgraceful for us to understand the nature of things and not—being as we are the wisest of the Greeks and gathered here together in this veritable hall of wisdom, in this greatest and most august house of the city itself—not, I say, produce anything worthy of all this dignity, but bicker with each other as if we were the dregs of society. I therefore implore and counsel you, Protagoras and Socrates, to be reconciled and to compromise, under our arbitration, as it were, on some middle course. You, Socrates, must not insist on that precise, excessively brief form of discussion if it does not suit Protagoras, but rather allow free rein to the speeches, so that they might communicate to us more impressively and elegantly. And you, Protagoras, must not let out full sail in the wind and leave the land behind to disappear into the Sea of Rhetoric. Both of you must steer a middle course. So that’s what you shall do, and take my advice and choose a referee or moderator or supervisor who will monitor for you the length of your speeches.”

Socrates:: Everyone there thought this was a fine idea and gave it their approval. Callias said he wouldn’t let me go, and they requested me to choose a moderator. I said it would be unseemly to choose someone to umpire our speeches. “If the person chosen is going to be our inferior, it is not right for an inferior to supervise his superiors. If he’s our peer that’s no good either, because he will do the same as we would and be superfluous. Choose someone who’s our superior? I honestly think it’s impossible for you to choose someone wiser than Protagoras. And if you choose someone who is not his superior but claim that he is, then you’re insulting him.

Protagoras is just not the insignificant sort of person for whom you appoint a supervisor. For myself, I don't care one way or another. But you have your heart set on this conference and these discussions proceeding, and if that's going to happen, this is what I want to do. If Protagoras is not willing to answer questions, let him ask them, and I will answer, and at the same time I will try to show him how I think the answerer ought to answer. When I've answered all the questions he wishes to ask, then it's his turn to be accountable to me in the same way. So if he doesn't seem ready and willing to answer the actual question asked, you and I will unite in urgently requesting him, as you have requested me, not to ruin our conference. This will not require any one supervisor, since you will all supervise together."

Everyone agreed this was the thing to do. Protagoras wanted no part of it, but he had to agree to ask questions, and when he had asked enough, to respond in turn with short answers.

So he began to ask questions something like this:

Protagoras:: "I consider, Socrates, that the greatest part of a man's education is to be in command of poetry, by which I mean the ability to understand the words of the poets, to know when a poem is correctly composed and when not, and to know how to analyze a poem and to respond to questions about it. So my line of questioning now will still concern the subject of our present discussion, namely virtue, but translated into the sphere of poetry. Now, Simonides somewhere says to Scopas, the son of Creon of Thessaly:

> For a man to become good truly is hard,
> in hands and feet and mind foursquare,
> blamelessly built …

Do you know this lyric ode, or shall I recite it all for you?"

Socrates:: I told him there was no need, for I knew the poem, and it happened to be one to which I had given especially careful attention.

Protagoras:: “Good, So, do you think it’s well made or not?”

Socrates:: “Very well made.”

Protagoras:: “And do you think it’s well made if the poet contradicts himself?”

Socrates:: “No.”

Protagoras:: “Take a better look then.”

Socrates:: “As I’ve said, I’m already familiar enough with it.”

Protagoras:: “Then you must know that at some point later in the ode he says:

> Nor is Pittacus’ proverb in tune
> however wise a man he was.
> Hard it is to be good.

“You do recognize that both these things are said by the same person?”

Socrates:: “I do.”

Protagoras:: “Well, do you think that the latter is consistent with the former?”

Socrates:: “It seems so to me.” I said (but as I said it I was afraid he had a point there). “Doesn’t it seem so to you?”

Protagoras:: “How can anyone who says both these things be consistent? First, he asserts himself that it is hard for a man truly to become good, and then, a little further on in his poem he forgets and criticizes Pittacus for saying the same thing as he did, that it is hard for a man to be good, and refuses to accept from him the same thing that he himself said. And yet, when he criticizes him for saying the same thing as himself, he obviously criticizes himself as well, so either the earlier or the later must not be right.”

Socrates:: Protagoras got a noisy round of applause for this speech. At first I felt as if I had been hit by a good boxer. Everything went black and I was reeling from Protagoras’ oratory and the others’ clamor. Then, to tell you the truth, to stall for time to consider what the poet meant, I turned to Prodicus and, calling on him, “Prodicus, Simonides was from your hometown, wasn’t he? It’s your duty to come to the man’s rescue, so I don’t mind calling for your help, just as Homer says Scamander called Simois to help him when he was besieged by Achilles:

> Dear brother, let’s buck this hero’s strength together.

So also do I summon your aid, lest to our dismay Protagoras destroy Simonides. But really, Prodicus, Simonides’ rehabilitation does require your special art, by which you distinguish ‘wanting’ from ‘desiring’ and make all the other fine distinctions that you did just a while ago. So tell me if you agree with me, because it’s not clear to me that Simonides does in fact contradict himself. Just give us your offhand opinion. Are becoming and being the same or different?”

Prodicus:: “Good heavens, different.”

Socrates:: “All right. Now, in the first passage, Simonides declared as his own opinion that it is hard for a man truly to become good.”

Protagoras:: “That’s right.”

Socrates:: “Then he criticizes Pittacus not for saying the same thing as himself, as Protagoras thinks, but for saying something different. Because Pittacus did not say that it is hard to become good, as Simonides said, but to be good. As Prodicus here says, being and becoming are not the same thing, Protagoras. And if being is not the same as becoming, Simonides does not contradict himself. Perhaps Prodicus and many others might agree with Hesiod that it is difficult to become good:

> The gods put Goodness where we have to sweat
> To get at her. But once you reach the top
> She's as easy to have as she was hard at first."

Prodicus applauded me when he heard this, but Protagoras said;

Protagoras:: "Your rehabilitation, Socrates, has a crippling error greater than the one you are correcting."

Socrates:: "Then I've done my work badly, and I am the ridiculous sort of physician whose cure is worse than the disease."

Protagoras:: "That's exactly right."

Socrates:: "How so?"

Protagoras:: "The poet's ignorance would be monumental if he says the possession of virtue is so trivial when everyone agrees it is the hardest thing in the world."

Socrates:: Then I said, "By heaven, Prodicus' participation in our discussion couldn't be more timely. It may well be, Protagoras, that Prodicus' wisdom is of ancient and divine origin, dating back to the time of Simonides or even earlier. But although your experience is very broad, it does not seem to extend to this branch of wisdom, which I have been schooled in as a pupil of Prodicus. And now it appears that you do not understand that Simonides may well have not conceived of the word 'hard' as you do. In much the same way Prodicus corrects me each time I use the word 'terrible' to praise you or someone else, as, for example, 'Protagoras is a terribly wise man.' When I say that, he asks me if I am not ashamed to call good things terrible. For terrible, he says, is bad. No one ever speaks of terrible wealth, or terrible peace, or terrible well-being, but we do hear of terrible disease, terrible war, and terrible poverty, ‘terrible’ here being ‘bad.’ So perhaps the Ceans and Simonides conceived of ‘hard’ as ‘bad’ or something else that you do not understand. Let’s ask Prodicus. He’s just the right person to consult on Simonides’ dialect. Prodicus, what did Simonides mean by ‘hard’?”

Prodicus:: “Bad.”

Socrates:: “Then this is why he criticizes Pittacus for saying it is hard to be good, just as if he had heard him say it is bad to be good. Right, Prodicus?”

Prodicus:: “What else do you think Simonides meant, Socrates? He was censuring Pittacus, a man from Lesbos brought up in a barbarous dialect, for not distinguishing words correctly.”

Socrates:: “Well, Protagoras, you hear Prodicus. Do you have anything to say in response?”

Protagoras:: “You’ve got it all wrong, Prodicus, I am positive that Simonides meant by ‘hard’ the same thing we do: not bad,’ but whatever is not easy and takes a lot of effort.”

Socrates:: “Oh, but I think so too, Protagoras, This is what Simonides meant, and Prodicus knows it. He was joking and thought he would test your ability to defend your own statement. The best proof that Simonides did not mean that ‘hard’ is ‘bad’ is found in the very next phrase, which says:

God alone can have this privilege.

He cannot very well mean that it is bad to be good if he then says that God alone has this privilege. Prodicus would call Simonides a reprobate for that and no Cean at all. But I would like to tell you what I think Simonides’ purpose is in this ode, if you would like to test my command (to use your term) of poetry. If you'd rather, though, I’ll listen to you.”

Protagoras heard me out and said;

Protagoras:: “If you please, Socrates.”

Socrates:: and then Prodicus, Hippias, and the others urged me on.

"All right, then, I will try to explain to you what I think this poem is about. Philosophy, first of all, has its most ancient roots and is most widespread among the Greeks in Crete and Lacedaemon, and those regions have the highest concentration of sophists in the world. But the natives deny it and pretend to be ignorant in order to conceal the fact that it is by their wisdom that they are the leaders of the Greek world, something like those sophists Protagoras was talking about. Their public image is that they owe their superiority to their brave fighting men, and their reason for promoting this image is that if the real basis for their superiority were discovered, i.e., wisdom, everyone else would start cultivating it. This is top secret; not even the Spartanizing cults in the other cities know about it, and so you have all these people getting their ears mangled aping the Spartans, lacing on leather gloves, exercising fanatically and wearing short capes, as if Sparta's political power depended on these things. And when the citizens in Sparta want some privacy to have free and open discussions with their sophists, they pass alien acts against any Spartanizers and other foreigners in town, and conceal their meetings from the rest of the world. And so that their young men won't unlearn what they are taught, they do not permit any of them to travel to other cities (the Cretans don't either). Crete and Sparta are places where there are not only men but women also who take pride in their education. You know how to test the truth of my contention that the Spartans have the best education in philosophy and debate? Pick any ordinary Spartan and talk with him for a while. At first you will find he can barely hold up his end of the conversation, but at some point he will pick his spot with deadly skill and shoot back a terse remark you'll never forget, something that will make the person he's talking with (in this case you) look like a child. Acute observers have known this for a long time now: To be a Spartan is to be a philosopher much more than to be an athlete. They know that to be able to say something like that is the mark of a perfectly educated man. We're talking about men like Thales of Miletus, Pittacus of Mytilene, Bias of Priene, our own Solon, Cleobulus of Lindus, Myson of Chen, and, the seventh in the list, Chilon of Sparta. All of these emulated, loved, and studied Spartan culture. You can see that distinctive kind of Spartan wisdom in their pithy, memorable sayings, which they jointly dedicated as the first fruits of their wisdom to Apollo in his temple at Delphi, inscribing there the maxims now on everyone's lips: 'Know thyself' and 'Nothing in excess.'

"What is my point? That the characteristic style of ancient philosophy was laconic brevity. It was in this context that the saying of Pittacus—It is hard to be good—was privately circulated with approval among the sages. Then Simonides, ambitious for philosophical fame, saw that if he could score a takedown against this saying, as if it were a famous wrestler, and get the better of it, he would himself become famous in his own lifetime. So he composed this poem as a deliberate attack against this maxim. That's how it seems to me.

"Let's test my hypothesis together, to see whether what I say is true. If all the poet wanted to say was that it is hard to become good, then the beginning of the poem would be crazy, for he inserted there an antithetical particle. It doesn't make any sense to insert this unless one supposes that Simonides is addressing the Pittacus maxim as an opponent. Pittacus says it is hard to be good; Simonides rebuts this by saying, 'No, but it is hard for a man to become good, Pittacus, truly.' Notice that he does not say truly good; he is not talking about truth in the context of some things being truly good and other things being good but not truly so. This would create an impression of naïveté very unlike Simonides. The position of ‘truly’ in the verse must be a case of hyperbaton. We have to approach this maxim of Pittacus by imagining him speaking and Simonides replying, something like this: Pittacus: ‘Gentlemen, it is hard to be good.’ Simonides: ‘What you say is not true, Pittacus, for it is not being but becoming good, in hands and feet and mind foursquare, blamelessly built—that is hard truly.’ This way the insertion of the antithetical particle makes sense, and the ‘truly’ feels correct in its position at the end. Everything that comes after is evidence for this interpretation. The poem is full of details that testify to its excellent composition; indeed, it is a lovely and exquisitely crafted piece, but it would take a long time to go through it from that point of view. Let’s review instead the overall structure and intention of the ode, which is from beginning to end a refutation of Pittacus’ maxim.

“A few lines later he states (imagine he is making a speech): ‘To become good truly is hard, and although it may be possible for a short period of time, to persist in that state and to be a good man, as you put it, Pittacus, is not humanly possible. God alone can have this privilege;

> But that man inevitably is bad
> whom incapacitating misfortune throws down.

“Whom does incapacitating misfortune throw down when it comes to, say, the command of a ship? Clearly not the ordinary passenger, who is always susceptible. You can’t knock down someone already supine; you can only knock down someone standing up an’ render him supine. In the same way, incapacitating misfortune would overthrow only someone who is capable, not the chronically incapable. A hurricane striking a pilot would incapacitate him, a bad season will do it to a farmer, and the same thing applies to a doctor. For the good is susceptible to becoming bad, as another poet testifies:

> The good man is at times bad, at times good.

"But the bad is not susceptible to becoming; it must always be. So that when incapacitating misfortune throws down a man who is capable, wise, and good, he must inevitably be bad. You say, Pittacus, that it is hard to be good; in fact, to become good is hard, though possible, but to be good is impossible.

> Faring well, every man is good;
> Bad, faring ill.

"What does it mean to fare well in letters; what makes a man good at them? Clearly, the learning of letters. What kind of faring well makes a good doctor? Clearly, learning how to cure the sick. 'Bad, faring ill': who could become a bad doctor? Clearly, someone who is, first, a doctor and, second, a good doctor. He could in fact become a bad doctor, but we who are medical laymen could never by faring ill become doctors or carpenters or any other kind of professional. And if one cannot become a doctor by faring ill, clearly one cannot become a bad one either. In the same way a good man may eventually become bad with the passage of time, or through hardship, disease, or some other circumstance that involves the only real kind of faring ill, which is the loss of knowledge. But the bad man can never become bad, for he is so all the time. If he is to become bad, he must first become good. So the tenor of this part of the poem is that it is impossible to be a good man and continue to be good, but possible for one and the same person to become good and also bad, and those are best for the longest time whom the gods love.'

"All this is directed at Pittacus, as the next few lines of the poem make even clearer:

Therefore never shall I seek for the impossible,
cast away my life’s lot on empty hope, a quixotic quest
for a blameless man among those who reap the broad earth’s fruit,
but if I find him you will have my report.

This is strong language, and he keeps up his attack on Pittacus’ maxim throughout the poem:

All who do no wrong willingly
I praise and love.
Necessity not even the gods resist.

Socrates:: This is spoken to the same end. For Simonides was not so uneducated as to say that he praised all who did nothing bad willingly, as if there were anyone who willingly did bad things. I am pretty sure that none of the wise men thinks that any human being willingly makes a mistake or willingly does anything wrong or bad. They know very well that anyone who does anything wrong or bad does so involuntarily. So also Simonides, who does not say that he praises those who willingly do nothing bad; rather he applies the term ‘willingly’ to himself. He perceived that a good man, an honorable man, often forces himself to love and praise someone utterly different from himself, one’s alienated father perhaps, or mother, or country. Scoundrels in a similar situation are almost happy to see their parents’ or country’s trouble and viciously point it out and denounce it so that their own dereliction of duty toward them will not be called into question. They actually exaggerate their complaints and add gratuitous to unavoidable hostility, whereas good men conceal the trouble and force themselves to give praise, and if they are angry because their parents or country wronged them, they calm themselves down and reconcile themselves to it, and they force themselves to love and praise their own people. I think that Simonides reflected that on more than one occasion he himself had eulogized some tyrant or other such person, not willingly but because he had to. So he is saying to Pittacus: Tittacus, it is not because I am an overcritical person that I am criticizing you, since;

> enough for me a man who is not bad
> nor too intractable, who knows civic Right, a sound man.
> I shall not blame him, for I am not fond of blame.
> Infinite the tribe of fools.'

the implication being that a censorious person would have his hands full blaming them.

> 'All is fair in which foul is not mixed.'

The sense here is not that all is white in which black is not mixed, which would be ludicrous in many ways, but rather that he himself accepts without any objection what is in between. 'I do not seek.' he says;

> 'for a blameless man among those who reap the broad earth's fruit,
> but if I find him you will have my report.'

The meaning is that 'on those terms I will never praise anyone, but I am happy with an average man who does no wrong, since I willingly

> praise and love all'—

—note the Lesbian dialect form of the verb 'praise,' since he is addressing Pittacus—

> 'all who do no wrong'

(this is where the pause should be, before 'willingly')

> 'willingly
> I praise and love

but there are some whom I praise and love unwillingly. So if you spoke something even moderately reasonable and true, Pittacus, I would never censure you. But the fact is that you have lied blatantly yet with verisimilitude about extremely important issues, and for that I do censure you.'

"And that, Prodicus and Protagoras, is what I think was going through Simonides' mind when he composed this ode."

Then Hippias said:

Hippias:: “I am favorably impressed by your analysis of this ode, Socrates. I have quite a nice talk on it myself, which I will present to you if you wish.”

Alcibiades:: “Yes, Hippias, some other time, though. What should be done now is what Socrates and Protagoras agreed upon, which is for Socrates to answer any questions Protagoras may still have to ask, or if he so chooses, to answer Socrates’ questions.”

Socrates:: “I leave it up to Protagoras, but if it’s all right with him, why don’t we say good-bye to odes and poetry and get back to what I first asked him, a question, Protagoras, which I would be glad to settle in a joint investigation with you. Discussing poetry strikes me as no different from the second-rate drinking parties of the agora crowd. These people, largely uneducated and unable to entertain themselves over their wine by using their own voices to generate conversation, pay premium prices for flute-girls and rely on the extraneous voice of the reed flute as background music for their parties. But when well-educated gentlemen drink together, you will not see girls playing the flute or the lyre or dancing, but a group that knows how to get together without these childish frivolities, conversing civilly no matter how heavily they are drinking. Ours is such a group, if indeed it consists of men such as most of us claim to be, and it should require no extraneous voices, not even of poets, who cannot be questioned on what they say. When a poet is brought up in a discussion, almost everyone has a different opinion about what he means, and they wind up arguing about something they can never finally decide. The best people avoid such discussions and rely on their own powers of speech to entertain themselves and test each other. These people should be our models. We should put the poets aside and converse directly with each other, testing the truth and our own ideas. If you have more questions to ask, I am ready to answer them; or, if you prefer, you can render the same service to me, and we can resume where we broke off and try to reach a conclusion."

I went on in this vein, but Protagoras would not state clearly which alternative he preferred. So Alcibiades looked over at Callias and said;

Alcibiades:: "Callias, do you think Protagoras is behaving well in not making it clear whether he will participate in the discussion or not? I certainly don't. He should either participate or say he is not going to, so we will know how he stands, and Socrates, or whoever, can start a discussion with someone else."

Socrates:: It looked to me that Protagoras was embarrassed by Alcibiades' words, not to mention the insistence of Callias and practically the whole company. In the end he reluctantly brought himself to resume our dialogue and indicated he was ready to be asked questions.

"Protagoras, I don't want you to think that my motive in talking with you is anything else than to take a good hard look at things that continually perplex me. I think that Homer said it all in the line;

Going in tandem, one perceives before the other.

Human beings are simply more resourceful this way in action, speech, and thought. If someone has a private perception, he immediately starts going around and looking until he finds somebody he can show it to and have it corroborated. And there is a particular reason why I would rather talk with you than anyone else: I think you are the best qualified to investigate the sort of things that decent and respectable individuals ought to examine, and virtue especially. Who else but you? Not only do you consider yourself to be noble and good but, unlike others who are themselves decent and respectable individuals yet unable to make others so, you are not only good yourself but able to make others good as well, and you have so much self-confidence that instead of concealing this skill, as others do, you advertise it openly to the whole Greek world, calling yourself a sophist, highlighting yourself as a teacher of virtue, the first ever to have deemed it appropriate to charge a fee for this. How could I not solicit your help in a joint investigation of these questions? There is no way I could not.

"So right now I want you to remind me of some of the questions I first asked, starting from the beginning. Then I want to proceed together to take a good hard look at some other questions. I believe the first question was this: Wisdom, temperance, courage, justice, and piety—are these five names for the same thing, or is there underlying each of these names a unique thing, a thing with its own power or function, each one unlike any of the others? You said that they are not names for the same thing, that each of these names refers to a unique thing, and that all these are parts of virtue, not like the parts of gold, which are similar to each other and to the whole of which they are parts, but like the parts of a face, dissimilar to the whole of which they are parts and to each other, and each one having its own unique power or function. If this is still your view, say so; if it's changed in any way, make your new position clear, for I am certainly not going to hold you accountable for what you said before if you want to say something at all different now. In fact, I wouldn't be surprised if you were just trying out something on me before."

Protagoras:: "What I am saying to you, Socrates, is that all these are parts of virtue, and that while four of them are reasonably close to each other, courage is completely different from all the rest. The proof that what I am saying is true is that you will find many people who are extremely unjust, impious, intemperate, and ignorant, and yet exceptionally courageous.”

Socrates:: “Hold it right there, This is worth looking into. Would you say courageous men are confident, or something else?”

Protagoras:: “Confident, yes, and ready for action where most men would be afraid.”

Socrates:: “Well, then, do you agree that virtue is something fine, and that you offer yourself as a teacher of it because it is fine?”

Protagoras:: “The finest thing of all, unless I am quite out of my mind.”

Socrates:: “Then is part of it worthless and part of it fine, or all of it fine?”

Protagoras:: “Surely it is all as fine as can be.”

Socrates:: “Do you know who dives confidently into wells?”

Protagoras:: “Of course, divers.”

Socrates:: “Is this because they know what they are doing, or for some other reason?”

Protagoras:: “Because they know what they are doing.”

Socrates:: “Who are confident in fighting from horseback? Riders or nonriders?”

Protagoras:: “Riders.”

Socrates:: “And in fighting with shields? Shieldmen or nonshieldmen?”

Protagoras:: “Shieldmen, and so on down the line, if that’s what you’re getting at. Those with the right kind of knowledge are always more confident than those without it, and a given individual is more confident after he acquires it than he was before.”

Socrates:: “But haven’t you ever seen men lacking knowledge of all of these occupations yet confident in each of them?”

Protagoras:: “I have, all too confident.”

Socrates:: “Is their confidence courage?”

Protagoras:: “No, because courage would then be contemptible. These men are out of their minds.”

Socrates:: “Then what do you mean by courageous men? Aren’t they those who are confident?”

Protagoras:: “I still hold by that.”

Socrates:: “Then these men who are so confident turn out to be not courageous but mad? And, on the other side, the wisest are the most confident and the most confident are the most courageous? And the logical conclusion would be that wisdom is courage?”

Protagoras:: “You are doing a poor job of remembering what I said when I answered your questions, Socrates. When I was asked if the courageous are confident, I agreed. I was not asked if the confident are courageous. If you had asked me that, I would have said, ‘Not all of them.’ You have nowhere shown that my assent to the proposition that the courageous are confident was in error. What you did show next was that knowledge increases one’s confidence and makes one more confident than those without knowledge. In consequence of this you conclude that courage and wisdom are the same thing. But by following this line of reasoning you could conclude that strength and wisdom are the same thing. First you would ask me if the strong are powerful, and I would say yes. Then, if those who know how to wrestle are more powerful than those who do not, and if individual wrestlers became more powerful after they learn than they were before.

Again I would say yes. After I had agreed to these things, it would be open to you to use precisely these points of agreement to prove that wisdom is strength. But nowhere in this process do I agree that the powerful are strong, only that the strong are powerful. Strength and power are not the same thing. Power derives from knowledge and also from madness and passionate emotion. Strength comes from nature and proper nurture of the body. So also confidence and courage are not the same thing, with the consequence that the courageous are confident, but not all those who are confident are courageous. For confidence, like power, comes from skill (and from passionate emotion and madness as well); courage, from nature and the proper nurture of the soul."

Socrates:: "Would you say, Protagoras, that some people live well and others live badly?"

Protagoras:: "Yes."

Socrates:: "But does it seem to you that a person lives well, if he lives distressed and in pain?"

Protagoras:: "No, indeed."

Socrates:: "Now, if he completed his life, having lived pleasantly, does he not seem to you to have lived well?"

Protagoras:: "It seems that way to me."

Socrates:: "So, then, to live pleasantly is good, and unpleasantly, bad?"

Protagoras:: "Yes, so long as he lived having taken pleasure in honorable things."

Socrates:: "What, Protagoras?" Surely you don't, like most people, call some pleasant things bad and some painful things good? I mean, isn't a pleasant thing good just insofar as it is pleasant, that is, if it results in nothing other than pleasure; and, on the other hand, aren't painful things bad in the same way, just insofar as they are painful?"

Protagoras:: "I don't know, Socrates, if I should answer as simply as you put the question—that everything pleasant is good and everything painful is bad. It seems to me to be safer to respond not merely with my present answer in mind but from the point of view of my life overall, that on the one hand, there are pleasurable things which are not good, and on the other hand, there are painful things which are not bad but some which are, and a third class which is neutral—neither bad or good."

Socrates:: "You call pleasant things those which partake of pleasure or produce pleasure?"

Protagoras:: "Certainly."

Socrates:: "So my question is this: Just insofar as things are pleasurable are they good? I am asking whether pleasure itself is not a good."

Protagoras:: "Just as you always say, Socrates, let us inquire into this matter, and if your claim seems reasonable and it is established that pleasure and the good are the same, then we will come to agreement; otherwise we will disagree."

Socrates:: "Do you wish to lead this inquiry, or shall I?"

Protagoras:: "It is fitting for you to lead, for it is you who brought up the idea."

Socrates:: "All right, will this help to make it clear? When someone evaluates a man's health or other functions of the body through his appearance, he looks at the face and extremities, and might say: 'Show me your chest and back too, so that I can make a better examination.' That's the kind of investigation I want to make. Having seen how you stand on the good and the pleasant, I need to say something like this to you: Come now, Protagoras, and reveal this about your mind: What do you think about knowledge? Do you go along with the majority or not? Most people think this way about it, that it is not a powerful thing, neither a leader nor a ruler. They do not think of it in that way at all; but rather in this way: while knowledge is often present in a man, what rules him is not knowledge but rather anything else—sometimes desire, sometimes pleasure, sometimes pain, at other times love, often fear; they think of his knowledge as being utterly dragged around by all these other things as if it were a slave. Now, does the matter seem like that to you, or does it seem to you that knowledge is a fine thing capable of ruling a person, and if someone were to know what is good and bad, then he would not be forced by anything to act otherwise than knowledge dictates, and intelligence would be sufficient to save a person?"

Protagoras:: "Not only does it seem just as you say, Socrates, but further, it would be shameful indeed for me above all people to say that wisdom and knowledge are anything but the most powerful forces in human activity."

Socrates:: "Right you are. You realize that most people aren't going to be convinced by us. They maintain that most people are unwilling to do what is best, even though they know what it is and are able to do it. And when I have asked them the reason for this, they say that those who act that way do so because they are overcome by pleasure or pain or are being ruled by one of the things I referred to just now."

Protagoras:: "I think people say a lot of other things erroneously too, Socrates."

Socrates:: "Come with me, then, and let's try to persuade people and to teach them what is this experience which they call being overcome by pleasure, because of which they fail to do the best thing when they know what it is. For perhaps if we told them that what they were saying isn't true, but is demonstrably false, they would ask us: 'Protagoras and Socrates, if this is not the experience of being overcome by pleasure, but something other than that, what do you two say it is? Tell us.'"

Protagoras:: "Socrates, why is it necessary for us to investigate the opinion of ordinary people, who will say whatever occurs to them?"

Socrates:: "I think this will help us find out about courage, how it is related to the other parts of virtue. If you are willing to go along with what we agreed just now, that I will lead us toward what I think will turn out to be the best way to make things clear, then fine; if you are not willing, I will give it up."

Protagoras:: "No, you are right; proceed as you have begun."

Socrates:: "Going back, then; if they should ask us: 'We have been speaking of "being overcome by pleasure." What do you say this is?' I would reply to them this way: 'Listen. Protagoras and I will try to explain it to you. Do you hold, gentlemen, that this happens to you in circumstances like these—you are often overcome by pleasant things like food or drink or sex, and you do those things all the while knowing they are ruinous?' They would say yes. Then you and I would ask them again: In what sense do you call these things ruinous? Is it that each of them is pleasant in itself and produces immediate pleasure, or is it that later they bring about diseases and poverty and many other things of that sort? Or even if it doesn't bring about these things later, but gives only enjoyment, would it still be a bad thing, just because it gives enjoyment in whatever way?' Can we suppose then, Protagoras, that they would make any other answer than that bad things are bad not because they bring about immediate pleasure, but rather because of what happens later, disease and things like that?"

Protagoras:: “I think that is how most people would answer.”

Socrates:: “And in bringing about diseases and poverty, do they bring about pain?’ I think they would agree.”

Protagoras:: “Yes.”

Socrates:: “Does it not seem to you, my good people, as Protagoras and I maintain, that these things are bad on account of nothing other than the fact that they result in pain and deprive us of other pleasures?’ Would they agree?”

Protagoras concurred.

“Then again, suppose we were to ask them the opposite question: ‘You who say that some painful things are good, do you not say that such things as athletics and military training and treatments by doctors such as cautery, surgery, medicines, and starvation diet are good things even though painful?’ Would they say so?”

Protagoras:: “Yes.”

Socrates:: “Would you call these things good for the reason that they bring about intense pain and suffering, or because they ultimately bring about health and good condition of bodies and preservation of cities and power over others and wealth?’ Would they agree?”

Protagoras:: “Yes.”

Socrates:: “These things are good only because they result in pleasure and in the relief and avoidance of pain? Or do you have some other criterion in view, other than pleasure and pain, on the basis of which you would call these things good?’ They say no, I think.”

Protagoras:: “And I would agree with you.”

Socrates:: “So then you pursue pleasure as being good and avoid pain as bad?”

Protagoras:: “Yes.”

Socrates:: “So this you regard as bad, pain, and pleasure, you regard as good, since you call the very enjoying of something bad whenever it deprives us of greater pleasures than it itself provides, or brings about greater pains than the very pleasures inherent in it? But if you call the very enjoying of something bad for some other reason and with some other criterion in view than the one I have suggested, you could tell us what it is; but you won’t be able to.”

Protagoras:: “I don’t think they’ll be able to either.”

Socrates:: “And likewise concerning the actual state of being in pain? Do you call the actual condition of being in pain good, whenever it relieves pains greater than the ones it contains or brings about greater pleasures than its attendant pains? Now, if you are using some other criterion than the one I have suggested, when you call the very condition of being pained good, you can tell us what it is; but you won’t be able to.’”

Protagoras:: “Truly spoken.”

Socrates:: “Now, again, gentlemen, if you asked me: ‘Why are you going on so much about this and in so much detail?’ I would reply, forgive me. First of all, it is not easy to show what it is that you call ‘being overcome by pleasure,’ and then, it is upon this very point that all the arguments rest. But even now it is still possible to withdraw, if you are able to say that the good is anything other than pleasure or that the bad is anything other than pain. Or is it enough for you to live life pleasantly without pain? If it is enough, and you are not able to say anything else than that the good and the bad are that which result in pleasure and pain, listen to this. For I say to you that if this is so, your position will become absurd, when you say that frequently a man, knowing the bad to be bad, nevertheless does that very thing, when he is able not to do it, having been driven and overwhelmed by pleasure; and again when you say that a man knowing the good is not willing to do it, on account of immediate pleasure, having been overcome by it. Just how absurd this is will become very clear, if we do not use so many names at the same time, 'pleasant' and 'painful,' 'good' and 'bad'; but since these turned out to be only two things, let us instead call them by two names, first, 'good' and 'bad,' then later, 'pleasant' and 'painful.' On that basis, then, let us say that a man knowing bad things to be bad, does them all the same. If then someone asks us: 'Why?' 'Having been overcome,' we shall reply. 'By what?' 'By what?' he will ask us. We are no longer able to say 'by pleasure,'—for it has taken on its other name, 'the good' instead of 'pleasure'—so we will say and reply that 'he is overcome.' 'By what?' he will ask. 'By the good,' we will say, 'for heaven's sake!' If by chance the questioner is rude he might burst out laughing and say: 'What you're saying is ridiculous—someone does what is bad, knowing that it is bad, when it is not necessary to do it, having been overcome by the good. So,' he will say, 'within yourself, does the good outweigh the bad or not?' We will clearly say in reply that it does not; for if it did, the person whom we say is overcome by pleasure would not have made any mistake. 'In virtue of what,' he might say, 'does the good outweigh the bad or the bad the good? Only in that one is greater and one is smaller, or more and less.' We could not help but agree. 'So clearly then' he will say, 'by "being overcome" you mean getting more bad things for the sake of fewer good things.' That settles that, then.

"So let's now go back and apply the names 'the pleasant' and 'the painful' to these very same things. Now let us say that a man does what before we called 'bad' things and now shall call 'painful' ones, knowing they are painful things, but being overcome by pleasant things, although it is clear that they do not outweigh them. But how else does pleasure outweigh pain, except in relative excess or deficiency? Isn’t it a matter (to use other terms) of larger and smaller, more or fewer, greater or lesser degree?

“For if someone were to say: ‘But Socrates, the immediate pleasure is very much different from the pleasant and the painful at a later time,’ I would reply, ‘They are not different in any other way than by pleasure and pain, for there is no other way that they could differ. Weighing is a good analogy; you put the pleasures together and the pains together, both the near and the remote, on the balance scale, and then say which of the two is more. For if you weigh pleasant things against pleasant, the greater and the more must always be taken; if painful things against painful, the fewer and the smaller. And if you weigh pleasant things against painful, and the painful is exceeded by the pleasant—whether the near by the remote or the remote by the near—you have to perform that action in which the pleasant prevails; on the other hand, if the pleasant is exceeded by the painful, you have to refrain from doing that. Does it seem any different to you, my friends?’ I know that they would not say otherwise.”

Protagoras assented.

“Since this is so, I will say to them: ‘Answer me this: Do things of the same size appear to you larger when seen near at hand and smaller when seen from a distance, or not?’ They would say they do. ‘And similarly for thicknesses and pluralities? And equal sounds seem louder when near at hand, softer when farther away?’ They would agree. ‘If then our wellbeing depended upon this, doing and choosing large things, avoiding and not doing the small ones, what would we see as our salvation in life? Would it be the art of measurement or the power of appearance? While the power of appearance often makes us wander all over the place in confusion, often changing our minds about the same things and regretting our actions and choices with respect to things large and small, the art of measurement in contrast, would make the appearances lose their power by showing us the truth, would give us peace of mind firmly rooted in the truth and would save our life.’ Therefore, would these men agree, with this in mind, that the art of measurement would save us, or some other art?”

Protagoras:: “I agree, the art of measurement would.”

Socrates:: “What if our salvation in life depended on our choices of odd and even, when the greater and the lesser had to be counted correctly, either the same kind against itself or one kind against the other, whether it be near or remote? What then would save our life? Surely nothing other than knowledge, specifically some kind of measurement, since that is the art of the greater and the lesser? In fact, nothing other than arithmetic, since it’s a question of the odd and even? Would these men agree with us or not?”

Protagoras thought they would agree.

“Well, then, my good people: Since it has turned out that our salvation in life depends on the right choice of pleasures and pains, be they more or fewer, greater or lesser, farther or nearer, doesn’t our salvation seem, first of all, to be measurement, which is the study of relative excess and deficiency and equality?”

Protagoras:: “It must be.”

Socrates:: “And since it is measurement, it must definitely be an art, and knowledge.”

Protagoras:: “They will agree.”

Socrates:: “What exactly this art, this knowledge is, we can inquire into later; that it is knowledge of some sort is enough for the demonstration which Protagoras and I have to give in order to answer the question you asked us. You asked it, if you remember, when we were agreeing that nothing was stronger or better than knowledge, which always prevails, whenever it is present, over pleasure and everything else. At that point you said that pleasure often rules even the man who knows; since we disagreed, you went on to ask us this: ‘Protagoras and Socrates, if this experience is not being overcome by pleasure, what is it then; what do you say it is? Tell us.’ If immediately we had said to you ‘ignorance,’ you might have laughed at us, but if you laugh at us now, you will be laughing at yourselves. For you agreed with us that those who make mistakes with regard to the choice of pleasure and pain, in other words, with regard to good and bad, do so because of a lack of knowledge, and not merely a lack of knowledge but a lack of that knowledge you agreed was measurement. And the mistaken act done without knowledge you must know is one done from ignorance. So this is what “being overcome by pleasure” is—ignorance in the highest degree, and it is this which Protagoras and Prodicus and Hippias claim to cure. But you, thinking it to be something other than ignorance, do not go to sophists yourselves, nor do you send your children to them for instruction, believing as you do that we are dealing with something unteachable. By worrying about your money and not giving it to them, you all do badly in both private and public life.’

“This is how we would have answered the many. Now, I ask you, Hippias and Prodicus, as well as Protagoras—this is your conversation also—to say whether you think what I say is true or false.” They all thought that what I said was marvelously true.

“So you agree that the pleasant is good, the painful bad. I beg indulgence of Prodicus who distinguishes among words; for whether you call it ‘pleasant’ or ‘delightful’ or ‘enjoyable,’ or whatever way or manner you please to name this sort of thing, my excellent Prodicus, please respond to the intent of my question.” Prodicus, laughing, agreed, as did the others.

“Well, then, men, what about this? Are not all actions leading toward living painlessly and pleasantly honorable and beneficial? And isn’t honorable activity good and beneficial?”

They agreed.

“Then if the pleasant is the good, no one who knows or believes there is something else better than what he is doing, something possible, will go on doing what he had been doing when he could be doing what is better. To give in to oneself is nothing other than ignorance, and to control oneself is nothing other than wisdom.”

They all agreed.

“Well, then, do you say that ignorance is to have a false belief and to be deceived about matters of importance?”

They all agreed on this.

“Now, no one goes willingly toward the bad or what he believes to be bad; neither is it in human nature, so it seems, to want to go toward what one believes to be bad instead of to the good. And when he is forced to choose between one of two bad things, no one will choose the greater if he is able to choose the lesser.”

They agreed with all of that too.

“Well, then, is there something you call dread or fear? And I address this to you, Prodicus. I say that whether you call it fear or dread, it is an expectation of something bad.”

Protagoras and Hippias thought that this was true of both dread and fear, but Prodicus thought it applied to dread, but not to fear.

“Well, it does not really matter, Prodicus. This is the point. If what I have said up to now is true, then would anyone be willing to go toward what he dreads, when he can go toward what he does not? Or is this impossible from what we have agreed? For it was agreed that what one fears one holds to be bad; no one goes toward those things which he holds to be bad, or chooses those things willingly."

They all agreed.

"Well, Prodicus and Hippias, with this established, let Protagoras defend for us the truth of his first answer. I don't mean his very first answer, for then he said that while there are five parts of virtue, none is like any other, but each one has its own unique power or function. I'm not talking about this now, but about what he said later. For later he said that four of them are very similar to each other, but one differs very much from the others, namely courage. And he said that I would know this by the following evidence: 'You will find, Socrates, many people who are extremely impious, unjust, intemperate, and ignorant, and yet exceptionally courageous; by this you will recognize that courage differs very much from all the other parts of virtue.' I was very surprised at his answer then, and even more so now that I have gone over these things with you. I asked him then if he said that the courageous were confident. And he said, 'Yes, and ready for action too.' Do you remember giving this answer?"

He said he did.

"Well, then, tell us, for what actions are the courageous ready? The same actions as the cowardly?"

Protagoras:: "No."

Socrates:: "Different actions?"

Protagoras:: "Yes."

Socrates:: "Do the cowardly go forward to things which are easily ventured, and the courageous toward things to be feared?"

Protagoras:: "So it is said by most people."

Socrates:: “Right, but I am not asking that. Rather, what do you say the courageous go toward with daring: toward things to be feared, believing them to be fearsome, or toward things not to be feared?”

Protagoras:: “By what you have just said, the former is impossible.”

Socrates:: “Right again; so, if our demonstration has been correct, then no one goes toward those things he considers to be fearsome, since not to be in control of oneself was found to be ignorance.”

He agreed.

“But all people, both the courageous and the cowardly, go toward that about which they are confident; both the cowardly and the courageous go toward the same things.”

Protagoras:: “But, Socrates, what the cowardly go toward is completely opposite to what the courageous go toward. For example, the courageous are willing to go to war, but the cowardly are not.”

Socrates:: “Is going to war honorable or is it disgraceful?”

Protagoras:: “Honorable.”

Socrates:: “Then, if it is honorable, we have agreed before, it is also good, for we agreed that all honorable actions were good.”

Protagoras:: “Very true, and I always believed this.”

Socrates:: “And rightly; but who would you say are not willing to go to war, war being honorable and good?”

Protagoras:: “The cowardly.”

Socrates:: “If a thing is noble and good, is it also pleasant?”

Protagoras:: “That was definitely agreed upon.”

Socrates:: “So, the cowardly, with full knowledge, are not willing to go toward the more honorable, the better, and more pleasant?”

Protagoras:: “If we agree to that, we will undermine what we agreed on earlier.”

Socrates:: “What about the courageous man: Does he go toward the more honorable, the better, and more pleasant?”

Protagoras:: “We must agree to that.”

Socrates:: “So, generally, when the courageous fear, their fear is not disgraceful; nor when they are confident is their confidence disgraceful.”

Protagoras:: “True.”

Socrates:: “If not disgraceful, is it honorable?”

He agreed.

“If honorable, then also good?”

Protagoras:: “Yes.”

Socrates:: “Whereas the fear and confidence of the cowardly, the foolhardy, and madmen are disgraceful?”

He agreed.

“Is their confidence disgraceful and bad for any reason other than ignorance and stupidity?”

Protagoras:: “No, it isn’t.”

Socrates:: “Now then; that through which cowardly people are cowardly, do you call it cowardice or courage?”

Protagoras:: “Cowardice.”

Socrates:: “And aren’t cowards shown to be so through their ignorance of what is to be feared?”

Protagoras:: “Absolutely.”

Socrates:: “So they are cowards because of that ignorance?”

He agreed.

Socrates:: “You agreed that it is through cowardice that they are cowards?”

He said he did.

“So, can we conclude that cowardice is ignorance of what is and is not to be feared?”

He nodded.

Socrates:: “Now, courage is the opposite of cowardice.”

He said yes.

“So then, wisdom about what is and is not to be feared is the opposite of this ignorance?”

He nodded again.

“And this ignorance is cowardice?”

He nodded again, very reluctantly.

“So the wisdom about what is and is not to be feared is courage and is the opposite of this ignorance?”

He would not even nod at this; he remained silent.

And I said, “What’s this, Protagoras? Will you not say yes or no to my question?”

Protagoras:: “Answer it yourself.”

Socrates:: “I have only one more question to ask you. Do you still believe, as you did at first, that some men are extremely ignorant and yet still very courageous?”

Protagoras:: “I think that you just want to win the argument, Socrates, and that is why you are forcing me to answer. So I will gratify you and say that, on the basis of what we have agreed upon, it seems to me to be impossible.”

Socrates:: “I have no other reason for asking these things than my desire to answer these questions about virtue, especially what virtue is in itself. For I know that if we could get clear on that, then we would be able to settle the question about which we both have had much to say, I—that virtue cannot be taught, you—that it can.

“It seems to me that our discussion has turned on us, and if it had a voice of its own, it would say, mockingly, ‘Socrates and Protagoras, how ridiculous you are, both of you. Socrates, you said earlier that virtue cannot be taught, but now you are arguing the very opposite and have attempted to show that everything is knowledge—justice, temperance, courage—in which case, virtue would appear to be eminently teachable. On the other hand, if virtue is anything other than knowledge, as Protagoras has been trying to say, then it would clearly be unteachable. But, if it turns out to be wholly knowledge, as you now urge, Socrates, it would be very surprising indeed if virtue could not be taught. Now, Protagoras maintained at first that it could be taught, but now he thinks the opposite, urging that hardly any of the virtues turn out to be knowledge. On that view, virtue could hardly be taught at all.’

“Now, Protagoras, seeing that we have gotten this topsy-turvy and terribly confused, I am most eager to clear it all up, and I would like us, having come this far, to continue until we come through to what virtue is in itself, and then to return to inquire about whether it can or cannot be taught, so that Epimetheus might not frustrate us a second time in this inquiry, as he neglected us in the distribution of powers and abilities in your story. I liked the Prometheus character in your story better than Epimetheus. Since I take promethean forethought over my life as a whole, I pay attention to these things, and if you are willing, as I said at the beginning, I would be pleased to investigate them along with you.”

Protagoras:: “Socrates, I commend your enthusiasm and the way you find your way through an argument. I really don’t think I am a bad man, certainly the last man to harbor ill will. Indeed, I have told many people that I admire you more than anyone I have met, certainly more than anyone in your generation. And I say that I would not be surprised if you gain among men high repute for wisdom. We will examine these things later, whenever you wish; now it is time to turn our attention elsewhere."

Socrates:: "That is what we should do, if it seems right to you. It is long since time for me to keep that appointment I mentioned. I stayed only as a favor to our noble colleague Callias."

Our conversation was over, and so we left.

# The Protagoras.

Translated by Thomas Taylor.

THE PERSONS OF THE DIALOGUE.
An ASSOCIATE, ALCIBIADES.
SOCRATES, CALLIAS.
HIPPOCRATES, CRITIAS.
PROTAGORAS, PRODICUS.
And HIPPIAS.

Friend:: Whence come you, Socrates? or is it not evident that you come from hunting about the beauty of Alcibiades? For to me, as I lately beheld him, the man appeared to be beautiful. I say the man: for between ourselves, Socrates, he may be called so, since his beard begins now to make its appearance.

Socrates:: But what then? Do you not indeed praise Homer, who says, that the age of a young man when he begins to have a beard is most agreeable? And this is now the age of Alcibiades.

Friend:: But do you not at present come from him? And how is the young man disposed towards you?

Socrates:: He appears to be well affected towards me, and especially so today; for he said many things in defense of me; and I am just now come from him. However, I wish to tell you something very strange: though he was present I did not attend to him, and even forgot to look at him.

Friend:: What great affair then happened to both of you? for you could not meet with any other beautiful person in this city.

Socrates:: I did, however, and with one far more beautiful.

Friend:: What do you say? Was he a citizen or a stranger?

Socrates:: A stranger.

Friend:: Whence came he.

Socrates:: From Abdera.

Friend:: And did this stranger appear to you so beautiful as to surpass in beauty the son of Clinias?

Socrates:: How can it be otherwise, O blessed man, but that the wisest must appear to be the more beautiful person?

Friend:: Do you come to us then, Socrates, from a certain wise man?

Socrates:: I do, and from the wisest indeed of those that exist at present; if Protagoras appears to you to be most wise.

Friend:: What do you say? Is Protagoras arrived hither?

Socrates:: He has been here these three days.

Friend:: And have you then just now been with him?

Socrates:: I have; and I have also both spoken and heard many things.

Friend:: Will you not therefore relate this conversation to us? For if nothing hinders, you may sit here, since this boy will give you his place.

Socrates:: I will certainly relate it to you: and I shall also thank you for attending to it.

Friend:: And we shall thank you for the narration.

Socrates:: There will then be reciprocal thanks. Hear therefore:—This morning, while it was yet dark, Hippocrates, the son of Apollodorus and the brother of Phason, knocked very hard at my gate with his stick, and as soon a it was opened he hastily came to my bedchamber, crying with a loud voice;

Hippocrates:: Socrates, are you asleep?

Socrates:: And I knowing his voice said, This is Hippocrates, do you bring any news:

Hippocrates:: None, but what is good.

Socrates:: You speak well, but what is it? and what brought you hither?

Hippocrates:: Protagoras, is come, and dwells near me.

Socrates:: He has been here for some time; and have you only just heard it?

Hippocrates:: I only heard it, by the gods, this evening;

Socrates:: And at the same time, taking a couch, he sat down at my feet, and said;

Hippocrates:: I returned last night very late from the village of Oinoe; for my boy Satyrus had made his escape from me, and being desirous to tell you that I should pursue him, something else occurring, I forgot it. But after I had returned, supped, and was going to bed, then my brother told me Protagoras was come. On hearing this, I immediately attempted to go to you; but afterwards it appeared to me that the night was already far advanced. Soon therefore falling asleep from weariness, when I awoke, I came hither.

Socrates:: And I knowing the fortitude of Hippocrates, and seeing his astonishment, said, What is this to you? Has Protagoras injured you in any respect?

Laughing he said;

Hippocrates:: By the gods, he has, because he alone is wise, and has not made me to be so.

Socrates:: But, by Jupiter, if you had given him money, and had persuaded him, he would have made you also wise.

Hippocrates:: O Jupiter, and the other gods, I should neither spare my own property, nor that of my friends, to accomplish this, and I now come to you, that you may speak to him in my behalf. For I am younger than you, and at the same time I never either saw or heard Protagoras; for I was a boy when he first came to this place. However, Socrates, all men praise him, and say that his discourses are most wise. But why do we not go to him that we may find him within? And he resides, as I have heard, with Callias the son of Hipponicus. Let us then go.

Socrates:: We will not yet go thither, O good man, For it is too early; but let us go into our court, where we will walk and converse till it is light; and afterwards we will pay a visit to Protagoras. For, as he stays very much at home, we shall most probably find him within.

After this we rose and went into the court, and I, in order to try the strength of Hippocrates, looked at him attentively, and said, Tell me, O Hippocrates, do you now endeavor to go to Protagoras, that by giving him money he may teach you something? What kind of man do you suppose him to be? and what kind of a man would you wish him to make you? Just as if you should go to your namesake, Hippocrates of Cos, who is a defendant of Æsculapius, and should offer him money on your own account, if any one should ask you, O Hippocrates, to what kind of man do you give money, and on what account? what would you answer?

Hippocrates:: I should say, that I give it as to a physician.

Socrates:: And with what view would you give it?

Hippocrates:: That I might become a physician.

Socrates:: But if you went to the Argive Polycletus, or the Athenian Phidias, and gave them a reward on your own account, should any one ask you to what kind of men, and for what purpose, you offered money to Polycletus and Phidias, what would you answer?

Hippocrates:: I should answer that I gave it as to statuaries, and in order that I myself might become a statuary.

Socrates:: Be it so. But we are now going, I and you, to Protagoras, and we are prepared to give him money on your account, if we have sufficient for this purpose, and can persuade him by this mean; but if it be not sufficient, we must borrow from our friends. If therefore some one, on perceiving our great eagerness about these particulars, should say, Tell me, O Socrates and Hippocrates, to what kind of man, and for what purpose do you intend to give money in offering it to Protagoras? what answer should we give him? What other appellation have we heard respecting Protagoras, as with respect to Phidias we have heard him called a statuary, and with respect to Homer, a poet? What thing of this kind have we heard concerning Protagoras?

Hippocrates:: They call this man a sophist, Socrates.

Socrates:: Shall we go therefore, and offer money as to a sophist?

Hippocrates:: Certainly.

Socrates:: If then some one should ask you what do you design to become by going to Protagoras?

He replied, blushing (for there was now daylight sufficient for me to see him);

Hippocrates:: From what we have already admitted, it is evident that my design is to become a sophist.

Socrates:: But, by the gods, will you not be ashamed to proclaim yourself a sophist among the Greeks?

Hippocrates:: I shall, by Jupiter, if it is requisite to speak what I think.

Socrates:: Your design then, Hippocrates, in acquiring the discipline of Protagoras, is not to become a sophist, but you have the same intention as when you went to the school of a grammarian, or that of a musician, or of a master of gymnastic: for you went not to those masters to learn their art, that you might become a professor yourself, but for the sake of acquiring such instruction as becomes a private and a free man.

Hippocrates:: The discipline which I shall receive from Protagoras, perfectly appears to me to be rather a thing of this kind.

Socrates:: Do you know therefore, what you now intend to do? or is it concealed from you?

Hippocrates:: About what?

Socrates:: That you are about to commit your soul to the care of a man, who, as you say, is a sophist; and yet I should wonder if you know what a sophist is. Though if you are ignorant of this, neither do you know to whom you deliver your soul, nor if to a good or a bad thing.

Hippocrates:: But I think, that I know.

Socrates:: Tell me then what you think a sophist is?

Hippocrates:: I think, as the name implies, that he is one knowing in things pertaining to wisdom.

Socrates:: But, the same thing may also be said of painters and architects, that they also are knowing in things pertaining to wisdom. And if any one should ask us in what wise particulars painters are knowing, we should answer him, that their wisdom consisted in the production of images; and we should reply in a similar manner with respect to the rest. But if some one should ask in what particulars is a sophist wise; what should we answer? Of what art is he the master?

Hippocrates:: He is master, Socrates, of the art which enables men to speak eloquently.

Socrates:: Perhaps, we speak the truth, yet we do not speak sufficiently. For this answer demands from us another interrogation, viz. in what a sophist renders men eloquent. For does not a harper also enable those that are instructed by him, to speak about that in which he is knowing, viz. the playing on the harp? Is it not so?

Hippocrates:: It is.

Socrates:: Be it so then. But about what does a sophist render men eloquent? For it is evident, that it must be about things of which he has a knowledge.

Hippocrates:: It is likely.

Socrates:: What then is that thing about which the sophist is knowing, and which he teaches to others?

Hippocrates:: By Jupiter, I can no longer tell you.

Socrates:: Do you know therefore to what danger you are going to expose your soul? or if you were going to subject your body to the hazard of becoming in a good or a bad condition, would you not diligently consider whether you should expose it to this danger or not? Would you not call your friends and relations to consult with them? And would you not take more than one day to deliberate on the affair? But though you esteem your soul far more than your body, and upon it depends your happiness or unhappiness, according as it is well or ill disposed, yet, concerning this, you neither ask advice of your father nor brother, nor of any one of us your associates, whether you should commit your soul to this stranger. But having heard of his arrival yesterday evening, you come next morning before break of day, without considering whether it is proper to commit yourself to him or not, and are prepared to employ not only all your own riches for that purpose, but also those of your friends, as if you already knew that you must by all means associate with Protagoras, whom, as you say, you neither know nor have ever spoken to. But you call him a sophist, though what a sophist is, to which you are about to deliver yourself, you are evidently ignorant.

Hippocrates:: What you say, Socrates, appears to be the truth.

Socrates:: Whether or not, therefore, O Hippocrates, is a sophist a certain merchant and retailer of things by which the soul is nourished?

Hippocrates:: He appears to me, Socrates, to be a character of this kind; but with what is the soul nourished?

Socrates:: By disciplines. But we must take care, my friend, lest the sophist, while he praises what he sells, deceive us, just as those merchants and retailers do respecting the food of the body. For they are ignorant whether the articles of their traffic are salubrious or noxious to the body, but at the same time they praise all that they sell. Those also that buy these articles are alike ignorant in this respect, unless the purchaser should happen to be a master of gymnastic, or a physician. In like manner, those who carry about disciplines in cities, and who hawk and sell them to those that desire to buy them, praise indeed all that they sell, though perhaps some of these also, O most excellent youth, may be ignorant whether what they sell is beneficial or noxious to the soul. And this also may be the case with those that buy of them, unless the purchaser should happen to be a physician of the soul. If therefore you scientifically know what among these is good or bad, you may securely buy disciplines from Protagoras, or any other; but if not, see, O blessed youth, whether you will not be in extreme danger with respect to your dearest concerns. For there is much greater danger in the buying of disciplines than in that of food; since he who buys meats and drinks of a victualer or merchant may take them away in other vessels, and, before he receives them into his body, may place them in his house, and calling in some person skilled in these things, may consult what should be eaten and drank, and what should not, and how much and when it is proper to eat and drink; so that there is no great danger in buying provisions. Disciplines, however, cannot be taken away in another vessel; but it is necessary that he who buys a discipline, receiving and learning it in his soul, should depart either injured or benefited. Let us therefore consider these things with those that are older than we are: for we are too young to discuss an affair of such great importance. Let us now, however, go whither we intended, and hear the man; and after we have heard him, let us also communicate with others. For not only Protagoras is there, but Hippias the Elean, and Prodicus too, I think, and many other wise men.

This being agreed upon by us, we go on; but when we entered the porch, we stopt to discuss something which had occurred to us in the way. That it might not therefore be unfinished, but that being terminated we might thus enter the house, we stood discoursing in the porch, until we agreed with each other. It appears therefore to me that the porter, who was a eunuch, heard us; and that on account of the multitude of the sophists he was enraged with those that came to the house. When therefore we had knocked at the gate he opened it, and seeing us;

Eunuch:: Ha, ha certain sophists. He is not at leisure.

Socrates:: And at the same time taking the gate with both his hands, he shut it with all his force. We then knocked again, and he, without opening the gate, said;

Eunuch:: Did not you hear me tell you that he is not at leisure?

Socrates:: But, my good man, we are not come to Callias, nor are we sophists. Take courage, therefore, for we come requesting to see Protagoras. Announce this to him. Notwithstanding this the man would scarcely open the gate to us. However, he opened it at length, and when we entered, we met with Protagoras walking in the vestibule of the porch. Many followed him; on one side Callias the son of Hipponicus, and his brother by the mother; Paralus the son of Pericles; and Charmides the son of Glauco. On the other side of him were Xanthippus the other son of Pericles, and Philippides the son of Philomelus, and Antimocrus the Mendæan, who was the most illustrious of all the disciples of Protagoras, and who is instructed in his art that he may become a sophist. Of those behind these, who followed them listening to what was said, the greater part appeared to be strangers, whom Protagoras brings with him from the several cities through which he passes, and whom he charms by his voice like another Orpheus: and they, allured by voice, follow him. Some of our countrymen also were in the choir. On seeing this choir I was very much delighted in observing how well they took care not to be an impediment to Protagoras in walking before him; but when he turned, and his company with him, these his auditors that followed him opened to the right and left in a becoming and orderly manner, and always beautifully ranged themselves behind him. After Protagoras, as Homer says, I saw Hippias the Elean seated on a throne in the opposite vestibule of the porch, and round him on benches sat Eryximachus, the son of Acumenus, Phædrus the Myrrhinusian, Andron the son of Androtion, and some others, partly strangers and partly his fellow citizens. They appeared, too, to be interrogating

Hippias concerning the sublime parts of nature, and certain astronomical particulars; but he, sitting on a throne, considered and resolved their questions. I likewise saw Tantalus: for Prodicus the Cean was there; but he was in a certain building which Hipponicus had before used for an office, but which Callias, on account of the multitude that came to his house, had given to the strangers, after having prepared it for their reception. Prodicus therefore was still in bed wrapt up in skins and coverings, and Pausanias of Ceramis was seated by his bedside; and with Pausanias there was a youth, who appeared to me to be of a beautiful and excellent disposition. His form indeed was perfectly beautiful; and his name, as I have heard, was Agatho. Nor did I wonder that he was beloved by Pausanias. There were also the two Adimantes, the one the son of Cephis, and the other the son of Leucolophides, and many others. But as I was without, I was not able to learn what was the subject of their discourse, though I very much desired to hear Prodicus: for he appears to me to be a man perfectly wise and divine. But a certain humming found being produced in the chamber through the grave tone of his voice, prevented me from hearing distinctly what he said. Just as we had entered, Alcibiades, the beautiful as you say, and as I am persuaded he is, and Critias the son of Callaischrus, came after us.

After we had entered therefore, and had discussed certain trifling particulars, and considered what passed, we went to Protagoras; and I said, O Protagoras, I and Hippocrates are come to see you.

Protagoras:: Would you wish to speak with me alone, or in the presence of others?

Socrates:: It makes no difference to us; but when you hear on what account we come, you yourself shall determine this.

Protagoras:: What is it then that hath brought you?

Socrates:: Hippocrates here is our countryman, the son of Apollodorus, and is of a great and happy family, and seems to contend with his equals in age for natural endowments. But he desires to become illustrious in the city; and he thinks that he shall especially effect this if he associates with you, Consider, therefore, whether it is proper for him to converse alone with you about these particulars, or in conjunction with others.

Protagoras:: Your forethought, Socrates, with respect to me is right. For a stranger who goes to great cities, and persuades young people of the greatest quality to leave the associations both of their kindred and others, both the young and the old, and adhere to him alone, that they may become better men by his conversation, ought in doing this to be cautious. For things of this kind are attended with no small envy, together with much malevolence and many stratagems. I say indeed that the sophistic art is ancient, but that those men who first professed it, fearing the hatred to which it would be exposed, sought to conceal it, some with the veil of poetry, as Homer, Hesiod, and Simonides, and others with that of the mysteries and prophecy, as Orpheus and Musæus, and their followers. I perceive also, that some have called this art gymnastic, as Iccus of Tarentum, and as a sophist at present does who is inferior to none, viz. Herodicus the Selymbrianian, who was originally of Megara. But your Agathocles, who was a great sophist, Pythoclides of Ceos, and many others, concealed it under the veil of music. All these, as I said, being afraid of envy, employed these arts as veils. I however, in this particular, do not accord with all these: for I think they did not effect any thing which they wished to accomplish; since these concealments are understood by men of great authority in cities. The vulgar indeed do not perceive them;

but praise certain things which they hear from the sophists. This subterfuge therefore, not being attended with any effect, but becoming apparent, necessarily shows the great folly of him that attempts it, and makes men much more inimical: for they think that a man of this kind is crafty in every thing. I therefore have taken an opposite path: for I acknowledge myself to be a sophist, and a teacher of men: and I think that by this ingenuous confession I avoid envy more safely than by dissimulation. I also direct my attention to other things besides this; so that, as I may say, with the assistance of Divinity, I have suffered nothing dire through confessing that I am a sophist; though I have exercised this art many years: for my age is very great, and I am old enough to be the father of any one of you. So that it will be by far the most pleasant to me, if you discourse with me concerning these particulars in the presence of all those that are in the house.

Socrates:: I then, suspecting that he wished to exhibit himself to Prodicus and Hippias, and to boast that we came to him as being enamored of his wisdom, said, Why may not Prodicus and Hippias be called, and those that are with him, that they may hear us?

Socrates:: By all means let them be called.

Callias:: Shall we prepare seats for you, that you may discourse sitting?

Socrates:: It was agreed to be proper so to do. And at the same time all of us being pleased, as those that were to hear wise men converse, took hold of the benches and couches, and disposed them near to Hippias; for the benches had been there previously placed. In the interim came Callias and Alcibiades, bringing with them Prodicus, who had then risen from his bed, and those that were with him. When therefore we were all seated.

Protagoras:: Now, Socrates, you may tell me before all this company what you a little before mentioned to me about this youth.

Socrates:: My exordium, O Protagoras, is that which I employed before, viz. with what design we came to you. Hippocrates then, here, is desirous of your converse; and says he shall gladly hear what advantage he shall derive from associating with you. This is all we have to say to you.

Protagoras:: O young man, the advantage which you will derive from associating with me is this, that on the day in which you come to me you will go home better than you was before; you will also be more improved on the second than on the first day, and you will always find that you have every day advanced in improvement.

Socrates:: O Protagoras, this is by no means wonderful, but it is fit that it should be so; since you also, though so old and so wise, would become better, if any one should teach you what you do not know. But that is not what we require. But just as if Hippocrates here should immediately change his mind, and should desire to associate with the youth lately arrived at this place, Zeuxippus the son of Heracletus, and coming to him in the same manner as he is now come to you, should hear from him the same things as he has heard from you, that every day by associating with him he would become better, and advance in improvement; if he should ask him, In what do you say I shall become better, and advance in proficiency, Zeuxippus would answer him, In the art of painting. And if he were to associate with the Theban Orthagoras, and should hear from him the same things as he has heard from you, and should ask him in what he would daily become better by associating with him, he would reply, In the art of playing on the pipe. In like manner do you also reply to the youth, and to me asking for him: for you say that Hippocrates here, by associating with Protagoras, will daily become better and advance in improvement; tell us then, O Protagoras, in what he will make this proficiency?

Protagoras:: You interrogate well, Socrates, and I rejoice to answer those who ask in a becoming manner. For Hippocrates, if he comes to me, will not suffer that which he would suffer by associating with any other of the sophists. Other sophists indeed injure youth: for they force them to apply to arts which they are unwilling to learn, by teaching them arithmetic, astronomy, geometry, and music.

Socrates:: And at the same time looking at Hippias, he added;

Protagoras:: But he who comes to me, will not learn any thing else than that for the sake of which he came. The discipline too which he acquires from me is the ability of consulting well about his domestic affairs, so that he may govern his house in the best manner, and so that he may be capable of saying and doing all that is advantageous for his country.

Socrates:: I understand you: for you appear to me to speak of the political art, and to profess to make men good citizens.

Protagoras:: This is the profession which I announce.

Socrates:: What a beautiful artifice you possess! if you do possess it. For nothing else is to be said to you than that which I conceive. For I, O Protagoras, do not think that this can be taught, and yet I cannot disbelieve what you say. It is just, however, that I should inform you whence I think it cannot be taught, nor by men be procured for men. For I, as well as the other Greeks, say that the Athenians are wise. I see, therefore, when we are collected in the assembly, and when it is necessary to do something respecting the building of houses, that the architects being sent for, are consulted about the business; but that when something is to be done concerning the building of ships, shipwrights are consulted; and in a similar manner with respect to other things which they think may be taught and learnt. But if any other person whom they do not think to be an artist attempts to give them advice in these particulars, though he may be very fine and rich and noble, they pay no more attention to him on this account, but laugh and make a noise, until he either desists from speaking through the disturbance, or till the archers, by order of the magistrates, lead or carry him out. In this manner therefore they act respecting things which pertain to art. But when it is requisite to consult about any thing which relates to the government of the city, then the builder, the brazier, the shoe-maker, the merchant, and the sailor, the rich and the poor, the noble and the ignoble, rise, and similarly give their advice, and no one disturbs them, as was the case with the others, as persons who, though they have never learnt nor have had a preceptor, yet attempt to give advice. For it is evident that they do not think this can be taught. Nor does this take place only in public affairs, but in private concerns also; the wisest and best of the citizens are not able to impart to others the virtue which they possess. For Pericles, the father of these youths, has beautifully and well instructed them in those things which are taught by masters; but in those things in which he is wise, he has neither himself instructed them, nor has he sent them to another to be instructed; but they, feeding as it were without restraint, wander about, to see if they can casually meet with virtue.

If you will too, this very same man Pericles, being the tutor of Clinias the younger brother of this Alcibiades, separated them, fearing the former should be corrupted by the latter, and sent Clinias to be educated by Ariphron. Before, however, six months had elapsed, Ariphron, not knowing what to do with him, returned him to Pericles. I could also mention many others to you, who being themselves good men, never made any other man better, neither of their kindred nor strangers. I therefore, O Protagoras, looking to these things, do not think that virtue can be taught. When, however, I hear you asserting these things, I waver, and am of opinion that you speak to the purpose, because I think that you are skilled in many things, and that you have learned many and discovered some things yourself. If, therefore, you can more clearly show us, that virtue may be taught, do not be envious, but demonstrate this to us.

Protagoras:: Indeed, Socrates, I shall not be envious. But whether shall I show you this by relating a fable, as an older to younger men, or shall I discuss it by argument?

Socrates:: Many, therefore, of those that sat with him, left it to his choice.

Protagoras:: It appears, therefore, to me that it will be more agreeable to you to relate a fable.

“There was a time, then, when the gods were alone, but the mortal genera did not exist. But when the destined time of generation came to these, the, gods fashioned them within the earth, by mixing earth and fire together; and such things as are mingled with these two elements. And when they were about to lead them into light, they commanded Prometheus and Epimetheus to distribute to and adorn each with those powers which were adapted to their nature. But Epimetheus requested Prometheus that he might distribute these powers: And, said he, do you attend to my distribution. And having thus persuaded him, he distributed. But in his distributing, he gave to some strength without swiftness, and adorned with swiftness the more imbecile. Some he also armed; but giving to others an unarmed nature, he devised a certain other power for their security. For those whom he had invested with a small body, he either enabled to fly away through wings, or distributed them in a subterranean habitation; but those whom he had increased in magnitude he preserved by their bulk. And thus equalizing, he distributed other things, taking care that no genus should be deprived of the means of preservation.

"After, then, he had secured them from mutual destruction, he took care to defend them against the injuries of the air and seasons, by clothing them with thick hairs and solid skins, so that they might be sufficiently protected in the winter frosts and summer heats; and so that these very things might become appropriate and spontaneous beds to each when they went to rest. Under their feet, likewise, he partly added arms, and partly hairs and solid and bloodless skins. He also imparted to different animals different nutriment; to some, indeed, herbs from the earth, to others the fruits of trees, and to others roots. There were some also whom he permitted to feed on the flesh of other animals: and to some, indeed, he gave the power of generating but a few of their own species, but to those that are devoured by these he imparted fecundity, thus extending safety to the race. However, as Epimetheus was not very wise, he ignorantly bestowed all his powers on irrational animals; but the human race still remained unadorned by him. Prometheus, therefore, came to him while he was doubting, and considered the distribution which he had made. And he saw that other animals were well provided for, but that man was naked, without shoes, without a bed, and unarmed. But now the fatal day was arrived, in which it was necessary that man should emerge from the earth into light. Prometheus, therefore, being dubious what safety he could find for man, stole the artificial wisdom of Vulcan and Minerva, together with fire; since it was impossible that the possession of this wisdom could be useful without fire; and thus he imparted it to man. By these means, therefore, man possessed the wisdom pertaining to life. He had not, however, political wisdom. For this was with Jupiter; and Prometheus was no longer permitted to ascend to the citadel, the habitation of Jupiter. To which we may add, that the guards of Jupiter were terrible. Prometheus, therefore, secretly entered into the common habitation of Minerva and Vulcan, in which the arts were exercised; and stealing the fiery art from Vulcan, and the other from Minerva, he gave them to man: and from this arises the fertility of human life. But Prometheus afterwards, as it is said, through Epimetheus, was punished for his theft. Since, however, man became a partaker of a divine allotment, in the first place through this alliance with divinity, he alone of the other animals believed that there were gods, and endeavored that the altars and statues of the gods should be established. In the next place he articulately distinguished by art, voice and names, and invented houses and garments, shoes and beds, and nourishment from the earth. But men, being thus provided for in the beginning, lived dispersed; for cities were not: hence they were destroyed by wild beasts, through being every where more imbecile than them; and the fabricating art was indeed a sufficient aid to them for nutriment, but was inadequate to the war with wild beasts: for they had not yet the political art, of which the military is a part. They sought therefore to collect themselves together, and to save themselves, building for this purpose cities. When, however, they were thus collected in a body, they injured each other, as not possessing the political art; so that, again being dispersed, they were destroyed by the beasts. Jupiter, therefore, fearing for our race, lest it should entirely perish, sent Hermes, and ordered him to bring Shame and Justice to men, that these two might be the ornaments and the bonds of cities, and the conciliators of friendship. Hermes, therefore, asked after what manner he should give Shame and Justice to men. Whether, said he, as the arts are distributed, so also shall I distribute these? for they are distributed as follows:—One man who possesses the medicinal art is sufficient for many private persons; and in a similar manner other artificers. Shall I, therefore, thus insert Shame and Justice in men? or shall I distribute them to all?—To all, said Jupiter, and let all be partakers of them: for cities will not subsist, if a few only participate of these, as of the other arts. Publish also this law in my name, that he who is incapable of partaking of Shame and Justice shall be punished as the pest of the city."

Thus, Socrates, and on this account, both others and the Athenians, when they discourse concerning building, or any other fabricative art, think that a few only should be consulted; and if any one unskilled in these affairs offers to give advice, they do not allow him, as you say; and it is reasonable, as I say, that they should not. But when they proceed to a consultation concerning political virtue, the whole of which consists from justice and temperance, they very properly permit every man to speak; because it is fit that every one should partake of this virtue, or there can be no cities. This, Socrates, is the cause of that which was doubted. And that you may not think I deceive you in asserting that all men in reality think that every man participates of justice, and of the rest of politic virtue, take this as an argument: in other arts, as you say, if any one asserts that he is a good piper, or skilled in any other art of which he is ignorant, those that hear him either laugh at, or are indignant with him, and his friends admonish him as one insane; but in justice and the other political virtue, though it be known that a certain person is unjust, yet if he asserts the truth of himself before the multitude, they think that he is insane, and that he should not unfold his iniquity; and they say that all men should acknowledge themselves to be just, whether they are or not; or that he who does not pretend that he is just must be mad; as if it were necessary that every one should, in a certain respect, partake of justice, or no longer be a man. I say these things, to show that every man is very properly permitted to give his advice concerning this virtue, because every one is thought to be a partaker of it. But that men do not think that it subsists from nature, nor from chance, but that it may be taught and obtained by study, this I will in the next place endeavor to show you. No one is enraged with another on account of those evils which he thinks arise either from nature or art; nor does he admonish, or teach, or punish the possessors of these evils in order to make them otherwise than they are; but, on the contrary, he pities them. Thus, for instance, who would be so mad as to reprehend the deformed, or the little, or the diseased? For I think they know that these things, viz. such as are beautiful and the contrary, happen to men from nature and fortune. On the contrary, when they think that any one possesses certain evils from study, custom, and learning, then they are indignant, admonish, and punish; among the number of which evils are injustice and impiety, and in short every thing which is contrary to political virtue. And as this species of virtue is obtained by study and discipline, they are on this account indignant with and admonish every one who neglects to acquire it. For if you are willing, O Socrates, to consider what the punishment of the unjust is able to effect, this very thing will teach you that men think virtue is to be acquired. For no one endued with intellect punishes him who has acted unjustly, merely because he has so acted; for he who acts in this manner punishes like a wild beast, irrationally. But he who endeavors to punish with reason, does not punish for the sake of past guilt (for that which has been done cannot be undone), but for the sake of future injustice, that neither this offender himself, nor any other who sees him punished, may again act unjustly. And he who has this conception must he persuaded that virtue may be taught: for punishment is inflicted for the sake of turning others from guilt. All, therefore, that punish, as well privately as publicly, have this opinion. And both other men, and especially the Athenians your fellow citizens, take vengeance on and punish those whom they think have acted unjustly; so that, according to this reasoning, the Athenians also are among the number of those who think that virtue may be acquired and taught. Very properly, therefore, do your fellow citizens admit the brazier and shoe-maker to give advice in political concerns; and, as it appears to me, Socrates, it has been sufficiently demonstrated to you that they consider virtue as a thing which may be taught and acquired.

There still, however, remains the doubt which you introduced concerning illustrious men, viz. on what account they teach their sons, and make them wise in things which may be obtained from preceptors, but do not render them better than others in the virtue for which they themselves are renowned. In order to remove this doubt, Socrates, I shall no longer employ a fable, but argument. For thus conceive: whether is there any one thing or not, of which it is necessary all the citizens should partake, or a city cannot subsist? In this thing your doubt is solved, but by no means otherwise. For if there is this one thing, which is neither the art of the architect, nor of the brazier, nor potter, but is justice, and temperance, and holiness, and in short the virtue of man; if this be the thing, of which it is necessary all should partake, and together with which every man should learn and perform whatever else he wishes to learn or do, but by no means without this; or if he does not partake of it, that he should be taught and punished, whether boy, or man, or woman, till through punishment he becomes better; and he who is not obedient, when punished or taught, is banished from the city, or put to death as one incurable; if this then be the case, and those illustrious men teach their children other things, but not this, consider in how wonderful a manner they become excellent men: for we have shown that they think virtue may be taught both privately and publicly. But since it may be taught, do you think that fathers teach their children other things, the ignorance of which is neither attended with death nor a penalty; but that in other things in which a penalty, death, and exile are the punishments attendant on their children, when they are not instructed nor exercised in virtue, and besides death, the confiscation of their goods, and in short the ruin of their families, they neither teach them these things. nor use their utmost endeavors that they may acquire them? It is necessary to think, Socrates, that fathers, beginning with their children when they are very young, will teach and admonish them as long as they live. For as soon as a boy understands what is said to him, his nurse, mother, pædagogue, and the father himself, drive to the utmost that the boy may become a most excellent character; teaching and pointing out to him, in every word and deed, that this is just, and that unjust; that this is beautiful and that base; and that this is holy, and that unholy: likewise that he should do these things, and not those. And if the boy is willingly persuaded, they think they have done well; but if not, they form him to rectitude by threats and blows, as if he were a distorted and bent piece of wood. In the next place they send him to masters, and these they much more enjoin to pay attention to the morals of the boys, than to the teaching them to read and play on the harp. The preceptors likewise take care of the children; and when the boys have learnt their letters, and their attention is directed to the meaning of what they read, instead of oral precepts, the masters give them the compositions of the best poets to read, and compel them to commit them to memory; because in these there are many admonitions, and many transactions, and praises, and encomiums, of ancient illustrious men, that the boy may be zealous to imitate them, and may desire to become a similar character. The masters of the harp also do other things of a like kind; for they pay attention to temperance, and take care that the boys do not commit any vice. Besides this too, when they have learnt to play on the harp, they teach them the compositions of other good lyric poets, singing them to the harp; and they compel rhythms and harmonies to become familiar to the souls of the boys, that becoming milder, more orderly, and more harmonious, they may be more able both to speak and act: for every life of man requires rhythm and harmony. Further still, besides these things, they send them to masters of exercise, that their bodies being rendered better, may be usefully subservient to the rational part of the soul, and that they may not be compelled to cowardice, through the depravity of their bodies, in war and other actions. And these things are done by those who are most able to do them: but the most able are the most wealthy; and the sons of these begin their exercises the earliest, and continue them the longest. But when they leave their masters, the city compels them to learn the laws, and to live according to the paradigm of these, that they may not act casually from themselves; but in reality, just as writing masters give their scholars, who have not yet learnt to write well, letters to be traced over by them which they have written, and thus compel them to write conformably to their copy; so the city prescribing laws which were the inventions of illustrious and ancient legislators, compels them to govern and to be governed according to these. But it punishes him who transgresses these; and the name which is given to this punishment, both by you, and in many other places, is ευθυαι, corrections, as if it were justice correcting depravity.

As so much attention therefore is paid, both privately and publicly, to virtue, can you still wonder and doubt, O Socrates, whether virtue may be taught? It is not, however, proper to wonder that it can be taught, but it would be much more wonderful if this were not the case. But why then are unworthy sons frequently the offspring of worthy fathers? Learn again the reason of this. For this is not wonderful, if what I have before said is true, that this thing virtue ought not to be peculiar to any one person, in order to the existence of a city. For if this be the case, as I say (and it is so the most of all things), consider and select any other study and discipline whatever. Thus, for instance, suppose that this city could not subsist unless we were all of us players on the pipe, should we not all apply ourselves to this instrument? and would not every one, teach every one, both privately and publicly, to play on it. and would he not reprove him who played unskillfully, and this without any envy? Just as now, no one envies or conceals things just and legal, as is the case in other arts. For mutual justice and virtue are, I think, advantageous to us: and on this account every one most willingly discourses about and teaches things just and legal. If then in playing on the pipe we are thus disposed, with all alacrity and without reserve, to teach each other, do you think, Socrates, that the sons of the most excellent players on the pipe would become good pipers, rather than the sons of bad players on this instrument? I indeed think not; but the boy most happily born for that art would be found to be him who made the greatest proficiency; and he who was not naturally adapted for it would pursue it without glory. And the son of an excellent piper would often be unskilled in that art; and again, a good piper would frequently be the offspring of a bad one. However, they would be all sufficiently excellent, if compared with the unskillful, and with those who know nothing of the piper's art. In like manner think that the man who appears to you to be the most unjust of those who are nurtured by the laws, and among men, is just and the artificer of this thing (justice), if he is compared with men, who have neither discipline, nor courts of justice, nor laws, nor any necessity which compels them to pay every attention to virtue, but are mere savages, such as those which Pherecrates the poet caused to be acted last year, during the festivals of Bacchus. And if you should chance to be among such men as the misanthropes in that play, you would rejoice if you met with Eurybates and Phrynendas, and deploring your fortune, you would desire the depravity of our men. But now you are delicate, Socrates, because all men are teachers of virtue to the utmost of their abilities, though no one appears to you to be so. For if you should search for the man who taught us to speak the Greek tongue, he would be no where to be found: nor, if you were to inquire who it is that can teach the sons of manual artificers this very art which they have learnt from their father, and which both the father and the fellow artists his friends exercise, you would not, I think, O Socrates, easily find the preceptor of these; but it is every where easy to find teachers of the ignorant. And thus it is also with respect to virtue and every thing else. We should likewise rejoice, if he who surpasses us causes us to advance in virtue, though but in a small degree, among the number of which I think I am one, and that I know in a manner, superior to other men, what will contribute to the beautiful and the good, and that I am worthy of the reward which I receive for my instruction, and indeed of more than I receive, as is also the opinion of my disciples. Hence this is the bargain which I usually make: when any one has learnt from me, if he is willing, he pays me the sum of money which I require; but if not, going to a temple and swearing how much the disciplines which I teach are worth, he deposits the sum which he is to pay me. And thus much, O Socrates, I, and the fable, and argument have asserted, to prove that virtue may be taught; and the Athenians also are of the same opinion. We have likewise shown that it is not in any respect wonderful that depraved sons should be the offspring of excellent fathers, since the sons of Polycletus, who are of the same age with Paralus and Xanthippus, are nothing when compared with their father; and in like manner with respect to the sons of other artists. These, however, are not yet to be condemned; for they are young, and hope may be yet entertained of their making a proficiency.

Socrates:: Protagoras therefore, having pointed out these and similar things, ceased to speak; and I having been for a long time charmed, looked still at him, as desiring to hear him still speak. But when I perceived that he had in reality finished his discourse, and when I had with difficulty collected myself, looking to Hippocrates I said, O son of

Apollodorus, how much do I thank you for having brought me hither! For I make much of what I have heard from Protagoras; since before this, I thought that it was not human care by which worthy men become worthy, but now I am persuaded that it is. There is however a small impediment to my belief, which Protagoras will doubtless easily remove, since he has unfolded so much. For if some one should discourse with any one of the popular orators, perhaps he would hear arguments of this kind, such as Pericles delivered, or some other eloquent man; but if some one should ask them concerning any thing, they like a book would have nothing to reply, nor any thing to say. And if a man should ask them any trifling particular respecting what was said, they would resemble brass when struck, which keeps and extends its found for a long time, unless some one lays hold of it. For thus rhetoricians, when asked some trifling thing, reply in an extended speech. But Protagoras here is sufficient to deliver both long and beautiful discourses, as he has just now made it appear; and he is also sufficient, when interrogated, to answer with brevity, and interrogating, to wait for and receive an answer; which can be asserted but of a few. Now then, O Protagoras, I am in want of a certain trifling particular, and if you answer me this, I shall have all that I want. You say that virtue may be taught; and I, if I could be persuaded by any man, should be persuaded by you. But I beseech you to remove the wonder which you excited in my mind while you were speaking. For you say that Jupiter sent justice and shame to men; and afterwards, in many parts of your discourse, you speak of justice, temperance, and sanctity, and of all these collectively, as if virtue were but one thing. Accurately explain to me, therefore, this very thing, whether virtue is one certain thing, but the parts of it are justice, temperance, and sanctity; or whether all these which I have just now mentioned are names of one and the same thing. This it is which I still desire to know.

Protagoras:: But it is easy, Socrates, to answer this question, that virtue being one thing, the particulars which you have adduced are the parts of it.

Socrates:: But whether are they parts, in the same manner as the mouth, nostrils, eyes and ears are parts of the face? or are they parts like the parts of gold, which do not differ from each other and the whole, except in magnitude and parvitude?

Protagoras:: It appears to me, Socrates, that the parts of virtue have the same relation to the whole, as the parts of the face to the whole face.

Socrates:: Whether then, do different men receive a different part of virtue? or is it necessary that he who receives one part should possess all the parts of virtue?

Protagoras:: By no means; since many men are brave, but unjust; and others again are just, but not wise.

Socrates:: But are these parts of virtue, viz. wisdom and fortitude?

Protagoras:: Certainly, the most of all things; and the greatest of all the parts, is wisdom.

Socrates:: But of these parts, is this one thing, and that another?

Protagoras:: Yes.

Socrates:: Has each of them also its proper power, in the same manner as each of the parts of the face? As for instance, the eye is not similar to the ears, nor is the power of it the same; nor do any of the other parts resemble each other, nor are their powers the same, nor are they mutually similar in any other respect. Is it therefore thus also with the parts of virtue, so that the one does not resemble the other, neither in itself, nor in its power? Or is it not evident that it is so, since it is similar to the paradigm which we have introduced?

Protagoras:: But it does thus subsist, Socrates.

Socrates:: No other part of virtue therefore, is such as science, nor such as justice, nor such as fortitude, nor such as temperance, nor such as sanctity.

Protagoras:: It is not.

Socrates:: But come, let us consider in common what kind of a thing each of these is And, in the first place, is justice a certain thing, or is it nothing? For to me it appears to be something. But what does it appear to you to be?

Protagoras:: That it is also something.

Socrates:: What then? If some one should ask you and me, O Protagoras and Socrates, tell me with respect to this very thing which you have just now named justice, whether it is just or unjust? I indeed should answer him that it is just. But what would you say? would your answer be the same with mine or not?

Protagoras:: The same.

Socrates:: I therefore should say that justice is a thing similar to the being just, in reply to the interrogator. And would not you also assert the same?

Protagoras:: Yes.

Socrates:: If then, after this, he should ask us, Do you also say that sanctity is something? we should reply, I think, that we do.

Protagoras:: We should.

Socrates:: But whether do you say that this very thing sanctity is actually adapted to be unholy, or to be holy? For my part, I should be indignant with this question, and should say, Predict better things, O man: for by no means will any thing else be holy unless holiness itself be holy. But what do you say? would not you thus answer?

Protagoras:: Entirely so.

Socrates:: If then, after this he should say, asking us, How then have ye spoken a little before? Or have I not rightly understood you? For you appear to me to assert that the parts of virtue subsisted in such a manner with respect to each other, that one of them does not resemble the other; I should reply, that as to other things, you have understood rightly, but you are mistaken in thinking that I also have said this: for Protagoras gave this answer, but I interrogated him. If then he should say, he speaks the truth, Protagoras: for you say that one part of virtue does not resemble another. This is your assertion. What would be your answer to him?

Protagoras:: It is necessary, Socrates, to acknowledge it.

Socrates:: What then, O Protagoras, assenting to these things, shall we answer him, if he should add, holiness therefore is not of such a nature as to be a just thing, nor is justice such as a holy thing, but such as that which is not holy; and holiness is such as that which is not just. So that what is just is unholy. What shall we say to him in reply? For I, for my own part, should say that justice is holy, and that holiness is just. And for you, if you will permit me, I should reply this very thing, that either justice is the same with holiness, or that it is most similar to it; and that the most of all things, justice is such as holiness, and holiness such as justice. But see whether you hinder me from giving this answer; or does this also appear to you to be the case?

Protagoras:: It does not entirely, Socrates, appear to me to be simply thus, so as to grant that justice is holy, and holiness just; but there appears to me to be a certain difference between them. However, of what consequence is this? For, if you will, let justice be holy, and let holiness be just.

Socrates:: I have nothing to do with *I will*; and *if it is agreeable to you*, let it be reprobated. And let us also be persuaded that the subject of our conversation will be discussed in the best manner, when the particle *if* is removed from it.

Protagoras:: But indeed, justice has something similar to holiness. For one thing always resembles another in a certain respect, contraries alone excepted: for white has no similitude to black, nor hard to soft; and so with respect to other things which appear to be most contrary to each other, and which, as we before observed, possess another power, and of which one does not resemble the other. But there are other things, such as the parts of the face, in which the one is similar to the other. So that although you should confute these things after this manner, if you are of opinion that all things are similar to each other, yet it is not just to call those things similar which possess a certain similitude to each other; as neither is it just to call those things which possess a certain dissimilitude, dissimilars, though they have but very little of the similar.

Socrates:: And I wondering, said to him, do the just and the holy appear to you to be so mutually related, as to possess but a small degree of similitude to each other?

Protagoras:: Not entirely so; nor yet again, do I consider them in the same way as you appear to me to consider them.

Socrates:: But, since these things do not seem to be agreeable to you, we will dismiss them, and consider this other thing which you say. What do you call folly? Do you not say that wisdom is perfectly contrary to it?

Protagoras:: To me it appears to be so.

Socrates:: But when men act rightly and profitably, do they then appear to you to act temperately; or when they act in a contrary manner?

Protagoras:: They appear to me to act temperately, when they act rightly and profitably.

Socrates:: —And do they not act temperately by temperance?

Protagoras:: It is necessary.

Socrates:: Do not therefore those that act wrongly, act foolishly, and thus acting, not act by temperance?

Protagoras:: I agree with you that they do.

Socrates:: The acting foolishly, therefore, is the contrary to acting temperately.

He said it was.

Are not, therefore, things which are done foolishly, so done by folly, but by temperance things which are done temperately?

He granted it.

If then any thing is done by strength, is it not done strongly, and if by weakness, weakly.

Protagoras:: So it appears.

Socrates:: And if any thing is done with swiftness, is it not done swiftly, and if with slowness, slowly?

He said it was.

And if any thing is done after the same manner, is it not done by the same, and if in a contrary manner by the contrary?

He granted it.

Come then, is there something beautiful?

He admitted there was.

And is any thing contrary to this except the base?

Protagoras:: There is not.

Socrates:: But what? Is there something good? And is any thing contrary to this except evil?

Protagoras:: There is not.

Socrates:: Is there also something acute in voice?

He said there is.

And is any thing contrary to this except the grave?

Protagoras:: There is not.

Socrates:: To every one of contraries therefore, there is only one contrary, and not many.

He granted it.

Let us then, repeat the particulars to which we have assented. We have acknowledged that there is only one contrary to one thing, but not more than one.

Protagoras:: We have.

Socrates:: But that which is done contrarily is done by things contrary.

He admitted it.

We also granted that what is done foolishly is done in a manner contrary to that which is done temperately.

He said we did.

But that which is done temperately is done by temperance, and that which is done foolishly, by folly.

He granted it.

But if a thing is done contrarily, is it not done by a contrary?

Protagoras:: Yes.

Socrates:: And the one is done by temperance, and the other by folly.

Protagoras:: Yes.

Socrates:: And are they not done contrarily?

Protagoras:: Entirely so.

Socrates:: Are they not therefore done by contraries?

Protagoras:: Yes.

Socrates:: Folly therefore is contrary to temperance.

Protagoras:: So it appears.

Socrates:: Do you remember, then, that it was before acknowledged by us, that folly is contrary to wisdom?

He agreed that it was.

And did we not also say, that there is only one contrary to one thing.

Protagoras:: We did.

Socrates:: Which therefore of these positions, O Protagoras, shall we reject? That which says there is only one contrary to one thing, or that in which it is asserted, that wisdom is different from temperance? but that each is a part of virtue? And that besides being different, both they and their powers are dissimilar, in the same manner as the parts of the face? Which therefore of these shall we reject? for both of them are not very musically asserted; since they do not accord, nor coharmonize with each other. For how can they accord, if it be necessary that there should only be one contrary to one thing, but not to more than one? But to folly, which is one thing, wisdom and temperance have appeared to be contrary. Is it so, O Protagoras, or not?

He acknowledged that it was so, but very unwillingly.

Will not, therefore, temperance and wisdom be one thing? And again, prior to this, it appeared to us that justice and sanctity were nearly the same thing. But come, said I, Protagoras, let us not be weary, but consider what remains. Does it then appear to you that a man who acts unjustly is wise, because he acts unjustly?

Protagoras:: I, Socrates, should be ashamed to acknowledge this, though it is asserted by many men.

Socrates:: Whether then shall we address ourselves to them, or to you?

Protagoras:: If you are willing, speak first to this assertion of the many.

Socrates:: But it makes no difference to me, if you only answer, whether these things appear to you or not; for I especially direct my attention to the assertion. It may, however, perhaps happen, that I shall both explore myself interrogating, and him who answers.

At first, therefore, Protagoras began to assume some consequence (for he was averse to discuss this affair, and said it was difficult); but afterwards he submitted to answer.

Come then, answer me from the beginning: Do certain persons who act unjustly, appear to you to be wise?

Protagoras:: Let them be so.

Socrates:: And does not the being wise consist in consulting well, even when they act unjustly?

Protagoras:: Be it so.

Socrates:: But whether does this take place if they do well, acting unjustly, or if they do ill?

Protagoras:: If they do well.

Socrates:: Do you then say that certain things are good?

Protagoras:: I do.

Socrates:: Whether, therefore, are those things good which are advantageous to men?

Protagoras:: By Jupiter, they are; and I also call some things good, though they are not advantageous to men.

Socrates:: And Protagoras, when he said this, appeared to me to be ruffled, afraid, and averse to answer. Seeing him, therefore, in this condition, I cautiously and gradually interrogated him; and I said, Whether, O Protagoras, do you speak of things which are advantageous to no man, or of those which are in no respect advantageous? And do you call such things as these good?

Protagoras:: By no means; but I know many things which are useless to men, meats and drinks, and medical potions, and ten thousand other things; and I also know some things which are advantageous to them. There are likewise some things which are by no means profitable to men, but are beneficial to horses; some which are advantageous to oxen only; and others to dogs: others again which are beneficial to no one of these, but to trees; and others which are good to the roots of trees, but pernicious to their blossoms. Thus, for instance, dung is beneficial to the roots of all trees when thrown upon them; but if you were to throw it on their branches and shoots, you would destroy them all. Thus too, oil is a very excellent thing for all plants: but is most hostile to the hairs of all animals except man. For it is beneficial to the hairs of man, and to the rest of his body. And so diversified and all-various a thing is good, that this very thing, oil, is good to the external parts of the body of man, but is most pernicious to his inward parts. And on this account all physicians forbid the diseased the use of oil; or at least only permit them to use it in a very small degree, and just sufficient to correct the bad smell of the food which they take.

Socrates:: Protagoras having thus spoken, those that were present loudly applauded him as one that had made a good speech. And I said, O Protagoras, I am a man naturally forgetful, and if any one makes, a long discourse to me, I forget what was the subject of his discourse. As, therefore, if I were deaf, and you intended to discourse with me, it would be necessary for you to speak a little louder to me than to others; so now, since you happen to have met with a forgetful man, cut your answers for me, and make them shorter, if you wish that I should follow you.

Protagoras:: How would you have me shorten my answers? Must I answer you shorter than is necessary?

Socrates:: By no means.

Protagoras:: But as much as is proper?

Socrates:: Yes.

Protagoras:: Whether, therefore, must my reply be such as appears to me to be necessary, or such as appears to be so to you?

Socrates:: I have heard that you can both speak with prolixity yourself about the same things, and teach another to do the same, so as never to be in want of words; and again, that you can speak with brevity, so that no one can deliver himself in fewer words than you. If, therefore, you intend to discourse with me, use the other method, that of speaking with brevity.

Protagoras:: O Socrates, I have had verbal contests with many men, and if I had done this which you urge me to do, viz. if I had spoken as my antagonist ordered me to speak, I should not have appeared to excel any one, nor would the name of Protagoras have been celebrated in Greece.

Socrates:: And I (for I knew that the former answers did not please him, and that he would not be willing to answer my interrogations) thought that I had no longer any business in the conference. I therefore said, O Protagoras, I do not desire you to discourse with me contrary to your will; but if you are disposed to converse so that I can follow you, then I will discourse with you. For you, according to report, and as you yourself say, are able to speak both with prolixity and brevity: for you are wise. But I am unable to make these long speeches; though I wish that I had the ability. It is fit, however, that you, who are capable of doing both, should yield to my inability, in order that conversation may take place. But now, as you are not willing to do this, and a certain business prevents me from staying to hear your long speeches, I must depart whither it is requisite I should go; though perhaps it would not be unpleasant to me to hear these things from you.

And at the same time having thus spoken, I rose in order to go. But as I was rising, Callias taking hold of me with his right hand, and of my cloak with his left, said;

Callias:: We shall not dismiss you, Socrates: for if you depart, our conversation will be at an end. I beseech you, therefore, stay with us: for there is not any one thing which I would more willingly hear than you and Protagoras discoursing together. Gratify all of us therefore.

Socrates:: (I was now standing as being ready to go), O son of Hipponicus, I have always admired your philosophy; but I now both praise and love it; so that I should wish to gratify you, if you request of me possibilities. But at present, it is just as if you should desire me to run a race with Criso the Himeræan, who is now in the vigor of youth, or with one of those who run and accomplish the longest course, or with some diurnal courier; I should say to you, that I wish much more than you do that I could keep pace with these runners, but that I cannot. If, therefore, you would see me and Criso running a race together, you must request him to keep pace with me: for I am not able to run swiftly, but he is able to run slowly. In like manner, if you desire to hear me and Protagoras, you must request him, that as he at first answered me with brevity the, questions that were asked, he will now also answer me in the same manner: for if he does not, what will be the mode of our discourse? I indeed thought that it is one thing to converse together, and another to harangue.

Callias:: But you see Socrates, that Protagoras appears to speak justly when he says that he ought to be permitted to speak as he pleases, and you as you please.

Socrates:: Alcibiades, therefore taking up the discourse, said;

Alcibiades:: You do not speak well Callias: for Socrates here acknowledges that he cannot make a long speech, and in this yields to Protagoras. But in the ability of discoursing, and knowing how to question and answer, I should wonder if he yielded to any man. If, therefore, Protagoras confesses that he is inferior to Socrates in disputation, it is sufficient for Socrates; but if he denies it, let him dispute, both by questioning and answering without making a long speech to every interrogation, and without deviating from the subject so as to prevent another from speaking. and lengthening his discourse till the greater part of the auditors forget what was the subject of investigation. For as for Socrates, I will be security for him that he will not forget any thing: since he only jests when he says he is forgetful. To me, therefore, Socrates appears to be more, reasonable in what he demands: For it is fit that every one should declare his own opinion.

Socrates:: But after Alcibiades, it was Critias, I think, who said;

Critias:: O Prodicus and Hippias, Callias indeed appears some to be very much for Protagoras; but Alcibiades is always fond of contention in every thing to which he applies himself. We, however, ought not to contend with each other, either for Socrates or Protagoras, but we should request both of them in common not to dissolve the conference in the middle.

Prodicus:: You appear to me, Critias, to speak well: for it is requisite that those who are present at these conferences should be the common, but by no means equal, auditors of both speakers. For these two are not the same: For it is requisite to hear both in common, but not to distribute equally to either; but to the wiser more, and to the more unlearned less. I indeed, O Protagoras and Socrates, think that you ought to concede something to each other, and to contend together, but not to quarrel: for friends contend with friends through benevolence; but adversaries and enemies quarrel with each other. And thus this conference will be conducted in the most beautiful manner. For you, the speakers, will be especially approved, I do not say praised, by us the hearers: for auditors approve from their soul without deception; but praise is frequently bestowed in words, falsely, contrary to the real opinion. And thus again, we, the hearers, shall be especially delighted, but not pleasurably affected: for he is delighted who learns any thing and participates of wisdom in his dianoëtic part; but he is pleasurably affected who eats something, or is passive to some other pleasant sensation in his body.

Socrates:: Prodicus having thus spoken, many of those that were present approved what he said. But after Prodicus, Hippias the wise thus addressed them:

Hippias:: I consider all ye that are present as kinsmen, friends, and fellow-citizens by nature, and not by law: for the similar is naturally allied to the similar, But law being the tyrant of men, compels many things to be done contrary to nature. It would be disgraceful, therefore, if we who know the nature of things, who are the wisest of the Greeks, and who are now come for the purpose of displaying our knowledge into the very prytaneum itself of wisdom, and into this house, which is the greatest and most fortunate in the city, should exhibit nothing worthy of this dignity, but disagree with each other like the vilest of men. I therefore both request and advise you, O Protagoras and Socrates, to submit yourselves to us, as if we were arbitrators assembled for the purpose of bringing you to an agreement. Nor do you, Socrates, pursue this accurate form of dialogue, which is so very concise, unless it is agreeable to Protagoras; but give up the reins to discourse, that it may appear to us to be more magnificent and elegant. Nor do you, Protagoras, extending all your ropes, fly with swelling sails into the wide sea of discourse, and lose sight of shore: but let both endeavor to preserve a middle course. Be persuaded also by me, and let some moderator and president be chosen, who shall oblige each of you to keep within bounds.

Socrates:: This expedient pleased those that were present, and all of them praised it. And Callias said, that he would not suffer me to go, and required me to choose a moderator. I therefore said;

Socrates:: It would be disgraceful to select a judge of our discourses: for if he be our inferior, it will not be right that the subordinate should preside over the more excellent; and if he be our equal, neither thus will it be right. For he who is just such a one as we are, will act similarly to us; so that the choice will be vain. But to choose one better than we are, is, I think, in reality impossible: since one wiser than Protagoras here, cannot be chosen. And if you should choose a man in no respect more able, but whom you assert however to be so, this also will be disgraceful to Protagoras, by subjecting him to a president, as if he were some contemptible person: For it makes no difference as to myself. I am willing, therefore, to act as follows, that conversation and dialogue may take place between us, which are the objects of your desire: If Protagoras is not willing to answer, let him interrogate, and I will answer; and at the same time I will endeavor to show him in what manner I say he who is interrogated ought to answer. But when I reply to that which he may be willing to ask, he again in a similar manner shall reply to me. If, therefore, he shall appear not to be cheerfully disposed to answer the interrogation, both you and I in common must demand of him, that which you now demand of me, not to dissolve the conversation. Nor for the sake of this is there any occasion to appoint a president: for all of you will be presidents in common.

It appeared to all that this was what ought to be done. And Protagoras, indeed, was not very willing to comply; but at the same time he was compelled to consent to interrogate; and that when he had sufficiently interrogated, he would in his turn answer with brevity. He began therefore as follows:

Protagoras:: I think, O Socrates, that the greatest part of a man’s erudition consists in being skilled in poetical compositions. But this is the ability of knowing what is well or ill said by the poets, so as to be capable of assigning a reason when interrogated concerning their poems. And now indeed let the question be respecting virtue, the subject of our present discourse; differing only in this, that the disquisition is transferred to poetry. Simonides then says to Scopas, the son of Creon the Thessalonian, “That it is difficult to become a truly good man, so as in hands, feet, and intellect, to be fashioned a blameless square.” Do you know the verse, or shall I repeat the whole passage to you?

Socrates:: There is no necessity for this; for I know, and have paid great attention to the verse.

Protagoras:: You speak well. Whether, therefore, does Simonides appear to you to have done well and rightly, or not?

Socrates:: Very well and rightly.

Protagoras:: But does the poet appear to you to have done well if he contradicts himself?

Socrates:: By no means.

Protagoras:: Consider more attentively.

Socrates:: But, my good man, I have sufficiently considered it.

Protagoras:: You know therefore, that in the course of the poem he says, "The assertion of Pittacus does not please me, though it was delivered by a wise man, viz. that it is difficult to continue to be a good man," Do you understand that the same person made this and the former assertion?

Socrates:: I do.

Protagoras:: Does it therefore, appear to you that these things accord with those?

Socrates:: To me they do appear to accord. And at the same time fearing lest he should say any thing in addition, I said, But do they not appear to do so to you?

Protagoras:: How can he who made both these assertions accord with himself, when he first says, that it is difficult to become a truly good man, and a little after, forgetting what he had asserted, he blames Pittacus for saying the same thing that he had said, viz. that it is difficult to continue to be a good man, though it is evident that in blaming him who said this, he also blames himself? So that either the former or the latter assertion is not right.

Socrates:: Protagoras having thus spoken, many of the auditors made a noise, and applauded him. And I indeed at first, as if I had been struck by a skilful pugilist, was incapable of seeing, and became giddy, on his saying these things, and the rest making a tumult; but afterwards (to tell you the truth), that I might have time to consider what the poet said, I turned myself to Prodicus, and calling him, I said, Simonides, O Prodicus, was your fellow-citizen, and it is just that you should assist the man, I appear therefore to myself to call upon you, in the same manner as Homer says Scamander called upon Simois when besieged by Achilles, "Dear brother, let us both join to repel the prowess of this man," For I say the same to you, let us take care that Simonides be not subdued by Protagoras. For in order to assist Simonides, that elegant device of yours is requisite, by which you distinguish between to will and to desire, as not being the same, and by which you have just now said many and beautiful things. And now consider whether the same thing appears to you as to me: for I do not think that Simonides contradicts himself. But do you, Prodicus, first declare your opinion. Does it appear to you that to become is the same as to be, or that it is something different?

Prodicus:: Something, different, by Jupiter.

Socrates:: Does not Simonides then, in the first assertion, declare his own opinion, that it is difficult to become a truly good man?

Prodicus:: You speak the truth.

Socrates:: But he blames Pittacus not as Protagoras thinks, for saying the same thing that he had said, but for asserting something different from it. For Pittacus does not say this, that it is difficult to become a good man, as Simonides does, but that it is difficult to continue to be so.

But as Prodicus says, *to be* is not the same as to *become*, And if this be the case, Simonides does not contradict himself. And perhaps Prodicus here, and many others, may say with Hesiod, "It is difficult to become good: for the gods have placed sweat before virtue. But he who has arrived at the summit will find that to be easy, which it was difficult to acquire."

Prodicus therefore having heard these things, praised me; but Protagoras said;

Protagoras:: Your emendation, Socrates, is more erroneous than that which you correct.

Socrates:: Then I have done ill, as it seems, O Protagoras, and I am a ridiculous physician; since by attempting to cure, I increase the disease.

Protagoras:: Thus however it is.

Socrates:: But how?

Protagoras:: The poet would have been very ignorant, if he had asserted that virtue is so vile a thing that it may be easily acquired, though, as it appears to all men, its possession is the most difficult of all things.

Socrates:: By Jupiter, Prodicus, here, is opportunely present at our conference. For the wisdom of Prodicus appears, O Protagoras, to be of great antiquity, whether it originated from Simonides, or from a source still more ancient. But you, who are skilled in many other things, appear to be unskilled in this, and not skilled in it as I am, in consequence of being the disciple of this Prodicus. And now you appear to me not to understand that this thing which is said to be difficult, was not perhaps so apprehended by Simonides, as you apprehend it; but it is with that as with the word δεινος, *deinos*, concerning which Prodicus continually admonishes me, when in praising you, or any other, I say, that Protagoras is a wise and *skilful* (δεινος) man, by asking me if I am not ashamed to call things excellent *dreadful* (δεινος). For το δεινον says he, signifies some thing bad. Hence no one says *dreadful* riches, nor *dreadful* peace, nor dreadful health; but every one says dreadful disease, and dreadful war, and dreadful poverty, as if that which is (δεινον) *deinon*, is bad. Perhaps, therefore, the inhabitants of Ceos and Simonides apprehended by the word difficult (χαλεπον) either that which is bad, or something different from what you conceive it to mean. Let us therefore inquire of Prodicus (For it is just to ask him the signification of words employed by Simonides); What, O Prodicus, does Simonides mean by the word difficult?

Prodicus:: He meant, bad.

Socrates:: He blames Pittacus for saying that it is difficult to continue to be good, just as if he had heard him saying, that it is bad to continue to be good.

Prodicus:: But what else, Socrates, do you think Simonides intended, than to blame Pittacus because he did not know how to distinguish terms rightly, as being a Lesbian, and educated in a barbarous language?

Socrates:: Do you hear Prodicus, O Protagoras? And have you any thing to say to these things?

Protagoras:: This is very far, O Prodicus, from being the case; for I well know that Simonides meant by the word difficult, not that which is bad, but that which we and others mean by it, viz. a thing which is not easy, but is accomplished through many labors.

Socrates:: But I also think that Simonides meant this, and that Prodicus knows that he did; but he jests, and it willing to try whether you can defend your assertion. For that Simonides did not by the word difficult mean any thing bad, is very much confirmed by what he adds immediately after: for he says, that Divinity alone possesses this honorable gift. He does not indeed say, that it is bad to continue to be good, and afterwards add that Divinity alone possesses this, and attribute this honor to Divinity alone: for if this were the case, Prodicus should have called Simonides a profligate, and not a divine man. But I wish to tell you what Simonides appears to me to have understood in this verse, if you think proper to make trial of my poetical skill. Or, if it is agreeable to you, I will hear you Protagoras.

Protagoras:: Do so, if you please, Socrates:

Socrates:: But Prodicus, Hippias, and the rest, very much urged me to do it.

I will endeavor, then, to explain to you my conceptions, respecting this verse.

Philosophy is very ancient among the Greeks, and particularly in Crete and Lacedæmon; and there are more sophists there than in any other country. They dissemble, however, and pretend that they are unlearned, in order that it may not be manifest that they surpass the rest of the Greeks in wisdom (just as Protagoras has said respecting the sophists); but that they may appear to excel in military skill and fortitude; thinking if their real character were known, that all men would engage in the same pursuit. But now, concealing this, they deceive those who laconize in other cities. For there are some that in imitation of them cut their ears, have a cord for their girdle, are lovers of severe exercise, and use short garments, as if the Lacedæmonians surpassed in these things the other Greeks. But the Lacedæmonians, when they wish to speak freely with their own sophists, and are weary of converging with them privately, expel these laconic imitators, and then discourse with their sophists, without admitting any strangers to be present at their conversations. Neither do they suffer any of their young men to travel into other cities, as neither do the Cretans, lest they should unlearn what they have learnt. But in these cities, there are not only men of profound erudition, but women also. And that I assert these things with truth, and that the Lacedæmonians are disciplined in the best manner in philosophy and discourse, you may know from the following circumstance: For if any one wishes to converse with the meanest of the Lacedæmonians, he will at first find him, for the most part apparently despicable in conversation, but afterwards, when a proper opportunity presents itself, this same mean person, like a skilful jaculator, will hurl a sentence worthy of attention, short, and contorted; so that he who converses with him will appear to be in no respect superior to a boy. That to laconize, therefore, consists much more in philosophizing, than in the love of exercise, is understood by some of the present age, and was known to the ancients; they being persuaded that the ability of uttering such sentences as these is the province of a man perfectly learned. Among the number of those who were thus persuaded, were Thales the Milesian, Pittacus the Mitylenæan, Bias the Prienean, our Solon, Cleobulus the Lindian, Miso the Chenean, and the seventh of these is said to be the Lacedæmonian Chilo. All these were emulators, lovers, and disciples of the Lacedæmonian erudition. And any one may learn that their wisdom was a thing of this kind, viz. short sentences uttered by each and worthy to be remembered. These men also assembling together, consecrated to Apollo the first fruits of their wisdom, writing in the Temple of Apollo at Delphi those sentences which are celebrated by all men, viz. “Know thyself,” and “Nothing too much.” But on what account do I mention these things? To show that the mode of philosophy among the ancients was a certain laconic brevity of diction. But the sentence which is ascribed to Pittacus in particular, and which is celebrated by the wise, is this: “It is difficult to continue to be good.” Simonides, therefore, as being ambitious of wisdom, knew that if he could overthrow this sentence, and triumph over it like a renowned athletic, he himself would be celebrated by the men of his own time. In opposition to this sentence, therefore, and with a view to renown, he composed the whole of this poem, as it appears to me. Let all of us, however, in common, consider whether what I assert is true.

In the first place, then, the very beginning of the poem would indicate that its author was insane, if he, wishing to say that it is difficult to become a good man, had afterwards inserted the particle (μεν) *indeed*. For this would appear to have been inserted for no purpose. Unless it should be said, that Simonides in what he says contends as it were against the sentence of Pittacus: and that Pittacus, having asserted that it is difficult to continue to be good, Simonides disputing this, says it is not difficult; but it is difficult *indeed*, O Pittacus, to become a good man, and to be truly good. For he does not use the word truly, as if there were some men that are truly good, and others that are good indeed, but not truly so (for this would have been stupid and unworthy of Simonides); but it is necessary to consider the word truly as an hyperbaton in the verse; and we must suppose Pittacus speaking, as if there was a dialogue between him and Simonides, and saying, O men, it is difficult to continue to be good; but Simonides answering, O Pittacus, your assertion is not true: For it is not difficult to be truly good, but to become so, in hands and feet, and intellect, being fashioned a blameless square. And thus it appears that the particle *indeed* is introduced with reason, and that the word truly is rightly added in the last place. All that follows likewise testifies that this is the meaning of the passage. There are also many sentences in this poem, each of which might be proved to be well written; for it is very elegantly and accurately composed. To evince this, however, would take up too much time; but let us summarily consider the whole form and intention of the poem, that we may show that the design of it throughout is more than anything to confute that sentence of Pittacus. For a little after he says, as follows: “It is indeed truly difficult to become a good man; yet for a certain time it is possible to be so. But having become a good man, to continue in this habit, and to be a good man, (as you say, O Pittacus,) is impossible. for this is not human, but Divinity alone possesses this honorable gift. For man, who may be overwhelmed by unexpected calamity, cannot continue free from vice.

Whom, then, does an unexpected calamity overwhelm in the government of a ship? Evidently not an idiot; for the idiot is always overwhelmed. As therefore no one throws to the ground him who is lying on it, but sometimes he who stands upright is thrown down, so as to be prostrate; but this is never the case with him who is already prostrate; so an unexpected calamity may sometimes overwhelm a skilful man, but never him who is always unskillful. And a mighty storm bursting on the head of the pilot may render him unskillful; bad seasons may confound the husbandman; and things similar to these may be applied to the physician: for a good may indeed become a bad man. And this is also testified by another poet, who says, “A good man is sometimes bad, and sometimes worthy.” But it is not possible for a bad man to become bad, but it is always necessary that he should be so. So that when an unexpected calamity overwhelms a skilful, wise, and good man, it is not possible for him not to be wicked. But you, O Pittacus, say, that it is difficult to continue to be good. The truth however is this, that it is difficult indeed, but possible, to become good; but impossible to continue to be good. For every man who acts well is good; but bad if he acts ill, What then is a good action with respect to literature? and what makes a man excellent in literature? Evidently the being disciplined in it. What good action likewise makes a good physician? Evidently the learning the art of curing the sick. For a good physician cures properly, but a bad one improperly. Who is it then that becomes a bad physician? Evidently the man to whom it belongs in the first place to be a physician, and in the next place to be a good physician; for he may become a bad physician. But we who are ignorant of the medicinal art, can never by acting ill become bad physicians; nor being ignorant of architecture can we become bad architects, or any thing else of this kind. But whoever does not become a physician by acting ill, it is evident that neither is he a bad physician. Thus also a good man may sometimes become a bad man, either from time, or labor, or disease, or from some other circumstance (for this alone is a bad action to be deprived of science); but a bad man can never become bad (for he is always so); but if he is to become bad, it is necessary that prior to this he should have been good. So that to this also the verses of Simonides tend, that it is not possible to be a good man, so as to be perseveringly good; but that it is possible to become a good man, and for this same good to become a bad man. And also that for the most part, those are the best men whom the gods love. All these things therefore are said against Pittacus, which the verses following these still more clearly evince. For he says, “Wherefore I shall not explore in vain and hope for that which cannot be found, viz. a man nourished by the fruits of the earth, who lives a blameless life and is perpetually good." Afterwards he adds, "I will tell you when I have found him." So vehemently, and through the whole of the poem, does he attack the saying of Pittacus. He also adds, "I willingly praise and love the man, who does nothing base; and the gods themselves are not able to contend with necessity." And this likewise is said in opposition to Pittacus. For Simonides was not so unlearned as to say that he praised him who willingly did nothing bad, as if there were some who committed base actions willingly. For I nearly think this, that no wise man considers any man as erring voluntarily, and as acting basely and wickedly with the concurrence of his will; but he well knows that all those who act basely and wickedly, do so involuntarily. But Simonides does not speak as if he said, that he praises the man who does not willingly do wrong, but he says this word willingly of himself. For he thought that a worthy and good man is frequently compelled to love and praise a certain person. Thus, for instance, it often happens that a man has a monstrous father, or mother, or country, or something else of this kind. Depraved characters, therefore, when any thing of this nature happens to them, are in the first place glad to see it, and in the next place blame and every where divulge the depravity of their parents or country, that they may not be accused of having neglected these, nor fall into disgrace for their neglect. Hence they blame their parents or country in a still greater degree, and add voluntary to necessary enmity. But the worthy man conceals the faults of his parents or country, and if any unjust conduct has led him to be enraged with them, he is their mediator to himself, and compels them to love and praise their own offspring. I also think that Simonides himself frequently praised and was the encomiast of a tyrant, or some other character of this kind; and this not willingly, but by compulsion. This, then, is what he says to Pittacus; “I, O Pittacus, do not blame you, from being myself one who loves to blame: for I am satisfied if a man is not wicked, nor very indolent, as knowing that a sane man benefits his country. Nor will I find fault; since I am not a lover of detraction. For the race of fools is infinite; so that he who delights in blaming will be satiated with it. All things, indeed, are beautiful with which such as are base are not mingled.” His meaning however in this, is not as if he had said, all things are white with which black is not mingled (for this would be very ridiculous), but he intends to signify that he admits mediocrity, so as not to blame it. “And I do not seek,” says he, “a man perfectly blameless, or expect to find him among such as gather the fruits of the wide-bosomed earth: for I will tell you when I find such a one. So that on this account I shall praise no one as perfect. But I am satisfied with a man of moderate excellence, and who does no ill: and all such as these I both love and praise.” Here too he uses the language of the Mitylenæans as speaking to Pittacus, and saying, “I willingly praise and love all these.” But here it is necessary to consider the word willingly as connected with the words “Who does nothing base,” and to separate it from the verse in which he says, “There are also those whom I unwillingly praise and love. You therefore, O Pittacus, I should never have blamed, if you had spoken of that equitable and true mediocrity; but now, though you are very much mistaken about things of the greatest moment, yet you appear to speak the truth, and on this account I blame you.”

It appears to me, O Prodicus and Protagoras, that Simonides composed this poem in consequence of these conceptions.

Hippias:: You seem to me, Socrates, to have well explained these verses: and I also have something pertinent to say concerning them, which, if you please, I will point out to you.

Alcibiades:: Do so, O Hippias, but let it be at another time; for now it is just to attend to the coincidence in opinion of Protagoras and Socrates with each other. And indeed, if Protagoras wishes still to interrogate, Socrates should answer; but if he wishes to reply to Socrates, then Socrates should interrogate.

Socrates:: I leave it to Protagoras to do whichever of the two is more agreeable to him: but if he is willing, let us dismiss any further consideration about the verses. And I would gladly, O Protagoras, complete with you the discussion of those things, concerning which I at first interrogated you. For it appears to me, that a discourse about poetry is most similar to the banquets of vile and rustic men; since these, not being able, through the want of education, to converse with each other while they are drinking, in their own language, and with their own words, introduce the players on the flute as honorable persons, hire at a great expense a foreign voice, viz. that of flutes, and through the sound of these associate with each other. But when worthy, good, and well-educated men feast together, you will see neither pipers, nor dancers, nor singers, but they being sufficient to converse with themselves, without these trifles and sportive amusements, speak in their own language, and in a becoming manner reciprocally hear each other, even though they have drank a considerable quantity of wine. In like manner, such conversations as the present, when they are between men such as most of us assert ourselves to be, require no foreign voice, nor poets, of whom it is impossible to ask the meaning of what they say, and to whom most of those by whom they are cited attribute different conceptions, without being able to explain their real meaning. Wise men, therefore, bid farewell to such conferences as these, but converse with each other through themselves, and in their discourses make trial of each other's skill. It appears to me, that you and I ought rather to imitate conferences of this kind, laying aside the poets, and discoursing with each other through ourselves, make trial of the truth of ourselves. And if you wish still to interrogate, I am prepared to answer you; but if you do not wish it, impart yourself to me, and assist me in giving completion to those things, the discussion of which we left unfinished.

When I had said these and other such like things, Protagoras did not clearly signify what part he would take. Alcibiades, therefore, looking to Callias, said;

Alcibiades:: Does Protagoras, O Callias, appear to you to do well, in not now being willing to say clearly, whether he will answer or not? For to me he does not; but let him say, whether he is willing or not willing to converse, that we may know this from him, and that Socrates may converse with some other person, or that some one of the company who is so disposed may discourse with some other.

Socrates:: And Protagoras, as it seemed to me, being ashamed in consequence of Alcibiades thus speaking, and Callias, and nearly all those that were present, soliciting him, scarcely at length agreed to dispute, and desired me to interrogate him that he might answer.

Socrates:: O Protagoras, do not think that I shall converse with you with any other design, than that those things may be discussed of which I am continually in doubt. For I think that Homer speaks very much to the purpose, when he says, "When two come together, the one apprehends prior to the other." For with respect to us men, we are all of us more prompt in every deed, and word, and conception, when collected together. But he who thinks of any thing by himself alone, immediately searches for some one to whom he may communicate it, and from whom he may derive stability till he meets with the object of his search. Just as I, also, for the sake of this, more willingly converse with you than with any other, thinking that you discriminate the best of all men, both about other things which it is likely a worthy man would make the object of his consideration, and also concerning virtue. For what other person can do this besides you? Since you not only think yourself to be a worthy and good man, as some others also are indeed themselves worthy, but are not able to make others so; but you are both worthy yourself, and are able to make others good. And you have such confidence in yourself, that while others conceal this art, you openly proclaim yourself to all the Greeks to be a sophist, declare that you are a master of erudition and virtue, and you are the first that has thought fit to set a price on his instructions. Is it not proper, therefore, to call upon you to the consideration of these things, and to interrogate and communicate with you concerning them?

Protagoras:: There is no reason why this should not be done.

Socrates:: And now, with respect to those things which were the subject of my former interrogations, I again desire from the beginning, partly to be reminded of them by you, and partly to consider them in conjunction with you. But the question, I think, was this, whether wisdom, temperance, fortitude, justice, and sanctity, which are five names, belong to one thing, or whether a certain proper essence pertains to each of these names, so that each is a thing having a power of its own, and no one of them possesses a quality similar to the other. You said, therefore, that these were not names belonging to one thing, but that each of these names pertained to a proper thing. You likewise observed, that all these are parts of virtue, not in the same manner as the parts of gold are similar to each other, and to the whole of which they are parts, but just as the parts of the face are dissimilar to the whole of which they are parts, and to each other, and each possesses a proper power of its own. Inform me if these things still appear to you as they did then; or if you think otherwise concerning them. For I shall not accuse you, if you now speak differently; since I should not wonder if you said these things for the purpose of trying me.

Protagoras:: But, Socrates, I say that all these are parts of virtue; and that four of them may justly be considered as similar to each other, but that fortitude very much differs from all these. By the following circumstance you may know that I speak the truth. You will find men who are most unjust, most unholy, most intemperate, and most unlearned, who are notwithstanding remarkably brave.

Socrates:: Stop; for what you say deserves to be considered. Whether do you call brave men, daring men, or any thing else?

Protagoras:: I do, and I likewise say that they rush headlong on things, which the multitude are afraid to approach.

Socrates:: Come then; Do you say, that virtue is something beautiful; and that you are a teacher of it, as of a thing beautiful?

Protagoras:: Yes and a thing most beautiful, unless I am insane.

Socrates:: Whether then is one thing belonging to it base, and another beautiful? Or, is the whole beautiful?

Protagoras:: The whole is as much as possible beautiful.

Socrates:: Do you not know, then, that there are some who boldly merge themselves in wells?

Protagoras:: I know that divers do.

Socrates:: Whether do they do this in consequence of possessing knowledge, or on account of something else?

Protagoras:: In consequence of possessing knowledge.

Socrates:: But who are they that fight boldly on horseback? Are they horsemen, or those that are unskilled in horsemanship?

Protagoras:: They are horsemen.

Socrates:: And who are they that fight boldly with short shields? Are they those that are skilled in the use of such shields, or those that are not skilled?

Protagoras:: Those that are skilled. And in every thing else you will find that those who possess knowledge, are bolder than the ignorant; and the same men after they have been disciplined are bolder than they were before.

Socrates:: But did you ever see any who being ignorant of all these things, were yet daring with respect to each of these?

Protagoras:: I have and such as were very daring.

Socrates:: Are, therefore, those daring persons brave also?

Protagoras:: If they were fortitude would be a base thing, since these men are insane.

Socrates:: What then, have you asserted of the brave? Is it not that they are bold?

Protagoras:: I have and now also I assert the same.

Socrates:: But, do not those who are thus bold appear, not to be brave, but insane? And again, did not the most wise appear to us to be also the most daring? And being most daring, were they not also most brave? And according to this reasoning, will not wisdom be fortitude?

Protagoras:: You do not well remember, Socrates, what I said, and what was my answer to you? For being asked by you if the brave were bold, I acknowledged that they were; but you did not also ask me if the bold were brave. For if you had asked me this, I should have said that all the bold were not brave. But you have by no means shown that I was not right in granting that the brave are bold. In the next place, you show that men, when they possess knowledge, are bolder than when they were ignorant, and than others who are ignorant; and in consequence of this, you think that fortitude and wisdom are the same. But from this mode of reasoning, you may also think that strength is wisdom. For in the first place, if you should in like manner inquire of me, if the strong are powerful, I should say that they are; and in the next place, if you should ask me, if those who know how to wrestle are more powerful than those who do not possess this knowledge, and if they are more powerful after they have learnt than before, I should say that they are. But from my acknowledging these things, it will be possible for you, by using the same arguments, to say that, by my own confession, wisdom is strength. I, however, shall by no means here acknowledge that the powerful are strong; but I shall admit, indeed, that the strong are powerful; since power and strength are not the same. For, indeed, power may be produced from insanity, and from anger; but strength derives its subsistence from nature, and the proper nutrition of bodies, In like manner, boldness and fortitude are not the same; so that it will happen, that the brave are bold, but not that all the bold are brave. For boldness is produced in men from anger, and from insanity, in the same manner as we observed of power; but fortitude arises from nature, and the proper nutrition of souls.

Socrates:: But do you say, O Protagoras, that some men live well, and others ill?

Protagoras:: I do.

Socrates:: Does, therefore, a man appear to you to live well, if he lives in molestation and sorrow?

Protagoras:: He does not.

Socrates:: But what, if he has lived pleasantly to the end of life, will he not thus appear to you to have lived well?

Protagoras:: To me he will.

Socrates:: To live pleasantly, therefore, is a good, but unpleasantly a bad thing.

Protagoras:: If he has lived delighted with worthy things.

Socrates:: But what, O Protagoras, Do you, like the multitude, call certain things that are pleasant bad, and some things that are disagreeable good?

Protagoras:: I do. How do you say?

Socrates:: So far as they are agreeable, are these things according to this not good, unless something else happens from them? And again, is this also the case with things disagreeable?

Protagoras:: It is.

Socrates:: Are they not then bad so far as they are disagreeable?

Protagoras:: I do not know, Socrates, whether I should simply answer as you ask me, that all pleasant things are good, and all disagreeable things evil; but it appears to me to be more base to answer, not only to the present question, but also to every other during the rest of my life, that there are some pleasant things which are not good, and again, that there are some disagreeable things which are not evil; and that there are also a third sort, which are neither good nor evil.

Socrates:: But do you not call those things pleasant, which either participate of pleasure, or produce pleasure?

Protagoras:: Entirely so.

Socrates:: I ask, therefore, whether they are not good, so far as they are pleasant; asking with respect to pleasure itself, if it is not good?

Protagoras:: Just as you continually say, Socrates, we must examine it, and if it shall seem to be conformable to reason, and the same thing shall appear to be pleasant and good, we must acquiesce in it; but if not, we must controvert it.

Socrates:: Whether, therefore, are you willing to be the leader of the inquiry? or shall I lead?

Protagoras:: It is just that you should lead: for you began the conference.

Socrates:: Perhaps then, that which we investigate will become manifest after the following manner: for just as if any one, directing his attention to the form or health of a man, or any other of the works of his body, on beholding his countenance and his hands, should say, Come, strip yourself, and show me your breast and back, that I may see more clearly; I also desire something of this kind in the present inquiry, perceiving that you being so affected as you say you are, with respect to the good and the pleasant, it is requisite I should say to you some such thing as this, Come, Protagoras, lay your mind open to me, and inform me what are your conceptions with respect to science. Does the same thing appear to you concerning it as to other men, or not? But a thing of this kind appears to the many concerning science; that it is not strong, and that it neither possesses a leading nor a governing power; nor is it conceived to be a thing of this kind: but science being frequently inherent in man, they are of opinion, that it is not science that governs him, but something else; at one time anger at another pleasure, and at another pain: and that he is sometimes governed by love, and frequently by fear. And, in short, their conceptions of science are, as if it were a slave dragged about by every thing else. Does, therefore, a thing of this kind appear to you also respecting it? Or, do you think that science is something beautiful, and as it were the governor of man? And, that he who knows good and evil, will never be subdued by any thing, so as to act contrary to the mandates of science, but that intellectual prudence will be a sufficient aid to such a man?

Protagoras:: It appears to me also, Socrates, as you say: and it would be base in me, if it ever were so in any man, not to assert that wisdom and science are the most powerful of all human affairs.

Socrates:: You speak well, and with truth. You know, therefore, that the multitude of men are not persuaded by you and me, but say that many who know what is best, are unwilling to do it, when they have the power of acting in the best manner, but do other things. And such as I have asked what is the cause of this, have replied, that being vanquished by pleasure or pain, or some one of the things which I have just now mentioned, they have acted in this manner.

Protagoras:: For I think, Socrates, that men assert many other things erroneously.

Socrates:: Come then, endeavor with me to persuade and teach men what this passion is, which they call the being vanquished by pleasures, and through which they do not perform the most excellent things, though they have a knowledge of them. For, perhaps, if we should say, you speak erroneously, O men, and are deceived, they would ask us, O Protagoras and Socrates, if this passion is not the being vanquished by pleasure, but something else, tell us what you say it is?

Protagoras:: But, why is it necessary, Socrates, that we should consider the opinion of the multitude, who speak that which casually presents itself?

Socrates:: But I think that this will contribute to our discovering how fortitude is related to the other parts of virtue. If, therefore, you are willing to abide by that which was just now agreed upon by us, that I should be the leader, follow me in that in which I think this thing will become most beautifully apparent; but if you are not willing, dismiss it, if you think fit.

Protagoras:: You speak well; but proceed as you begun.

Socrates:: Again, therefore, if the multitude should ask us, What then do you assert this thing to be, which we call the being vanquished by pleasures? I should answer them as follows: Hear then, for I and Protagoras shall endeavor to tell you, Do you, O men, say that any thing else happens to you in this case, than that which often happens to those who are subdued by meats and drinks, and venereal pleasures; who, though they know that these things are baneful, yet at the same time they do them because they are pleasant? They will say, that nothing else happens. You and I, therefore, will again ask them, Do you say that these things are baneful? Whether, therefore, is it because they immediately impart pleasure, and each of them is pleasant? Or is it because that in some future time they produce diseases and poverty, and procure many other things of this kind? Or, though they should be followed by nothing of this kind, are they bad in consequence of causing men to rejoice? Shall we think, O Protagoras, that they will answer any thing else than that they are not evil from the immediate pleasure which they produce, but from the diseases and other things with which they are followed?

Protagoras:: I indeed think that the multitude would thus answer.

Socrates:: If they cause diseases, therefore, and poverty, do they not also cause sorrow? I think they would acknowledge that they did.

Protagoras assented.

Socrates:: It appears, therefore, O men, as I and Protagoras say, that these things are bad, for no other reason than because they end in sorrow, and deprive their votaries of other pleasures.

It appeared to both of us, that they would acknowledge this to be the case.

Again, therefore, if, taking the contrary side, we should ask them, O men! ye who say that disagreeable things are good, do you not speak of such things as gymnastic exercises, military labors, and things which are effected through burnings, and incisions, and medicines, and fasting? And do you not say, that these things are indeed good, but disagreeable? They would say so.

It also appeared to Protagoras, that they would.

Whether, therefore, do you call these things good, because they immediately impart extreme pain and torment; or because they are followed by health, and a good habit of body, together with the safety of cities, dominion and wealth. They would say, because of the latter consequence.

And to this also Protagoras assented.

But are these things good through any thing else, than because they end in pleasures, and liberations from pain? Or can you mention any other end than pleasures and pains to which looking they call these things good? They will say, I think, that they cannot.

Protagoras:: So, likewise, it appears to me.

Socrates:: Do you, therefore, pursue pleasure as being good, and avoid pain as an evil? They will say, that they do.

And to this also Protagoras assented.

You, therefore, are of opinion, that this thing is evil, viz. pain, and that pleasure is good; since delight also is then said to be evil, when it deprives us of greater pleasures than it possesses, or when it procures pains greater than the pleasures which it contains. For if you call delight an evil on any other account, and look to any other end, you would also be able to inform us; but you cannot.

Protagoras:: Nor do they appear to me to regard any other end.

Socrates:: Again, therefore, after the same manner with respect to pain, do you not then call the being in pain a good, when it liberates from pains greater than those which it contains, or when it procures pleasures greater than the pains? For if you looked to any other end, when you call the being in pain a good, than that which I have mentioned, you would be able to inform us; but you cannot.

Protagoras:: You speak the truth.

Socrates:: Again, therefore, if you should ask me, O men, on what account I speak so much and so frequently about this, I should say, Pardon me. For, in the first place, it is not easy to show what this thing is which you call the being subdued by pleasures; and, in the next place, all demonstrations are contained in this. But now, also, you are at liberty to inform me, if you have any thing else which you assert to be good besides pleasure, or any thing else besides pain, which you call evil. Or are you satisfied with passing your life pleasantly without pain? For if you are satisfied with this, and if you cannot mention any good or evil which does not end in these things, hear what follows: I say, then, that, if this be the case, the assertion is ridiculous when you say that frequently, though a man knows that evil things are evil, he at the same time does them (though he has the power of not doing them), in consequence of being led and astonished by pleasure: and again, when you say that a man, knowing what is good, is not willing to do it, in consequence of being vanquished by immediate pleasure. For it will be manifest that these things are ridiculous, unless we employ a multitude of names; such as pleasant and disagreeable, good and evil. But since it appears that there are these two things, we must also call them by two names; in the first place by good and evil, and in the next place by pleasant and disagreeable. These things, therefore, being admitted, we will say that a man, knowing things evil to be evil, at the same time does them. If, then, some one should ask us why he does them, We must say, because he is vanquished. By what? he will say to us. But we are no longer permitted to say, by pleasure; for it assumes another name in the place of pleasure, viz. good. We must, however, answer him, and say that he does it because he is vanquished. By what? he will say. By good, we must say, by Jupiter. If it should happen, therefore, that he who interrogates us is an insolent man, he will laugh and say, You speak of a ridiculous thing when you assert that any one does evil, knowing that it is evil (and it is not proper to do it), in consequence of being vanquished by good. For he will say, Is such a one vanquished because the good in him is not worthy to vanquish the evil? Or is it because it is worthy? We shall evidently say in reply, that it is because it is not worthy. For otherwise he would not err whom we say is subdued by pleasure. But perhaps he will say, Why is the good in such a one unworthy to vanquish the evil? Or the evil to vanquish the good? Is it for any other reason than because the one is greater, and the other lesser? or because the one is more, and the other fewer in number? Have we any other cause to assign than this? It is evident, therefore, he will say, that this thing which is called the being vanquished, is to receive greater evils instead of lesser goods. And thus much for these particulars.

Let us then again change the names, and introduce in these very same things the pleasant and disagreeable, as follows: We formerly said that a man does evil, let us now say that he does things disagreeable, knowing that they are disagreeable, in consequence of being vanquished by pleasures, viz. by such as are unworthy to conquer. And what other unworthiness is there in pleasure with respect to pain, than the excess and defect of each other; that is, when they become greater and lesser, more or less numerous? For if any one should say, Immediate pleasure, O Socrates, very much differs from future pleasure and pain, I indeed should reply by asking, Whether it differs in any thing else than in pleasure and pain? For it cannot differ in any thing else. But it is just as if a man who is skilful in weighing, having collected together things pleasant and painful, and placed those which are near, and those which are remote, in the balance, should say which are the more numerous. For if you weigh pleasures with pleasures, the greater and more numerous must always be chosen; but, if you weigh pains with pains, the fewer and the smaller must be selected. If likewise you weigh pleasures with pains, if the disagreeables are surpassed by the pleasures, those that are near by those that are remote, or those that are remote by those that are near, we must yield to the more weighty; but if the pleasures are surpassed by the disagreeables, this conduct must not be adopted. Is it not so, O men, with respect to these things? I know that they will not be able to say otherwise. It also appeared to Protagoras that they would not. Since, therefore, this is the case, I will thus interrogate them, Do the same magnitudes appear to your sight greater when near, but lesser when at a distance? They will say, that they do. And is not this the case also with things bulky, and with things numerous? And are not equal voices greater when near, but lesser when at a distance? They will say that they are. If therefore our acting well consisted in this, viz. in making and receiving great masses, but rejecting and not making such as are small, what would appear to be the safety of our life? Would it be the art of measuring, or the power of sight which judges of that which is apparent? Or rather would not the latter deceive us, and involving us in error, often compel us to judge differently at different times of the same thing, and change our opinion in the actions and elections of things great and small? But the art of measuring would make this phantasm void, and manifesting the truth, would cause the soul, by abiding in reality, to be at rest, and would preserve our life. Would the men assent to these things, and acknowledge that the art of measuring preserves us, or that this is effected by any other art? They would acknowledge that we should be preserved by the measuring art. But what, if the safety of our life consisted in choosing the even and the odd, so as to know when more ought to be rightly chosen, and when less, either one of these with respect to itself, or one with respect to the other, whether they be near or at a distance, what is it that in this case would preserve our life? Is it not science? For it would no longer be the art of measuring, since this is the art of excess and defect. But since that of which we are speaking is the art of the even and the odd, is it any thing else than arithmetic? The men would acknowledge that it is nothing else: or would they not? It appeared also to Protagoras that they would. Be it so, O men; but since the safety of our life has appeared to consist in the right choice of pleasure and pain, and in the choice of the more and the less, of the greater and the smaller, of the more distant and the nearer; of these, in the first place, does not the art of measuring appear to be the consideration of the excess and defect, and also of the equality of these to each other? Necessarily so. But since it is conversant with measuring, it is necessary that it should be both an art and a science. They will agree to this. What then this art and science may be, we will consider hereafter; but that it is a science is sufficient to the demonstration which it is necessary that Protagoras and I should give to your question. And, if you remember, when we mutually agreed that nothing is superior to science, but that this always governs, wherever it may be, both pleasure and every thing else, then you said that pleasure frequently subdues a man, even though he possesses science. But as we did not agree with you, after this you asked us, O Protagoras and Socrates, if this passion is not to be vanquished by pleasure, tell us what it is, and what you assert it to be? If, therefore, we then had immediately said to you that it is ignorance, you would have derided us. For ye have acknowledged that those that err in the choice of pleasures and pains (and these are things good and evil) err through the want of science; and not only through the want of science, but, ye have also added, of the science of measuring. But an erroneous action without science, is, as ye also know, performed through ignorance. So that to be vanquished by pleasure is the greatest ignorance; of which Protagoras here, Prodicus and Hippias, say they are the physician. But ye, because ye think this is something else than ignorance, neither go yourselves, nor send your children to the sophists, the teachers of these things, as if this science of measuring could not he taught: and by giving your money, and not giving it to these men, ye act badly both in private and public. And in this manner we, should answer the multitude.

Together with Protagoras, however, I ask you, O Hippias, and you, O Prodicus (for let my discourse be in common to you), whether I appear to speak the truth, or that which is false?

It appeared to all that what had been said was transcendently true.

You confess, therefore, that the pleasant is good, but the disagreeable evil. But I request Prodicus to excuse my adopting his division of names. For whether you call it pleasant, or delightful, or joyful, or in whatever way you may think fit to denominate things of this kind, O most excellent Prodicus, only answer what I wish to ask you.

Prodicus therefore laughing assented, and so likewise did the rest.

But what, my friends, as to this particular, are not all actions which contribute to the living well and pleasantly, beautiful and profitable? And is not a beautiful deed good and profitable?

They granted this.

If, therefore, the pleasant is good, no one either knowing or thinking that other things are better than those which he does, and is able to do, will afterwards do these things, when he has the power of doing those that are better. Nor when a man is inferior to himself, is it any thing else than ignorance; nor, when he is superior to himself, is it any thing else than wisdom.

To this all of them assented.

But what? Do you say that ignorance is a thing of this kind, viz. to have a false opinion, and to be deceived about things of great importance?

And to this, likewise, all of them assented.

Does it not then follow that no one willingly betakes himself to things evil, or to those things which he thinks are evil? For, as it appears, it is not in the nature of man to betake himself to things which he considers as evil, instead of applying himself to such as are good. And when it is necessary to choose one of two evils, no one will choose the greater if he has it in his power to choose the lesser.

All these things were assented to by all of us.

What then, do you call dread and fear? Is it that which I say it is to you, O Prodicus, viz. a certain expectation of evil, whether you call it fear or dread?

It appeared to Protagoras and Hippias that dread and fear were this; but to Prodicus it appeared that dread was this, but not fear.

It is, however, O Prodicus, of no consequence; but this is of importance, whether what has been formerly asserted is true. Is, therefore, any man willing to betake himself to those things which he dreads, when he has the power of betaking himself to things which he does not dread? Or is not this impossible from what we have granted? For we have granted that he thinks those things to be evil which he dreads; and that no one betakes himself to, or willingly receives things which he considers as evil.

These things, likewise, were assented to by all of them.

This, then, being admitted, O Prodicus and Hippias, let Protagoras, here, defend to us the rectitude of his first answer. For then, there being five parts of virtue, he said that no one of them resembled the other, but that each had a peculiar power of its own. I do not, however, urge this at present, but I speak of that which he afterwards said, viz. that four of the parts might justly be considered as similar to each other, but that one of them, fortitude, very much differed from the rest. He also said that this might be known from the following circumstance. You will find, Socrates, men that are most unholy, most unjust, most intemperate, and most undisciplined, but who are, at the same time, most brave; by which you may know that fortitude very much differs from the other parts of virtue. And I indeed, at that time, immediately very much wondered at the answer, and my surprise has been greatly increased since I have discussed these things with you. I therefore asked him this, If he called brave men bold men, He said he did, and likewise impetuous. Do you remember, Protagoras, that this was your answer?

Protagoras:: I do.

Socrates:: Tell us, then, in what, according to you, the brave are impetuous? Is it in things which the timid attempt?

Protagoras:: It is not.

Socrates:: In other things, therefore.

Protagoras:: Yes.

Socrates:: But whether do the timid engage in bold attempts, but the brave in such as are dreadful?

Protagoras:: It is so said, Socrates, by the multitude.

Socrates:: You speak the truth. I do not, however, ask this: but in what do you say the brave are impetuous? Is it in dreadful things, thinking that they are dreadful, or in things that are not dreadful?

Protagoras:: But, this, in what you just now said, has been shown to be impossible.

Socrates:: And in this, also, you speak the truth. So that if this is rightly demonstrated, no one betakes himself to things which he thinks are dreadful, since it has been found that it is ignorance for a man to be inferior to himself.

He acknowledged it.

All men, however, both the timid and the brave, engage in things in which they boldly confide; and, in consequence of this, both the timid and the brave engage in the same things.

Protagoras:: But indeed, Socrates, the things in which the timid and the brave engage are perfectly contrary to each other; for the latter wish, but the former are unwilling to engage in war.

Socrates:: But whether, is it a beautiful, or a base thing to engage in war?

Protagoras:: A beautiful thing.

Socrates:: If, therefore, it is a beautiful thing, we have above agreed that it is a good thing. For we have acknowledged that all beautiful are good actions.

Protagoras:: You speak the truth, and to me this has always appeared to be the case.

Socrates:: Right. But which of the two do you say is unwilling to engage in war, though it is a beautiful and good thing.

Protagoras:: The timid.

Socrates:: If, therefore, it be beautiful and good, is it not also pleasant?

Protagoras:: It is granted.

Socrates:: Are the timid, therefore, unwilling to proceed to that which is beautiful, better, and more pleasant, knowing it to be such?

Protagoras:: But, if we assented to this, we should destroy what we have before acknowledged.

Socrates:: But what with respect to the brave man? Does he not engage in that which is more beautiful, more excellent, and more pleasant?

Protagoras:: It is necessary, to acknowledge that he does.

Socrates:: Hence, in short, the brave have not any base fears when they are afraid; nor when they are bold, are they basely daring.

Protagoras:: True.

Socrates:: But if they are not basely, does it not follow that they are beautifully daring?

He assented.

And if their boldness is beautiful, is it not also good?

Protagoras:: Yes.

Socrates:: Are not, therefore, the timid, and the rash, and the insane, on the contrary, basely afraid, and basely bold?

He agreed they were.

But are they basely and wickedly bold, through any thing else than ignorance and the want of discipline?

Protagoras:: It is so.

Socrates:: What then? Do you then call this thing, through which the timid are timid, timidity or fortitude?

Protagoras:: Timidity.

Socrates:: But have not the timid appeared to be what they are, through the ignorance of things dreadful?

Protagoras:: Entirely so.

Socrates:: They are timid, therefore, through this ignorance.

He acknowledged it.

But that through which they are timid, you have granted to be timidity.

He said, he had.

Will not, therefore, the ignorance of things dreadful, and not dreadful, be timidity?

He assented.

But, fortitude is contrary to timidity.

Protagoras:: It is.

Socrates:: Will not then the wisdom of things dreadful, and not dreadful, be contrary to the ignorance of these things?

To this also he assented.

But is not the ignorance of these things timidity?

He, with great difficulty, assented to this.

The wisdom, therefore, of things dreadful, and not dreadful, is fortitude, being contrary to the ignorance of these.

Here, however, he was no longer willing to assent, but was silent.

Socrates:: Why, O Protagoras, do you neither assent to, nor deny what I say?

Protagoras:: Come to a conclusion.

Socrates:: let me only first ask you, if it still appears to you as it did before, that there are certain men who are most ignorant, and yet most brave?

Protagoras:: You still, Socrates, seem to be very anxious that I should answer you. I will therefore gratify you; and I say, that from what has been granted, it appears to me impossible that this should be the case.

Socrates:: I do not ask you all these particulars on any other account, than because I wish to consider how the things pertaining to virtue subsist, and what virtue itself is. For I know that this becoming apparent, that which has been the subject of a long discussion to you and me will be made manifest; I indeed, asserting, that virtue cannot be taught, but you that it can. And it seems to me, that the conclusion of our arguments, as if it were a man, reviles and derides us; and that if it had a voice, it would thus address us:

You are absurd, O Socrates, and Protagoras; you indeed, in asserting in the former part of your discourse, that virtue cannot be taught, and now, being anxious to contradict yourself, by endeavoring to show that all these things, viz. justice, temperance, and fortitude, are science; by which mode of proceeding virtue will especially appear to be a thing which may be taught. For if virtue were any thing else than science, as Protagoras endeavors to evince it is, it clearly could not be taught; but now, if it should appear that it is science, as you, Socrates, are anxious to infer, it will be wonderful if it cannot be taught. Again, Protagoras at first admitted that it could be taught, but now, on the contrary, he seems earnestly to endeavor that virtue may appear to be any thing else rather than science; and thus it will be a thing in the smallest degree capable of being taught. I therefore, O Protagoras, seeing all these things agitated upwards and downwards with, such dire confusion, am in the highest degree anxious that they may become apparent. And I could wish that we, in consequence of discussing these things, might discover what virtue is: and again, that we might speculate concerning it, whether it can be taught, or whether it cannot. For I fear that your Epimetheus has frequently deceived us in our inquiry, just as you say he neglected us in the distribution which he made. I am more pleased, therefore, with Prometheus in the fable, than with Epimetheus. Hence, following his example, and paying a providential attention to the whole of my life, I diligently consider all these things. And if you are willing, as I said at the beginning, I would most gladly examine these particulars with you.

Protagoras:: —I, O Socrates, praise your alacrity, and the evolution of your discourse. For I am not, in other respects, I think, a bad man, and I am envious the least of all men: indeed I have often said respecting you to many, that I admire you by far the most of those with whom I associate, and consider you as greatly surpassing your equals in age. And I say, that I shall not wonder if you rank among the men renowned for wisdom. And, with respect to these things, we will again discuss them when you please; but it is now time for me to betake myself to something else.

Socrates:: It is requisite so to do, if it seems fit to you. For I ought to have gone elsewhere some time ago; but I staid in order to gratify the beautiful Callias.

Having spoken and heard these things, we departed.

THE END OF THE PROTAGORAS.

## Protagoras.

Translated by J. Wright.

A FRIEND, SOCRATES, HIPPOCRATES, PROTAGORAS, ALCIBIADES, CALLIAS, CRITIAS, PRODICUS, AND HIPPIAS.

Friend:: Ha, Socrates, where do you appear from? though I can hardly doubt that it's from a chase after the fair Alcibiades. Well, I saw the man only the other day, and I can assure you I thought him looking still beautiful; though between ourselves, Socrates, he is a man by this time, and his chin is getting pretty well covered with beard.

Socrates:: And what of that? Sure you don't disapprove of Homers assertion, that no age is so graceful as the beardlings prime. And this is just the age of Alcibiades.

Friend:: Be that as it may, Socrates, I want to know about matters now. Is it from him that you make your appearance, and how is the youth disposed towards you?

Socrates:: Very well, I think, and never better than today. For he has been taking my side, and saying a great deal in my favor. And in point of fact, I have only just left him. I have, however, something strange to tell you. Though he was in the room all the while, he was so far from engrossing my attention, that I frequently forgot his existence altogether.

Friend:: Why, whatever can have happened between you and him, to produce such an effect as this? You surely don't mean to say that you have met with any one more beautiful here in Athens?

Socrates:: Yes I do, much more beautiful.

Friend:: More beautiful! a citizen or a foreigner?

Socrates:: A foreigner.

Friend:: From what country?

Socrates:: Abdera.

Friend:: And did this stranger really appear to you so beautiful a person, that you accounted him more beautiful than the son of Clinias?

Socrates:: Indeed I do. For how, my good friend, can the supremely wise fail of being accounted more beautiful?

Friend:: Ho, ho, Socrates, you have just left one of our wise men, have you?

Socrates:: Say, rather, the wisest man of the present day, unless you would refuse this title to Protagoras.

Friend:: Protagoras, do you say? is he in Athens?

Socrates:: He is, and has been here now two days.

Friend:: And you are just come, I suppose, from his company?

Socrates:: Yes, and from a very long conversation with him.

Friend:: Oh pray repeat it to us then, unless you have something to hinder you. Just turn out this boy, and sit down in his place.

Socrates:: With all my heart; and I shall be much obliged to you for listening.

Friend:: And I am sure we shall be so to you for speaking.

Socrates:: The obligation then will be mutual. I will therefore begin.

Last night, or rather very early this morning, Hippocrates, the son of Apollodorus, and brother of Phason, came and knocked very violently at my door with his stick; and, as soon as they opened to him, rushed into the house in the greatest haste, calling out with a loud voice;

Hippocrates:: Socrates, are you awake or asleep?

Socrates:: Recognizing his voice, I said to myself, Ho, Hippocrates here; turning to him, Have you any news?

Hippocrates:: None but what is good.

Socrates:: So much the better. But what is the matter; what has made you come here so early?

Hippocrates:: Protagoras is arrived.

Socrates:: Yes, the day before yesterday; have you only just heard it?

Hippocrates:: Only just, I assure you, only last night.

Socrates:: While thus speaking, he felt about the bed on which I lay, and sitting down at my feet, continued;

Hippocrates:: Only yesterday evening, on my return at a very late hour from Oenoe. For my slave Satyrus ran away; and I was just going to tell you that I meant to pursue him, when some thing else came into my head, and I forgot it. And when I came back, it was not till we had supped and were going to bed, that my brother informed me of the arrival of Protagoras. Whereupon, late as it was, I started up with the intention of coming immediately to you, but on second thoughts it seemed too far gone in the night. As soon, however, as sleep released me after my fatigue, I rose up at once and hurried here.

Socrates:: On hearing this, being well acquainted with my friends vehement and excitable nature, I said to him, Well, what does this matter to you? does Protagoras do you any harm?

Hippocrates:: Yes, that he does; he keeps his wisdom to himself, and does not make me wise.

Socrates:: —said he with a laugh—

But I have no doubt, that if you only give him money enough, he will make you wise too.

Hippocrates:: I would, ye gods! it only depended on this; if it did, I would not spare the last farthing of my own fortune, or of my friends either. But in point of fact, Socrates, the very object I have in coming here now is to ask you to speak to him on my behalf. For, to say nothing of my being so young, I have never even seen Protagoras in my life, or heard him speak; for I was quite a boy when he was here before. However, all the world applaud the man, and say that he is wonderfully clever in discourse. So pray let us go to him at once, that we may find him in doors. He is staying, I am told, with Callias, the son of Hipponicus. Let us start.

Socrates:: Not yet, it is too early. Rather let us turn into the court here, and walk about and talk, till it is light. And then we can go. For Protagoras seldom stirs out; so that you need not be afraid, we shall in all probability find him at home.—

After this we rose up from the bed, and went out into the court. And while we were walking up and down, with a view of trying the strength of Hippocrates, I sifted him with the following questions. —

Hippocrates, you are now proposing to call upon Protagoras, and pay him a sum of money as a fee for your attendance. Now tell me; in what capacity, on his part, do you mean to visit him, and what do you expect to become yourself by so doing? Take a similar case. If you had conceived the idea of going to your namesake Hippocrates of Cos, of the house of the Asclepiads, and paying him a sum of money as a fee for your tuition; and if you were to be asked what Hippocrates was, that you meant to pay him this money, what should you answer?

Hippocrates:: I should say, a physician.

Socrates:: And what do you expect to become?

Hippocrates:: A physician.

Socrates:: Again, if you had taken it into your head to go to Polyclitus of Argos or our Athenian Phidias, and pay them a fee for your tuition, and you were to be asked, what Polyclitus and Phidias were, that you intended to pay them this money, what should you reply?

Hippocrates:: Statuaries, of course.

Socrates:: And what do you expect to become yourself?

Hippocrates:: A statuary, to be sure.

Socrates:: Well, here are you and I now going to Protagoras; and when arrived there we shall be prepared to pay him a sum of money as a fee for your tuition. If our own funds prove adequate to his demand, so much the better; if they are deficient, we shall not hesitate to drain the purses of our friends. Now, suppose some man were to see us thus earnestly bent on the matter, and to say, My good friends, Socrates and Hippocrates, what do you mean to pay Protagoras as? Tell me, what would be our answer to this question? What distinct name is currently given to Protagoras, in the same way that the name of statuary is given to Phidias, and of poet to Homer? what analogous designation do we hear applied to Protagoras?

Hippocrates:: Well, there is no denying, that men do call our friend a sophist.

Socrates:: It is then, I suppose, as a sophist that we are going to pay him our monies.

Hippocrates:: Yes.

Socrates:: Now, suppose you were further asked, And what do you expect to become yourself, that you go to Protagoras? At this he blushed. By this time there was just a glimpse of day, so that I could see his face.

Hippocrates:: Why, if this be at all like the two former cases, it is clear that I must expect to become a sophist.

Socrates:: And should not you, be ashamed of showing yourself as a sophist in the eyes of Greece?

Hippocrates:: Yes, Socrates, I certainly should, if I must speak what I really think.

Socrates:: But possibly, Hippocrates, you are of opinion that the instructions to be afforded by Protagoras will not be given on this sort of principle, but rather resemble those you received from your masters in writing and music and gymnastics. For you were instructed in each of these latter professions, not with a view of becoming a craftsman therein yourself, but of obtaining the education which is deemed proper for an unprofessional gentleman.

Hippocrates:: Yes, Socrates, I am quite of opinion that this is rather the character of Protagoras's instructions.

Socrates:: Are you aware then, what you are now about to do, or are you blind?

Hippocrates:: To what?

Socrates:: Blind to the fact, that you are about to consign your soul to the care of a man, who is, you say, a sophist, while what in the world such sophist is, you know not, or I am much surprised. And yet, if you know not this, neither do you know to what you are abandoning your soul, whether it be to a good or an evil thing.

Hippocrates:: I think I know.

Socrates:: Well, what do you think a sophist means?

Hippocrates:: I think, as the name imports, that it means a man who is learned in wisdom.

Socrates:: Yes, but as much may be said for painters and architects; they also may be described as men learned in wisdom. But if we were asked, what the wisdom is in which painters are learned, we should doubtless say, In that which relates to the production of pictures. And so for the rest. But if we were to be further asked, What is the wisdom in which a sophist is learned? what is the production that he superintends? what would be our reply?

Hippocrates:: Why, what else should it be, Socrates, but I that he superintends the production of an able speaker?

Socrates:: If so, our answer might possibly be true, but certainly not sufficient. For it would draw on us the further inquiry, But what is the subject on which the sophist makes a man able to speak? The musician makes his pupil able to speak on the subject in which it makes him learned; in music, that is; does he not?

Hippocrates:: He does.

Socrates:: Well, what is the subject on which the sophist makes a man able to speak? obviously on that in which he makes him learned, is it not?

Hippocrates:: One would expect so, at any rate.

Socrates:: What then, is that, in which the sophist is both learned himself, and makes his pupil learned also?

Hippocrates:: This, Socrates, I confess, I cannot tell you.

Socrates:: Young man, what are you doing? are you aware of the danger to which you are about to expose your soul? If you had had occasion to entrust your body to any one’s care, at the risk of its becoming either healthy or depraved, frequent would have been your deliberations on the propriety of the measure; you would have summoned both friends and relatives to a consultation, and taken many days to consider the matter; yet now, when your soul is concerned, your soul, which you prize far more highly than your body, and whereon your all depends for good or ill, according as it turns out healthy or depraved; when this, I say, is at stake, you communicate neither with your father, nor your brother, nor with any of us your friends; you ask none of us whether or no you ought to entrust your soul to this stranger who is come to Athens; but having heard of his arrival only last evening, as you tell me, you come here early in the morning, not to take thought or counsel on the matter, but prepared to spend both your own fortune and your friends, as if you had already made up your mind that, come what might, you must be the pupil of Protagoras; a man whom, as you admit, you are neither acquainted with, nor have even so much as spoken to in your life, but whom you call a sophist; while what this sophist is, to whom you are about to entrust yourself, you are plainly ignorant.

Hippocrates:: Yes, Socrates, such would appear, from what you say, to be the case.

Socrates:: Hippocrates, is not a sophist a sort of merchant, or retail dealer, in the wares upon which the soul subsists? for myself, I esteem him something of the kind.

Hippocrates:: And what does the soul subsist upon, Socrates?

Socrates:: Instruction, of course, and let us be careful, my dear friend, that the sophist does not impose upon us, by praising the quality of his wares, just as is done by those who traffic in food for the body, by the merchant, that is, and the tradesman. For these dealers are ignorant, if I mistake not, of the commodities which they supply; they cannot tell which article is good or bad for the body though they praise them all alike in the sale any more than their customers can, unless they happen to be versed in the gymnastic or medical art. And, exactly in the same way, those who hawk about their instructions from city to city, selling wholesale and retail to all who bid, are in the habit of praising their whole stock alike; yet some of these too, my good friend, may very likely be unable to tell us which of their wares is good, and which bad for the soul, while their customers will be equally ignorant, unless here again there chance to be among them some skilled in the medicine of the soul. If then you happen to be a judge of these matters, and can say which is good, and which is bad, there is no danger in your buying instructions from Protagoras, or any other person whatever; but if not, then have a care, my good Hippocrates, that you do not stake and imperil your dearest treasure. For, I can assure you, there is a far greater risk in the purchase of instruction than in that of food. When you buy meat and drink from the trades man or merchant, you may carry them away in other vessels; and before admitting them into your body, by eating or drinking, you may lay them down in your house, and, calling in qualified advisers, consult what is fit to be eaten or drunk, and what to be rejected; what, moreover, is the proper quantity that may be taken, and what the proper time for taking it. So that in this purchase the danger is not great. But instruction you cannot possibly carry away in another vessel; as soon as you have paid down the price, you must of necessity receive the instruction in your soul itself; and when you have learnt it, go home a worse, or a better man. Let us, therefore, take advice on this question with our elders, for we are still too young to settle so great a matter. Since, how ever, we have started the plan, let us go and hear our sophist, and afterwards confer with others on what we have heard; for, beside Protagoras, we shall find there Hippias of Elis, and, I think, also Prodicus of Ceos, and many other learned professors.—

This resolution taken, we set out on our expedition. When arrived at the porch, we stopped to discuss a question which had fallen out between us on the road, and which we wished to bring to a satisfactory conclusion before entering the house. Accordingly we stood talking in the porch till we had settled the matter. Now the porter, an eunuch, must, I imagine, have overheard us; and I am inclined to think that, on account of the multitude of sophist-callers, he feels disgust for all who come to the house. At any rate, when we had knocked at the door, and he had opened it, and caught sight of us;

Eunuch:: Bah! more sophists, I declare. My masters engaged.

Socrates:: At the same time, with both his hands, he slammed the door in our faces, with all the will in the world. So we knocked again; but our friend, without opening, called out;

Eunuch:: Sirs, have you not heard that my master is engaged?

Socrates:: But, good porter, we are neither come to call upon Callias, nor are we sophists; so cheer up. It is Protagoras that we want to see, take in our names. At length, with the greatest difficulty, we prevailed on the fellow to open us the door.

On entering, we found Protagoras walking up and down one of the porticoes. And, in the same line with him, there walked on one side Callias, the son of Hipponicus, and his half-brother Paralus, the son of Pericles, and Charmides, the son of Glaucon; on the other there was Pericles other son, Xanthippus, and Philippides, the son of Philomelus; and, more over, Antimcerus of Mende, who enjoys the greatest reputation of all Protagoras’s pupils, and is taking lessons professionally, with the view of becoming a sophist himself. Behind these distinguished individuals there followed a crowd of listeners, composed principally, as it appeared to me, of the foreigners whom Protagoras sweeps with him from the several cities he passes through, luring them, like an Orpheus, with his voice, and they follow at the sound, enchanted. There were, however, among them some of our own countrymen as well. On looking at this attendant band, I was particularly charmed to observe the excellent care they took never to get into the way of Protagoras. The moment the great master and his party turned, deftly and daintily did these gentlemen file off to the right and left, and, wheeling round, take their places, on each occasion, behind him, in the prettiest order.

Next after him my eyes observed, as Homer has it, Hippias of Elis, sitting in the opposite portico on a high chair; and on stools around him I remarked Eryximachus the son of Acumenus, Phaedrus of Myrrhine, and Andron the son of Androtion, beside a number of foreigners from his own town of Elis and other cities. And they appeared to be plying him with questions on natural science, and especially on astronomy, while he, sitting aloft on his throne, was dispensing to them their several answers, and explaining all their difficulties.

There too, moreover, I beheld a Tantalus; for Prodicus of Ceos had lately come to Athens. Now this professor was established in a small room which Hipponicus had been in the habit of using as a store closet. On the present occasion, however, Callias has been forced, by the influx of guests, to empty it of its contents and turn it into a spare bedchamber. Here then was Prodicus, still in bed, and wrapped up in what appeared to be a great quantity of sheepskins and blankets. On sofas near him were sitting Pausanias of Ceramis, and close by the side of Pausanias a young lad of a noble disposition, as far as I could judge, and certainly of a most beautiful form. I thought I heard his name was Agathon, and I should not be surprised if he turns out to be Pausaniass favorite. Beside this stripling there were the two Adimantuses, sons of Cepis and Leucolophides, and some others. But what they were talking about I was unable to catch from the outside, notwithstanding my intense anxiety to hear Prodicus, so supremely, nay divinely, clever do I account the man; for the gruffness of his voice caused a kind of buzzing in the room, which rendered all he said indistinct. We had not been long in the house, when there came in after us Alcibiades the fair, as you call him with my full assent, and Critias the son of Callaeschrus.

After we had spent a few minutes in noticing the particulars I have mentioned, we walked up to Protagoras, and I said;

Socrates:: Protagoras, it is to see you that I and my friend Hippocrates here have called.

Protagoras:: Would you like, to speak with me alone, or before the rest?

Socrates:: To us, it makes no difference in the world; when you have heard our object in coming, you can judge for yourself.

Protagoras:: Well, what is your object?

Socrates:: Hippocrates, presenting him, is a native of Athens, son of Apollodorus, of a great and wealthy house. For himself, he is considered in point of natural ability a fair match for the youth of his age; and he is desirous, I believe, of making a figure in the state, a result which he expects more readily to attain by attaching himself to you. Now then that you have heard our errand, consider whether it ought to be discussed between ourselves alone, or in public.

Protagoras:: You do well, Socrates, to take these precautions in my behalf. When a stranger visits powerful cities, and in each of them calls upon the flower of the youth to abandon the society of their countrymen, both related and not related, both old and young, and attach themselves solely to him, in the hope of becoming better by such intercourse; when he does this, I say, he cannot take too many precautions; for his course is attended by no slight jealousy, by ill-will, moreover, and actual plots. Now the trade of sophist is, I maintain, of ancient date; but its professors in ancient times were so afraid of this odium ever attaching to it, that they uniformly covered it with an assumed disguise. Some among them veiled it under poetry, as Homer, Hesiod, and Simonides; others, again, under mystic rites and prophetic inspiration, like Orpheus, Musceus, and their followers. I have heard of others putting forward even the gymnastic art, as a screen; Iccus of Tarentum, for instance, and that sophist of the present day, who is inferior to none of his contemporaries, Herodicus of Selymbria, and formerly of Megara. Music, again, was the cover assumed by your own countryman, Agathocles, a very eminent sophist, by Pythoclides of Ceos, and a number of others. Now it was, I repeat, for fear of becoming generally odious, that all these distinguished sophists shrouded their one trade beneath the veil of the several arts I have mentioned. But I, for my part, differ from them all, so far as this concealment is concerned. For I conceive that they were very far from attaining the object they desired, inasmuch as their secret was discovered by men of authority in their respective states, that is to say, by the very men to deceive whom these disguises were assumed; since the vulgar herd may be said to perceive nothing at all of them selves, but merely to echo the opinions which the former promulgate. Now, whenever a man attempts to escape, and instead of succeeding is caught in the act, he is not only thought a great fool for his pains, but necessarily renders himself still more obnoxious than before; for men consider that such a person adds knavery to his other delinquencies. On such grounds, then, the course I have pursued has been exactly the opposite to this. I have ever avowed myself a sophist and a teacher of youth; and I esteem this precaution of mine to be more effectual than theirs, avowal, that is to say, I esteem safer than denial. Added to this, I have devised other precautions, so that, thanks be to Heaven, no harm has ever come to me from avowing my profession. Yet I have now been engaged in it many years, as may well be the case, considering the number I have lived altogether so many that there is not one among you, whose father I am not old enough to be. I shall therefore consider it far more agreeable, if you-do not object, to discuss your errand in the presence of all the inmates of the house.

Socrates:: On hearing this, I at once suspected that he had a mind to parade us before Prodicus and Hippias, and make it appear that we had come as his ardent admirers.

Accordingly I said, Why don’t we then summon Prodicus and Hippias to come with their followers, and listen to our conversation?

Protagoras:: Let us do so by all means.

Callias:: What say you, to our making a regular divan, so that you may talk sitting?

Socrates:: His proposal being accepted, we all set to work with delight at the idea of listening to such clever men, and with our own hands seized on the stools and sofas, and ranged them in order by the side of Hippias, as the stools were already in his neighborhood. Before we had finished, Callias and Alcibiades, who had gone to fetch Prodicus, returned with him and his coterie, having succeeded in getting the professor out of bed.

As soon as we had all taken our seats, Protagoras began.

Protagoras:: Now then, Socrates, that these gentlemen have joined our party, you had better repeat what you mentioned to me a few minutes ago, with regard to this young man.

Socrates:: I open my account of our errand, in the same way as I did before. I present to you my friend Hippocrates, who is possessed with a desire of becoming your disciple, and would be glad, he says, to hear what advantages he may expect to derive from your tuition. So much for our part of the business. In answer to this, Protagoras said to Hippocrates;

Protagoras:: My young friend, if you are to be my disciple, you will find that on the very day of your becoming such, you will go home a better man than you came; on the second day the result will be similar, and each succeeding day will be marked with the same gradual improvement.

Socrates:: But, Protagoras, there is nothing wonderful in this promise of yours; it is only what may naturally be expected. Since I am sure that even you yourself, advanced in years and wisdom as you are, could not fail of being improved by receiving information on a subject with which you might possibly chance to be unacquainted. No, this is not the sort of answer we want; but something of the following kind. Suppose our friend here were ere long to take a new fancy into his head, and conceive the desire of attaching himself to the young painter, Zeuxippus of Heraclea, who has lately come to Athens, and were to make the same application to him, that he is now making to you, and were to hear from him in reply, exactly as he has heard from you, that each day of his attendance would be marked by fresh improvement and progress. If our youth, however, not content with this answer, were further to inquire, In what do you mean that I shall improve, and wherein shall I make progress? Zeuxippus would say, In painting. And so, if on applying to Orthagoras of Thebes, and hearing from him the same answer that he hears from you, he were to proceed to ask, what would be the particular point in which he would daily improve by his daily attendance? the flute-player would reply, In playing the flute. This then is the kind of answer I wish you to give to Hippocrates, and to me who am questioning you on his behalf.

If my friend here becomes a pupil of yours, Protagoras, he will go home on the first day of his attendance a better man than he came, and on each succeeding day he will make similar progress to what, Protagoras? In what will he improve?

Protagoras:: Socrates, your question is a fair one, and I delight in answering fair questions. If Hippocrates comes to me, he will not be served as he would be served if he were to attach himself to any other sophist. Sophists in general misuse their pupils sadly. Just escaped as the lads are from their school studies, these teachers drive them back again, sorely against their will, into the old routine, and give them lessons

Socrates:: (while saying this, he glanced at Hippias)

Protagoras:: in arithmetic, astronomy, geometry, and music; whereas, if a youth comes to me, he will receive instruction on no other subject than that which he is come to learn. And what he will learn is this; such prudence in domestic concerns as will best enable him to regulate his own household; such wisdom in public affairs as will best qualify him for becoming a statesman and orator.

Socrates:: I wonder, whether I follow your meaning; I understand you to speak of the political art, and that you undertake to make men good citizens.

Protagoras:: This is exactly the profession I do make, Socrates.

Socrates:: Glorious truly then, is the art you possess, if so be that you do possess it; for to a man like you I will say nothing else than what I really think. Since for my part, Protagoras, I always imagined that this art was not capable of being taught, but when you say it is, I know not how to disbelieve you. My reasons, however, for believing that it cannot be taught, or communicated from man to man, I am bound to declare. I hold, as all Greece holds, that the Athenians are a wise people. Now, I observe in all our meetings in the assembly, that whenever there is occasion to transact any public business connected with house-building, they invariably send for house builders, to advise them on the matter; when ever connected with shipbuilding, for ship builders; and the same practice is observed with regard to all the arts which they consider capable of being learnt and taught. But should any individual, whom they believe to be no member of the trade in question, obtrude his advice on the matter, be he ever so beautiful, or wealthy, or high-born, they do not a whit the more allow him a hearing on this account, but shower on him jeers and hisses, till our would-be speaker either gives way of himself to this storm of clamor, or is pulled down from the bema by the bowmen, and turned out of the house by command of the prytanes. Such then is the course they pursue with all business which they consider belongs to a craft. But whenever a matter connected with the public administration requires discussion, up starts any member who pleases, and proffers them his advice, no matter whether he be carpenter, smith, or shoemaker, merchant or skipper, rich or poor, high or low. And in this case no one thinks, as in the former, of objecting to the speaker, that without having received instruction from any quarter, without having any teacher to show, he yet presumes to offer advice; clearly, because they all believe that this knowledge is not capable of being taught. Nay, not only is public business conducted on this principle, but in private life we see our best and wisest citizens unable to impart to others the excellence which them selves possess. Take, for example, Pericles, the father of these two young men. In all that a master could teach, he has educated them liberally, and well; but in his own wisdom he neither instructs them himself, nor sends them anywhere else to be instructed; but, like oxen consecrated to the gods, they are left to roam and pasture at will, if haply some where or other they may light by good fortune on virtue. Do you wish another case? There is Clinias, the younger brother of our friend here, Alcibiades. His guardian, this same Pericles, for fear, as he said, of his being corrupted by Alcibiades, tore him from the society of the latter, and placed him in Ariphrons house to be educated. But he had not been there six months before Ariphron restored him to his guardian, as not being able to make anything of him. And so I could cite instance upon instance of men, who, good themselves, have been unable to render better either their own sons or other people's; and it is, Protagoras, from the observation of such instances as these that I have been led to the belief, that virtue is not a thing that can be taught. Now, however, that I hear you maintain the contrary, that belief is shaken, and I am inclined to think that there must be something in what you say; since I esteem you a man of vast experience, of extensive acquirements, and no inconsiderable invention. If therefore you are able to make it clear by demonstration, that the nature of virtue admits of its being taught, do not grudge us, I beseech you, your proof.

Protagoras:: No, Socrates, I will not. But say, should you prefer me, as beseems an elder when addressing his juniors, to convey my proof in the form of a mythical story, or to go through it step by step in a serious discussion?

Socrates:: Many of the party calling out in reply, that he might do whichever he pleased;

Protagoras:: Well, since you leave me the choice, I think it pleasanter to tell you a story.

There was once a time when, though gods were, mortal races were not. But when there came, by law of fate, a time for these too to be created, the gods fashioned them in the bowels of the earth, out of a mixture of earth and fire, and substances which combine the two. And when they were ready to bring them forth to the light, they charged Prometheus and Epimetheus with the office of equipping them, and dispensing to each of them suitable endowments. Epimetheus, however, entreated his brother to leave the distribution to him; and when I have completed my work, do you, says he, review it.

Having obtained his request, he began to distribute. To some he assigned strength without speed; others, that were weaker, he equipped with speed. Some he furnished with weapons; while for those whom he left weapon less, he devised some other endowment to save them. Animals, which he clad with puny frames, were to find safety in the flight of their wings, or subterranean retreats; those which he invested with size, were by this very size to be preserved. And so throughout the whole of the distribution he maintained the same equalizing principle; his object in all these contrivances being to prevent any species from becoming extinct. Having thus supplied them with means of escaping mutual destruction, he proceeded to arm them against the seasons, by clothing them with thick furs and strong hides, proof against winter-frost and summer-heat, and fitted also to serve each of them, when seeking rest, as his own proper and native bed; and under the feet he furnished some with hoofs, others with hair and thick and bloodless skins. His next care was to provide them with different kinds of food; to one class he gave herbs of the field; to another, fruits of trees; to a third, roots; while a fourth he destined to live by making other animals their prey. Such, how ever, he allowed to multiply but slowly, while their victims he compensated with fecundity, thus ensuring preservation to the species. Forasmuch though as Epimetheus was not altogether wise, he unawares exhausted all the endowments at his command on the brute creation; so he still had left on his hands without provision the human family, and he knew not what to do.

While thus embarrassed, Prometheus came up to review his distribution, and found that, while other animals were in all points well suited, man was left naked and barefoot, imbedded and unarmed. Yet now the fated day was close at hand, on which man too was to go forth from earth to light. Prometheus therefore, being sorely puzzled what means of safety to devise, steals in his extremity the inventive skill of Hephaestus and Athene, together with fire; for without fire it could neither be acquired, nor used by any; and presented them to the human race.

Thus man obtained the arts of life, but the art of polity he had not; for it was kept in the house of Zeus, and into the citadel, the dwelling of Zeus, Prometheus was not now allowed to enter; moreover, the watchmen of Zeus were terrible. But into the joint abode of Athene and Hephaestus, where they worked together at the craft they loved, he stole unnoticed, and purloining the fiery art of Hephaestus, and the other proper to Athene, bestowed them on man; and hence man derives abundance for life. But Prometheus, for his brothers fault, was visited not long after, as the story goes, by the penalty of his theft.

Man being thus made partaker of a divine condition was in the first place, by reason of his relationship to God, the only animal that acknowledged gods, and attempted to erect to gods altars and statues. Secondly, by his art he soon articulated sounds and words, and devised for himself houses, and raiment, and shoes, and beds, and food out of the ground.

Thus furnished, men lived at first scattered here and there, but cities there were none. So they fell a prey piecemeal to the beasts of the field, because wherever they met them they were weaker than they, and their mechanical art, though sufficient for their support, was found unequal to the war with beasts. For as yet they had not the art of polity, which comprises the art of war. So they sought to assemble together, and save their lives by founding cities. But often as they assembled they injured one another, for lack of the political art; so that again they dispersed, and again were perishing. Zeus therefore, fearing for our race that it would be quite destroyed, sent Hermes to take to men justice and shame, that they might be orderers of cities, and links to bring together friendship. Whereupon Hermes inquired of Zeus in what manner he was to present shame and justice to men. Am I to dispense them, he asked, in the same way that the arts have been dispensed? which have been dispensed on this wise; One man received the art of medicine for the use of many not physicians, and so with the other crafts. Is it thus that I am to distribute shame and justice among men, or bestow them on all alike? On all alike, said Zeus; let all partake, for cities cannot be formed, if only a few are to partake of them, as of other arts. Nay more, enact a law from me, that whosoever is incapable of partaking in shame and injustice, be put to death as a pest to a city.

Thus you see the reason, Socrates, why the Athenians and others, when there is a question on excellence in carpentering, or any other manual art, conceive that few only are qualified to advise them; and why, if any one not of the number of the few, presumes to offer his counsel, they refuse him a hearing, as you assert; and refuse it justly, as I maintain. But when ever they come to a debate on political virtue, which ought altogether to depend on justice and prudence, they listen with good reason to every speaker whatsoever, esteeming it every mans duty to partake of this virtue, if he par takes of no other, as otherwise no city can exist. This, Socrates, is the true reason of the fact. That you may not, however, fancy yourself imposed upon, but may understand that it is really the universal opinion, that all men have a share of justice and political virtue in general, receive this additional proof. In all other kinds of excellence, for instance, if a man professes himself skilled in playing the flute, or in any other art whatsoever, while in reality he is not so, he is pursued, as you observe, with either ridicule or indignation, and his relations come up and reprimand him as a madman. But in the case of justice and political virtue, albeit a man is known to be deficient in such virtue, yet if he tells the truth of himself before many hearers, this confession of the truth, which in the former case was considered good sense, is here looked upon as madness; and it is said that all men ought to profess to be just, whether they are so or not, and that he who does not profess it is out of his senses; it being necessary that every single person should in some degree partake of justice, if he is to live among men.

So much then to prove that on this particular virtue they with good reason allow every man to offer his advice, because they believe that every man has a share in it; and further, that they consider it to be, not of natural or spontaneous growth, but that, wherever it exists, it is the result of teaching and study, I will next endeavor to demonstrate. If you take notice of all the evils which men believe their neighbors possess by the fault of nature or of fortune, you will observe that no one is angry with those who are thus afflicted; no one takes them to task; no one attempts to instruct or correct them with a view to their alteration for the better; pity is the only feeling entertained. Who, for instance, is so unreasonable as to visit another with any of these modes of treatment for being ugly, or small, or sickly? No one, clearly, because no one, I imagine, is ignorant that evils of this kind, as well as their opposite advantages, accrue to men either by nature or fortune. Look, on the other hand, at those merits which it is believed may be acquired by application, exercise, and instruction; if a man, instead of possessing these merits, possesses the opposite vices, here, if I mistake not, is indignation excited, punishment inflicted, and reproof ad ministered. Now of this kind injustice and impiety are individual instances, while the entire opposite to political virtue composes the class. And for this every man is angry with his neighbor, every man takes his neighbor to task, clearly because every man believes that it is acquired by education and habit. Nay, Socrates, if you will but observe the purport of punishment, it will itself teach you that in the opinion of the world, at any rate, virtue is a thing capable of being acquired. No one when punishing a criminal directs his thought to the fact, or punishes him for the fact, of his having committed the crime, unless he be pursuing his victim with the blind vengeance of a reasonless brute. No, he that would punish with reason, punishes not on account of the past offence for what has been done he surely cannot undo but for the sake of the future, in order that the offender himself, and all who have witnessed his punishment, may be prevented from offending hereafter. And if he conceives such a notion as this, he also conceives the notion that virtue may be taught; at any rate he punishes with a view of deterring from vice. This, therefore, is the opinion entertained by all who inflict punishment, either in a private or public capacity. Now, punishment and correction are inflicted by all the world on those whom they believe to be guilty, and by none more than by your own citizens, the Athenians; so that, by this reasoning, the Athenians also are in the number of those who consider that virtue may be acquired and taught. That your countrymen then have good reason for listening to the advice of a smith or a shoemaker on political affairs, and that in their opinion virtue is a thing susceptible of being taught and acquired, has been proved to you, Socrates, with arguments which, for my part, I consider convincing.

There still remains, however, a difficulty which puzzles you. You ask how it is that good fathers instruct their children in all know ledge that depends upon teachers, and make them wise therein, but in the virtue wherein they are good themselves they make them no better than others. In answering this question, Socrates, I shall address you no more in fable, but in serious argument. And let us view the matter thus. Is there not some one thing of which all members of a state must partake, if a state it is to be? for here, if any where, shall we find the solution of your difficulty. For if such a thing there be, and if this single thing be neither the art of the carpenter, nor of the brazier, nor of the potter, but justice and discretion and holiness, and, in a word, that which I call compendiously a mans virtue; if this be a thing of which all must partake, and with which every lesson must be learnt, and every deed done, without which no lesson learnt and no deed done; if all who do not partake of it must be instructed and corrected, be they men, or women, or children, until by such treatment they are improved; while those who refuse to hearken to the voice of correction and instruction are to be expelled from their country, or put to death as incurable; if all this be true, and in spite of this being true, virtuous men have their children instructed in all other knowledge, but fail to have them instructed in this, just think what extraordinary people you make of your virtuous men. For we have proved that as individuals and statesmen they believe virtue to be the fruit of education and culture; and, with this belief on their part, is it possible to suppose that they instruct their sons in knowledge where death is not the punishment of ignorance, but that in the knowledge of that, wherein if they fail to instruct their children, they entail upon them the penalty of death, and of exile, and beside death the confiscation of their goods; and, in a word, the utter ruin of their house; is it possible, I say, to suppose that in the know ledge of this, that is, in the knowledge of virtue, they do not instruct their children and bestow thereon all their care? Surely we must believe they do. Yes, Socrates, from infancy upwards they instruct and admonish them as long as they live. The moment that a child understands what is said to him, the one point contended for by nurse, and mother, and governor, and the father himself, is the progress of their charge in virtue; from every thing that is said and done they take occasion to tell and explain to him, that such a thing is just, and such another unjust, that this conduct is honorable, and that disgraceful, that one deed is holy, and another impious; this you must do, they say, and that you must not do. If the child yield a willing obedience, all is well; if not, they treat him like a young tree that is twisted and bent, and try to straighten him with threats and blows. After this, they send him to school, with a strict charge to the master to pay far greater heed to the good be savior of the children than to their progress in reading and music. And the master does make this his principal care, and as soon as his boys have learned their letters, and are in a condition to understand what is written, as before what was spoken, he sets before them on their benches the works of good poets to read, and compels them to learn them by heart, choosing such poems as contain moral admonitions, and many a narrative interwoven with praise and panegyric on the worthies of old, in order that the boy may admire, and emulate, and strive to become such himself. And exactly on a similar principle the study of the music-master is to produce sobriety of character, and deter the young from the commission of evil; and further, when he has taught them to play, he again instructs them in the works of other good poets, selecting lyric poems for their use, which he sets to his music, and compels the minds of his pupils to be familiarized with measure and harmony, to the end that their natures may be softened, and that, by becoming more sensible to time and tune, they may be better qualified to speak and to act. For the life of man in all its stages requires modulation and harmonizing. Nay more, they send them to gymnastic schools, in order that by an increase of bodily strength they may be better able to serve their virtuous minds, and not be compelled by physical infirmity to shrink from their post in war and other emergencies. Such is the course of education adopted by those fathers who are best able to follow it, that is to say, by the wealthiest citizens; and their sons are the first to go to school, and the last to leave it. And as soon as they are released from school, the state on its part constrains them to learn its laws, and live by them as by a model, that they may not follow the random bent of their own inclinations. And exactly as writing-masters under-rule lines with their pen for such pupils as are still awkward at writing, before they give them their writing lesson, and oblige them to follow in their writing the direction of the lines; so too does the state mark out a line of laws, the discoveries of good and ancient lawgivers, which it forces its members to be guided by, as well in exercising as in obeying authority, while it visits with punishment all who transgress the line; and the name given to this punishment, both here and in other places, is correction, under the notion that justice directs. So great then being the attention paid to virtue both by states and individuals, do you wonder, Socrates, and doubt if virtue is capable of being taught? You ought not to wonder at that, but much rather, if it were not capable.

Protagoras:: How does it happen then, that virtuous fathers have frequently unworthy sons? Hear the reason; for neither in this is there any thing to wonder at, if it be true, as I previously remarked, that virtue is a pursuit wherein no member of a state, if it is to be a state, must be altogether uninitiated. For if what I say be true, as most incontestably it is, consider the case by selecting in the way of example some other pursuit and subject of instruction. Suppose, for instance, that it were impossible for a state to exist without all its members being flute-players in a greater or less degree, according to their several capacities; suppose that all both publicly and privately were taught to play, and reproached if they played ill, and that no one envied another this attainment, just as under existing circumstances no one either envies a man his justice and his obedience to law, or affects to conceal his own, as he does his other accomplishments for each of us, I imagine, finds his own interest in his neighbors justice and virtue, and therefore all are eager to tell and teach to all the dictates of justice and law. Suppose, I repeat, that in the art of playing the flute we were all ready to instruct one another with the same zeal and freedom from jealousy; do you imagine, Socrates, that the sons of superior flute-players would be at all more likely to turn out superior performers than the sons of inferior players? I think they would not; but any mans son who chanced to be born with a genius for flute-playing would rise to distinction, and if the genius were wanting, so would be the distinction; and often would it happen that a skilful player would be followed by an unskillful son, and an unskillful father by a skilful son. But still I feel sure that all would be competent players by the side of those, who did not make flute playing their business or their study. This then is the light in which I wish you to view our present condition. Select the individual whom you consider the most deficient in justice of all who have been trained in law and society, and you will find him not only just, but a perfect master in justice, when compared with men who have neither training, nor tribunal, nor laws, nor any necessity ever compelling them to cultivate virtue; but who are in fact savages, like the wild men represented on the stage last year by the poet Pherecrates at the Lensean festival. I am confident that, if you were thrown among such men as those, like the misanthropical chorus in the play, you would be only too happy to fall in with a Eurybates or a Phrynondas, and would mourn with tears of regret for the villainy of your worst citizens here. But now you are fastidious, Socrates, and because all men are teachers of virtue to the best of their several abilities, you believe that it is taught by none. Again, if you were to search in Athens for a teacher of Greek, you would not find a single one; and equally unsuccessful, I imagine, would you be if you were to look for a master competent to instruct the sons of our mechanics in the very trade which they have each learnt from their father, as well as their father and his fellow-craftsmen were able to teach it. No, Socrates, if you wanted a teacher for such proficients as these, it would be no easy matter to discover one; but if for boys quite ignorant of the trade, you would find one with no trouble at all. And similar is the difficulty with respect to virtue and all those other qualities. But if there be any among us ever so little more capable than others of advancing men on the road to virtue, you may be well content. Now of this number I conceive that I am one; and I flatter myself that far above all other men do I understand the art of making a virtuous gentleman, and that my lessons are well worth the price I demand, ay and a still larger one, so much so that even the pupil himself allows it. And therefore the plan I have adopted in asking my terms is this. As soon as a pupil has finished his course, he pays me, if willing, the full amount of my demand; if not, he goes to an altar, and there he makes on oath his own estimate of the value of my instructions, and pays me accordingly.

Such are my proofs, Socrates, both in fable and serious argument, in favor of the propositions, that virtue is capable of being taught, and that it is such in the opinion of the Athenians, and that there is nothing surprising in good fathers having bad sons, or in bad fathers having good sons; since to take from the various professions one case out of many, the sons of Polyclitus, the companion of our friends here, Paralus and Xanthippus, are nothing m comparison with their father. But of Paralus and Xanthippus it is not as yet fair to predicate this; for their youth allows us to hope.

Socrates:: After this lengthened and varied display Protagoras ceased to speak. And for a long While I sat enchanted, with my eyes still fixed on him, in the expectation of his saying something more, and in my eagerness to hear it. At last, when I perceived that he had really Finished, I with some difficulty recovered myself, And turning to Hippocrates said, —

How Thankful I am to you, son of Apollodorus for having induced me to come hither, so high a privilege do I account it to have heard what I have heard from Protagoras. For heretofore I as of opinion that there was no method of human culture by which the virtuous acquired their virtue but now, am persuaded there is Only one slight difficulty remains in my mind, Which I am sure that Protagoras will easily Elucidate, since he has elucidated so much. For if you were to apply to any of our public Men for an explanation of these very matters, To Pericles, for instance, or some other able speaker, you might possibly hear from them as fine a speech as has just been delivered; but if you were to proceed with your interrogations, you would find them like books, unable either to give you an answer, or to ask any question themselves; but if you start ever so slight an inquiry with respect to any remark they have made, exactly in the way that a vessel of brass, when struck, rings loud, and continues to ring, unless you stop it by laying on your finger, so do these orators respond to the shortest question with an harangue of inordinate length. But not so our Protagoras. He is not only equal, as the fact proves, to the delivery of long and beautiful speeches, but he is also able to return a short answer to a short question; and, when questioner in his turn, he can wait till he has received his answer gifts these of rare attainment. Now therefore, Protagoras, as I only want one slight explanation to be entirely satisfied, I trust to you for answering me this; You assert that virtue is susceptible of being taught, and if there be a man in the world on whose word I would believe it, I believe it on yours. But there was one thing that puzzled me, as you were speaking, and on this pray satisfy my mind. You said that Zeus sent justice and shame as a present to men; and again, in several places in your discourse, you spoke of justice, and discretion, and holiness, and similar qualities, as making all together one thing, which you called virtue. This, then, is the point that I wish to be accurately explained. Is virtue one thing, and are justice, discretion, holiness, parts of it, or are all these but so many names of one and the same thing? This is what I still want to know.

Protagoras:: Well, Socrates, if this be all, I shall have no difficulty in answering you. These qualities of which you ask are all parts of one thing, of virtue.

Socrates:: But are they parts, like the parts of a face, like the mouth, nose, ears, and eyes; or, like the parts of gold, do they exactly resemble one another and the whole, except in being greater or smaller?

Protagoras:: Like the former, I consider, Socrates. They bear the same relation to virtue that the parts of a face bear to the entire face.

Socrates:: How then, are these parts of virtue distributed among men? Do some men have one, and some another; or, if a man has received one, must he of necessity have all?

Protagoras:: Certainly not, Socrates. Many men are courageous without being just, many are just without being wise.

Socrates:: Then these too are parts of virtue, wisdom and courage.

Protagoras:: Most assuredly they are. Why, wisdom is chief of all the parts.

Socrates:: And every one of these parts is different from every other. Is it not so?

Protagoras:: It is.

Socrates:: And every one of them has a distinct function, like the parts of a face? An eye, you know, is not like an ear, nor is its function the same; and so of the other parts, there is not one like any other, either in function or in any thing else. Is it the same then with the parts of virtue? do they all differ from one another, at once in themselves and their functions? Is it not clear though, that such must be the case, at least, if we are to keep to our comparison?

Protagoras:: Well, Socrates, it is the case.

Socrates:: If so, there are none of the other parts of virtue like wisdom, or like justice, or like courage, or like discretion, or like holiness.

Protagoras:: None.

Socrates:: Come then, let us examine together into the character of each of these parts. And, first, of justice. Is justice a thing, or not a thing? For my part, I believe it to be a thing. But what do you?

Protagoras:: I believe so, too.

Socrates:: To proceed. If a man were to say to you and me, Protagoras and Socrates, be good enough to tell me whether this thing, as you have just called it, this justice, is, in itself, just or unjust? I should answer, Just; but what would be your decision? The same as mine, or different?

Protagoras:: The same.

Socrates:: The nature then of justice is to be just, I should say, if he were to ask me the question. Should you?

Protagoras:: I should.

Socrates:: And if he were to proceed to inquire whether we believed in the existence of holiness as well, we should doubtless assent.

Protagoras:: True.

Socrates:: And if he were to ask whether we called this a thing also, we should assent again.

Protagoras:: So we should.

Socrates:: But if he were further to inquire whether we considered the nature of this thing to be holy, or unholy, I, for my part, should be indignant at the question, and should reply, Hush, my good sir; it were hard for anything else to be holy, if holiness itself were not holy. And you, should not you answer thus?

Protagoras:: Most certainly I should.

Socrates:: If however to these questions he were to add the following, But what was it, my good friends, that you said a little time ago? Did I not hear you aright? I fancied you said that the parts of virtue were so disposed among them selves, as to bear no resemblance one to another. To this I should reply, For the rest you heard aright; but when you thought that I too made this remark, your hearing deceived you. No, this was Protagoras's answer to a question of mine. On hearing this, if he were to turn to you, and say, Protagoras, does Socrates speak the truth? do you maintain that the different parts of virtue are all unlike each other? was this assertion yours? what would be your reply?

Protagoras:: I should be forced to allow that it was.

Socrates:: After this admission, Protagoras, what would be our answer, if he were to proceed thus? It appears then, that it is not the nature of holiness to be a just thing, nor of justice to be a holy thing; but, rather, of holiness to be a thing that is not just, and of justice to be a thing that is not holy; that is to say, holiness is an unjust thing, and justice an unholy thing. Well, what is to be our answer? On my own account I should reply, that, as for myself, I believed justice to be holy, and holiness just; and on yours, too, I should be glad, if you would allow me, to make the same answer; at any rate, to say that justice and holiness, if not exactly the same, resembled each other as nearly as possible; and that nothing was so like holiness as justice, or like justice as holiness. Determine then, whether you would forbid me to make this reply, or whether your opinion coincides with mine.

Protagoras:: I certainly do not think, Socrates, that it is so unconditionally true, as to demand my unqualified assent, that justice is holy, and holiness just. There appears to me to be a difference between them. But what matters that? If you wish it, I am quite ready to allow that holiness is just, and justice holy.

Socrates:: Pardon me. It is not at all my object to examine into an If you wish it, or an If you think so; but into what you think, and what I think; that is to say, I consider that our argument will be most successfully investigated by putting ifs altogether out of the question.

Protagoras:: Well, Socrates, there is no doubt that justice and holiness are somewhat alike; for there are no two things in the world that do not, in some point of view, resemble one another. There are points of resemblance between black and white, hard and soft, and other qualities which are believed to be most diametrically opposed to each other. In fact, those very parts which we said just now had different functions and different natures the parts, that is, of the face do, in certain respects, resemble one another. So that, in this way, you might go on to prove, if you chose, that all things are alike. But it is not fair to call things like, because they have some point of resemblance; nor unlike, because they have some point of dissimilarity, if, in either case, the point be a very small one.

Socrates:: Do you mean to say then, that, in your opinion, the relation between justice and holiness is that of the faintest resemblance?

Protagoras:: I don’t quite say this, but neither, on the other hand, am I inclined to take your view of the matter.

Socrates:: Well, since this question seems to put you out of humor, let us allow it to pass; and from the other things you said select the following for consideration.

Socrates:: Is there a thing you call folly?

Protagoras:: There is.

Socrates:: And is not the direct contrary of this thing wisdom?

Protagoras:: I think so.

Socrates:: When men act correctly and beneficially, are they discreet, think you, in so acting; or would they be, if they were to act in the opposite manner?

Protagoras:: Discreet in so acting.

Socrates:: Are they not discreet by virtue of discretion?

Protagoras:: Of course they are.

Socrates:: And do not those, who do not act correctly, act foolishly, and show themselves not discreet in so acting?

He assented.

Socrates:: It appears then that acting foolishly is the contrary to acting discreetly.

Protagoras:: It does.

Socrates:: Is it not true, that what is done foolishly is done through folly, and what is done discreetly, through discretion?

To this he agreed.

And that if a thing be done through strength, it is done strongly; if through weakness, weakly?

Protagoras:: Yes.

Socrates:: And if with quickness, quickly; and if with slowness, slowly?

Protagoras:: True.

Socrates:: And, in short, that if anything is done in such and such wise, it is done by virtue of the corresponding quality; and if contrariwise, by the contrary quality?

Protagoras:: Granted.

Socrates:: To proceed. Is there such a thing as beauty?

Protagoras:: There is.

Socrates:: And has it any contrary except deformity?

Protagoras:: None.

Socrates:: Again, is there such a thing as good?

Protagoras:: Yes.

Socrates:: Has it any contrary except evil?

Protagoras:: No.

Socrates:: Once more, is there such a thing as high in sound?

Protagoras:: There is.

Socrates:: And is there any contrary to it except low?

Protagoras:: Not any.

Socrates:: Has every single thing then only one contrary, and not many?

Protagoras:: Only one, I admit.

Socrates:: Come then, let us reckon up our admissions. We have admitted that each thing has one contrary, and no more, have we not?

Protagoras:: We have.

Socrates:: And that whatever is done contrariwise, is done by virtue of contraries?

Protagoras:: Yes.

Socrates:: And that whatever is done foolishly, is done contrariwise to that which is done discreetly?

Protagoras:: Granted.

Socrates:: And that what is done discreetly, is done through discretion; what foolishly, through folly?

Protagoras:: Agreed.

Socrates:: Well, if they be done contrariwise, they must be done through contraries, must they not?

Protagoras:: They must.

Socrates:: And the one is done through discretion, the other through folly, is it not?

Protagoras:: Just so.

Socrates:: Contrariwise?

Protagoras:: Of course.

Socrates:: Through contraries then?

Protagoras:: Yes.

Socrates:: It follows then that folly is contrary to discretion?

Protagoras:: Clearly.

Socrates:: Do you remember though our agreeing before that folly was contrary to wisdom?

Protagoras:: I do.

Socrates:: And that one thing had only one contrary?

Protagoras:: Yes.

Socrates:: Well then, which of our two assertions are we to retract, Protagoras? the one which maintains that one thing has only one contrary, or that, in which it was stated that wisdom and discretion were distinct, both being parts of virtue, and not only distinct but unlike, both in nature and function, just as the parts of the face are unlike? Which of the two, I repeat, are we to retract? for when set side by side these two statements do not present a very musical appearance, as they neither accord nor harmonies with one another. For how can they possibly accord, if on the one hand it is necessary that one thing have only one contrary and no more, and on the other it appears that folly, which is one thing, has wisdom for a contrary and likewise discretion? I state the case correctly, do I not, Protagoras?—

He confessed that I did, though sorely against his will.—

Socrates:: Might it not be then, that wisdom and discretion are one and the same thing? Just as before we found that justice and holiness were pretty nearly the same. But come now, Protagoras, let us not be faint hearted, but examine the rest. If a man commits injustice, does he appear to you to be discreet in committing it?

Protagoras:: I, for my part, Socrates, should be ashamed to avow this; there are many though who do.

Socrates:: Shall I maintain then my argument with them or with you?

Protagoras:: If you like, address yourself to this statement first, the statement of the many.

Socrates:: Well, it makes no difference to me, if you will only answer whether this be your own opinion or not. For it is the statement itself that I am bent on sifting, though it may possibly happen that we are at the same time sifted ourselves I in asking, and you in answering.

With this proposal Protagoras at first coquetted. The subject is so awkward, he pleaded. At last, however, he agreed to answer.

Socrates:: Come then, answer me from the beginning. Do people appear to you to be discreet when committing injustice?

Protagoras:: Be it so.

Socrates:: By their being discreet, do you mean that they are well advised?

Protagoras:: I do.

Socrates:: And by their being well advised, that they take good counsel in committing injustice?

Protagoras:: Granted.

Socrates:: Is this the case if they fare well in commit ting it, or if they fare ill?

Protagoras:: If they fare well.

Socrates:: Do you say then that there are certain good things?

Protagoras:: I do.

Socrates:: Are those things good which are advantageous to mankind?

Protagoras:: Yes, and there are things, I can tell you, that I call good, though they be not advantageous to mankind.

Socrates:: And by this time Protagoras seemed to be fairly exasperated and sorely fretted, and to be steadfastly set against answering any more. So, seeing him in this state, I was cautious, and asked him softly;

Will you tell me, Protagoras, whether you speak of things which are advantageous to no man, or of things which in no respect whatever are advantageous? Is it the latter sort that you call good?

Protagoras:: By no means. I know of many things which are disadvantageous to men, meats, and drinks, and drugs, and a thousand other things, and of things too which are advantageous. There are things also which to men are neither the one nor the other, though they are to horses, or to oxen, or to dogs; while there are other things again which are neither good nor bad for any animal, but only for trees. And here again there is a distinction; some things are good for the roots, but bad for the branches. Dung, for instance, is a capital thing for the roots of all plants when laid at the roots, but if you choose to lay it on the branches and young shoots, you destroy the tree. Then again there is oil, which is very bad for all plants, and most destructive to the hair of every animal but man, while to man it is of service not only for his hair, but also for the rest of his body. Nay, so varied and multifarious a thing is good, that even this very thing of which we are speaking is good for external application, but the worst thing in the world to be taken internally. And for this reason medical men make a point of forbidding their patients the use of oil, save only of the smallest possible quantity in what they are going to eat, of just enough, in fact, to drown the disagreeableness in their viands and seasonings which impresses itself on their organs of smell.

Socrates:: This harangue was received by the party present with clamorous approval. For myself, I said;

Protagoras, it is my misfortune to be a forgetful sort of person, and if a man makes me a long speech, I forget what it is all about. Just then as, if I had chanced to be short of hearing, you would have considered it necessary, if intending to converse with me, to speak louder than you do to other people; so now, since I happen to be short of memory, you must curtail me your answers, and make them briefer, if you mean me to keep up with you.

Protagoras:: In what sense do you bid me make them briefer? Are they to be briefer than is proper?

Socrates:: Oh dear no.

Protagoras:: Are they to be the proper length?

Socrates:: Precisely.

Protagoras:: Pray then must I answer you at the length which I consider proper, or which you consider proper?

Socrates:: Protagoras, I have certainly heard that you both possess yourself the gift, and can teach it to others, of speaking, if you choose, on any given subject at such a length, that your speech never comes to an end, and then again on the same subject so concisely that no one expresses himself in fewer words. If therefore you intend to converse with me, I must request you to adopt your latter style, your brevity.

Protagoras:: Socrates, I in my time have entered the lists of argument with many men, and had I been in the habit of doing as you recommend, of talking, that is, as my antagonist bade me talk, I should be still a mere nobody, and the name of Protagoras would never have been heard in Greece.

Socrates:: Then I, knowing that he had not pleased himself with his former answers, and that he would not consent if he could help it to go on answering, and feeling in consequence that it was no longer my business to be present at the meeting, addressed him thus;

I can assure you, Protagoras, that I for my part am not desirous of carrying on our conversation in a way that you dislike, but as soon as you like to talk in such a manner that I can keep pace with you, I shall then be happy to converse. For you, as fame says, and you say yourself, are capable of conducting a discourse in a style both of brevity and prolixity for you are a clever man; but I have not the gift for these long speeches, albeit I should have liked well to possess it. It was your place therefore, as master of both styles, to have given me the choice, that so we might have managed a conversation. But now since you refuse to do so, and I have an engagement, and could not wait while you launched out into long orations being required elsewhere I will take myself off; otherwise I might possibly have heard even long speeches from you not unpleasantly.—

With these words I rose to depart. And as I was rising, Callias seized my hand with his right, and with his left laid hold of my cloak, saying;

Callias:: We won't let you go, Socrates; for if you leave us, we shall find our conversation no longer the same thing. I beg, therefore, that you will remain with us; for I know nothing that I would more gladly hear than a discussion between you and Protagoras. So pray oblige us all. —

Socrates:: To this I replied, having already risen to leave the house;

Son of Hipponicus, charmed as I always am with your philosophic spirit, I now love and admire it more than ever. So that it would give me great pleasure to comply with your request, if it were but feasible. But now its just as if you were to ask me to keep up with a runner in his prime, like Crison of Himera; or to compete in speed with one of our long-distance runners or couriers. Were you to ask me to do this, I should reply, You cannot be so anxious for me, as I am for myself, to keep up with such runners as these; but as I cannot, I do not try. No, if you want to see me and Crison running together, you must ask him to come down to my level; for he can manage a slow pace, though I cannot a fast. And so in the present matter, if you are desirous of hearing Protagoras and me, you must request him to answer, as he did at first, briefly, and to the question. Otherwise, what is to be the plan of our conversation? for my part, I always thought there was a distinction between conversing and haranguing.

Callias:: But you see, Socrates, Protagoras's proposal is only just; he demands for himself permission to converse as he pleases, and leaves the same liberty to you.—

Socrates:: Alcibiades broke in—

Alcibiades:: That's not fair, Callias, My friend Socrates here confesses that he has no notion of making long speeches, and yields the palm therein to Protagoras; but, in the power of conversing, and knowing how to give and answer a question, I should be surprised if he finds his master anywhere. If therefore, Protagoras, on his side, admits that he is a worse hand than Socrates at conversing, Socrates is content; but if he professes to be his match, let him maintain the conversation with question and answer, and not launch out into a long harangue, whenever a question is proposed, for the purpose of eluding his opponents arguments; and, instead of rendering a simple answer, protracting his speech to a length, that most of the hearers forget what the question was about; though as for Socrates himself, I'll be bound that he will not forget, for all his joking and pretending to have a bad memory. I therefore (as every one of us ought to declare his opinion) maintain that Socrates' proposal is the fairer of the two.

Socrates:: After Alcibiades, it was Critias, if I remember right, who spoke.

Critias:: Prodicus and Hippias, Callias appears to me to be very much on the side of Protagoras; and Alcibiades, as usual, is a vehement partisan, whatever side he takes. It is our business, however, to side neither with Socrates nor

Protagoras; but impartially request of them both not to break up our meeting in the middle.

Socrates:: Critias having thus spoken, Prodicus began.

Prodicus:: Very well said, Critias, in my opinion. It is the duty of all who are present in a conversation of this kind, to regard both sides with impartiality, but not with equality. For I conceive there is a difference. To both we should give an impartial hearing; but not reward both with an equal meed: but the cleverer of the two with a greater, and the less clever with a less. I therefore, in my turn Protagoras and Socrates, request of you both to make concessions; and in considering the question, to debate, if you will, but not to wrangle; for friends debate with friends, just out of friendship, but those only wrangle who are at variance and feud with one another. And thus your conversation will be best for us all. For, on the one hand, you, the speakers, will by this means be most likely to obtain from us, the hearers, approbation, and not praise for approbation is felt in the mind of the listener, and there is no deception in it; but praises are often bestowed by those who falsify with their lips the belief of their hearts; and we, on the other hand, the hearers, shall thus be most likely to feel delight, not pleasure for a man feels delight in learning, and in partaking of wisdom in his mind; but pleasure in eating, and experiencing any other agreeable sensation merely in the body.

Socrates:: Thus spoke Prodicus, and was very generally applauded; and after Prodicus, Hippias the learned took up the word.

Hippias:: My friends who are here present, I regard you all as of one kin and family and country by nature, though not by law; for like is akin to like by nature; but law, which lords it over men, does frequently violence to nature. It were a shame then in us to know the nature of things, to be the wisest men of Greece, and in this very character to have now met together in that city of Greece which is the home and altar of Grecian wisdom, and in that cities greatest and wealthiest house, and yet to exhibit no result worthy of this our rank, but, like the lowest of mankind, to quarrel with one another. It is at once therefore my entreaty and my advice to you, Protagoras and Socrates, that you will allow us as arbiters to mediate between you; and do not you, Socrates, insist upon this your strict method of talking, which admits only of the extremist brevity, if such a method is disagreeable to Protagoras, but allow your self more liberty, and give the rein to your words, order that they may appear before us with greater majesty and grace; and for you, Protagoras, do not stretch every rope spread every sail, and, losing sight of land, run before the wind into your ocean of words but see both of you whether you cannot cut out some middle course between you. Such then the plan you should adopt, and, if you take my advice, you will elect an umpire, and a chairman and a president, who will take care that neither of you transgress on either side the bounds of moderation.

Socrates:: This proposal pleased the party, and, all approving it, Callias repeated that he would not let me go, and I was requested to name a president. To which I replied, that it would be unworthy of us to select an umpire for our conversation. If, I urged, the object of our choice is found to be our inferior, it cannot be well for such a person to preside over his betters; nor can it be well if he turn out to be an equal, for being himself no better than we are, his acts will be no better either; so that our election will prove to have been superfluous. But you will appoint you say, a superior to the post. To tell you the truth, I do not believe that it is in your power to elect a wiser man than

Protagoras; but if you appoint one who is not superior, though you maintain he is, Protagoras is still exposed to the indignity of having a president set over him like a common man. For myself, I say nothing it makes no difference to me. But I will tell you what I will do to gratify your desire for the continuance of our meeting and conversation. If Protagoras does not like answering, let him take the questioning part, and I will answer, and in doing so will endeavor to show the sort of answers that, in my opinion, ought to be given. And as soon as I have answered all the questions he may choose to propose, let him in turn answer mine in a similar manner. And should he still evince an unwillingness to keep to the question in his answers, I will then join with you all in entreating him, as you are now entreating me, not to destroy our party. And so there will be no need for a single president to be appointed; you will all discharge the office jointly.

This plan of mine being universally sanctioned, Protagoras was compelled, though with a very bad grace, to agree to begin by asking questions; and when he had asked enough, to give brief answers in his turn to any question of mine. He commenced then pretty nearly thus;

Protagoras:: In my opinion, Socrates, one of the most important elements in a gentleman's education is a critical knowledge of poetry, and by this I understand the capacity of distinguishing between such passages in the poets as are correctly and incorrectly composed, and the power of discussing them scientifically, and giving reasons when questioned about them. Accordingly, the question which I now have to propose, though it will relate to the subject which you and I are at present discussing that is to say, to virtue, shall be transferred to the region of poetry. This shall be the only difference. If I remember right, Simonides says to Scopas, son of Creon the Thessalian, No doubt to become a good man truly is hard, a man in hand and foot and heart four square wrought to a faultless work. Do you know the ode, or shall I give it you entire?

Socrates:: Not the slightest occasion, thank you. I not only know the piece, but have studied it with considerable attention.

Protagoras:: I am glad to hear it. Pray then do you consider it a beautiful and correct composition?

Socrates:: Certainly I do, very beautiful and correct.

Protagoras:: And do you think it beautiful if the poet contradicts himself?

Socrates:: Certainly not.

Protagoras:: Look at it closer then.

Socrates:: You are very good, but I have looked at it close enough.

Protagoras:: Are you aware then, that in the course of the poem he proceeds, if I mistake not, to say, I'll do I accord with that word of Pittacus, though it fell from the lips of a sage, Tis hard to be good. You observe, that it is the same person who makes both this remark and the former one.

Socrates:: I do.

Protagoras:: And do you think them consistent with each other?

Socrates:: I must confess I do. At the same time, though, I was sorely frightened, lest there should be something in what he said. However, But perhaps you don't.

Protagoras:: Why how, can I possibly think a writer consistent with himself who makes both these assertions? who in the first place premises in his own person, that it is hard truly to become a good man, and yet, before he has advanced any distance in his poem, is so oblivious as to find fault with Pittacus for saying, as he had said himself, that it is hard to be good, and declares that he cannot admit such an assertion, though it is exactly the same as his own. Surely it is evident that in finding fault with a man, who says only what he has said himself, he finds fault with himself as well; so that in the first passage or the second he is clearly wrong.

Socrates:: These remarks drew from many of the hearers clapping and applause. For myself, at first, just as if a blow had been dealt me by a skilful boxer, I was blinded and made giddy at once by the speech of my antagonist, and the plaudits of his supporters. At last, with a view (to confess to you the truth) of gaining time to consider the sense of the poet, I turned to Prodicus, and calling out to him, said; —

Prodicus, sure Simonides is a countryman of yours. You are bound to come to his aid.

And in thus inviting your assistance, I can fancy myself using the words of Scamander to Simois, when beset by Achilles; for according to Homer he summons him thus;

Come, brother, hasten; let us both unite

To quell a mortals too presumptuous might.

And so I now call upon you to join me in saving our friend Simonides from being demolished by Protagoras. And I can assure you, the defense requires all that exquisite art of yours, whereby you prove that to wish and to desire are not the same, and which supplied you with those numerous and delicate distinctions which you just now established. And now consider whether your opinion agrees with mine. Mine is, that Simonides does not contradict himself in this matter; but, before I support it, I wish you to publish yours.

Do you conceive that becoming and being are identical or different?

Prodicus:: Different, to be sure.

Socrates:: And did not Simonides in the first passage declare his own opinion, that to become a good man truly is hard?

Prodicus:: He did.

Socrates:: And afterwards he condemns Pittacus, not, as Protagoras supposes, for making the same assertion that he had made himself, but for a different one. For Pittacus does not make, like Simonides, the difficulty to consist in becoming good, but in being good. And let me tell you, Protagoras, on the authority of Prodicus, that being and becoming are not the same. And if being is not the same with becoming, Simonides does not contradict him self. And I should not wonder if Prodicus and many others of the party were to bring forward Hesiod to prove, that no doubt to become good is hard; for in front of virtue, he says, the gods have placed sweat but when you are come to the top, for all its being so hard, it is easy to possess.

As soon as I had finished, Prodicus complimented me, but Protagoras rejoined;

Protagoras:: Your amendment, Socrates, involves a greater error than what you would amend.

Socrates:: If so, my work has been unfeatly done, and I am a sorry sort of physician; in attempting to cure I augment the disease.

Protagoras:: Well it is so, Socrates.

Socrates:: How do you mean?

Protagoras:: Why, it would argue great folly in the poet, if he really maintained that virtue was so common a thing to possess, when in the universal opinion of mankind it-is the hardest thing of all.

Socrates:: How very luckily it happens, that Prodicus is present at our conversation. For you must know, Protagoras, I apprehend that the art of Prodicus was in old time of a god like sort, and commenced either with Simonides, or at some still more ancient date. But you, though acquainted with a great many things, are apparently not acquainted with this; whereas I on the contrary am, thanks to the teaching of Prodicus. And so in the present instance you appear to me not to be aware that this very word hard was possibly not under stood by Simonides in the sense in which you understand it, but that he was like our friend here, who is constantly taking me to task on the meaning of the word δεινὸς (terrible, also sharp, clever). For whenever, in lauding you or any other distinguished person, I say of the object of my panegyric, that he is a terrible clever man, Prodicus asks me whether I am not ashamed of myself, for calling good things terrible? Whatever is terrible, says he, is evil; at any rate, no one ever thinks of talking of terrible wealth, or terrible peace, or terrible good health; but men do talk of terrible sickness, and terrible war, and terrible poverty; thereby implying, that whatever is terrible is evil. And so perhaps too the Ceans, with Simonides at their head, conceive what is hard to be evil, or give it some other signification with which you are not acquainted. But what says Prodicus to the question? for he is the person to apply to about Simonides' language. What did Simonides mean, Prodicus, by the word hard?

Prodicus:: Evil.

Socrates:: This then, I suppose, is the reason why he finds fault with Pittacus for saying, Tis hard to be good, just as if he had heard him say, that it was evil to be good.

Prodicus:: Why what else, Socrates, do you suppose that Simonides does mean? This of course and he makes it a reproach to Pittacus that he did not know how to distinguish rightly the meaning of words, as being a Lesbian, and reared in a barbarous dialect.

Socrates:: You hear, Protagoras, what Prodicus says. Have you any answer to make?

Protagoras:: You are altogether wrong, Prodicus, I am confident that Simonides meant by hard, just as we all do, not what is evil, but that which, instead of being easy, is done with a great deal of trouble.

Socrates:: Well, to tell you the truth, Protagoras, I agree with you. I believe Simonides did mean this, and what is more, Prodicus knows he did; only he is bantering you, and thinks to try whether you are able to back your own assertions. Since a very strong proof, that, at any rate, Simonides did not understand hard to be evil, is afforded by his very next remark. For he says, that God alone can possess this boon; and I am sure that, if he had meant to say that it was evil to be good, he could not have at once added, that none but God can possess good, and have assigned this as a special attribute to the deity. Were this the case, Prodicus would call his countryman an impious profligate, and no true son of Ceos. But what appears to me to be in this poem the intention of Simonides throughout, I am willing to tell you, if you would like, Protagoras, to have a sample of my capacity for the criticism of poetry that you talk about. To this proposal Protagoras answered, —

Prodicus:: Exactly as you please, Socrates;

Socrates:: but Prodicus, Hippias, and the rest, pressed me strongly to begin.

Socrates:: Well then, I will endeavor thoroughly to explain to you the view which I, for my part, take of the poem.

In no countries of Greece is philosophy of higher antiquity, or more generally prevalent, than in Crete and Lacedaemon, and nowhere in the world are sophists more numerous than there. But the inhabitants of these countries deny the fact, and, like those sophists of whom Protagoras told us, affect an unlearned exterior, in order that their superiority in Greece may not be discovered to consist in wisdom, but be thought to depend upon their velour in war, as they imagine that, if the secret of their ascendency were known, it would at once be universally practiced. As it is, however, they have so skillfully concealed it, that they have taken in all the would-be Spartans in other states; and, accordingly, you may see these gentlemen getting their ears battered in their ardent emulation, encircling their arms with the straps of the cestus, toiling in the palaestra, and wearing brief cloaks, under the impression, doubtless, that these are the practices to which the Spartans owe their supremacy in Greece. But the Lacedaemonians, wishing to enjoy the society of their native sophists without restraint, and getting wearied of having to meet them in secret, made a clearance by alien-acts of these foreign imitators, and all other strangers in their country, and thenceforward lived in intercourse with their sophists, without foreigners being aware of the fact. And, further, they allow none of their own youth to visit other cities, for fear of their there unlearning the lessons they have learnt at home a practice which is observed by the Cretans as well. Nay, not only are there men in these countries who pique themselves on their erudition, but women also share their zeal. Now, that my statement is correct, and that the Lacedaemonians are admirably trained in philosophy and the art of words, may be discovered from the following fact. If you converse with the most ordinary Spartan you find him for a long while in the conversation appearing an ordinary sort of person; but just wait for an opportunity to present itself, and he will shoot at you, like a skilful archer, a notable saying of terse and pointed brevity, so that you, his antagonist, will show no better than a child by his side. And it was observing this very fact which led certain men, in times both past and present, to believe that the Spartan idiosyncrasy consisted rather in a devotion to wisdom than gymnastics, as they were aware that the capacity for uttering pithy sentences of this sort implied in its possessor a finished education. Of this number were Thales of Miletus, Pittacus of Mytilene, Bias the Prienian, Solon among ourselves, Cleobulus of Lindus, Myson of Chene, and the Lacedaemonian Chilon, who was reckoned to make up the seven. All these sages were admirers and lovers and disciples of the Spartan system, and easily may you discover their wisdom to have been after the Spartan model, by the brief and memorable sayings that were uttered by each. Nay more, when they met together to dedicate the choice offering-of their wisdom to Apollo, in his temple at Delphi, they inscribed thereon, in their joint capacity, those famous sayings, which are, you know, on everybody’s lips, Know thyself, and, Nothing in extremes.

Socrates:: What is my object, you will ask, in saying this? It is to show, that among the ancients philosophy was couched in a style of Laconic pith and brevity. A particular instance of which is afforded by this very saying of Pittacus, Tis hard to be good; which, being received with applause by the learned, was passed in private circles from mouth to mouth. Simonides then, being a man ambitious of philosophic distinction, felt sure that if he were to succeed in overturning this famous dictum, he would, like a novice who had defeated a champion wrestler, establish himself a reputation among the men of his day. It was in opposition then to this current saying, and with this ambitious view in thus seeking to suppress it, that he composed the entire ode, according to my view of the matter.

Let us now then all unite in examining the piece, to see whether my view be a correct one. To begin, the very commencement would appear to be insane, if the author wished simply to state the fact that it was hard to be good; for he inserts the words no doubt, which seem to be inserted with no object in the world, unless we conceive him engaged in a sort of quarrel with the saying of Pittacus; and that, when Pittacus asserts that it is hard to be good, Simonides contradicts him and says, It is not so, but to become a good man is hard, Pittacus, in very truth. Mind, he does not say, truly good; it is not to good that he applies the word truly as though he thought that some things were truly good, and others good indeed, but not good truly. No, this would be silly, and not like Simonides. But we must make a transposition of the word truly, and presuppose that the two remarks were made in something like the following manner. Pittacus enunciates thus, Mortals, it is hard to be good; and Simonides replies, You are wrong, Pittacus; be is not the word, but no doubt to become a good man, in hand and word and thought complete, wrought to a faultless work, is hard in very truth. Thus you see we find a reason for inserting no doubt, and the word truly seems to be correctly placed at the end of the sentence. And that this is here the sense of the poet, is attested by all the remainder of the poem. For were I to review each passage in it separately, I could abundantly prove it to be a perfect composition; for it is all very charming and elaborate. As, however, it would be too long a matter to analyze it thus, I will content myself with making it clear by a general sketch that the scope of the entire poem is nothing more or less, from beginning to end, than a refutation of Pittacus’ dictum.

For after a brief interval the poet proceeds to assert, just as he would do if maintaining an argument, that though no doubt to become a good man is truly hard, yet for a certain time at least it is possible; but when become so, to remain in this condition, and be, as you say, Pittacus, a good man, is altogether impossible, and more than human. God alone may possess this boon; But for man, he cannot possibly be other than evil, whom helpless misfortune prostrates. Who is it then that helpless misfortune prostrates in the command of a ship? Clearly not the landsman; for the landsman is always prostrate. Just then, as you cannot throw down a man who is on the ground, but he must be on his legs before you can so throw him as to lay him on the ground; exactly in the same way a man must be possessed of help and resource before he can be prostrated by helpless misfortune, while the man who is ever without help can never possibly be prostrated. A violent storm may overtake the pilot, and make him helpless; a severe season may surprise the farmer, and make him help less; and so may the physician be made help less by an analogous professional calamity. For the good man is capable of becoming evil, as is attested by another poet, who says, The good are sometimes evil, sometimes good; but the evil man cannot possibly become, but must of necessity ever be, evil. Thus it appears then, that whenever a helpful, a wise, and a virtuous man is prostrated by helpless misfortune, he cannot possibly be other than evil. But, you say, Pittacus, it is hard to be good; no, the truth is, that to become good no doubt is hard, yet possible; but to be good is impossible quite. For, as the poet continues, Every man is good by faring well, and evil by faring ill. What then is faring well with regard to letters? and what makes a man good in letters? Clearly the learning of letters. And what kind of faring well makes a good physician? Clearly the learning of the treatment of the sick. And evil, he says, by faring ill. Who then is capable of becoming an evil physician? Clearly the man who starts with being in the first instance a physician, and in the second a good physician. For he can also become a bad physician. But we who are unprofessional cannot possibly become, by faring ill, either physicians, or carpenters, or anything of the kind; and whosoever cannot become a physician by faring ill, obviously cannot become an evil physician either. Thus you see it is only the good man that can ever become evil, whether he become so by decay, or pain, or disease, or any other casualty for this alone is evil faring, to lose ones know ledge but the evil man can never become evil, for he is always evil; if he would fain become evil, he must first become good. So that this part of the poem also tends to prove that it is not possible to be a good man in the sense of continuing good, but to become good is possible, just as it is to become evil. And they, adds the poet, are best for the longest time whom the gods love.

And if it be plain that these passages are directed against Pittacus, the aim of the poet in the following is still more clearly marked. For thus he proceeds; Wherefore never will in quest of that which cannot be, throw away a part of life on empty bootless hope; in quest, I say, of an all-blameless man among us, who feed on the fruits of the wide-bosomed earth. When I find one, I will let you know. So vehemently and uniformly throughout the poem does he persist in attacking that expression of Pittacus. But all I praise and love willingly who do naught vile with necessity not even gods contend. And this again is directed to the same point. For Simonides was not so ill-informed as to express his admiration of those who committed no evil willingly, as though he imagined there were any in the world who did commit evil willingly. I had almost said, that no wise man ever entertained the opinion, that any mortal errs willingly, or commits base and wicked actions willingly. On the contrary, wise men well know that all who do base and evil deeds, do them involuntarily. And so Simonides, as a wise man, does not profess himself an admirer of those who do not commit evil willingly; but he predicates the willingness of himself. For he conceived it to be frequently the duty of a good and noble man to force himself to become the friend and admirer of others for instance, when a man is unfortunate enough to have an unworthy father, or mother, or country, or any similar tie. Now wicked men, when subject to any evil of this kind, observe it with a kind of satisfaction; and draw attention to it by their vituperations, and enlarge on the enormity whether in their parents or their country in order that, while they neglect their own duty towards them, men may not make such neglect a ground of accusation, or reproach. And thus their censure far exceeds what is merited; and, to unavoidable causes of dislike, they add causes of their own making. Whereas good men, on the contrary, dissemble in such cases, and compel themselves to speak even the language of praise; and, if ever at all enraged with their parents, or country, for wrong inflicted, they sober and tranquillize their feelings, and seek a reconciliation by forcing themselves into a condition to love and admire those who are thus connected with them. And so, I imagine, did Simonides frequently find it his duty to speak of a tyrant, or some similar, character, in terms of admiration and panegyric not willingly, remember, but by compulsion. This then explains what he says to Pittacus. If I blame you, Pittacus, it is not because I am fond of blaming; since I, for my part, am content with a man who is not evil or helpless quite; who does but know the justice that saves a city, and is of sound mind. Such a man I will not censure; for censure I do not love; besides, infinite is the family of fools (thereby implying, that if a man were fond of blaming, he might take his fill by blaming these). Sure, all is fair wherewith foul is not mixed. And by this he does not mean the same as if he had said, Sure, all is white wherewith black is not mixed; for this would be absurd, in more ways than one; but what he does mean to say is, that he admits of a mean which he does not condemn. And I search not, he says, for an all-blameless man among us, who feed on the fruits of the wide-bosomed earth; when I find one, I will let you know. So that if on this depended praise, I should praise none; but I am content with one who holds the mean, and does no evil; since all I love and praise (here, as addressing Pittacus, he uses the dialect of Mytilene); since all I love and praise willingly (here, at the word willingly, we must make the pause in reading) who do naught vile; there are some, though, whom I praise and love against my will. Thee there fore, Pittacus, hadst thou spoken but moderate sooth and reason, I would never have blamed; but now, as thy lie is utter, and on the greatest things, while thou fanciest thyself speaking truth, I cannot choose but give thee blame.

Such, Prodicus and Protagoras, I conclude to have been the object which Simonides had in view in the composition of this poem.—

Hippias:: And a very fair exposition you have made of it too, Socrates, in my opinion. I however, gentlemen, possess a critique of my own on this piece a very good one which I am willing to propound to you, if you would like to hear it.

Alcibiades:: Thank you, Hippias, another day, if you please. To-day its only fair that Protagoras and Socrates should fulfill their mutual agreement; which binds Socrates to reply, if Protagoras has any further question to propose; but to ask questions himself, if Protagoras prefers to answer.

Socrates:: Yes, I leave it to Protagoras to choose whichever is more agreeable to him. But, Protagoras, if you have no objection, I should like to drop these criticisms on songs and poems, and should much prefer coming to a conclusion on the former subject of our inquiry, by investigating it in company with you. For, I must confess, I think that talking about poetry bears a close resemblance to the festive amusements of the vulgar and uneducated. For these people, being too ignorant to converse together over their cups through the medium of their own voices and words, keep up the prices of flute-players by hiring, for large sums, the foreign aid of their flutes, and entertaining each other through their voices. But in the banquets of gentle men and scholars, you will see neither dancing girls nor women that play on the flute or the lyre; but you will find the guests themselves equal to the task of conversing, without these puerile toys, by their own voices; both speaking and listening in turn, with decency and order, even though they have drunk a great quantity of wine. And so too parties like the present, if indeed composed of such men as most of us profess to be, have no need to borrow the foreign voices even of poets, whom it is impossible to interrogate as to their meaning; but who are cited as authorities by combatants in their talk, while both sides assign a different sense to the citation, and persist in disputing a point, which they can never satisfactorily settle.

No; wise men care nothing for such entertainment as this; but entertain each other with their own stores, by giving and receiving mutually, in their own conversation, proofs of their capacity. And such is the example which it appears to me that you and I ought rather to imitate; let us throw the poets on one side, and, conducting the discourse by our own unaided efforts, bring at once truth and our own selves to the test. Should you therefore wish still to interrogate, I am ready to lend myself to you in reply; but if you prefer answering, do you lend me your aid in bringing to a conclusion that inquiry, of which we abandoned the discussion in the middle.—

Notwithstanding these and similar remarks on my part, Protagoras continued to keep us in the dark as to the course he should prefer; upon which Alcibiades looked at Callias, and said;

Alcibiades:: Callias, do you still think that Protagoras acts fairly in refusing to let us know whether he will answer or not? For my part, I certainly do not think that he does. No, let him either continue the conversation, or tell us at once that he is unwilling to do so, in order that, his unwillingness being once clearly understood, we may either get Socrates to converse with some one else, or find another pair willing to engage in a discussion.

Socrates:: Whereupon, Protagoras being piqued, as it appeared to me, by this remark of Alcibiades, and being pressed by Callias and nearly all the remainder of the party, was at length induced, though with great difficulty, to renew the conversation; which he did by requesting me to start my inquiries, as he was now ready to reply.

So I began. Pray do not imagine, Protagoras, that I have ever any other design in conversing with you, than a wish to examine thoroughly into difficulties which I cannot of myself unravel. I think that Homer was very right in saying, When two go together, one observes before the other. For so do all of us mortals acquire a greater facility for every deed, and word, and thought. But if haply a man has thought alone, he straightway goes up and down, and searches till he find some one else to whom he may communicate his thought, and in concert with whom he may verify it. And this is the reason why I have greater pleasure in conversing with you than with any other man in the world, as I am persuaded that none are so well capable of investigating all subjects which are worth the good mans study, and in particular the subject of virtue. For to whom but you should I apply? when not only do you profess yourself a virtuous gentleman, just as is professed by many good people, who cannot impart their goodness to others; but when, beside being virtuous yourself, you are able to make others virtuous also; when, further, your confidence in yourself is so implicit, that, whereas it is the custom with other masters of your art to dissemble it with care, you, on the other hand, have yourself publicly cried under the name of a sophist before all the Greeks, and advertise yourself a teacher of accomplishment and virtue; being moreover the first to conceive yourself entitled to receive a price for your instructions. Is it not then every man's duty to appeal to you for the investigation of these matters, to inquire into your opinions, and communicate his own? Most assuredly it is. And so on the present occasion I am anxious to renew from the beginning those questions, which I in the first instance proposed to you on these subjects, hoping that you will remind me of points which we decided, and join me in considering others. My inquiry, if I remember right, was this; Wisdom, discretion, courage, holiness, and justice, are these all but five names for one and the same thing; or is there attached to each of these names a distinct idea, and a distinct thing possessing a separate function of its own, whereby it is distinguished from all the rest? To this you replied, that they were not names of one thing, but that each of these names was applied to a distinct thing, and that all these things were parts of virtue, not like the parts of gold, which resemble both one another, and the whole whereof they are parts, but like the parts of the face, which are dissimilar from the whole and from one another, each being possessed of a distinct function. If then you still adhere to your former opinion, tell me; but if you have altered it at all, mark the alteration clearly, as I hold you in no wise accountable for any difference of opinion you may choose to ex press. Nay, I should not be surprised if your previous answer was merely intended to try me.

Protagoras:: Well, Socrates, I tell you that all these qualities are parts of virtue, and that four of them bear a reasonably close resemblance to one another, but that courage is very different indeed from them all. And the following fact will prove my assertion. You will find many men distinguished for injustice, impiety, intemperance, and stupidity, who are yet eminently conspicuous for their courage.

Socrates:: Hold there a moment, your observation is worth examining. By the courageous, do you mean the daring?

Protagoras:: Yes, and those who are ready to plunge into dangers which most men are afraid to encounter.

Socrates:: Again, do you pronounce virtue to be a beautiful thing, and as being a beautiful thing do you come forward to teach it?

Protagoras:: Nay, Socrates, as I m a sane man, I pronounce it to be of all things most beautiful.

Socrates:: Is, however, one part of it beautiful and another ugly, or is it all beautiful?

Protagoras:: All beautiful, I consider, and in the highest degree.

Socrates:: Do you know who they are that dive into wells daringly?

Protagoras:: Of course I do. Divers.

Socrates:: Is it because they know how to dive, or for some other reason?

Protagoras:: Because they know how to dive.

Socrates:: And who are daring fighters on horseback, good riders or bad?

Protagoras:: Good riders.

Socrates:: And who are daring as targeteers, those who understand the service or those who do not?

Protagoras:: Those who do. And so in everything else, if this is what you are driving at, the scientific are more daring than the unscientific, and the same person when he has acquired the science is more daring than he was before he acquired it.

Socrates:: Have you ever in your life, met with persons who were unscientific in all these matters, and yet engaged in them all with daring?

Protagoras:: Certainly I have, and with excessive daring.

Socrates:: Are these daring people also courageous?

Protagoras:: If they were, courage would be far from being a beautiful thing; for these are mere madmen.

Socrates:: Pray how do you define the courageous? Did you not say they were the daring?

Protagoras:: I did, and I say so now.

Socrates:: It would appear then, that those who are daring in this way are not courageous, but mad; and from the former instances I adduced, that the wisest men are also most daring, and as being most daring are most courageous. So that by this reasoning, wisdom would be courage, would it not?

Protagoras:: You do not rightly remember, Socrates, what I said in reply to your question. When asked by you whether the courageous were daring, I agreed they were; but whether the daring also were courageous, you did not ask me then. Had you done so, I should have replied, Not all. But that the courageous are not daring, and that I was wrong in admitting they were, you have no where proved. Instead of doing so, you take the trouble of showing, that those who possess science are more daring than they were them selves before they possessed it, and more daring than others who do not possess it, and thereby you conclude that courage and wisdom are identical. But, by pursuing this method of inquiry, you might equally well arrive at the conclusion, that bodily strength is wisdom. For if, in following out this course, you were in the first place, to ask me whether the strong were powerful, I should say, Yes; if you were to proceed to inquire whether scientific wrestlers were more powerful than unscientific wrestlers, and more powerful than they were themselves before they had learnt the science of wrestling, I should again reply, Yes; and after I had made these admissions, you would be in a condition, by availing yourself of the same logic as before, to state that by my admission wisdom was bodily strength. But here again observe, I nowhere admit that the powerful are strong, though I do that the strong are powerful. For I do not consider strength and power to be the same; but the one, power, to arise from science, yes, and from madness too, and passion; but strength from sound nature and good bodily nourishment. In like manner, I maintain that courage and daring are not the same. Courageous men are daring, but it is not all daring men that are courageous; for daring, like power, arises from scientific skill, and from passion too, and madness, but courage, from nature and good mental nurture.

Socrates:: Do you allow, Protagoras, that some men live well, and others ill?

Protagoras:: I do.

Socrates:: Do you think that a man would live well if he lived in vexation and pain?

Protagoras:: No.

Socrates:: But if he lived in pleasure to the day of his death, you would consider him then, would you not, to have lived well?

Protagoras:: I should.

Socrates:: To live pleasantly then, it appears, is a good thing; to live unpleasantly, an evil thing.

Protagoras:: Yes, if the pleasures a man lives in be but honest.

Socrates:: How, Protagoras, do you maintain with the many, that some pleasant things are evil, and some painful things good? For myself, I say, as far as things are pleasant, are they not so far good, if they are to have no other results? And, on the other hand, are not painful things in the same way evil, in so far as they are painful?

Protagoras:: I am not sure, Socrates, whether I ought to answer as unreservedly as you ask, that pleasant things are all good, and painful things all evil. No, I conceive that it would be safer for me, not only in reference to my present answer, but also to all the rest of my life, if I were to reply that there are some pleasant things which are not good, some painful things which are not evil, others again which are such, while there is a third class which are neither the one nor the other, neither evil nor good.

Socrates:: By pleasant things, do you not mean those with which pleasure is connected or which cause pleasure?

Protagoras:: To be sure I do.

Socrates:: I ask then, whether they be not good, in so far as they are pleasant; meaning by this question to ask, whether pleasure itself be not a good thing.

Protagoras:: Well, Socrates, I say to yon, as you are always saying yourself, let us examine the matter, and if the question seem germane to our subject, and it appears that pleasure and good are the same, we will agree on the point; if not, we will then join issue.

Socrates:: Would you like, to take the lead in the examination yourself, or shall I?

Protagoras:: You are the proper person to lead, for it was you who started the subject.

Socrates:: Perhaps then, by some way like the following, we shall arrive at a clear view of the question. Just as a person who was forming an estimate of a mans health or physical capacity in any particular, from a survey of his bodily form, would be sure to say to him, if he saw no more than his face and hands, Come, my good friend, strip, if you please, and show me your chest and your back, that I may inspect you more closely; so do I now crave some disclosure of the kind for our present investigation. Having observed, from what you have told me, the state of your mind with regard to pleasure and good, I still require to say, Come, friend Protagoras, uncover your mind further, and show me its state with regard to knowledge. On this point, also, do you think as the many do, or differently? Their opinion of knowledge is, that it is not a strong, nor a commanding, nor a governing thing; nor do they form their notions with reference to it, as though it were such; but conceive that, though knowledge is often to be found in a man, it is not his knowledge that governs him, but some other thing, at one time passion, at another pleasure, at another pain, sometimes love, and often fear; so that they plainly think of knowledge as of a poor slave, liable to be dragged about at will by all those other things. Is this then your opinion also? or do you conceive knowledge to be a noble thing, well fitted to govern mankind; and that if a man does but know what is good and evil, he can never be so swayed by any other thing, as to do aught else than what his knowledge prescribes, and, in fine, that wisdom is well able to defend mankind?

Protagoras:: I quite think as you say, Socrates. And besides, if for any man in the world, it were a shame for me, to deny that wisdom and knowledge are of all human things the mightiest.

Socrates:: Well and truly said. Are you aware though, that most men do not believe you and me in this matter, but say that many people, who know what is best, do not choose to practice it, though it is in their power to practice it, but practice other things? And never have I asked the reason of this conduct, but I have been told that such people act thus from being overpowered by pleasure or pain, or mastered by some one of those things which I just now mentioned.

Protagoras:: I don’t doubt it, Socrates. There are many other points on which men speak in correctly.

Socrates:: Come then, and join me in endeavoring to persuade these men, and teach them what that state is, which they call being over powered by pleasure, and which prevents people from doing, although they know, what is best. For I should not wonder if on our saying to them, You speak incorrectly, my friends, you are deceived, they were to turn upon us with the question; Protagoras and Socrates, if being overpowered by pleasure is not this, pray what is it? what do you declare it to be? tell us both of you.

Protagoras:: What business is it of ours, Socrates, to examine into the opinion of the vulgar herd, who just say what comes first into their head?

Socrates:: I think, that we shall find this inquiry help us somewhat in discovering the relation which courage bears to the other parts of virtue. If it is your intention then to abide by our late agreement which assigned the lead to me, let me beg you to follow me on the road which I expect will best conduct us to the light. But if you are unwilling to do so, I will drop this question, if such be your pleasure.

Protagoras:: No, Socrates, you are right, finish as you have begun.

Socrates:: Again then, if they were to ask us, What do you declare this to be, which we called being subject to pleasures? I for my part should answer, Hearken, my friends, we will endeavor to tell you, Protagoras and I. Do you not allow that you experience this subjection in the following circumstances? that often you are so swayed by eating and drinking and love, all pleasant things, that, though you know them to be evil, you still indulge in them?

Protagoras:: Yes, they would allow it.

Socrates:: You and I then, Protagoras, will ask them again, In what point of view do you say that they are evil? Is it because they afford this pleasure at the moment, and because each of them is pleasant for the moment, or because they lay up for your future life diseases and poverty, and many other similar evils? Or, if they produced none of these after effects, but merely created pleasure, should you still pronounce them evil for making a man pleased under any circumstances and in any way whatsoever? Can we conceive, Protagoras, that they would return us any other answer, than that these things were evil, not for the mere fact of creating the momentary pleasure, but on account of the diseases and other results which follow in their train?

Protagoras:: Such, I imagine, would be the answer of the many.

Socrates:: And when they create diseases, do they create pain? and when they create poverty, do they create pain? They would assent to this, I think.

Protagoras:: And so do I.

Socrates:: Are you of opinion then, my friends, as I and Protagoras hold, that these things are evil for no other reason than because they terminate in pain, and deprive us of other pleasures? They would assent? We both agreed that they would.

But suppose we were to reverse our question, and ask, When you speak, on the other hand, good people, of painful things being good, do you not mean such things as gymnastic exercises, and military service, and the treatment of diseases by cautery and the knife, by dosing and starving? Is it not such things you call good, but painful? Yes, they would say.

Protagoras:: Granted.

Socrates:: Do you call these things good then for the reason, that they afford us at the moment the utmost pain and annoyance, or because their after results are the health and good condition of bodies, the safety, empire, and wealth of states? For the latter reason, would be their answer, I think.

Protagoras:: Certainly it would.

Socrates:: Are these things good on any other account than because they terminate in pleasures, and in deliverance from, and avoidance of, pains? Or can you tell me of some other end which you have in view when you call them good, than that of pleasure and pain? No, they would answer, in my opinion.

Protagoras:: And in mine too.

Socrates:: Do you pursue then pleasure as being a good thing, and shun pain as being an evil thing?

Protagoras:: They do.

Socrates:: This then, pain, you esteem to be an evil, and pleasure to be a good; since you say that even the enjoyment of pleasure itself is evil, when it deprives you of greater pleasures than itself contains, or produces pains which exceed its own pleasures. For, if you call pleasure itself an evil for any other reason, or with any other end in view than this, you may tell us, if you can; but you cannot.

Protagoras:: No, I do not think they can.

Socrates:: And is it not exactly the same, on the other hand, with suffering pain? Do you not call pain itself a good, when it rids you of greater pains than its own, or produces pleasures which exceed its pains? Since, if you have any other end in view when you call pain itself a good, you may tell us, if you can; but you cannot.

Protagoras:: Quite true, Socrates, they cannot.

Socrates:: But if, my friends, you were on your side to interrogate me and ask, Why ever do you say so much on this question, and turn it in so many ways? Bear with me, I should reply; for, in the first place, it is no easy matter to prove what that is which you call being subject to pleasures; and secondly, on this very question hinges all my proof. But even now, late as it is, you are at liberty to retract, if you can say that good is anything else than pleasure; evil, anything else than pain; if you can tell me that you are not content to live out your life pleasantly in freedom from pain. But if you are so content, and cannot tell me of any thing being good or evil, which does not terminate in these, hearken to what follows. I maintain that, if this be the case, your words become ridiculous, when you say, that often a man who knows evil to be evil, practices it nevertheless, when he is not obliged to practice it, from being led and carried out of him self by pleasures; and when, on the other hand, you say, that the man, who knows what is good, does not choose to practice it, on account the immediate pleasures by which he is over mastered.—

Now the absurdity of these statements will be clearly seen, if we abstain from using the many names of pleasant and painful, and good and evil; but agree, since the things have been found to be only two, to call them only by two names; first, by those of good and evil, and then by those of pleasant and painful. This being established, let us say, that a man knowing evil to be evil, nevertheless does it if any one ask us, Why? We shall answer, because he is overpowered. By what? will be the next question. But we are no longer at liberty to say, By pleasure; for it has received another name, and instead of pleasure, is now called good. Let us answer him then and say Because he is overpowered. By what? he will repeat. By good, we must reply. Now should our friend be disposed to raillery, he will laugh at us, and say, Ridiculous conduct this you speak of, when a man does evil knowing it to be evil, with no obligation to do it because he is overpowered by good. Is it by a good he will ask, which is worthy or not worthy in your opinion to overcome the evil? To this, of course, we shall reply, Not worthy for otherwise the man whom we say is subject to pleasure would not be in fault. And in what respect, he will probably continue, are good things unworthy to overcome evil, or evil to overcome good? is it in any other than in that of magnitude or quantity? We shall not be able to mention any other than this. It is evident then, he will conclude, that by this case of being overpowered, you mean, choosing greater evil instead of less good. So far then on this track. Now let us change our names, and again applying the terms pleasant and painful to these same things, let us say that a man does things, which we before called evil and now call painful, knowing them to be painful, being overpowered by pleasant things, which are of course unworthy to obtain the mastery. And what other measure is there of pleasure in comparison with pain, than that of excess and defect? that is to say, of one being greater or smaller than the other, more or less, stronger or weaker? For if it be said, But, Socrates, there is a great difference between that which is pleasant at the moment, and that which is ultimately pleasant or painful; Does it lie, I should ask, in anything else than in pleasure and in pain? In nothing else, I am sure. No, like a man expert at weighing, put together all the pleasures, and put together all the pains, then set both their nearness and remoteness in the scales, and tell me which are the heavier. If you weigh pleasures against pleasures, the greater and the greater number are always to be chosen; if pains against pains, the smaller and the smaller number; if pleasures against pains, then, if the pains be exceeded by the pleasures, whether near by remote, or remote by near, the line of conduct is to be pursued in which this excess is contained; but if the pleasures be exceeded by the pains, then it is not to be pursued. Good people, I should ask, can these matters be settled in any other way? I am sure that they could tell me of no other.—

Protagoras did not think they could either.

Seeing, then, that this is the case, answer me the following question. Do the same objects appear to your sight to be greater in size when near, and smaller in size when remote? or do they not?

Protagoras:: They do, would be their answer.

Socrates:: And is it not the same with the thickness and number of objects? And do not equal sounds appear louder when near, fainter at a distance?

Protagoras:: Yes, they would say.

Socrates:: If then our well-being had depended upon this, upon our making and choosing great lengths, and our avoiding and not making small ones, what would, to all appearance, have been the safeguard of our life? Would it be the art of mensuration, or the force of appearances? Or would this latter have led us astray, and caused us to be ever choosing and ever rejecting the same things; and ever repenting, in our practice and choice of lengths, both great and small? while the art of mensuration would bring to naught this phantom show, and, pointing out to us the truth, would anchor our soul thereon, and bid it rest, and assure us our life's safety. Would they allow, think you, that, in this case, the art of mensuration would save us, or some other art?

Protagoras:: None other.

Socrates:: Again, if the security of our life depended on the choice of odd and even numbers, on choosing, at the proper time, the larger, and at the proper time the smaller, by comparison both between themselves and one another, whether they might be far or whether they might be near; what would, in this case, be our life's safeguard? Would it not be a science? and would it not, further, be one of measurement, since it relates to excess and defect? and since it has numbers for its object, could it be any other than arithmetic? To this would our friends assent, or would they not?—

Protagoras agreed with me that they would.

Come then, my friends, I proceeded, since the security of our life has been found to depend on our choice of pleasure and pain being correct, with reference at once to quantity and degree and distance, does not our security appear to you, in the first instance, to consist in measurement, since it has to consider excess and defect and respective equality?

Protagoras:: Yes, it must.

Socrates:: And if in measurement, it must, of necessity, be an art and a science.

Protagoras:: Assuredly, they will say.

Socrates:: What art, what science this is, we will in quire some other time. That it is a science, is quite sufficient for the explanation which Protagoras and I have to give you of the question that you asked us. You proposed it, if you remember, at the time when Protagoras and I were agreeing that nothing was so powerful as scientific knowledge; and that knowledge was ever dominant, wherever it existed, over both pleasure and everything else. But you, on the other hand, said that pleasure was often dominant, even over the man that was possessed of knowledge; and when we refused to agree with you, you proceeded to ask; Socrates and Protagoras, you said, if being vanquished by pleasure is not this, pray what is it? what do you declare it to be? Tell us. If, then, at that moment we had answered you, that it was ignorance, you would have laughed at us; but now, if you laugh at us, you will laugh at your selves as well. For you have yourselves agreed, that whoever commits error in the choice of pleasure and pain that is, of good and evil commits it through defect of knowledge; and not only of knowledge, but, as you further agreed, a knowledge of measurement. Now all action, that errs for want of knowledge, is committed, you must yourselves know, through ignorance. Being vanquished therefore by pleasure is ignorance, of all ignorance the greatest. Now of this Protagoras here professes himself a physician; and so do Prodicus and Hippias. But you, because you believe it to be something else than ignorance, neither go yourselves, nor send your children, to these sophists to be instructed in this matter, as though you imagined it could not be taught; but, by being chary of your gold, and by refusing to bestow it upon these men, succeed badly in your transactions, both public and private. Such would be the answer we would render to the crowd. —

But you, Hippias and Prodicus, I ask you, in concert with Protagoras, wishing you to join in our conversation, do you judge that what I say is true or false?—

They all agreed that nothing was more true.

You admit then, that the pleasant is good, and the painful evil. But I would enter a protest against our friend Prodicus' verbal distinctions. Yes, my very excellent Prodicus, whether you call it pleasant, or agreeable, or enjoyable; whatever be the name, from what ever quarter derived, which you may be pleased to give it, restrict yourself to that answer which I wish to hear.—

Prodicus laughed, and said he quite agreed with me, and so did all the rest.

But what do you say to the following. All actions which tend to this, to living, that is, pleasantly and without pain, are they not honorable, and, being honorable, are they not both good and useful?—

They assented.

If then, the pleasant is good, no man who either knows or believes that other things are better than that which he is doing, if they are such things as he can do, proceeds to do the less good, when he might do the better. Neither is subjection to self aught else than ignorance; mastery over self aught else than wisdom.—

They all assented.

But tell me. What is ignorance, according to you? is it not having a false opinion and being deceived on matters of great moment?—

Here again there was no dissentient voice.

Is it not true then, that no one enters willingly into evil, or into that which he considers evil; that it is not, in fact, in the nature of man to engage with deliberate purpose in what he believes to be evil instead of in good; that no man, when compelled to choose one of two evils, will choose the greater, when he might choose the less?—

All these questions met with universal assent.

To the point then. Do you say that there is such a thing as terror or fear? Do you understand by it the same as I do? To you, Prodicus, I address myself. I under stand by it a certain expectation of evil, whether you call it terror or fear.—

Protagoras and Hippias were of opinion that this was the meaning both of terror and fear; Prodicus thought it was of terror, but not of fear.

No matter for that, Prodicus, said I. But this does matter. If our former conclusions are true, will any man in the world deliberately enter into what he fears, when he might enter into that which he does not fear? or is it impossible by our previous admissions? for we have admitted that, what he fears he believes to be evil, and what he believes to be evil, he never engages in or chooses willingly. All agreed to this also.

Prodicus and Hippias, now that we have established these points, let us call on Protagoras to defend the answer which he gave us at first no, not quite at first. At first he said, that of the parts of virtue, which were five in number, there was not one like any other, and that each had a distinct function of its own. This is not the statement I mean, but a later one; for afterwards he said, that four of these parts bore a reasonably close resemblance to one another, but that the fifth was widely different from the rest, this fifth being courage. And he told me that I should be convinced of this by the following fact. Socrates, said he, you will find men of the greatest impiety, and injustice, and intemperance, and ignorance most distinguished for courage. This will show you that courage differs greatly from the other parts of virtue. And astonished as I was by this answer at the moment, it has astonished me still more since my late investigations with you. However, at the time I asked him whether by the courageous he meant the daring. Yes, said he, and men eager for encounter. Do you remember giving this answer, Protagoras?

Protagoras:: I do.

Socrates:: Come then, tell us what it is which, according to you, the courageous are eager to encounter? Is it the same as cowards?

Protagoras:: No.

Socrates:: Is it different then?

Protagoras:: Yes.

Socrates:: Do cowards engage in what is safe, brave men in what is formidable?

Protagoras:: So it is generally said, Socrates.

Socrates:: You are right, but this is not my question. According to you, what is it which brave men are eager to encounter? that which is formidable, believing it to be formidable, or that which is not formidable?

Protagoras:: Why the former, Socrates, your late arguments have shown to be impossible.

Socrates:: Again you are right. If our reasoning was correct, no man engages in what he believes to be formidable, since we found that want of self-command was want of knowledge.

Protagoras:: Granted.

Socrates:: But on the other hand, all men engage in that which inspires them with confidence, whether they be cowardly or courageous, and in this point of view, at any rate, both the one and the other encounter the same things.

Protagoras:: But I can assure you, Socrates, that no things can be more opposed to each other than the things which cowards and brave men encounter. To take the first instance that comes, the latter are willing to encounter war, the former are not.

Socrates:: When it is honorable, to engage in it, or disgraceful?

Protagoras:: When it is honorable.

Socrates:: And if it is honorable, it is also good by our former admission; for we admitted that all honorable actions were good.

Protagoras:: We did, and I am always of this opinion.

Socrates:: And very properly too. But which class do you say are not willing to encounter war, when it is honorable and good?

Protagoras:: Cowards.

Socrates:: And if it be honorable and good, it is also pleasant?

Protagoras:: Certainly, according to our premises.

Socrates:: Do cowards knowingly refuse to engage in what is honorable, and pleasant, and good?

Protagoras:: No; for if we allow this, we shall overturn all our former admissions.

Socrates:: And the courageous man? does not he en gage in what is honorable, and pleasant, and good?

Protagoras:: I must allow he does.

Socrates:: In a word then, the courageous men fear no base fears, when they do fear, nor are they inspired with base confidences. Is not this true?

Protagoras:: It is.

Socrates:: And if not base, are they not honorable?

Protagoras:: Granted.

Socrates:: And if honorable, good?

Protagoras:: Yes.

Socrates:: And are not the cowardly, the foolhardy, and the frenzied, possessed on the contrary with base fears, and inspired with base confidences?

Protagoras:: They are.

Socrates:: And when they dare what is base and evil, do they dare it in consequence of any thing else than ignorance and want of under standing?

Protagoras:: No.

Socrates:: Again, That which makes cowards cowardly, do you call it cowardice or courage?

Protagoras:: Cowardice, of course.

Socrates:: And have they not been found to be cowardly in consequence of their ignorance of that which is formidable?

Protagoras:: Certainly they have.

Socrates:: It is this ignorance then, it appears, which makes them cowardly?

Protagoras:: Granted.

Socrates:: And that which makes them cowardly you have allowed to be cowardice?

Protagoras:: I have.

Socrates:: Ignorance then of that which is formidable and not formidable proves to be cowardice.—

He nodded his head.

Socrates:: Again, is courage opposite to cowardice?

Protagoras:: Yes.

Socrates:: Is knowledge of that which is formidable and not formidable opposite to ignorance of the same?—

Here again he nodded his head.

Socrates:: And ignorance of this is cowardice?—

Though with a very bad grace, he here nodded again.

Knowledge then of that which is formidable and not formidable is courage, since it is opposite to ignorance of the same.—

At this he would neither make a sign nor utter a word.

So I said; How is it, Protagoras, that you will not say either yes or no to my question?

Protagoras:: Finish by yourself.

Socrates:: Only one more question will I ask you. Do you still think, as you did formerly, that there are some men very ignorant, and at the same time very courageous?

Protagoras:: You seem to stickle, Socrates, for the answer coming from me. Well, I'll indulge you so far, and say that by our previous admissions this appears to me to be impossible.

Socrates:: I can assure you, that I have no other motive in proposing all these questions than a wish to observe the relations of virtuous things, and the nature of virtue itself. For certain am I, that, if this point be once discovered, we shall clearly discern that other, on which both you and I launched out into a long harangue, I in maintaining that virtue could not be taught, and you in maintaining that it could. And I can fancy the upshot of our conversation attacking and deriding us like a human being, and that, if it got a voice, it would say, You are strange persons, both of you, Socrates and Protagoras. You, Socrates, who formerly maintained that virtue could not be taught, are now bent on contradicting your self, by endeavoring to prove that all things are knowledge, both justice, and discretion, and courage; a course of argument which leads most clearly to the result that virtue is a thing which can be taught. For if virtue were some thing different from knowledge, as Protagoras has been attempting to maintain, it evidently would not be susceptible of being taught; but now, if it be found to be all knowledge, as you, Socrates, are insisting, it will be strange indeed if it cannot be taught. Protagoras, on the other hand, who started with asserting that he could teach it, seems now bent on proving, in contradiction to that assertion, that it is almost anything rather than knowledge, and consequently the last thing in the world to be taught. I therefore, Protagoras, on observing how terrible is the confusion in which all these matters are thrown together, am all-desirous of bringing them to the light, and should be glad to follow up our late investigation by inquiring into the nature of virtue, and then reconsidering whether or no it is capable of being taught, lest haply the Epimetheus of your story trip us up treacherously in our examination, just as in the distribution of functions he neglected us carelessly, according to your account. The fore thought of your Prometheus pleased me far more than his brothers afterthought; and it is because I take Prometheus for my counselor, and look forward with his forethought over all my future life, that I busy myself with all these studies, and should be delighted, as I said before, to join you, if you have no objection, in fathoming them to the bottom.—

To this Protagoras replied;

Protagoras:: I for my part, Socrates, applaud your zeal, and your skill in the evolution of arguments. For I consider that in no point of view am I a bad man, and that I am the last person in the world to be jealous. Thus often ere now have I said of you, that among all whom I am in the habit of meeting, I admire you the most, and among those of your own age by far the most; and I add, that I should not be surprised if you win yourself a place among our distinguished sages. And with regard to the present discussion, we will continue it on some future occasion, when agreeable to you, but to-day it is high time for me to betake myself to other business.

Socrates:: So be it, since such is your pleasure. For I too ought long ago to have departed on the errand I mentioned; only I stayed to oblige the beautiful Callias.

Our conversation thus concluded, we left the house.

THE END

## Republic Of Plato.

The most common thing you hear about this dialog, is that the republic created during the dialog, was Plato's ideal state, but what this tells one who has studied it is that those who say these things, and it is commonly said, are simply illiterate. Plato created the worst hell he could imagine:

> "For unless you deprive each of its true reputation and attach to it the false one, we shall say that you are praising or denouncing nothing more than the appearances in either case, and recommending us to do wrong without being found out; and that you hold with Thrasymachus that right means what is good for someone else, being the interest of the stronger, and wrong is what really pays, serving one's own interest at the expense of the weaker." Republic by Plato, Book 2 Comford.

In the last book, book 10, at the end of the creation Plato reminds his auditors of what he did and asks for this republic to be dispensed with:

> I granted your request that a just person should seem unjust and an unjust one just, for you said that, even if it would be impossible for these things to remain hidden from both gods and humans, still, this had to be granted for the sake of argument, so that justice itself could be judged in relation to injustice itself. Don't you remember that? Republic by Plato, Book 10 Republic-Grube and Reeve.

One should compare both passages in the front and back of the dialog until they understand clearly what is the actual intention of the claimed ideal state until they realize that as stated, it was the worst hell Plato could imagine.

I am not surprised, however, that it appears that the whole of academia seems to be illiterate for I have never heard of anyone challenging these claims. The simple evidence is in the text itself, and plainly written, yet they all claim just the opposite of what is said. Why is that? Is reading comprehension that bad among scholars? Apparently so.

In the typical Platonic dialog, Plato uses the highest contrast possible, he was, after all a grammar teacher. He used the best of the best and the worst of the worst. In the *Republic*, Plato was challenged to contrast Justice with Injustice using such a high contrast. He was to put the best of men in the worst of circumstances so as to fool both gods and men. And so, the *Republic* one hears scholars extolling claiming to be Plato's ideal republic while even in the text itself it is said to be the worst hell Plato could imagine. To a sane person, much of the dialog should turn one's stomach. In Book Ten, Plato ends the exercise with the admission that he could not fool the gods, but history has proven that scholars, as a whole, have little or no reading comprehension and are apt to be, by Platonic standards, sociopaths. Imagine that, exactly how many PhDs in philosophy have been granted to illiterate sociopaths unable to discern the blatant meaning given in text? It happens all the time. Being self-educated affords one absolutely no stress at all with calling so-called intellectuals just a bunch of paper trained fools. Challenge them, and they will wave that paper in your face but I have found nowhere that anyone comprehended that a grammar teacher, Plato, was presenting correct lessons in grammar, itself; every possible grammar is a means of utilizing binary information processing which Plato called Dialectic. Scholars do not even recognize what dialectic actually is. Just look at a geometric line segment, and ask, exactly how many parts of speech is it telling you there are? Most current minds cannot abstract the simple relative and the correlative or traditionally, noun and verb, or two, and only two, parts of speech possible presented to man even by his own biology not to mention the physical world all around them. These two parts of speech are then dialectical, or expressible in symbolic form by any system of grammar in binary. Just ask your computer.

What makes people believe that there are more than two parts of speech is that they do not realize that we derive distinctions using binary recursion, this does not increase the number of the parts of speech, but only denotes how and where they are applied.

One can use such examples to tell just how well man has comprehended other intelligible works such as the Judeo-Christian Scripture. A dysfunctional mind cannot be educated out of its own biological foundation.

Typical current education focuses on memory retention instead of intelligible comprehension making social education an ineffective learning platform. If you train a parrot, then a parrot you will get. A parrot cannot solve real life problems.

Although this dialog is effected by the given inversion, if you pay careful attention to it, over the length of the dialog, Plato will define what both philosophy and a true philosopher is, by definition. And if you are very diligent, you will find that it accords with the definition of a mind as one of the life support systems of the body.

## Allegory of the Cave

Even though Plato tells the reader plainly that this allegory is derived from the distinction between the perceptible and the intelligible, still so called Brainiacs spin absurd yarns about it. It is a colorful, but simple metaphor. It is based on biological fact. As a life support system, we are designed to maintain and promote life, which is the good. We acquire information by the perceptible and simply name these perceptible abstractions. It is up to the intelligible to learn how to turn that information, process it, into the good, the maintenance and promotion of life. It is simply a display of the lack of mental ability which drives mankind to spin absurd theories of a simple biological fact. This simple biological fact, the definition of mind, is what Plato also uses to define philosophy and the philosopher, and is mean by doing one's own work just like any other life support system of the body. Plato's dialogs are based on the definition of a mind which is a biological fact.

The question posed by the Allegory of the Cave is, how do you educate a mind from the perceptible, arithmetic information processing, to the intelligible, or geometric information processing? How do you correctly educate a mind?

# Binary Recursion

> that branch of science which concerns unity would be among those which lead and turn the soul to the contemplation of real being. *Republic* by Plato, Henry Davis.

One of the distinctions between the perceptible and the intelligible which people, as Plato notes, do not consider is that the unit, aka, a thing, etc. is perceived simply as a word, a name, a perceptible. When all you are doing is turning a perceptible abstraction into a perceptible name, you are denoting simply a shadow. They do not consider that a unit, any unit, is a binary construct, limits and the relative difference between those limits. These two concepts give us a noun, for the absolute, or limit, and the verb for the relative. This means that every possible grammar is derived from a binary and effected by binary recursion. This binary recursion is used for judgment, to arrive at what is good and evil in terms of our survival. Every thing is a relative between correlatives, meaning, all we have is a binary, and when we denote a part of speech, all we have are nouns and verbs.

Thus, when metaphor is used, you can tell why it is used. It is used to exercise the mind, to habituate it into constantly employing the intelligible and when you miss that fact, then you spiral off into the ozone layer and start hallucinating producing gibberish and using names wholly devoid of any sense at all. This was my reaction to English Grammar in school starting when I was a child. I found the gibberish being passed off as English Grammar, wholly incredible. It made me afraid knowing how stupid my teachers were. I was aware I lived among people who could not distinguish between fantasy and reality. My situation in this life is still very confusion, how can people, all over the world, be so deluded, so ignorant of simple fact?

# Republic Of Plato.

Translated by Francis Macdonald Cornford.

Socrates, Cephalus, Glaucon, Thrasymachus,
Adeimantus, Cleitophon, Polemarchus, Boy

Socrates:: I walked down to the Piraeus yesterday with Glaucon, the son of Ariston, to make my prayers to the goddess. As this was the first celebration of her festival, I wished also to see how the ceremony would be conducted. The Thracians, I thought, made as fine a show in the procession as our own people, though they did well enough. The prayers and the spectacle were over, and we were leaving to go back to the city, when from some way off Polemarchus, the son of Cephalus, caught sight of us starting homewards and sent his slave running to ask us to wait for him. The boy caught my garment from behind and gave me the message.

I turned round and asked where his master was.

Boy:: There; coming up behind. Please wait.

Glaucon:: Very well; we will.

Socrates:: A minute later Polemarchus joined us, with Glaucon's brother, Adeimantus, and Niceratus, the son of Nicias, and some others who must have been at the procession.

Polemarchus:: Socrates, I do believe you are starting back to town and leaving us.

Socrates:: You have guessed right.

Polemarchus:: Well, you see what a large party we are?

Socrates:: I do.

Polemarchus:: Unless you are more than a match for us, then, you must stay here.

Socrates:: Isn’t there another alternative? We might convince you that you must let us go.

Polemarchus:: How will you convince us, if we refuse to listen?

Glaucon:: We cannot.

Polemarchus:: Well, we shall refuse; make up your minds to that.

Adeimantus:: Don’t you even know that in the evening there is going to be a torch-race on horseback in honour of the goddess?

Socrates:: On horseback! That is something new. How will they do it? Are the riders going to race with torches and hand them on to one another?

Polemarchus:: Just so. Besides, there will be a festival lasting all night, which will be worth seeing. We will go out after dinner and look on. We shall find plenty of young men there and we can have a talk. So please stay, and don’t disappoint us.

Glaucon:: It looks as if we had better stay.

Socrates:: Well, if you think so, we will.

Accordingly, we went home with Polemarchus; and there we found his brothers, Lysias and Euthydemus, as well as Thrasymachus of Chalcedon, Charmantides of Paeania, and Cleitophon, the son of Aristonymus. Polemarchus’ father, Cephalus, was at home too. I had not seen him for some time, and it struck me that he had aged a good deal. He was sitting in a cushioned chair, wearing a garland, as he had just been conducting a sacrifice in the court-yard. There were some chairs standing round, and we sat down beside him.

As soon as he saw me, Cephalus greeted me.

Cephalus:: You don’t often come down to the Piraeus to visit us, Socrates. But you ought to. If I still had the strength to walk to town easily, you would not have to come here we would come to you. But, as things are, you really ought to come here oftener. I find, I can assure you, that in proportion as bodily pleasures lose their savor, my appetite for the things of the mind grows keener and I enjoy discussing them more than ever. So you must not disappoint me. Treat us like old friends, and come here often to have a talk with these young men.

Socrates:: To tell the truth, Cephalus, I enjoy talking with very old people. They have gone before us on a road by which we too may have to travel, and I think we do well to learn from them what it is like, easy or difficult, rough or smooth. And now that you have reached an age when your foot, as the poets say, is on the threshold, I should like to hear what report you can give and whether you find it a painful time of life.

Cephalus:: I will tell you by all means what it seems like to me, Socrates. Some of us old men often meet, true to the old saying that people of the same age like to be together. Most of our company are very sorry for themselves, looking back with regret to the pleasures of their young days, all the delights connected with love affairs and merry-making. They are vexed at being deprived of what seems to them so important; life was good in those days, they think, and now they have no life at all. Some complain that their families have no respect for their years, and make that a reason for harping on all the miseries old age has brought. But to my mind, Socrates, they are laying the blame on the wrong shoulders. If the fault were in old age, so far as that goes, I and all who have ever reached my time of life would have the same experience; but in point of fact, I have met many who felt quite differently. For instance, I remember someone asking Sophocles, the poet, whether he was still capable of enjoying a woman. ‘Don’t talk in that way,’ he answered; ‘I am only too glad to be free of all that; it is like escaping from bondage to a raging madman.’ I thought that a good answer at the time, and I still think so; for certainly a great peace comes when age sets us free from passions of that sort. When they weaken and relax their hold, most certainly it means, as Sophocles said, a release from servitude to many forms of madness. All these troubles, Socrates, including the complaints about not being respected, have only one cause; and that is not old age, but a man’s character. If you have a contented mind at peace with itself, age is no intolerable burden; without that, Socrates, age and youth will be equally painful.

Socrates:: I was charmed with these words and wanted him to go on talking; so I tried to draw him out. I fancy, Cephalus, most people will not accept that account; they imagine that it is not character that makes your burden light, but your wealth. The rich, they say, have many consolations.

Cephalus:: That is true; they do not believe me; and there is something in their suggestion, though not so much as they suppose. When a man from Seriphus taunted Themistocles and told him that his fame was due not to himself but to his country, Themistocles made a good retort: ‘Certainly, if I had been born a Seriphian, I should not be famous; but no more would you, if you had been born at Athens.’ And so one might say to men who are not rich and feel old age burdensome: If it is true that a good man will not find it easy to bear old age and poverty combined, no more will riches ever make a bad man contented and cheerful.

Socrates:: And was your wealth, Cephalus, mostly inherited or have you made your own fortune?

Cephalus:: Made my fortune, Socrates? As a man of business I stand somewhere between my grandfather and my father. My grandfather, who was my namesake, inherited about as much property as I have now and more than doubled it; whereas my father Lysanias reduced it below its present level. I shall be content if I can leave these sons of mine not less than I inherited, and perhaps a little more.

Socrates:: I asked, because you strike me as not caring overmuch about money; and that is generally so with men who have not made their own fortune. Those who have are twice as fond of their possessions as other people. They have the same affection for the money they have earned that poets have for their poems, or fathers for their children: they not merely find it useful, as we all do, but it means much to them as being of their own creation. That makes them disagreeable company; they have not a good word for anything but riches.

Cephalus:: That is quite true.

Socrates:: It is indeed; but one more question: what do you take to be the greatest advantage you have got from being wealthy?

Cephalus:: One that perhaps not many people would take my word for I can tell you, Socrates, that, when the prospect of dying is near at hand, a man begins to feel some alarm about things that never troubled him before. He may have laughed at those stories they tell of another world and of punishments there for wrongdoing in this life; but now the soul is tormented by a doubt whether they may not be true. Maybe from the weakness of old age, or perhaps because, now that he is nearer to what lies beyond, he begins to get some glimpse of it himself—at any rate he is beset with fear and misgiving; he begins thinking over the past: is there anyone he has wronged? If he finds that his life has been full of wrongdoing, he starts up from his sleep in terror like a child, and his life is haunted by dark forebodings; whereas, if his conscience is clear, that ‘sweet Hope’ that Pindar speaks of is always with him to tend his age. Indeed, Socrates, there is great charm in those lines describing the man who has led a life of righteousness:

Hope is his sweet companion, she who guides
Man’s wandering purpose, warms his heart
And nurses tenderly his age.

That is admirably expressed, admirably. Now in this, as I believe, lies the chief value of wealth, not for everyone, perhaps, but for the right-thinking man. It can do much to save us from going to that other world in fear of having cheated or deceived anyone even unintentionally or of being in debt to some god for sacrifice or to some man for money. Wealth has many other uses, of course; but, taking one with another, I should regard this as the best use that can be made of it by a man of sense.

Socrates:: You put your case admirably, Cephalus. But take this matter of doing right: can we. say that it really consists in nothing more nor less than telling the truth and paying back anything we may have received? Are not these very actions sometimes right and sometimes wrong? Suppose, for example, a friend who had lent us a weapon were to go mad and then ask for it back, surely anyone would say we ought not to return it. It would not be ‘right’ to do so; nor yet to tell the truth without reserve to a madman.

Cephalus:: No, it would not.

Socrates:: Right conduct, then, cannot be defined as telling the truth and restoring anything we have been trusted with.

Polemarchus:: Yes, it can, at least if we are to believe Simonides.

Cephalus:: Well, well, I will bequeath the argument to you. It is time for me to attend to the sacrifice.

Polemarchus:: Your part, then, will fall to me as your heir.

Cephalus:: By all means.

Socrates:: Cephalus said with a smile; and with that he left us, to see to the sacrifice.

Then, if you are to inherit this discussion, tell me, what is this saying of Simonides about right conduct which you approve?

Polemarchus:: That it is just to render every man his due. That seems to me a fair statement.

Socrates:: It is certainly hard to question the inspired wisdom of a poet like Simonides; but what this saying means you may know, Polemarchus, but I do not. Obviously it does not mean what we were speaking of just now—returning something we have been entrusted with to the owner even when he has gone out of his mind. And yet surely it is his due, if he asks for it back?

Polemarchus:: Yes.

Socrates:: But it is out of the question to give it back when he has gone mad?

Polemarchus:: True.

Socrates:: Simonides, then, must have meant something different from that when he said it was just to render a man his due.

Polemarchus:: Certainly he did; his idea was that, as between friends, what one owes to another is to do him good, not harm.

Socrates:: I see; to repay money entrusted to one is not to render what is due, if the two parties are friends and the repayment proves harmful to the lender. That is what you say Simonides meant?

Polemarchus:: Yes, certainly.

Socrates:: And what about enemies? Are we to render whatever is their due to them?

Polemarchus:: Yes certainly, what really is due to them; which means, I suppose, what is appropriate to an enemy—some sort of injury.

Socrates:: It seems, then, that Simonides was using words with a hidden meaning, as poets will. He really meant to define justice as rendering to everyone what is appropriate to him; only he called that his 'due'.

Polemarchus:: Well, why not?

Socrates:: But look here. Suppose we could question Simonides about the art of medicine—whether a physician can be described as rendering to some object what is due or appropriate to it; how do you think he would answer?

Polemarchus:: That the physician administers the appropriate diet or remedies to the body.

Socrates:: And the art of cookery—can that be described in the same way?

Polemarchus:: Yes; the cook gives the appropriate seasoning to his dishes.

Socrates:: Good. And the practice of justice?

Polemarchus:: If we are to follow those analogies, Socrates, justice would be rendering services or injuries to friends or enemies.

Socrates:: So Simonides means by justice doing good to friends and harm to enemies?

Polemarchus:: I think so.

Socrates:: And in matters of health who would be the most competent to treat friends and enemies in that way?

Polemarchus:: A physician.

Socrates:: And on a voyage, as regards the dangers of the sea?

Polemarchus:: A ship's captain.

Socrates:: In what sphere of action, then, will the just man be the most competent to do good or harm?

Polemarchus:: In war, I should imagine; when he is fighting on the side of his friends and against his enemies.

Socrates:: I see. But when we are well and staying on shore, the doctor and the ship's captain are of no use to us.

Polemarchus:: True.

Socrates:: Is it also true that the just man is useless when we are not at war?

Polemarchus:: I should not say that.

Socrates:: So justice has its uses in peace-time too?

Polemarchus:: Yes.

Socrates:: Like farming, which is useful for producing crops, or shoe-making, which is useful for providing us with shoes. Can you tell me for what purposes justice is useful or profitable in time of peace?

Polemarchus:: For matters of business, Socrates.

Socrates:: In a partnership, you mean?

Polemarchus:: Yes.

Socrates:: But if we are playing draughts, or laying bricks, or making music, will the just man be as good and helpful a partner as an expert draught-player, or a builder, or a musician?

Polemarchus:: No.

Socrates:: Then in what kind of partnership will he be more helpful?

Polemarchus:: Where money is involved, I suppose.

Socrates:: Except, perhaps, Polemarchus, when we are putting our money to some use. If we are buying or selling a horse, a judge of horses would be a better partner; or if we are dealing in ships, a shipwright or a sea-captain.

Polemarchus:: I suppose so.

Socrates:: Well, when will the just man be specially useful in handling our money?

Polemarchus:: When we want to deposit it for safe-keeping.

Socrates:: When the money is to lie idle, in fact?

Polemarchus:: Yes.

Socrates:: So justice begins to be useful only when our money is out of use?

Polemarchus:: Perhaps so.

Socrates:: And in the same way, I suppose, if a pruning-knife is to be used, or a shield, or a lyre, then a vine-dresser, or a soldier, or a musician will be of service; but justice is helpful only when these things are to be kept safe. In fact justice is never of any use in using things; it becomes useful when they are useless.

Polemarchus:: That seems to follow.

Socrates:: If that is so, my friend, justice can hardly be a thing of much value. And here is another point. In boxing or fighting of any sort skill in dealing blows goes with skill in keeping them off; and the same doctor that can keep us from disease would also be clever at producing it by stealth; or again, a general will be good at keeping his army safe, if he can also cheat the enemy and steal his plans and dispositions. So a man who is expert in keeping things will always make an expert thief.

Polemarchus:: Apparently.

Socrates:: The just man, then, being good at keeping money safe, will also be good at stealing it.

Polemarchus:: That seems to be the conclusion, at any rate.

Socrates:: So the just man turns out to be a kind of thief. You must have learnt that from Homer, who showed his predilection for Odysseus' grandfather Autolycus by remarking that he surpassed all men in cheating and perjury. Justice, according to you and Homer and Simonides, turns out to be a form of skill in cheating, provided it be to help a friend or harm an enemy. That was what you meant?

Polemarchus:: Good God, no; but I have forgotten now what I did mean. All the same, I do still believe that justice consists in helping one's friends and harming one's enemies.

Socrates:: Which do you mean by a man's friends and enemies—those whom he believes to be good honest people and the reverse, or those who really are, though they may not seem so?

Polemarchus:: Naturally, his loves and hates depend on what he believes.

Socrates:: But don't people often mistake an honest man for a rogue, or a rogue for an honest man; in which case they regard good people as enemies and bad people as friends?

Polemarchus:: No doubt.

Socrates:: But all the same, it will then be right for them to help the rogue and to injure the good man?

Polemarchus:: Apparently.

Socrates:: And yet a good man is one who is not given to doing wrong.

Polemarchus:: True.

Socrates:: According to your account, then, it is right to ill-treat a man who does no wrong.

Polemarchus:: No, no, Socrates; that can't be sound doctrine.

Socrates:: It must be the wrongdoers, then, that it is right to injure, and the honest that are to be helped.

Polemarchus:: That sounds better.

Socrates:: Then, Polemarchus, the conclusion will be that for a bad judge of character it will often be right to injure his friends, when they really are rogues, and to help his enemies, when they really are honest men—the exact opposite of what we took Simonides to mean.

Polemarchus:: That certainly does follow. We must shift our ground. Perhaps our definition of friend and enemy was wrong.

Socrates:: What definition, Polemarchus?

Polemarchus:: We said a friend was one whom we believe to be an honest man.

Socrates:: And how are we to define him now?

Polemarchus:: As one who really is honest as well as seeming so. If he merely seems so, he will be only a seeming friend. And the same will apply to enemies.

Socrates:: On this showing, then, it is the good people that will be our friends, the wicked our enemies.

Polemarchus:: Yes.

Socrates:: You would have us, in fact, add something to our original definition of justice: it will not mean merely doing good to friends and harm to enemies, but doing good to friends who are good, and harm to enemies who are wicked.

Polemarchus:: Yes, I think that is all right.

Socrates:: Can it really be a just man's business to harm any human being?

Polemarchus:: Certainly; it is right for him to harm bad men who are his enemies.

Socrates:: But does not harming a horse or a dog mean making it a worse horse or dog, so that each will be a less perfect creature in its own special way?

Polemarchus:: Yes.

Socrates:: Isn't that also true of human beings—that to harm them means making them worse men by the standard of human excellence?

Polemarchus:: Yes.

Socrates:: And is not justice a peculiarly human excellence?

Polemarchus:: Undoubtedly.

Socrates:: To harm a man, then, must mean making him less just.

Polemarchus:: I suppose so.

Socrates:: But a musician or a riding-master cannot be exercising his special skill, if he makes his pupils unmusical or bad riders.

Polemarchus:: No.

Socrates:: Whereas the just man is to exercise his justice by making men unjust? Or, in more general terms, the good are to make men bad by exercising their virtue? Can that be so?

Polemarchus:: No, it cannot.

Socrates:: It can no more be the function of goodness to do harm than of heat to cool or of drought to produce moisture. So if the just man is good, the business of harming people, whether friends or not, must belong to his opposite, the unjust.

Polemarchus:: I think that is perfectly true, Socrates.

Socrates:: So it was not a wise saying that justice is giving every man his due, if that means that harm is due from the just man to his enemies, as well as help to his friends. That is not true; because we have found that it is never right to harm anyone.

Polemarchus:: I agree.

Socrates:: Then you and I will make common cause against anyone who attributes that doctrine to Simonides or to any of the old canonical sages, like Bias or Pittacus.

Polemarchus:: Yes, I am prepared to support you.

Socrates:: Do you know, I think that account of justice, as helping friends and harming enemies, must be due to some despot, so rich and powerful that he thought he could do as he liked—someone like Periander, or Perdiccas, or Xerxes, or Ismenias of Thebes.

Polemarchus:: That is extremely probable.

Socrates:: Very good; and now that we have disposed of that definition of justice, can anyone suggest another?

All this time Thrasymachus had been trying more than once to break in upon our conversation; but his neighbors had restrained him, wishing to hear the argument to the end. In the pause after my last words he could keep quiet no longer; but gathering himself up like a wild beast he sprang at us as if he would tear us in pieces. Polemarchus and I were frightened out of our wits, when he burst out to the whole company:

Thrasymachus:: What is the matter with you two, Socrates? Why do you go on in this imbecile way, politely deferring to each other's nonsense? If you really want to know what justice means, stop asking questions and scoring off the answers you get. You know very well it is easier to ask questions than to answer them. Answer yourself, and tell us what you think justice means. I won't have you telling us it is the same as what is obligatory or useful or advantageous or profitable or expedient; I want a clear and precise statement; I won't put up with that sort of verbiage.

Socrates:: I was amazed by this onslaught and looked at him in terror. If I had not seen this wolf before he saw me, I really believe I should have been struck dumb; but fortunately I had looked at him earlier, when he was beginning to get exasperated with our argument; so I was able to reply, though rather tremulously: Don't be hard on us, Thrasymachus. If Polemarchus and I have gone astray in our search, you may be quite sure the mistake was not intentional. If we had been looking for a piece of gold, we should never have deliberately allowed politeness to spoil our chance of finding it; and now when we are looking for justice, a thing much more precious than gold, you cannot imagine we should defer to each other in that foolish way and not do our best to bring it to light. You must believe we are in earnest, my friend; but I am afraid the task is beyond our powers, and we might expect a man of your ability to pity us instead of being so severe.

Thrasymachus replied with a burst of sardonic laughter.

Thrasymachus:: Good Lord; Socrates at his old trick of shamming ignorance! I knew it; I told the others you would refuse to commit yourself and do anything sooner than answer a question.

Socrates:: Yes, Thrasymachus; because you are clever enough to know that if you asked someone what are the factors of the number twelve, and at the same time warned him: ‘Look here, you are not to tell me that twelve is twice six, or three times four, or six times two, or four times three; I won’t put up with any such nonsense’—you must surely see that no one would answer a question put like that. He would say: ‘What do you mean, Thrasymachus? Am I forbidden to give any of these answers, even if one happens to be right? Do you want me to give a wrong one?’ What would you say to that?

Thrasymachus:: Humph! As if that were a fair analogy!

Socrates:: I don’t see why it is not; but in any case, do you suppose our barring a certain answer would prevent the man from giving it, if he thought it was the truth?

Thrasymachus:: Do you mean that you are going to give me one of those answers I barred?

Socrates:: I should not be surprised, if it seemed to me true, on reflection.

Thrasymachus:: And what if I give you another definition of justice, better than any of those? What penalty are you prepared to pay?

Socrates:: The penalty deserved by ignorance, which must surely be to receive instruction from the wise. So I would suggest that as a suitable punishment.

Thrasymachus:: I like your notion of a penalty! But you must pay the costs as well.

Socrates:: I will, when I have any money.

Glaucon:: That will be all right; we will all subscribe for Socrates. So let us have your definition, Thrasymachus.

Thrasymachus:: Oh yes; so that Socrates may play the old game of questioning and refuting someone else, instead of giving an answer himself!

Socrates:: But really, what can you expect from a man who does not know the answer or profess to know it, and, besides that, has been forbidden by no mean authority to put forward any notions he may have? Surely the definition should naturally come from you, who say you do know the answer and can tell it us. Please do not disappoint us. I should take it as a kindness, and I hope you will not be chary of giving Glaucon and the rest of us the advantage of your instruction.

Glaucon and the others added their entreaties to mine. Thrasymachus was evidently longing to win credit, for he was sure he had an admirable answer ready, though he made a show of insisting that I should be the one to reply. In the end he gave way and exclaimed:

Thrasymachus:: So this is what Socrates' wisdom comes to! He refuses to teach, and goes about learning from others without offering so much as thanks in return.

Socrates:: I do learn from others, Thrasymachus; that is quite true; but you are wrong to call me ungrateful. I give in return all I can—praise; for I have no money. And how ready I am to applaud any idea that seems to me sound, you will see in a moment, when you have stated your own; for I am sure that will be sound.

Thrasymachus:: Listen then. What I say is that 'just' or 'right' means nothing but what is to the interest of the stronger party. Well, where is your applause? You don't mean to give it me.

Socrates:: I will, as soon as I understand I don't see yet what you mean by right being the interest of the stronger party. For instance, Polydamas, the athlete, is stronger than we are, and it is to his interest to eat beef for the sake of his muscles; but surely you don't mean that the same diet would be good for weaker men and therefore be right for us?

Thrasymachus:: You are trying to be funny, Socrates. It's a low trick to take my words in the sense you think will be most damaging.

Socrates:: No, no; but you must explain.

Thrasymachus:: Don't you know, then, that a state may be ruled by a despot, or a democracy, or an aristocracy?

Socrates:: Of course.

Thrasymachus:: And that the ruling element is always the strongest?

Socrates:: Yes.

Thrasymachus:: Well then, in every case the laws are made by the ruling party in its own interest; a democracy makes democratic laws, a despot autocratic ones, and so on. By making these laws they define as 'right' for their subjects whatever is for their own interest, and they call anyone who breaks them a 'wrongdoer' and punish him accordingly. That is what I mean: in all states alike 'right' has the same meaning, namely what is for the interest of the party established in power, and that is the strongest. So the sound conclusion is that what is 'right' is the same everywhere: the interest of the stronger party.

Socrates:: Now I see what you mean; whether it is true or not, I must try to make out. When you define right in terms of interest, you are yourself giving one of those answers you forbade to me; though, to be sure, you add 'to the stronger party'.

Thrasymachus:: An insignificant addition, perhaps!

Socrates:: Its importance is not clear yet; what is clear is that we must find out whether your definition is true. I agree myself that right is in a sense a matter of interest; but when you add ‘to the stronger party’, I don’t know about that. I must consider.

Thrasymachus:: Go ahead, then.

Socrates:: I will. Tell me this. No doubt you also think it is right to. obey the men in power?

Thrasymachus:: I do.

Socrates:: Are they infallible in every type of state, or can they sometimes make a mistake?

Thrasymachus:: Of course they can make a mistake.

Socrates:: In framing laws, then, they may do their work well or badly?

Thrasymachus:: No doubt.

Socrates:: Well, that is to say, when the laws they make are to their own interest; badly, when they are not?

Thrasymachus:: Yes.

Socrates:: But the subjects are to obey any law they lay down, and they will then be doing right?

Thrasymachus:: Of course.

Socrates:: If so, by your account, it will be right to do what is not to the interest of the stronger party, as well as what is so.

Thrasymachus:: What’s that you are saying?

Socrates:: Just what you said, I believe; but let us look again. Haven’t you admitted that the rulers, when they enjoin certain acts on their subjects, sometimes mistake their own best interests, and at the same time that it is right for the subjects to obey, whatever they may enjoin?

Thrasymachus:: Yes, I suppose so.

Socrates:: Well, that amounts to admitting that it is right to do what is not to the interest of the rulers or the stronger party. They may unwittingly enjoin what is to their own disadvantage; and you say it is right for the others to do as they are told. In that case, their duty must be the opposite of what you said, because the weaker will have been ordered to do what is against the interest of the stronger. You with your intelligence must see how that follows.

Polemarchus:: Yes, Socrates, that is undeniable.

Clitophon:: No doubt, if you are to be a witness on Socrates' side.

Polemarchus:: No witness is needed; Thrasymachus himself admits that rulers sometimes ordain acts that are to their own disadvantage, and that it is the subjects' duty to do them.

Clitophon:: That is because Thrasymachus said it was right to do what you are told by the men in power.

Polemarchus:: Yes, but he also said that what is to the interest of the stronger party is right; and, after making both these assertions, he admitted that the stronger sometimes command the weaker subjects to act against their interests. From all which it follows that what is in the stronger's interest is no more right than what is not.

Clitophon:: No; he meant whatever the stronger believes to be in his own interest. That is what the subject must do, and what Thrasymachus meant to define as right.

Polemarchus:: That was not what he said.

Socrates:: No matter, Polemarchus; if Thrasymachus says so now, let us take him in that sense. Now, Thrasymachus, tell me, was that what you intended to say—that right means what the stronger thinks is to his interest, whether it really is so or not?

Thrasymachus:: Most certainly not. Do you suppose I should speak of a man as 'stronger' or 'superior' at the very moment when he is making a mistake?

Socrates:: I did think you said as much when you admitted that rulers are not always infallible.

Thrasymachus:: That is because you are a quibbler, Socrates. Would you say a man deserves to be called a physician at the moment when he makes a mistake in treating his patient and just in respect of that mistake; or a mathematician, when he does a sum wrong and just in so far as he gets a wrong result? Of course we do commonly speak of a physician or a mathematician or a scholar having made a mistake; but really none of these, I should say, is ever mistaken, in so far as he is worthy of the name we give him. So strictly speaking—and you are all for being precise—no one who practices a craft makes mistakes. A man is mistaken when his knowledge fails him; and at that moment he is no craftsman. And what is true of craftsmanship or any sort of skill is true of the ruler: he is never mistaken so long as he is acting as a ruler; though anyone might speak of a ruler making a mistake, just as he might of a physician. You must understand that I was talking in that loose way when I answered your question just now; but the precise statement is this. The ruler, in so far as he is acting as a ruler, makes no mistakes and consequently enjoins what is best for himself; and that is what the subject is to do. So, as I said at first, 'right' means doing what is to the interest of the stronger.

Socrates:: Very well, Thrasymachus. So you think I am quibbling?

Thrasymachus:: I am sure you are.

Socrates:: You believe my questions were maliciously designed to damage your position?

Thrasymachus:: I know it. But you will gain nothing by that. You cannot outwit me by cunning, and you are not the man to crush me in the open.

Socrates:: Bless your soul, I should not think of trying. But, to prevent any more misunderstanding, when you speak of that ruler or stronger party whose interest the weaker ought to serve, please make it clear whether you are using the words in the ordinary way or in that strict sense you have just defined.

Thrasymachus:: I mean a ruler in the strictest possible sense. Now quibble away and be as malicious as you can. I want no mercy. But you are no match for me.

Socrates:: Do you think me mad enough to beard a lion or try to outwit a Thrasymachus?

Thrasymachus:: You did try just now, but it wasn't a success.

Socrates:: Enough of this. Now tell me about the physician in that strict sense you spoke of: is it his business to earn money or to treat his patients? Remember, I mean your physician who is worthy of the name.

Thrasymachus:: To treat his patients.

Socrates:: And what of the ship's captain in the true sense? Is he a mere seaman or the commander of the crew?

Thrasymachus:: The commander.

Socrates:: Yes, we shall not speak of him as a seaman just because he is on board a ship. That is not the point. He is called captain because of his skill and authority over the crew.

Thrasymachus:: Quite true.

Socrates:: And each of these people has some special interest?

Thrasymachus:: No doubt.

Socrates:: And the craft in question exists for the very purpose of discovering that interest and providing for it?

Thrasymachus:: Yes.

Socrates:: Can it equally be said of any craft that it has an interest, other than its own greatest possible perfection?

Thrasymachus:: What do you mean by that?

Socrates:: Here is an illustration. If you ask me whether it is sufficient for the human body just to be itself, with no need of help from without, I should say, Certainly not; it has weaknesses and defects, and its condition is not all that it might be. That is precisely why the art of medicine was invented: it was designed to help the body and provide for its interests. Would not that be true?

Thrasymachus:: It would.

Socrates:: But now take the art of medicine itself. Has that any defects or weaknesses? Does any art stand in need of some further perfection, as the eye would be imperfect without the power of vision or the ear without hearing, so that in their case an art is required that will study their interests and provide for their carrying out those functions? Has the art itself any corresponding need of some further art to remedy its defects and look after its interests; and will that further art require yet another, and so on for ever? Or will every art look after its own interests? Or, finally, is it not true that no art needs to have its weaknesses remedied or its interests studied either by another art or by itself, because no art has in itself any weakness or fault, and the only interest it is required to serve is that of its subject-matter? In itself, an art is sound and flawless, so long as it is entirely true to its own nature as an art in the strictest sense—and it is the strict sense that I want you to keep in view. Is not that true?

Thrasymachus:: So it appears.

Socrates:: Then, the art of medicine does not study its own interest, but the needs of the body, just as a groom shows his skill by caring for horses, not for the art of grooming. And so every art seeks, not its own advantage—for it has no deficiencies—but the interest of the subject on which it is exercised.

Thrasymachus:: It appears so.

Socrates:: But surely, Thrasymachus, every art has authority and superior power over its subject.

To this he agreed, though very reluctantly.

So far as arts are concerned, then, no art ever studies or enjoins the interest of the superior or stronger party, but always that of the weaker over which it has authority.

Thrasymachus assented to this at last, though he tried to put up a fight. I then went on:

So the physician, as such, studies only the patient's interest, not his own. For as we agreed, the business of the physician, in the strict sense, is not to make money for himself, but to exercise his power over the patient's body; and the ship's captain, again, considered strictly as no mere sailor, but in command of the crew, will study and enjoin the interest of his subordinates, not his own.

He agreed reluctantly.

And so with government of any kind: no ruler, in so far as he is acting as ruler, will study or enjoin what is for his own interest. All that he says and does will be said and done with a view to what is good and proper for the subject for whom he practices his art.

At this point, when everyone could see that Thrasymachus' definition of justice had been turned inside out, instead of making any reply, he said:

Thrasymachus:: Socrates, have you a nurse?

Socrates:: Why do you ask such a question as that? Wouldn't it be better to answer mine?

Thrasymachus:: Because she lets you go about sniffling like a child whose nose wants wiping. She hasn't even taught you to know a shepherd when you see one, or his sheep either.

Socrates:: What makes you say that?

Thrasymachus:: Why, you imagine that a herdsman studies the interests of hi flocks or cattle, tending and fattening them up with some other end in view; than his master's profit or his own; and so you don't see that, in politics, the genuine ruler regards his subjects exactly like sheep, and thinks of nothing else, night and day, but the good he can get out of them for himself. You are so far out in your notions of right and wrong, justice and injustice, as not to know that 'right' actually means what is good for someone else, and to be 'just' means serving the interest of the stronger who rules, at the cost of the subject who obeys; whereas injustice is just the reverse, asserting its authority over those innocents who are called just, so that they minister solely to their master's advantage and happiness, and not in the least degree to their own. Innocent as you are yourself, Socrates, you must see that a just man always has the worst of it Take a private business: when a partnership is wound up, you will never find that the more honest of two partners comes off with the larger share; and in their relations to the state, when there are taxes to be paid, the honest man will pay more than the other on the same amount of property; or if there is money to be distributed, the dishonest will get it all. When either of them holds some public office, even if the just man loses in no other way, his private affairs at any rate will suffer from neglect, while his principles will not allow him to help himself from the public funds; not to mention the offence he will give to his friends and relations by refusing to sacrifice those principles to do them a good turn. Injustice has all the opposite advantages. I am speaking of the type I described just now, the man who can get the better of other people on a large scale: you must fix your eye on him, if you want to judge how much it is to one's own interest not to be just. You can see that best in the most consummate form of injustice, which rewards wrongdoing with supreme welfare and happiness and reduces its victims, if they won't retaliate in kind, to misery. That form is despotism, which uses force or fraud to plunder the goods of others, public or private, sacred or profane, and to do it in a wholesale way. If you are caught committing any one of these crimes on a small scale, you are punished and disgraced; they call it sacrilege, kidnapping, burglary, theft and brigandage. But if, besides taking their property, you turn all your countrymen into slaves, you will hear no more of those ugly names; your countrymen themselves will call you the happiest of men and bless your name, and so will everyone who hears of such a complete triumph of injustice; for when people denounce injustice, it is because they are afraid of suffering wrong, not of doing it. So true is it, Socrates, that injustice, on a grand enough scale, is superior to justice in strength and freedom and autocratic power; and 'right', as I said at first, means simply what serves the interest of the stronger party; 'wrong' means what is for the interest and profit of oneself.

Socrates:: Having deluged our ears with this torrent of words, as the man at the baths might empty a bucket over one's head, Thrasymachus meant to take himself off; but the company obliged him to stay and defend his position. I was specially urgent in my entreaties.

My good Thrasymachus, do you propose to fling a doctrine like that at our heads and then go away without explaining it properly or letting us point out to you whether it is true or not? Is it so small a matter in your eyes to determine the whole course of conduct which every one of us must follow to get the best out of life?

Thrasymachus:: Don't I realize it is a serious matter?

Socrates:: Apparently not; or else you have no consideration for us, and do not care whether we shall lead better or worse lives for being ignorant of this truth you profess to know. Do take the trouble to let us into your secret; if you treat us handsomely, you may be sure it will be a good investment; there are so many of us to show our gratitude. I will make no secret of my own conviction, which is that injustice is not more profitable than justice, even when left free to work its will unchecked. No; let your unjust man have full power to do wrong, whether by successful violence or by escaping detection; all the same he will not convince me that he will gain more than he would by being just. There may be others here who feel as I do, and set justice above injustice. It is for you to convince us that we are not well advised.

Thrasymachus:: How can I? If you are not convinced by what I have just said, what more can I do for you? Do you want to be fed with my ideas out of a spoon?

Socrates:: God forbid! Not that. But I do want you to stand by your own words; or, if you shift your ground, shift it openly and stop trying to hoodwink us as you are doing now. You see, Thrasymachus, to go back to your earlier argument, in speaking of the shepherd you did not think it necessary to keep to that strict sense you laid down when you defined the genuine physician. You represent him, in his character of shepherd, as feeding up his flock, not for their own sake but for the table or the market, as if he were out to make money as a caterer or a cattle-dealer, rather than a shepherd. Surely the sole concern of the shepherd's art is to do the best for the charges put under its care; its own best interest is sufficiently provided for, so long as it does not fall short of all that shepherding should imply. On that principle it followed, I thought, that any kind of authority, in the state or in private life, must, in its character of authority, consider solely what is best for those under its care. Now what is your opinion? Do you think that the men who govern states—I mean rulers in the strict sense—have no reluctance to hold office?

Thrasymachus:: I don't think so; I know it.

Socrates:: Well, but haven't you noticed, Thrasymachus, that in other positions of authority no one is willing to act unless he is paid wages, which he demands on the assumption that all the benefit of his action will go to his charges? Tell me: Don't we always distinguish one form of skill from another by its power to effect some particular result? Do say what you really think, so that we may get on.

Thrasymachus:: Yes, that is the distinction.

Socrates:: And also each brings us some benefit that is peculiar to it: medicine gives health, for example; the art of navigation, safety at sea; and so on.

Thrasymachus:: Yes.

Socrates:: And wage-earning brings us wages; that is its distinctive product. Now, speaking with that precision which you proposed, you would not say that the art of navigation is the same as the art of medicine, merely on the ground that a ship's captain regained his health on a voyage, because the sea air was good for him. No more would you identify the practice of medicine with wage-earning because a man may keep his health while earning wages, or a physician attending a case may receive a fee.

Thrasymachus:: No.

Socrates:: And, since we agreed that the benefit obtained by each form of skill is peculiar to it, any common benefit enjoyed alike by all these practitioners must come from some further practice common to them all?

Thrasymachus:: It would seem so.

Socrates:: Yes, we must say that if they all earn wages, they get that benefit in so far as they are engaged in wage-earning as well as in practicing their several arts.

He agreed reluctantly.

This benefit, then,—the receipt of wages—does not come to a man from his special art. If we are to speak strictly, the physician, as such, produces health; the builder, a house; and then each, in his further capacity of wage-earner, gets his pay. Thus every art has its own function and benefits its proper subject. But suppose the practitioner is not paid; does he then get any benefit from his art?

Thrasymachus:: Clearly not.

Socrates:: And is he doing no good to anyone either, when he work for nothing?

Thrasymachus:: No, I suppose he does some good.

Socrates:: Well then, Thrasymachus, it is now clear that no form of skill or authority provides for its own benefit. As we were saying some time ago, it always studies and prescribes what is good for its subject—the interest of the weaker party, not of the stronger. And that, my friend, is why I said that no one is willing to be in a position of authority and undertake to set straight other men's troubles, without demanding to be paid; because, if he is to do his work well, he will never, in his capacity of ruler, do, or command others to do, what is best for himself, but only what is best for the subject. For that reason, if he is to consent, he must have his recompense, in the shape of money or honor, or of punishment in case of refusal.

Glaucon:: What do you mean, Socrates? I recognize two of your three kinds of reward; but I don't understand what you mean by speaking of punishment as a recompense.

Socrates:: Then you don't understand the recompense required by the best type of men, or their motive for accepting authority when they do consent. You surely know that a passion for honors or for money is rightly regarded as something to be ashamed of.

Glaucon:: Yes, I do.

Socrates:: For that reason, good men are unwilling to rule, either for money's sake or for honor. They have no wish to be called mercenary for demanding to be paid, or thieves for making a secret profit out of their office; nor yet will honors tempt them, for they are not ambitious. So they must be forced to consent under threat of penalty; that may be why a readiness to accept power under no such constraint is thought discreditable. And the heaviest penalty for declining to rule is to be ruled by someone inferior to yourself. That is the fear, I believe, that makes decent people accept power; and when they do so, they face the prospect of authority with no idea that they are coming into the enjoyment of a comfortable berth; it is forced upon them because they can find no one better than themselves, or even as good, to be entrusted with power. If there could ever be a society of perfect men, there might well be as much competition to evade office as there now is to gain it; and it would then be clearly seen that the genuine ruler's nature is to seek only the advantage of the subject, with the consequence that any man of understanding would sooner have another to do the best for him than be at the pains to do the best for that other himself. On this point, then, I entirely disagree with Thrasymachus' doctrine that right means what is to the interest of the stronger.

However, we may return to that question later. Much more important is the position Thrasymachus is asserting now: that a life of injustice is to be preferred to a life of justice. Which side do you take, Glaucon? Where do you think the truth lies?

Glaucon:: I should say that the just life is the better worth having.

Socrates:: You heard Thrasymachus' catalogue of all the good things in store for injustice?

Glaucon:: I did, but I am not convinced.

Socrates:: Shall we try to convert him, then, supposing we can find some way to prove him wrong?

Glaucon:: By all means.

Socrates:: We might answer Thrasymachus' case in a set speech of our own, drawing up a corresponding list of the advantages of justice; he would then have the right to reply, and we should make our final rejoinder; but after that we should have to count up and measure the advantages on each list, and we should need a jury to decide between us. Whereas, if we go on as before, each securing the agreement of the other side, we can combine the functions of advocate and judge. We will take whichever course you prefer.

Glaucon:: I prefer the second.

Socrates:: Come then, Thrasymachus, let us start afresh with our questions. You say that injustice pays better than justice, when both are carried to the furthest point?

Thrasymachus:: I do; and I have told you why.

Socrates:: And how would you describe them? I suppose you would call one of them an excellence and the other a defect?

Thrasymachus:: Of course.

Socrates:: Justice an excellence, and injustice a defect?

Thrasymachus:: Now is that likely, when I am telling you that injustice pays, and justice does not?

Socrates:: Then what do you say?

Thrasymachus:: The opposite.

Socrates:: That justice is a defect?

Thrasymachus:: No; rather the mark of a good-natured simpleton;

Socrates:: Injustice, then, implies being ill-natured?

Thrasymachus:: No; I should call it good policy.

Socrates:: Do you think the unjust are positively superior in character and intelligence, Thrasymachus?

Thrasymachus:: Yes, if they are the sort that can carry injustice to perfection and make themselves masters of whole cities and nations. Perhaps you think I was talking of pickpockets. There is profit even in that trade, if you can escape detection; but it doesn't come to much as compared with the gains I was describing.

Socrates:: I understand you now on that point. What astonished me was that you should class injustice with superior character and intelligence and justice with the reverse.

Thrasymachus:: Well, I do.

Socrates:: That is a much more stubborn position, my friend; and it is not so easy to see how to assail it. If you would admit that injustice, however well it pays, is nevertheless, as some people think, a defect and a discreditable thing, then we could argue on generally accepted principles. But now that you have gone so far as to rank it with superior character and intelligence, obviously you will say it is an admirable thing as well as a source of strength, and has all the other qualities we have attributed to justice.

Thrasymachus:: You read my thoughts like a book.

Socrates:: However, it is no good shirking; I must go through with the argument, so long as I can be sure you are really speaking your mind. I do believe you are not playing with us now, Thrasymachus, but stating the truth as you conceive it.

Thrasymachus:: Why not refute the doctrine? What does it matter to you whether I believe it or not?

Socrates:: It does not matter.

Thrasymachus' assent was dragged out of him with a reluctance of which my account gives no idea. He was sweating at every pore, for the weather was hot; and I saw then what I had never seen before—Thrasymachus blushing. However, now that we had agreed that justice implies superior character and intelligence, injustice a deficiency in both respects, I went on:

Good; let us take that as settled. But we were also saying that injustice was a source of strength. Do you remember, Thrasymachus?

Thrasymachus:: I do remember; only your last argument does not satisfy me, and I could say a good deal about that. But if I did, you would tell me I was haranguing you like a public meeting. So either let me speak my mind at length, or else, if you want to ask questions, ask them, and I will nod or shake my head, and say 'Humm?' as an old woman telling us a story.

Socrates:: No, please; don’t give your assent against your real opinion.

Thrasymachus:: Anything to please you, since you won’t let me have my say. What more do you want?

Socrates:: Nothing. If that is what you mean to do, I will go on with my questions.

Thrasymachus:: Go on, then.

Socrates:: Well, to continue where we left off. I will repeat my question: What is the nature and quality of justice as compared with injustice? It was suggested, I believe, that injustice is the stronger and more effective of the two; but now we have seen that justice implies superior character and intelligence, it will not be hard to show that it will also be superior in power to injustice, which implies ignorance and stupidity; that must be obvious to anyone. However, I would rather look deeper into this matter than take it as settled off-hand. Would you agree that a state may be unjust and may try to enslave other states or to hold a number of others in subjection unjustly?

Thrasymachus:: Of course it may; above all if it is the best sort of state, which carries injustice to perfection.

Socrates:: I understand; that was your view. But I am wondering whether a state can do without justice when it is asserting its superior power over another in that way.

Thrasymachus:: Not if you are right, that justice implies intelligence; but if I am right, injustice will be needed.

Socrates:: I am delighted with your answer, Thrasymachus; this is much better than just nodding and shaking your head.

Thrasymachus:: It is all to oblige you.

Socrates:: Thank you. Please add to your kindness by telling me whether any set of men—a state or an army or a band of robbers or thieves—who were acting together for some unjust purpose would be likely to succeed, if they were always trying to injure one another. Wouldn’t they do better, if they did not?

Thrasymachus:: Yes, they would.

Socrates:: Because, of course, such injuries must set them quarrelling and hating each other. Only fair treatment can make men friendly and of one mind.

Thrasymachus:: Be it so; I don’t want to differ from you.

Socrates:: Thank you once more. But don’t you agree that, if injustice has this effect of implanting hatred wherever it exists, it must make any set of people, whether freemen or slaves, split into factions, at feud with one another and incapable of any joint action?

Thrasymachus:: Yes.

Socrates:: And so with any two individuals: injustice will set them at variance and make them enemies to each other as well as to everyone who is just.

Thrasymachus:: It will.

Socrates:: And will it not keep its character and have the same effect, if it exists in a single person?

Thrasymachus:: Let us suppose so.

Socrates:: The effect being, apparently, wherever it occurs—in a state or a family or an army or anywhere else—to make united action impossible because of factions and quarrels, and moreover to set whatever it resides in at enmity with itself as well as with any opponent and with all who are just.

Thrasymachus:: Yes, certainly.

Socrates:: Then I suppose it will produce the same natural results in an individual. He will have a divided mind and be incapable of action, for lack of singleness of purpose; and he will be at enmity with all who are just as well as with himself?

Thrasymachus:: Yes.

Socrates:: And 'all who are just' surely includes the gods?

Thrasymachus:: Let us suppose so.

Socrates:: The unjust man, then, will be a god-forsaken creature; the goodwill of heaven will be for the just.

Thrasymachus:: Enjoy your triumph. You need not fear my contradicting you. I have no wish to give offence to the company.

Socrates:: You will make my enjoyment complete if you will answer my further questions in the same way. We have made out so far that just men are superior in character and intelligence and more effective in action. Indeed without justice men cannot act together at all; it is not strictly true to speak of such people as ever having effected any strong action in common. Had they been thoroughly unjust, they could not have kept their hands off one another; they must have had some justice in them, enough to keep them from injuring one another at the same time with their victims. This it was that enabled them to achieve what they did achieve: their injustice only partially incapacitated them for their career of wrongdoing; if perfect, it would have disabled them for any action whatsoever. I can see that all this is true, as against your original position. But there is a further question which we postponed: Is the life of justice the better and happier life? What we have said already leaves no doubt in my mind; but we ought to consider more carefully, for this is no light matter: it is the question, what is the right way to live?

Thrasymachus:: Go on, then.

Socrates:: I will. Some things have a function; a horse, for instance, is useful for certain kinds of work. Would you agree to define a thing's function in general as the work for which that thing is the only instrument or the best one?

Thrasymachus:: I don't understand.

Socrates:: Take an example. We can see only with the eyes, hear only with the ears; and seeing and hearing might be called the functions of those organs.

Thrasymachus:: Yes.

Socrates:: Or again, you might cut vine-shoots with a carving-knife or a chisel or many other tools, but with none so well as with a pruning-knife made for the purpose; and we may call that its function.

Thrasymachus:: True.

Socrates:: Now, I expect, you see better what I meant by suggesting that a thing's function is the work that it alone can do, or can do better than anything else.

Thrasymachus:: Yes, I will accept that definition.

Socrates:: Good; and to take the same examples, the eye and the ear, which we said have each its particular function: have they not also a specific excellence or virtue? Is not that always the case with things that have some appointed work to do?

Thrasymachus:: Yes.

Socrates:: Now consider: is the eye likely to do its work well, if you take away its peculiar virtue and substitute the corresponding defect?

Thrasymachus:: Of course not, if you mean substituting blindness for the power of sight.

Socrates:: I mean whatever its virtue may be; I have not come to that yet I am only asking, whether it is true of things with a function—eyes or ears or anything else—that there is always some specific virtue which enables them to work well; and if they are deprived of that virtue, they work badly.

Thrasymachus:: I think that is true.

Socrates:: Then the next point is this. Has the soul a function that can be performed by nothing else? Take for example such actions as deliberating or taking charge and exercising control: is not the soul the only thing of which you can say that these are its proper and peculiar work?

Thrasymachus:: That is so.

Socrates:: And again, living—is not that above all the function of the soul?

Thrasymachus:: No doubt.

Socrates:: And we also speak of the soul as having a certain specific excellence or virtue?

Adeimantus:: Yes.

Socrates:: Then, Thrasymachus, if the soul is robbed of its peculiar virtue, it cannot possibly do its work well. It must exercise its power of controlling and taking charge well or ill according as it is itself in a good or a bad state.

Thrasymachus:: That follows.

Socrates:: And did we not agree that the virtue of the soul is justice, and injustice its defect?

Thrasymachus:: We did.

Socrates:: So it follows that a just soul, or in other words a just man, will live well; the unjust will not.

Thrasymachus:: Apparently, according to your argument.

Socrates:: But living well involves well-being and happiness.

Thrasymachus:: Naturally.

Socrates:: Then only the just man is happy; injustice will involve unhappiness.

Thrasymachus:: Be it so.

Socrates:: But you cannot say it pays better to be unhappy.

Thrasymachus:: Of course not.

Socrates:: Injustice then, my dear Thrasymachus, can never pay better than justice.

Thrasymachus:: Well, this is a feast-day, and you may take all this as your share of the entertainment.

Socrates:: For which I have to thank you, Thrasymachus; you have been so gentle with me since you recovered your temper. It is my own fault if the entertainment has not been satisfactory. I have been behaving like a greedy guest, snatching a taste of every new dish that comes round before he has properly enjoyed the last. We began by looking for a definition of justice; but before we had found one, I dropped that question and hurried on to ask whether or not it involved superior character and intelligence; and then, as soon as another idea cropped up, that injustice pays better, I could not refrain from pursuing that.

So now the whole conversation has left me completely in the dark; for so long as I do not know what justice is, I am hardly likely to know whether or not it is a virtue, or whether it makes a man happy or unhappy.

Socrates:: I thought that, with these words, I was quit of the discussion; but it seems this was only a prelude. Glaucon, undaunted as ever, was not content to let Thrasymachus abandon the field.

Glaucon:: Socrates, you have made a show of proving that justice is better than injustice in every way. Is that enough, or do you want us to be really convinced?

Socrates:: Certainly I do, if it rests with me.

Glaucon:: Then you are not going the right way about it. I want to know how you classify the things we call good. Are there not some which we should wish to have, not for their consequences, but just for their own sake, such as harmless pleasures and enjoyments that have no further result beyond the satisfaction of the moment?

Socrates:: Yes, I think there are good things of that description.

Glaucon:: And also some that we value both for their own sake and for their consequences—things like knowledge and health and the use of our eyes?

Socrates:: Yes.

Glaucon:: And a third class which would include physical training, medical treatment, earning one's bread as a doctor or otherwise—useful, but burdensome things, which we want only for the sake of the profit or other benefit they bring.

Socrates:: Yes, there is that third class. What then?

Glaucon:: In which class do you place justice?

Socrates:: I should say, in the highest, as a thing which anyone who is to gain happiness must value both for itself and for its results.

Glaucon:: Well, that is not the common opinion. Most people would say it was one of those things, tiresome and disagreeable in themselves, which we cannot avoid practicing for the sake of reward or a good reputation.

Socrates:: I know; that is why Thrasymachus has been finding fault with it all this time and praising injustice. But I seem to be slow in seeing his point.

Glaucon:: Listen to me, then, and see if you agree with mine. There was no need, I think, for Thrasymachus to yield so readily, like a snake you had charmed into submission; and nothing so far said about justice and injustice has been established to my satisfaction. I want to be told what each of them really is, and what effect each has, in itself, on the soul that harbors it, when all rewards and consequences are left out of account. So here is my plan, if you approve. I shall revive Thrasymachus' theory. First, I will state what is commonly held about the nature of justice and its origin; secondly, I shall maintain that it is always practiced with reluctance, not as good in itself, but as a thing one cannot do without; and thirdly, that this reluctance is reasonable, because the life of injustice is much the better life of the two—so people say. That is not what I think myself, Socrates; only I am bewildered by all that Thrasymachus and ever so many others have dinned into my ears; and I have never yet heard the case for justice stated as I wish to hear it. You, I believe, if anyone, can tell me what is to be said in praise of justice in and for itself; that is what I want. Accordingly, I shall set you an example by glorifying the life of injustice with all the energy that I hope you will show later in denouncing it and exalting justice in its stead. Will that plan suit you?

Socrates:: Nothing could be better. Of all subjects this is one on which a sensible man must always be glad to exchange ideas.

Glaucon:: Good. Listen then, and I will begin with my first point: the nature and origin of justice.

What people say is that to do wrong is, in itself, a desirable thing; on the other hand, it is not at all desirable to suffer wrong, and the harm to the sufferer outweighs the advantage to the doer. Consequently, when men have had a taste of both, those who have not the power to seize the advantage and escape the harm decide that they would be better off if they made a compact neither to do wrong nor to suffer it. Hence they began to make laws and covenants with one another; and whatever the law prescribed they called lawful and right. That is what right or justice is and how it came into existence; it stands half-way between the best thing of all—to do wrong with impunity—and the worst, which is to suffer wrong without the power to retaliate. So justice is accepted as a compromise, and valued, not as good in itself, but for lack of power to do wrong; no man worthy of the name, who had that power, would ever enter into such a compact with anyone; he would be mad if he did. That, Socrates, is the nature of justice according to this account, and such the circumstances in which it arose.

The next point is that men practice it against the grain, for lack of power to do wrong. How true that is, we shall best see if we imagine two men, one just, the other unjust, given full license to do whatever they like, and then follow them to observe where each will be led by his desires. We shall catch the just man taking the same road as the unjust; he will be moved by self-interest, the end which it is natural to every creature to pursue as good, until forcibly turned aside by law and custom to respect the principle of equality.

Now, the easiest way to give them that complete liberty of action would be to imagine them possessed of the talisman found by Gyges, the ancestor of the famous Lydian. The story tells how he was a shepherd in the King's service. One day there was a great storm, and the ground where his flock was feeding was rent by an earthquake. Astonished at the sight, he went down into the chasm and saw, among other wonders of which the story tells, a brazen horse, hollow, with windows in its sides. Peering in, he saw a dead body, which seemed to be of more than human size. It was naked save for a gold ring, which he took from the finger and made his way out. When the shepherds met, as they did every month, to send an account to the King of the state of his flocks, Gyges came wearing the ring. As he was sitting with the others, he happened to turn the bezel of the ring inside his hand. At once he became invisible, and his companions, to his surprise, began to speak of him as if he had left them. Then, as he was fingering the ring, he turned the bezel outwards and became visible again. With that, he set about testing the ring to see if it really had this power, and always with the same result: according as he turned the bezel inside or out he vanished and reappeared. After this discovery he contrived to be one of the messengers sent to the court. There he seduced the Queen, and with her help murdered the King and seized the throne.

Now suppose there were two such magic rings, and one were given to the just man, the other to the unjust. No one, it is commonly believed, would have such iron strength of mind as to stand fast in doing right or keep his hands off other men's goods, when he could go to the market-place and fearlessly help himself to anything he wanted, enter houses and sleep with any woman he chose, set prisoners free and kill men at his pleasure, and in a word go about among men with the powers of a god. He would behave no better than the other; both would take the same course. Surely this would be strong proof that men do right only under compulsion; no individual thinks of it as good for him personally, since he does wrong whenever he finds he has the power. Every man believes that wrongdoing pays him personally much better, and, according to this theory, that is the truth. Granted full license to do as he liked, people would think him a miserable fool if they found him refusing to wrong his neighbors or to touch their belongings, though in public they would keep up a pretence of praising his conduct, for fear of being wronged themselves. So much for that.

Finally, if we are really to judge between the two lives, the only way is to contrast the extremes of justice and injustice. We can best do that by imagining our two men to be perfect types, and crediting both to the full with the qualities they need for their respective ways of life. To begin with the unjust man: he must be like any consummate master of a craft, a physician or a captain, who, knowing just what his art can do, never tries to do more, and can always retrieve a false step. The unjust man, if he is to reach perfection, must be equally discreet in his criminal attempts, and he must not be found out, or we shall think him a bungler; for the highest pitch of injustice is to seem just when you are not. So we must endow our man with the full complement of injustice; we must allow him to have secured a spotless reputation for virtue while committing the blackest crimes; he must be able to retrieve any mistake, to defend himself with convincing eloquence if his misdeeds are denounced, and, when force is required, to bear down all opposition by his courage and strength and by his command of friends and money.

Now set beside this paragon the just man in his simplicity and nobleness, one who, in Aeschylus' words, 'would be, not seem, the best'. There must, indeed, be no such seeming; for if his character were apparent, his reputation would bring him honors and rewards, and then we should not know whether it was for their sake that he was just or for justice's sake alone. He must be stripped of everything but justice, and denied every advantage the other enjoyed. Doing no wrong, he must have the worst reputation for wrong-doing, to test whether his virtue is proof against all that comes of having a bad name; and under this lifelong imputation of wickedness, let him hold on his course of justice unwavering to the point of death. And so, when the two men have carried their justice and injustice to the last extreme, we may judge which is the happier.

Socrates:: My dear Glaucon, how vigorously you scour these two characters clean for inspection, as if you were burnishing a couple of statues!

Glaucon:: I am doing my best. Well, given two such characters, it is not hard, I fancy, to describe the sort of life that each of them may expect; and if the description sounds rather coarse, take it as coming from those who cry up the merits of injustice rather than from me. They will tell you that our just man will be thrown into prison, scourged and racked, will have his eyes burnt out, and, after every kind of torment, be impaled. That will teach him how much better it is to seem virtuous than to be so. In fact those lines of Aeschylus I quoted are more fitly applied to the unjust man, who, they say, is a realist and does not live for appearances: ‘he would be, not seem’ unjust, reaping the harvest sown In those deep furrows of the thoughtful heart Whence wisdom springs.

With his reputation for virtue, he will hold offices of state, ally himself by marriage to any family he may choose, become a partner in any business, and, having no scruples about being dishonest, turn all these advantages to profit. If he is involved in a lawsuit, public or private, he will get the better of his opponents, grow rich on the proceeds, and be able to help his friends and harm his enemies. Finally, he can make sacrifices to the gods and dedicate offerings with due magnificence, and, being in a much better position than the just man to serve the gods as well as his chosen friends, he may reasonably hope to stand higher in the favor of heaven. So much better, they say, Socrates, is the life prepared for the unjust by gods and men.

Socrates:: Here Glaucon ended, and I was meditating a reply, when his brother Adeimantus exclaimed:

Adeimantus:: Surely, Socrates, you cannot suppose that that is all there is to be said.

Socrates:: Why, isn’t it?

Adeimantus:: The most essential part of the case has not been mentioned.

Socrates:: Well, there is a proverb about a brother’s aid. If Glaucon has failed, it is for you to make good his shortcomings; though, so far as I am concerned, he has said quite enough to put me out of the running and leave me powerless to rescue the cause of justice.

Adeimantus:: Nonsense; there is more to be said, and you must listen to me. If we want a clear view of what I take to be Glaucon's meaning, we must study the opposite side of the case, the arguments used when justice is praised and injustice condemned. When children are told by their fathers and all their pastors and masters that it is a good thing to be just, what is commended is not justice in itself but the respectability it brings. They are to let men see how just they are, in order to gain high positions and marry well and win all the other advantages which Glaucon mentioned, since the just man owes all these to his good reputation.

In this matter of having a good name, they go farther still: they throw in the favorable opinion of heaven, and can tell us of no end of good things with which they say the gods reward piety. There is the good old Hesiod, who says the gods make the just man's oak-trees 'bear acorns at the top and bees in the middle; and their sheep's fleeces are heavy with wool', and a great many other blessings of that sort. And Homer speaks in the same strain:

As when a blameless king fears the gods and upholds right judgment; then the dark earth yields wheat and barley, and the trees are laden with fruit; the young of his flocks are strong, and the sea gives abundance of fish.

Musaeus and his son Eumolpus enlarge in still more spirited terms upon the rewards from heaven they promise to the righteous. They take them to the other world and provide them with a banquet of the Blest, where they sit for all time carousing with garlands on their heads, as if virtue could not be more nobly recompensed than by an eternity of intoxication. Others, again, carry the rewards of heaven yet a stage farther: the pious man who keeps his oaths is to have children's children and to leave a posterity after him. When they have sung the praises of justice in that strain, with more to same effect, they proceed to plunge the sinners and unrighteous men into a pool of mud in the world below, and set them to fetch water in a sieve. Even in this life, too, they give them a bad name, and make out that the unjust suffer all those penalties which Glaucon described as falling upon the good man who has a bad reputation: they can think of no others. That is how justice is recommended and injustice denounced.

Besides all this, think of the way in which justice and injustice are spoken of, not only in ordinary life, but by the poets. All with one voice reiterate that self-control and justice, admirable as they may be, are difficult and irksome, whereas vice and injustice are pleasant and very easily to be had; it is mere convention to regard them as discreditable. They tell us that dishonesty generally pays better than honesty. They will cheerfully speak of a bad man as happy and load him with honors and social esteem, provided he be rich and otherwise powerful; while they despise and disregard one who has neither power nor wealth, though all the while they acknowledge that he is the better man of the two.

Most surprising of all is what they say about the gods and virtue: that heaven itself often allots misfortunes and a hard life to the good man, and gives prosperity to the wicked. Mendicant priests and soothsayers come to the rich man's door with a story of a power they possess by the gift of heaven to atone for any offence that he or his ancestors have committed with incantations and sacrifice, agreeably accompanied by feasting. If he wishes to injure an enemy, he can, at a trifling expense, do him a hurt with equal ease, whether he be an honest man or not, by means of certain invocations and spells which, as they profess, prevail upon the gods to do their bidding. In support of all these claims they call the poets to witness. Some, by way of advertising the easiness of vice, quote the words: ‘Unto wickedness men attain easily and in multitudes; smooth is the way and her dwelling is very near at hand. But the gods have ordained much sweat upon the path to virtue’ and a long road that is rough and steep.

Others, to show that men can turn the gods from their purpose, cite Homer: ‘Even the gods themselves listen to entreaty. Their hearts are turned by the entreaties of men with sacrifice and humble prayers and libation and burnt offering, whensoever anyone transgresses and does amiss.’ They produce a whole farrago of books in which Musaeus and Orpheus, described as descendants of the Muses and the Moon, prescribe their ritual; and they persuade entire communities, as well as individuals, that, both in this life and after death, wrongdoing may be absolved and purged away by means of sacrifices and agreeable performances which they are pleased to call rites of initiation. These deliver us from punishment in the other world, where awful things are in store for all who neglect to sacrifice.

Now, my dear Socrates, when all this stuff is talked about the estimation in which virtue and vice are held by heaven and by mankind, what effect can we suppose it has upon the mind of a young man quick-witted enough to gather honey from all these flowers of popular wisdom and to draw his own conclusions as to the sort of person he should be and the way he should go in order to lead the best possible life? In all likelihood he would ask himself, in Pindar’s words: ‘Will the way of right or the by-paths of deceit lead me to the higher fortress’, where I may entrench myself for the rest of my life? For, according to what they tell me, I have nothing to gain but trouble and manifest loss from being honest, unless I also get a name for being so whereas, if I am dishonest and provide myself with a reputation for honesty, they promise me a marvelous career. Very well, then; since ‘outward seeming’, as wise men inform me, ‘overpowers the truth’ and decides the question of happiness, I had better go in for appearances wholeheartedly. I must ensconce myself behind an imposing facade designed to look like virtue, and trail the fox behind me, ‘the cunning shifty fox’—Archilochus knew the world as well as any man. You may say it is not so easy to be wicked without ever being found out. Perhaps not; but great things are never easy. Anyhow, if we are to reach happiness, everything we have been told points to this as the road to be followed. We will form secret societies to save U from exposure; besides, there are men who teach the art of winning over popular assemblies and courts of law; so that, one way or another, by persuasion or violence, we shall get the better of our neighbors without being punished. You might object that the gods are not to be deceived and are beyond the reach of violence. But suppose that there are no gods, or that they do not concern themselves with the doings of men; why should we concern ourselves to deceive them? Or, if the gods do exist and care for mankind, all we know or have ever heard about them comes from current tradition and from the poets who recount their family history, and these same authorities also assure us that they can be won over and turned from their purpose ‘by sacrifice and humble prayers’ and votive offerings. We must either accept both these statements or neither. If we are to accept both, we had better do wrong and use part of the proceeds to offer sacrifice. By being just we may escape the punishment of heaven, but we shall be renouncing the profits of injustice; whereas by doing wrong we shall make our profit and escape punishment into the bargain, by means of those entreaties which win over the gods when we transgress and do amiss. But then, you will say, in the other world the penalty for our misdeeds on earth will fall either upon us or upon our children's children. We can counter that objection by reckoning on the great efficacy of mystic rites and the divinities of absolution, vouched for by the most advanced societies and by the descendants of the gods who have appeared as poets and spokesmen of heavenly inspiration.

What reason, then, remains for preferring justice to the extreme of injustice, when common belief and the best authorities promise us the fulfillment of our desires in this life and the next, if only we conceal our ill-doing under a veneer of decent behavior? The upshot is, Socrates, that no man possessed of superior powers of mind or person or rank or wealth will set any value on justice; he is more likely to laugh when he hears it praised. So, even one who could prove my case false and were quite sure that justice is best, far from being indignant with the unjust, will be very ready to excuse them. He will know that, here and there, a man may refrain from wrong because it revolts some instinct he is graced with or because he has come to know the truth; no one else is virtuous of his own will; it is only lack of spirit or the infirmity of age or some other weakness that makes men condemn the iniquities they have not the strength to practice. This is easily seen: give such a man the power, and he will be the first to use it to the utmost.

What lies at the bottom of all this is nothing but the fact from which Glaucon, as well as I, started upon this long discourse. We put it to you, Socrates, with all respect, in this way. All you who profess to sing the praises of right conduct, from the ancient heroes whose legends have survived down to the men of the present day, have never denounced injustice or praised justice apart from the reputation, honors, and rewards they bring; but what effect either of them in itself has upon its possessor when it dwells in his soul unseen of gods or men, no poet or ordinary man has ever yet explained. No one has proved that a soul can harbor no worse evil than injustice, no greater good than justice. Had all of you said that from the first and tried to convince us from our youth up, we should not be keeping watch upon our neighbors to prevent them from doing wrong to us, but everyone would keep a far more effectual watch over himself, for fear lest by wronging others he should open his doors to the worst of all evils.

That, Socrates, is the view of justice and injustice which Thrasymachus and, no doubt, others would state, perhaps in even stronger words. For myself, I believe it to be a gross perversion of their true worth and effect; but, as I must frankly confess, I have put the case with all the force I could muster because I want to hear the other side from you. You must not be content with proving that justice is superior to injustice; you must make clear what good or what harm each of them does to its possessor, taking it simply in itself and, as Glaucon required, leaving out of account the reputation it bears. For unless you deprive each of its true reputation and attach to it the false one, we shall say that you are praising or denouncing nothing more than the appearances in either case, and recommending us to do wrong without being found out; and that you hold with Thrasymachus that right means what is good for someone else, being the interest of the stronger, and wrong is what really pays, serving one’s own interest at the expense of the weaker. You have agreed that justice belongs to that highest class of good things which are worth having not only for their consequences, but much more for their own sakes—things like sight and hearing, knowledge, and health, whose value is genuine and intrinsic, not dependent on opinion. So I want you, in commending justice, to consider only how justice, in itself, benefits a man who has it in him, and how injustice harms him, leaving rewards and reputation out of account. I might put up with others dwelling on those outward effects as a reason for praising the one and condemning the other; but from you, who have spent your life in the study of this question, I must beg leave to demand something better. You must not be content merely to prove that justice is superior to injustice, but explain how one is good, the other evil, in virtue of the intrinsic effect each has on its possessor, whether gods or men see it or not.

Socrates:: I was delighted with these speeches from Glaucon and Adeimantus, whose gifts I had always admired. How right, I exclaimed, was Glaucon's lover to begin that poem of his on your exploits at the battle of Megara by describing you two as the sons divine Of Ariston's noble line!

Like father, like sons: there must indeed be some divine quality in your nature, if you can plead the cause of injustice so eloquently and still not be convinced yourselves that it is better than justice. That you are not really convinced I am sure from all I know of your dispositions, though your words might well have left me in doubt. But the more I trust you, the harder I find it to reply. How can I come to the rescue? I have no faith in my own powers, when I remember that you were not satisfied with the proof I thought I had given to Thrasymachus that it is better to be just. And yet I cannot stand by and hear justice reviled without lifting a finger. I am afraid to commit a sin by holding aloof while I have breath and strength to say a word in its defense. So there is nothing for it but to do the best I can.

Glaucon and the others begged me to step into the breach and carry through our inquiry into the real nature of justice and injustice, and the truth about their respective advantages. So I told them what I thought.

This is a very obscure question and we shall need keen sight to see our way. Now, as we are not remarkably clever, I will make a suggestion as to how we should proceed. Imagine a rather short-sighted person told to read an inscription in small letters from some way off. He would think it a godsend if someone pointed out that the same inscription was written up elsewhere on a bigger scale, so that he could first read the larger characters and then make out whether the smaller ones were the same.

Adeimantus:: No doubt; but what analogy do you see in that to our inquiry?

Socrates:: I will tell you. We think of justice as a quality that may exist in a whole community as well as in an individual, and the community is the bigger of the two. Possibly, then, we may find justice there in larger proportions, easier to make out. So I suggest that we should begin by inquiring what justice means in a state. Then we can go on to look for its counterpart on a smaller scale in the individual.

Adeimantus:: That seems a good plan.

Socrates:: Well then, suppose we imagine a state coming into being before our eyes. We might then be able to watch the growth of justice or of injustice within it. When that is done, we may hope it will be easier to find what we are looking for.

Adeimantus:: Much easier.

Socrates:: Shall we try, then, to carry out this scheme? I fancy it will be no light undertaking; so you had better think twice.

Adeimantus:: No need for that. Don't waste any more time.

Socrates:: My notion is, that a state comes into existence because no individual is self-sufficing; we all have many needs. But perhaps you can suggest some different origin for the foundation of a community?

Adeimantus:: No, I agree with you.

Socrates:: So, having all these needs, we call in one another's help to satisfy our various requirements; and when we have collected a number of helpers and associates to live together in one place, we call that settlement a state.

Adeimantus:: Yes.

Socrates:: So if one man gives another what he has to give in exchange for what he can get, it is because each finds that to do so is for his own advantage.

Adeimantus:: Certainly.

Socrates:: Very well. Now let us build up our imaginary state from the beginning. Apparently, it will owe its existence to our needs, the first and greatest need being the provision of food to keep us alive. Next we shall want a house; and thirdly, such things as clothing.

Adeimantus:: True.

Socrates:: How will our state be able to supply all these demands? We shall need at least one man to be a farmer, another a builder, and a third a weaver. Will that do, or shall we add a shoemaker and one or two more to provide for our personal wants?

Adeimantus:: By all means.

Socrates:: The minimum state, then, will consist of four or five men.

Adeimantus:: Apparently.

Socrates:: Now here is a further point. Is each one of them to bring the product of his work into a common stock? Should our one farmer, for example, provide food enough for four people and spend the whole of his working time in producing corn, so as to share with the rest; or should he take no notice of them and spend only a quarter of his time on growing just enough corn for himself, and divide the other three-quarters between building his house, weaving his clothes, and making his shoes, so as to save the trouble of sharing with others and attend himself to all his own concerns?

Adeimantus:: The first plan might be the easier.

Socrates:: That may very well be so; for, as you spoke, it occurred to me, for one thing, that no two people are born exactly alike. There are innate differences which fit them for different occupations.

Adeimantus:: I agree.

Socrates:: And will a man do better working at many trades, or keeping to one only?

Adeimantus:: Keeping to one.

Socrates:: And there is another point: obviously work may be ruined, if you let the right time go by. The workman must wait upon the work; it will not wait upon his leisure and allow itself to be done in a spare moment. So the conclusion is that more things will be produced and the work be more easily and better done, when every man is set free from all other occupations to do, at the right time, the one thing for which he is naturally fitted.

Adeimantus:: That is certainly true.

Socrates:: We shall need more than four citizens, then, to supply all those necessaries we mentioned. You see, Adeimantus, if the farmer is to have a good plough and spade and other tools, he will not make them himself. No more will the builder and weaver and shoemaker make all the many implements they need. So quite a number of carpenters and smiths and other craftsmen must be enlisted. Our miniature state is beginning to grow.

Adeimantus:: It is.

Socrates:: Still, it will not be very large, even when we have added cowherds and shepherds to provide the farmers with oxen for the plough, and the builders as well as the farmers with draught-animals, and the weavers and shoemakers with wool and leather.

Adeimantus:: No but it will not be so very small either.

Socrates:: And yet, again, it will be next to impossible to plant our city in a territory where it will need no imports. So there will have to be still another set of people, to fetch what it needs from other countries.

Adeimantus:: There will.

Socrates:: Moreover, if these agents take with them nothing that those other countries require in exchange, they will return as empty-handed as they went. So, besides everything wanted for consumption at home, we must produce enough goods of the right kind for the foreigners whom we depend on to supply us. That will mean increasing the number of farmers and craftsmen.

Adeimantus:: Yes.

Socrates:: And then, there are these agents who are to import and export all kinds of goods—merchants, as we call them. We must have them; and if they are to do business overseas, we shall need quite a number of ship-owners and others who know about that branch of trading.

Adeimantus:: We shall.

Socrates:: Again, in the city itself how are the various sets of producers to exchange their products? That was our object, you will remember, in forming a community and so laying the foundation of our state.

Adeimantus:: Obviously, they must buy and sell.

Socrates:: That will mean having a market-place, and a currency to serve as a token for purposes of exchange.

Adeimantus:: Certainly.

Socrates:: Now suppose a farmer, or an artisan, brings some of his produce to market at a time when no one is there who wants to exchange with him. Is he to sit there idle, when he might be at work?

Adeimantus:: No; there are people who have seen an opening here for their services. In well-ordered communities they are generally men not strong enough to be of use in any other occupation. They have to stay where they are in the marketplace and take goods for money from those who want to sell, and money for goods from those who want to buy.

Socrates:: That, then, is the reason why our city must include a class of shopkeepers—so we call these people who sit still in the market-place to buy and sell, in contrast with merchants who travel to other countries.

Adeimantus:: Quite so.

Socrates:: There are also the services of yet another class, who have the physical strength for heavy work, though on intellectual grounds they are hardly worth including in our society—hired laborers, as we call them, because they sell the use of their strength for wages. They will go to make up our population.

Adeimantus:: Yes.

Socrates:: Well, Adeimantus, has our state now grown to its full size?

Adeimantus:: Perhaps.

Socrates:: Then, where in it shall we find justice or injustice? If they have come in with one of the elements we have been considering, can you say with which one?

Adeimantus:: I have no idea, Socrates; unless it be somewhere in their dealings with one another.

Socrates:: You may be right. Anyhow, it is a question which we shall have to face.

Let us begin, then, with a picture of our citizens' manner of life, with the provision we have made for them. They will be producing corn and wine, and making clothes and shoes. When they have built their houses, they will mostly work without their coats or shoes in summer, and in winter be well shod and clothed. For their food, they will prepare flour and barley-meal for kneading and baking, and set out a grand spread of loaves and cakes on rushes or fresh leaves. Then they will lie on beds of myrtle-boughs and bryony and make merry with their children, drinking their wine after the feast with garlands on their heads and singing the praises of the gods. So they will live pleasantly together; and a prudent fear of poverty or war will keep them from begetting children beyond their means.

Here Glaucon interrupted me:

Glaucon:: You seem to expect your citizens to feast on dry bread.

Socrates:: True; I forgot that they will have something to give it a relish, salt, no doubt, and olives, and cheese, and country stews of roots and vegetables. And for dessert we will give them figs and peas and beans; and they shall roast myrtle-berries and acorns at the fire, while they sip their wine. Leading such a healthy life in peace, they will naturally come to a good old age, and leave their children to live after them in the same manner.

Glaucon:: That is just the sort of provender you would supply, Socrates, if you were founding a community of pigs.

Socrates:: Well, how are they to live, then, Glaucon?

Glaucon:: With the ordinary comforts. Let them lie on couches and dine off tables on such dishes and sweets as we have nowadays.

Socrates:: Ah, I see; we are to study the growth, not just of a state, but of a luxurious one. Well, there may be no harm in that; the consideration of luxury may help us to discover how justice and injustice take root in society. The community I have described seems to me the ideal one, in sound health as it were: but if you want to see one suffering from inflammation, there is nothing to hinder us. So some people, it seems, will not be satisfied to live in this simple way; they must have couches and tables and furniture of all sorts; and delicacies too, perfumes, unguents, courtesans, sweetmeats, all in plentiful variety. And besides, we must not limit ourselves now to those bare necessaries of house and clothes and shoes; we shall have to set going the arts of embroidery and painting, and collect rich materials, like gold and ivory.

Glaucon:: Yes.

Socrates:: Then we must once more enlarge our community. The healthy one will not be big enough now; it must be swollen up with a whole multitude of callings not ministering to any bare necessity: hunters and fishermen, for instance; artists in sculpture, painting, and music; poets with their attendant train of professional reciters, actors, dancers, producers; and makers of all sorts of household gear, including everything for women's adornment. And we shall want more servants: children's nurses and attendants, lady's maids, barbers, cooks and confectioners. And then swineherds—there was no need for them in our original state, but we shall want them now; and a great quantity of sheep and cattle too, if people are going to live on meat.

Glaucon:: Of course.

Socrates:: And with this manner of life physicians will be in much greater request.

Glaucon:: No doubt.

Socrates:: The country, too, which was large enough to support the original inhabitants, will now be too small. If we are to have enough pasture and plough land, we shall have to cut off a slice of our neighbors' territory; and if they too are not content with necessaries, but give themselves up to getting unlimited wealth, they will want a slice of ours.

Glaucon:: That is inevitable, Socrates.

Socrates:: So the next thing will be, Glaucon, that we shall be at war.

Glaucon:: No doubt.

Socrates:: We need not say yet whether war does good or harm, but only that we have discovered its origin in desires which are the most fruitful source of evils both to individuals and to states.

Glaucon:: Quite true.

Socrates:: This will mean a considerable addition to our community—a whole army, to go out to battle with any invader, in defense of all this property and of the citizens we have been describing.

Glaucon:: Why so? Can't they defend themselves?

Socrates:: Not if the principle was right, which we all accepted in framing our society. You remember we agreed that no one man can practice many trades or arts satisfactorily.

Glaucon:: True.

Socrates:: Well, is not the conduct of war an art, quite as important as shoemaking?

Glaucon:: Yes.

Socrates:: But we would not allow our shoemaker to try to be also a farmer or weaver or builder, because we wanted our shoes well made. We gave each man one trade, for which he was naturally fitted; he would do good work, if he confined himself to that all his life, never letting the right moment slip by. Now in no form of work is efficiency so important as in war; and fighting is not so easy a business that a man can follow another trade, such as farming or shoemaking, and also be an efficient soldier. Why, even a game like draughts or dice must be studied from childhood; no one can become a fine player in his spare moments. Just taking up a shield or other weapon will not make a man capable of fighting that very day in any sort of warfare, any more than taking up a tool or implement of some kind will make a man a craftsman or an athlete, if he does not understand its use and has never been properly trained to handle it.

Glaucon:: No; if that were so, tools would indeed be worth having.

Socrates:: These guardians of our state, then, inasmuch as their work is the most important of all, will need the most complete freedom from other occupations and the greatest amount of skill and practice.

Glaucon:: I quite agree.

Socrates:: And also a native aptitude for their calling.

Glaucon:: Certainly.

Socrates:: So it is our business to define, if we can, the natural gifts that fit men to be guardians of a commonwealth, and to select them accordingly. It will certainly be a formidable task; but we must grapple with it to the best of our power.

Glaucon:: Yes.

Socrates:: Don't you think then, that, for the purpose of keeping guard, a young man should have much the same temperament and qualities as a well-bred watch-dog? I mean, for instance, that both must have quick senses to detect an enemy, swiftness in pursuing him, and strength, if they have to fight when they have caught him.

Glaucon:: Yes, they will need all those qualities.

Socrates:: And also courage, if they are to fight well.

Glaucon:: Of course.

Socrates:: And courage, in dog or horse or any other creature, Implies a spirited disposition. You must have noticed that a high spirit is unconquerable. Every soul possessed of it is fearless and indomitable in the face of any danger.

Glaucon:: Yes, I have noticed that.

Socrates:: So now we know what physical qualities our Guardian must have, and also that he must be of a spirited temper.

Glaucon:: Yes.

Socrates:: Then, Glaucon, how are men of that natural disposition to be kept from behaving pugnaciously to one another and to the rest of their countrymen?

Glaucon:: It is not at all easy to see.

Socrates:: And yet they must be gentle to their own people and dangerous only to enemies; otherwise they will destroy themselves without waiting till others destroy them.

Glaucon:: True.

Socrates:: What are we to do, then? If gentleness and a high temper are contraries, where shall we find a character to combine them? Both are necessary to make a good Guardian, but it seems they are incompatible. So we shall never have a good Guardian.

Glaucon:: It looks like it.

Socrates:: Here I was perplexed, but on thinking over what we had been saying, I remarked that we deserved to be puzzled, because we had not followed up the comparison we had just drawn.

Glaucon:: What do you mean?

Socrates:: We never noticed that, after all, there are natures in which these contraries are combined. They are to be found in animals, and not least in the kind we compared to our Guardian. Well-bred dogs, as you know, are by instinct perfectly gentle to people whom they know and are accustomed to, and fierce to strangers. So the combination of qualities we require for our Guardian is, after all, possible and not against nature.

Glaucon:: Evidently.

Socrates:: Do you further agree that, besides this spirited temper, he must have a philosophical element in his nature?

Glaucon:: I don’t see what you mean.

Socrates:: This is another trait you will see in the dog. It is really remarkable how the creature gets angry at the mere sight of a stranger and welcomes anyone he knows, though he may never have been treated unkindly by the one or kindly by the other. Did that never strike you as curious?

Glaucon:: I had not thought of it before; but that certainly is how a dog behaves.

Socrates:: Well, but that shows a fine instinct, which is philosophic in the true sense.

Glaucon:: How so?

Socrates:: Because the only mark by which he distinguishes a friendly and an unfriendly face is that he knows the one and does not know the other; and if a creature makes that the test of what it finds congenial or otherwise, how can you deny that it has a passion for knowledge and understanding?

Glaucon:: Of course, I cannot.

Socrates:: And that passion is the same thing as philosophy—the love of wisdom.

Glaucon:: Yes.

Socrates:: Shall we boldly say, then, that the same is true of human beings? If a man is to be gentle towards his own people whom he knows, he must have an instinctive love of wisdom and understanding.

Glaucon:: Agreed.

Socrates:: So the nature required to make a really noble Guardian of our commonwealth will be swift and strong, spirited, and philosophic.

Glaucon:: Quite so.

Socrates:: Given those natural qualities, then, how are these Guardians to be brought up and educated? First, will the answer to that question help the purpose of our whole inquiry, which is to make out how justice and injustice grow up in a state? We want to be thorough, but not to draw out this discussion to a needless length.

Adeimantus:: I certainly think it will help.

Socrates:: If so, we must not think of dropping it, though it may be rather a long business.

Adeimantus:: I agree.

Socrates:: Come on then. We will take our time and educate our imaginary citizens.

Adeimantus:: Yes, let us do so.

Socrates:: What is this education to be, then? Perhaps we shall hardly invent a system better than the one which long experience has worked out, with its two branches for the cultivation of the mind and of the body. And I suppose we shall begin with the mind, before we start physical training.

Adeimantus:: Naturally.

Socrates:: Under that head will come stories; and of these there are two kinds: some are true, others fictitious. Both must come in, but we shall begin our education with the fictitious kind.

Adeimantus:: I don't understand.

Socrates:: Don't you understand, that we begin by telling children stories, which, taken as a whole, are fiction, though they contain some truth? Such story-telling begins at an earlier age than physical training; that is why I said we should start with the mind.

Adeimantus:: You are right.

Socrates:: And the beginning, as you know, is always the most important part, especially in dealing with anything young and tender. That is the time when the character is being molded and easily takes any impress one may wish to stamp on it.

Adeimantus:: Quite true.

Socrates:: Then shall we simply allow our children to listen to any stories that anyone happens to make up, and so receive into their minds ideas often the very opposite of those we shall think they ought to have when they are grown up?

Adeimantus:: No, certainly not.

Socrates:: It seems, then, our first business will be to supervise the making of fables and legends, rejecting all which are unsatisfactory; and we shall induce nurses and mothers to tell their children only those which we have approved, and to think more of molding their souls with these stories than they now do of rubbing their limbs to make them strong and shapely. Most of the stories now in use must be discarded.

Adeimantus:: What kind do you mean?

Socrates:: If we take the great ones, we shall see in them the pattern of all the rest, which are bound to be of the same stamp and to have the same effect.

Adeimantus:: No doubt; but which do you mean by the great ones?

Socrates:: The stories in Hesiod and Homer and the poets in general, who have at all times composed fictitious tales and told them to mankind.

Adeimantus:: Which kind are you thinking of, and what fault do you find in them?

Socrates:: The worst of all faults, especially if the story is ugly and immoral as well as false—misrepresenting the nature of gods and heroes, like an artist whose picture is utterly unlike the object he sets out to draw.

Adeimantus:: That is certainly a serious fault; but give me an example.

Socrates:: A signal instance of false invention about the highest matters is that foul story, which Hesiod repeats, of the deeds of Uranus and the vengeance of Cronos; and then there is the tale of Cronos's doings and of his son's treatment of him. Even if such tales were true, I should not have supposed they should be lightly told to thoughtless young people. If they cannot be altogether suppressed, they should only be revealed in a mystery, to which access should be as far as possible restricted by requiring the sacrifice, not of a pig, but of some victim such as very few could afford.

Adeimantus:: It is true: those stories are objectionable.

Socrates:: Yes, and not to be repeated in our commonwealth, Adeimantus. We shall not tell a child that, if he commits the foulest crimes or goes to any length in punishing his father's misdeeds, he will be doing nothing out of the way, but only what the first and greatest of the gods have done before him.

Adeimantus:: I agree; such stories are not fit to be repeated.

Socrates:: Nor yet any tales of warfare and intrigues and battles of gods against gods, which are equally untrue. If our future Guardians are to think it a disgrace to quarrel lightly with one another, we shall not let them embroider robes with the Battle of the Giants or tell them of all the other feuds of gods and heroes with their kith and kin. If by any means we can make them believe that no one has ever had a quarrel with a fellow citizen and it is a sin to have one, that is the sort of thing our old men and women should tell children from the first; and as they grow older, we must make the poets write for them in the same strain. Stories like those of Hera being bound by her son, or of Hephaestus flung from heaven by his father for taking his mother’s part when she was beaten, and all those battles of the gods in Homer, must not be admitted into our state, whether they be allegorical or not. A child cannot distinguish the allegorical sense from the literal, and the ideas he takes in at that age are likely to become indelibly fixed; hence the great importance of seeing that the first stories he hears shall be designed to produce the best possible effect on his character.

Adeimantus:: Yes, that is reasonable. But if we were asked which of these stories in particular are of the right quality, what should we answer?

Socrates:: You and I, Adeimantus, are not, for the moment, poets, but founders of a commonwealth. As such, it is not our business to invent stories ourselves, but only to be clear as to the main outlines to be followed by the poets in making their stories and the limits beyond which they must not be allowed to go.

Adeimantus:: True; but what are these outlines for any account they may give of the gods?

Socrates:: Of this sort A poet, whether he is writing epic, lyric, or drama, surely ought always to represent the divine nature as it really is. And the truth is that that nature is good and must be described as such.

Adeimantus:: Unquestionably.

Socrates:: Well, nothing that is good can be harmful; and if it cannot do harm, it can do no evil; and so it cannot be responsible for any evil.

Adeimantus:: I agree.

Socrates:: Again, goodness is beneficent, and hence the cause of wellbeing.

Adeimantus:: Yes.

Socrates:: Goodness, then, is not responsible for everything, but only for what is as it should be. It is not responsible for evil.

Adeimantus:: Quite true.

Socrates:: It follows, then, that the divine, being good, is not, as most people say, responsible for everything that happens to mankind, but only for a small part; for the good things in human life are far fewer than the evil, and, whereas the good must be ascribed to heaven only, we must look elsewhere for the cause of the evils.

Adeimantus:: I think that is perfectly true.

Socrates:: So we shall condemn as a foolish error Homer's description of Zeus as the 'dispenser of both good and ill'. We shall disapprove when Pandarus' violation of oaths and treaties is said to be the work of Zeus and Athena, or when Themis and Zeus are said to have caused strife among the gods. Nor must we allow our young people to be told by Aeschylus that 'Heaven implants guilt in man, when his will is to destroy a house utterly'. If a poet writes of the sorrows of Niobe or the calamities of the house of Pelops or of the Trojan war, either he must not speak of them as the work of a god, or, if he does so, he must devise some such explanation as we are now requiring: he must say that what the god did was just and good, and the sufferers were the better for being chastised. One who pays a just penalty must not be called miserable, and his misery then laid at heaven's door. The poet will only be allowed to say that the wicked were miserable because they needed chastisement, and the punishment of heaven did them good. If our commonwealth is to be well-ordered, we must fight to the last against any member of it being suffered to speak of the divine, which is good, being responsible for evil. Neither young nor old must listen to such tales, in prose or verse. Such doctrine would be impious, self-contradictory, and disastrous to our commonwealth.

Socrates:: I agree, and I would vote for a law to that effect.

Socrates:: Well then, that shall be one of our laws about religion. The first principle to which all must conform in speech or writing is that heaven is not responsible for everything, but only for what is good.

Adeimantus:: I am quite satisfied.

Socrates:: Now what of this for a second principle? Do you think of a god as a sort of magician who might, for his own purposes, appear in various shapes, now actually passing into a number of different forms, now deluding us into believing he has done so; or is his nature simple and of all things the least likely to depart from its proper form?

Adeimantus:: I cannot say offhand.

Socrates:: Well, if a thing passes out of its proper form, must not the change come either from within or from some outside cause?

Adeimantus:: Yes.

Socrates:: Is it not true, then, that things in the most perfect condition are the least affected by changes from outside? Take the effect on the body of food and drink or of exertion, or the effect of sunshine and wind on a plant: the healthiest and strongest suffer the least change. Again, the bravest and wisest spirit is least disturbed by external influence. Even manufactured things—furniture, houses, clothes—suffer least from wear and tear when they are well made and in good condition. So this immunity to change from outside is characteristic of anything which, thanks to art or nature or both, is in a satisfactory state.

Adeimantus:: That seems true.

Socrates:: But surely the state of the divine nature must be perfect in every way, and would therefore be the last thing to suffer transformations from any outside cause.

Adeimantus:: Yes.

Socrates:: Well then, would a god change or alter himself?

Adeimantus:: If he changes at all, it can only be in that way.

Socrates:: Would it be a change for the better or for the worse?

Adeimantus:: It could only be for the worse; for we cannot admit any imperfection in divine goodness or beauty.

Socrates:: True; and that being so, do you think, Adeimantus, that anyone, god or man, would deliberately make himself worse in any respect?

Adeimantus:: That is impossible.

Socrates:: Then a god cannot desire to change himself. Being as perfect as he can be, every god, it seems, remains simply and for ever in his own form.

Adeimantus:: That is the necessary conclusion.

Socrates:: If so, my friend, the poets must not tell us that 'the gods go to and fro among the cities of men, disguised as strangers of all sorts from far countries'; nor must they tell any of those false tales of Proteus and Thetis transforming themselves, or bring Hera on the stage in the guise of a priestess collecting alms for 'the life-giving children of Inachus, the river of Argos'. Mothers, again, are not to follow these suggestions and scare young children with mischievous stories of spirits that go about by night in all sorts of outlandish shapes. They would only be blaspheming the gods and at the same time making cowards of their children.

Adeimantus:: No, that must not be allowed.

Socrates:: But are we to think that the gods, though they do not really change, trick us by some magic into believing that they appear in many different forms?

Adeimantus:: Perhaps.

Socrates:: What? said  would a god tell a falsehood or act one by deluding us with an apparition?

Adeimantus:: I cannot say.

Socrates:: Do you not know that the true falsehood—if that is a possible expression—is a thing that all gods and men abominate?

Adeimantus:: What do you mean?

Socrates:: This: no one, if he could help it, would tolerate the presence of untruth in the most vital part of his nature concerning the most vital matters. There is nothing he would fear so much as to harbor falsehood in that quarter.

Adeimantus:: Still I do not understand.

Socrates:: Because you think I mean something out of the ordinary. All I mean is the presence of falsehood in the soul concerning reality. To be deceived about the truth of things and so to be in ignorance and error and to harbor untruth in the soul is a thing no one would consent to. Falsehood in that quarter is abhorred above everything.

Adeimantus:: It is indeed.

Socrates:: Well then, as I was saying, this ignorance in the soul which entertains untruth is what really deserves to be called the true falsehood; for the spoken falsehood is only the embodiment or image of a previous condition of the soul, not pure unadulterated falsity. Is it not so?

Adeimantus:: It is.

Socrates:: This real falsehood, then, is hateful to gods and men equally. But is the spoken falsehood always a hateful thing? Is it not sometimes helpful—in war, for instance, or as a sort of medicine to avert some fit of folly or madness that might make a friend attempt some mischief? And in those legends we were discussing just now, we can turn fiction to account; not knowing the facts about the distant past, we can make our fiction as good an embodiment of truth as possible.

Adeimantus:: Yes, that is so.

Socrates:: Well, in which of these ways would falsehood be useful to a god? We cannot think of him as embodying truth in fiction for lack of information about the past.

Adeimantus:: No, that would be absurd.

Socrates:: So there is no room in his case for poetical inventions. Would he need to tell untruths because he has enemies to fear?

Adeimantus:: Of course not.

Socrates:: Or friends who are mad or foolish?

Adeimantus:: No; a fool or a madman could hardly enjoy the friendship of the gods.

Socrates:: Gods, then, have no motive for lying. There can be no falsehood of any sort in the divine nature.

Adeimantus:: None.

Socrates:: We conclude, then, that a god is a being of entire simplicity and truthfulness in word and in deed. In himself he does not change, nor does he delude others, either in dreams or in waking moments, by apparitions or oracles or signs.

Adeimantus:: I agree, after all you have said.

Socrates:: You will assent, then, to this as a second principle to guide all that is to be said or written about the gods: that they do not transform themselves by any magic or mislead us by illusions or lies. For all our admiration of Homer, we shall not approve his story of the dream Zeus sent to Agamemnon; nor yet those lines of Aeschylus where Thetis tells how Apollo sang at her wedding:

> Boding good fortune for my child, long life
> From sickness free, in all things blest by heaven,
> His song, so crowned with triumph, cheered my heart.
> I thought those lips divine, with prophecy
> Instinct, could never lie. But he, this guest,

> Whose voice so rang with promise at the feast,
> Even he, has slain my son.

If a poet writes of the gods in this way, we shall be angry and refuse him the means to produce his play. Nor shall we allow such poetry to be used in educating the young, if we mean our Guardians to be god-fearing and to reproduce the divine nature in themselves so far as man may.

Adeimantus:: I entirely agree with your principles and I would have them observed as laws.

Socrates:: So far, then, as religion is concerned, we have settled what sorts of stories about the gods may, or may not, be told to children who are to hold heaven and their parents in reverence and to value good relations with one another.

Adeimantus:: Yes; and I believe we have settled right.

Socrates:: We also want them to be brave. So the stories they hear should be such as to make them unafraid of death. A man with that fear in his heart cannot be brave, can he?

Adeimantus:: Surely not.

Socrates:: And can a man be free from that fear and prefer death in battle to defeat and slavery, if he believes in a world below which is full of terrors?

Adeimantus:: No.

Socrates:: Here again, then, our supervision will be needed. The poets must be told to speak well of that other world. The gloomy descriptions they now give must be forbidden, not only as untrue, but as injurious to our future warriors. We shall strike out all lines like these:

> I would rather be on earth as the hired servant of another, in the house of a landless man with little to live on, than be king over all the dead;

or these:

> Alack, there is, then, even in the house of Death a spirit
> or a shade; but the wits dwell in it no more.

We shall ask Homer and the poets in general not to mind if we cross out all passages of this sort.. If most people enjoy them as good poetry, that is all the more reason for keeping them from children or grown men who are to be free, fearing slavery more than death.

Adeimantus:: I entirely agree.

Socrates:: We must also get rid of all that terrifying language, the very sound of which is enough to make one shiver: ‘loathsome Styx’, ‘the River of Wailing’, ‘infernal spirits’, ‘anatomies’, and so on. For other purposes such language may be well enough; but we are afraid that fever consequent upon such shivering fits may melt down the fine-tempered spirit of our Guardians. So we will have none of it; and we shall encourage writing in the opposite strain.

Adeimantus:: Clearly.

Socrates:: Another thing we must banish is the wailing and lamentations of the famous heroes. For this reason: if two friends are both men of high character, neither of them will think that death has any terrors for his comrade; and so he will not mourn for his friend’s sake, as if something terrible had befallen him.

Adeimantus:: No.

Socrates:: We also believe that such a man, above all, possesses within himself all that is necessary for a good life and is least dependent on others, so that he has less to fear from the loss of a son or brother or of his wealth or any other possession. When such misfortune comes, he will bear it patiently without lamenting.

Adeimantus:: True.

Socrates:: We shall do well, then, to strike out descriptions of the heroes bewailing the dead, and make over such lamentations to women (and not to women of good standing either) and to men of low character, so that the Guardians we are training for our country may disdain to imitate them.

Adeimantus:: Quite right.

Socrates:: Once more, then, we shall ask Homer and the other poets not to represent Achilles, the son of a goddess, as ‘tossing from side to side, now on his face, now on his back’, and then as rising up and wandering distractedly on the seashore, or pouring ashes on his head with both hands, with all those tears and wailings the poet describes; nor to tell how Priam, who was near akin to the gods, ‘rolled in the dung as he made entreaty, calling on each man by name’. Still more earnestly shall we ask them not to represent gods as lamenting, or at any rate not to dare to misrepresent the highest god by making him say: ‘Woe is me that Sarpedon, whom I love above all men, is fated to die at the hands of Patroclus.’ For if our young men take such unworthy descriptions seriously instead of laughing at them, they will hardly feel themselves, who are but men, above behaving in that way or repress any temptation to do so. They would not be ashamed of giving way with complaints and outcries on every trifling occasion; and that would be contrary to the principle we have deduced and shall adhere to, until someone can show us a better.

Adeimantus:: It would.

Socrates:: Again, our Guardians ought not to be overmuch given to laughter. Violent laughter tends to provoke an equally violent reaction. We must not allow poets to describe men of worth being overcome by it; still less should Homer speak of the gods giving way to ‘unquenchable laughter’ at the sight of Hephaestus ‘bustling from room to room’. That will be against your principles.

Adeimantus:: Yes, if you choose to call them mine.

Socrates:: Again, a high value must be set upon truthfulness. If we were right in saying that gods have no use for falsehood and it is useful to mankind only in the way of a medicine, obviously a medicine should be handled by no one but a physician.

Adeimantus:: Obviously.

Socrates:: If anyone, then, is to practice deception, either on the country’s enemies or on its citizens, it must be the Rulers of the commonwealth, acting for its benefit; no one else may meddle with this privilege. For a private person to mislead such Rulers we shall declare to be a worse offence than for a patient to mislead his doctor or an athlete his trainer about his bodily condition, or for a seaman to misinform his captain about the state of the ship or of the crew. So, if anyone else in our commonwealth ‘of all that practice crafts, physician, seer, or carpenter’, is caught not telling the truth, the Rulers will punish him for introducing a practice as fatal and subversive in a state as it would be in a ship.

Adeimantus:: It would certainly be as fatal, if action were suited to the word.

Socrates:: Next, our young men will need self-control; and for the mass of mankind that chiefly means obeying their governors, and themselves governing their appetite for the pleasures of eating and drinking and sex. Here again we shall disapprove of much that we find in Homer.

Adeimantus:: I agree.

Socrates:: Whereas we shall allow the poets to represent any examples of self-control and fortitude on the part of famous men, and admit such lines as these: ‘Odysseus smote his breast, chiding his heart: Endure, my heart; thou has borne worse things than these.'

Adeimantus:: Yes, certainly.

Socrates:: Nor again must these men of ours be lovers of money, or ready to take bribes. They must not hear that 'gods and great princes may be won by gifts'.

Adeimantus:: No, that sort of thing cannot be approved.

Socrates:: If it were not for my regard for Homer, I should not hesitate to call it downright impiety to make Achilles say to Apollo: 'Thou has wronged me, thou deadliest of gods; I would surely requite thee, if I had but the power.' And all those stories of Achilles dragging Hector round the tomb of Patroclus and slaughtering captives on the funeral pyre we shall condemn as false, and not let our Guardians believe that Achilles, who was the son of a goddess and of the wise Peleus, third in descent from Zeus, and the pupil of the sage Chiron, was so disordered that his heart was a prey to two contrary maladies, mean covetousness and arrogant contempt of gods and men.

Adeimantus:: You are right.

Socrates:: We have now distinguished the kinds of stories that may and may not be told about gods and demigods, heroes, and the world below. There remains the literature concerned with human life.

Adeimantus:: Clearly.

Socrates:: We cannot lay down rules for that at our present stage.

Adeimantus:: Why not?

Socrates:: Because, I suspect, we shall find both poets and prose-writers guilty of the most serious misstatements about human life, making out that wrongdoers are often happy and just men miserable; that injustice pays, if not detected; and that my being just is to another man’s advantage, but a loss to myself. We shall have to prohibit such poems and tales and tell them to compose others in the contrary sense. Don’t you think so?

Adeimantus:: I am sure of it.

Socrates:: Well, as soon as you admit that I am right there, may I not claim that we shall have reached agreement on the subject of all this inquiry?

Adeimantus:: That is a fair assumption.

Socrates:: Then we must postpone any decision as to how the truth is to be told about human life, until we have discovered the real nature of justice and proved that it is intrinsically profitable to its possessor, no matter what reputation he may have in the eyes of the world.

Adeimantus:: That is certainly true.

Socrates:: So much for the content of literature. If we consider next the question of form, we shall then have covered the whole field.

Adeimantus:: I don’t understand what you mean by form.

Socrates:: I must explain, then. Let me put it in this way. Any story in prose or verse is always a setting forth of events, past, present, or future, isn’t it?

Adeimantus:: Yes.

Socrates:: And that can be done either in pure narrative or by means of representation or in both ways.

Adeimantus:: I am still rather in the dark.

Socrates:: I seem to be a poor hand at explaining; I had better give a particular illustration. You remember the beginning of the Iliad, which describes how Chryses begged Agamemnon to release his daughter, and Agamemnon was angry, and Chryses called on his god to avenge the refusal on the Greeks. So far the poet speaks in his own person, but later on he speaks in the character of Chryses and tries to make us feel that the words come, not from Homer, but from an aged priest Throughout the Iliad and Odyssey, the events are set forth in these two different forms. All the time, both in the speeches and in the narrative parts in between, he is telling his story; but where he is delivering a speech in character, he tries to make his manner resemble that of the person he has introduced as speaker. Any poet who does that by means of voice and gesture, is telling his story by way of dramatic representation; whereas, if he makes no such attempt to suppress his own personality, the events are set forth in simple narrative.

Adeimantus:: Now I understand.

Socrates:: Observe, then, that, if you omit the intervening narrative and leave only the dialogue, you get the opposite form.

Adeimantus:: Yes, I see; that occurs in tragedy, for instance.

Socrates:: Exactly. Now I think you see the distinction I failed to make clear. All story-telling, in prose or poetry, is in one of three forms. It may be wholly dramatic: tragedy, as you say, or comedy. Or the poet may narrate the events in his own person; perhaps the best example of that is the dithyramb. Or again both methods may be used, as in epic and several other kinds of poetry.

Adeimantus:: Yes, I see now what you meant.

Socrates:: Remember, too, I began by saying that, having done with the content, we had still to consider the form. I meant that we should have to decide whether to allow our poets to tell their story in dramatic form, wholly, or in part (and, if so, in what parts), or not at all..

Adeimantus:: You mean, I suspect, the question whether we shall admit tragedy and comedy into our commonwealth.

Socrates:: Perhaps, or the question may be wider still. I do not know yet; but we must go wherever the wind of the argument carries us.

Adeimantus:: That is good advice.

Socrates:: Here then, Adeimantus, is a question for you to consider: Do we want our Guardians to be capable of playing many parts? Perhaps the answer follows from our earlier principle that a man can only do one thing well; if he tries his hand at several, he will fail to make his mark in any of them. Does not that principle apply to acting? The same man cannot act many parts so well as he can act one.

Adeimantus:: No, he cannot.

Socrates:: Then he will hardly be able to pursue some worthy occupation and at the same time represent a variety of different characters. Even in the case of two forms of representation so closely allied as tragedy and comedy, the same poet cannot write both with equal success. Again, the recitation of epic poetry and acting on the stage are distinct professions; and even on the stage different actors perform in tragedy and comedy.

Adeimantus:: That is so.

Socrates:: And human talent, Adeimantus, seems to be split up into subdivisions even minuter than these; so that no man can successfully represent many different characters in the field of art or pursue a corresponding variety of occupations in real life.

Adeimantus:: Quite true.

Socrates:: If, then, we are to hold fast to our original principle that our Guardians shall be set free from all manual crafts to be the artificers of their country's freedom, with the perfect mastery which comes of working only at what conduces to that end, they ought not to play any other part in dramatic representation any more than in real life; but if they act, they should, from childhood upward, impersonate only the appropriate types of character, men who are brave, religious, self-controlled, generous. They are not to do anything mean or dishonorable; no more should they be practiced in representing such behavior, for fear of becoming infected with the reality. You must have noticed how the reproduction of another person's gestures or tones of voice or states of mind, if persisted in from youth up, grows into a habit which becomes second nature.

Adeimantus:: Yes, I have.

Socrates:: So these charges of ours, who are to grow up into men of worth, will not be allowed to enact the part of a woman, old or young, railing against her husband, or boasting of a happiness which she imagines can rival the gods', or overwhelmed with grief and misfortune; much less a woman in love, or sick, or in labor; nor yet slaves of either sex, going about their menial work; nor men of a low type, behaving with cowardice and all the qualities contrary to those we mentioned, deriding one another and exchanging coarse abuse, whether drunk or sober, and otherwise using language and behavior that are an offence against themselves as well as their neighbors; nor must they copy the words and actions of madmen. Knowledge they must have of baseness and insanity both in men and women, but not reproduce such behavior in life or in art.

Adeimantus:: Quite true.

Socrates:: Again, are they to impersonate men working at some trade, such as a smith's, or rowing a galley or giving the time to the oarsmen?

Adeimantus:: How should they, when they are not even to take any notice of such occupations?

Socrates:: And may they take part in performances which imitate horses neighing and bulls bellowing or the noise of rivers and sea and thunder?

Adeimantus:: We have already forbidden them to represent the ravings of insanity.

Socrates:: If I understand you, then, there are two contrasted forms of expression in which any series of events may be set forth: one which will always be used by a man of fine character and breeding, the other by one whose nature and upbringing are of a very different sort.

Adeimantus:: Yes, there are those two forms.

Socrates:: One of them involves little change and variety; when the words have been fitted to a suitable musical mode and rhythm, the recitation can keep almost to the same mode and rhythm throughout, the modulations required being slight. The other, on the contrary, involves every sort of variation and demands the use of all the modes and rhythms there are.

Adeimantus:: Quite true.

Socrates:: Now all writers and composers fall into one or other of these styles, or a mixture of both. What shall we do? Are we to admit into our commonwealth one or other of the extreme styles, or the mixed one, or all three?

Adeimantus:: If my judgment is to prevail, the simple one which serves to represent a fine character.

Socrates:: On the other hand, Adeimantus, the mixed style has its attractions; and children and their attendants, not to mention the great mass of the public, find the opposite of the one you chose the most attractive of all.

Adeimantus:: No doubt they do.

Socrates:: But perhaps you think it will not suit our commonwealth, where no man is to be two or more persons or a jack of all trades; this being the reason why ours is the only state in which we shall find a shoemaker who cannot also take command of a ship, a farmer who does not leave his farm to serve on juries, a soldier who is not a tradesman into the bargain.

Adeimantus:: Quite true.

Socrates:: Suppose, then, that an individual clever enough to assume any character and give imitations of anything and everything should visit our country and offer to perform his compositions, we shall bow down before a being with such miraculous powers of giving pleasure; but we shall tell him that we are not allowed to have any such person in our commonwealth; we shall crown him with fillets of wool, anoint his head with myrrh, and conduct him to the borders of some other country. For our own benefit, we shall employ the poets and story-tellers of the more austere and less attractive type, who will reproduce only the manner of a person of high character and, in the substance of their discourse, conform to those rules we laid down when we began the education of our warriors.

Adeimantus:: Yes, we shall do that, if it lies in our power.

Socrates:: So now, my dear Adeimantus, we have discussed both the content and the form of literature, and we have finished with that part of education.

Adeimantus:: Yes, I think so.

Socrates:: There remains the question of style in song and poetry set to music. It must be easy now for anyone to discover the rules we must make as to their character, if we are to be consistent.

Glaucon laughed.

Glaucon:: I am afraid ‘anyone’ does not include me, Socrates. At the moment I cannot quite see what the rules should be, though I have my suspicions.

Socrates:: You can see this much at any rate, that song consists of three elements: words, musical mode, and rhythm.

Glaucon:: Yes.

Socrates:: And so far as the words go, it will make no difference whether they are set to music or not; in either case they must conform to the rules we have already made for the content and form of literature.

Glaucon:: True.

Socrates:: And the musical mode and the rhythm should fit the words?

Glaucon:: Of course.

Socrates:: And we said that we did not want dirges and laments. Which are the modes that express sorrow? Tell me; you are musical.

Glaucon:: Modes like the Mixed Lydian and Hyperlydian.

Socrates:: Then we may discard those; men, and even women of good standing, will have no use for them.

Glaucon:: Certainly.

Socrates:: Again, drunkenness, effeminacy, and inactivity are most unsuitable in Guardians. Which are the modes expressing softness and the ones used at drinking-parties?

Glaucon:: There are the Ionian and certain Lydian modes which are called ‘slack’.

Socrates:: You will not use them in the training of your warriors?

Glaucon:: Certainly not. You seem to have the Dorian and the Phrygian left.

Socrates:: I am not an expert in the modes; but leave me one which will fittingly represent the tones and accents of a brave man in warlike action or in any hard and dangerous task, who, in the hour of defeat or when facing wounds and death, will meet every blow of fortune with steadfast endurance. We shall need another to express peaceful action under no stress of hard necessity; as when a man is using persuasion or entreaty, praying to the gods or instructing and admonishing his neighbor, or again submitting himself to the instruction and persuasion of others; a man who is not overbearing when any such action has proved successful, but behaves always with wise restraint and is content with the outcome. These two modes you must leave: the two which will best express the accents of courage in the face of stern necessity and misfortune, and of temperance in prosperity won by peaceful pursuits.

Glaucon:: The modes you want are just the two I mentioned.

Socrates:: Our songs and airs, then, will not need instruments of large compass capable of modulation into all the modes, and we shall not maintain craftsmen to make them, in particular the flute, which has the largest compass of all. That leaves the lyre and the cithara for use in the town; and in the country the herdsmen may have some sort of pipe.

Glaucon:: That seems to be the conclusion.

Socrates:: At any rate, it is no innovation to prefer Apollo to Marsyas in the choice of instruments.

Glaucon:: Surely not.

Socrates:: It strikes me that, without noticing it, we have been purging our commonwealth of that luxurious excess we said it suffered from.

Glaucon:: A wise proceeding.

Socrates:: Let us go through with it, then. Next after the modes will come the principle governing rhythm, which will be, not to aim at a great variety of meters, but to discover the rhythms appropriate to a life of courage and self-control; and we shall then adapt meter and melody to the words expressing a life of that sort, not the words to the meter and melody. What these rhythms are, it is for you to explain, as you explained the modes.

Glaucon:: Really, I cannot do that. I have observed that there are three fundamental types of rhythm to which all meters may be reduced, just as there are four intervals at the base of all the modes; but what kind of life each rhythm is suited to express, I cannot say.

Socrates:: Well, we shall consult Damon on this question, which meters are expressive of meanness, insolence, frenzy, and other such evils, and which rhythms we must retain to express their opposites. It would take a long time to settle all that.

Glaucon:: It would indeed.

Socrates:: One thing, however, is easily settled, namely that grace and seemliness of form and movement go with good rhythm; ungracefulness and unseemliness with bad.

Glaucon:: Naturally.

Socrates:: And again, good or bad rhythm and also tunefulness or discord in music go with the quality of the poetry; for they will be modeled after its form, if, as we have said, meter and music must be adapted to the sense of the words.

Glaucon:: Well, they must be so adapted.

Socrates:: And the content of the poetry and the manner in which it is expressed depend, in their turn, on moral character.

Glaucon:: Of course.

Socrates:: Thus, then, excellence of form and content in discourse and of musical expression and rhythm, and grace of form and movement, all depend on goodness of nature, by which I mean, not the foolish simplicity sometimes called by courtesy ‘good nature’, but a nature in which goodness of character has been well and truly established.

Glaucon:: Yes, certainly.

Socrates:: So, if our young men are to do their proper work in life, they must follow after these qualities wherever they may be found. And they are to be found in every sort of workmanship, such as painting, weaving, embroidery, architecture, the making of furniture; and also in the human frame and in all the works of nature: in all these grace and seemliness may be present or absent. And the absence of grace, rhythm, harmony is nearly allied to baseness of thought and expression and baseness of character; whereas their presence goes with that moral excellence and self-mastery of which they are the embodiment.

Glaucon:: That is perfectly true.

Socrates:: Then we must not only compel our poets, on pain of expulsion, to make their poetry the express image of noble character; we must also supervise craftsmen of every kind and forbid them ‘to leave the stamp of baseness, license, meanness, unseemliness, on painting and sculpture, or building, or any other work of their hands; and anyone who cannot obey shall not practice his art in our commonwealth. We would not have our Guardians grow up among representations of moral deformity, as in some foul pasture where, day after day, feeding on every poisonous weed they would, little by little, gather insensibly a mass of corruption in their very souls. Rather we must seek out those craftsmen whose instinct guides them to whatsoever is lovely and gracious; so that our young men, dwelling in a wholesome climate, may drink in good from every quarter, whence, like a breeze bearing health from happy regions, some influence from noble works constantly falls upon eye and ear from childhood upward, and imperceptibly draws them into sympathy and harmony with the beauty of reason, whose impress they take.

Glaucon:: There could be no better upbringing than that.

Socrates:: Hence, Glaucon the decisive importance of education in poetry and music: rhythm and harmony sink deep into the recesses of the soul and take the strongest hold there, bringing that grace of body and mind which is only to be found in one who is brought up in the right way. Moreover, a proper training in this kind makes a man quick to perceive any defect or ugliness in art or in nature. Such deformity will rightly disgust him. Approving all that is lovely, he will welcome it home with joy into his soul and, nourished thereby, grow into a man of a noble spirit. All that is ugly and disgraceful he will rightly condemn and abhor while he is still too young to understand the reason; and when reason comes, he will greet her as a friend with whom his education has made him long familiar.

Glaucon:: I agree; that is the purpose of education in literature and music.

Socrates:: Now in learning to read we were proficient when we could recognize the few letters there are wherever they occur in all the multitude of different words, never thinking them beneath our notice in the most insignificant word, but bent upon distinguishing them everywhere, because we should not be scholars until we had got thus far.

Glaucon:: True.

Socrates:: Also we must know the letters themselves before we can recognize images of them, reflected (say) in water or in a mirror. The same skill and practice are needed in either case.

Glaucon:: Yes.

Socrates:: Then, is it not true, in the same way, that we and these Guardians we are to bring up will never be fully cultivated until we can recognize the essential Forms of temperance, courage, liberality, high-mindedness, and all other kindred qualities, and also their opposites, wherever they occur. We must be able to discern the presence of these Forms themselves and also of their images in anything that contains them, realizing that, to recognize either, the same skill and practice are required, and that the most insignificant instance is not beneath our notice.

Glaucon:: That must surely be so.

Socrates:: And for him who has eyes to see it, there can be no fairer sight than the harmonious union of a noble character in the soul with an outward form answering thereto and bearing the same stamp of beauty.

Glaucon:: There cannot.

Socrates:: And the fairest is also the most lovable.

Glaucon:: Of course.

Socrates:: So the man who has been educated in poetry and music will be in love with such a person, but never with one who lacks this harmony.

Glaucon:: Not if the defect should lie in the soul; if it were only some bodily blemish, he would accept that with patience and goodwill.

Socrates:: I understand; you are or have been in love with a person like that, and I agree. But tell me: is excessive pleasure compatible with temperance?

Glaucon:: How can it be, when it unsettles the mind no less than pain?

Socrates:: Or with virtue in general?

Glaucon:: Certainly not.

Socrates:: It has more to do with insolence and profligacy?

Glaucon:: Yes.

Socrates:: And is there any pleasure you can name that is greater and keener than sexual pleasure?

Glaucon:: No; nor any that is more like frenzy.

Socrates:: Whereas love rightfully is such a passion as beauty combined with a noble and harmonious character may inspire in a temperate and cultivated mind. It must therefore be kept from all contact with licentiousness and frenzy; and where a passion of this rightful sort exists, the lover and his beloved must have nothing to do with the pleasure in question.

Glaucon:: Certainly not, Socrates.

Socrates:: It appears, then, that in this commonwealth we are founding you will have a law to the effect that a lover may seek the company of his beloved and, with his consent, kiss and embrace him like a son, with honorable intent, but must never be suspected of any further familiarity, on pain of being thought ill-bred and without any delicacy of feeling.

Glaucon:: I quite agree.

Socrates:: Then is not our account of education in poetry and music now complete? It has ended where it ought to end, in the love of beauty.

Glaucon:: I agree.

Socrates:: Next, the upbringing of our young men must include physical training; and this must be no less carefully regulated throughout life from childhood onwards. In my view, which I should like you to consider, it is not true that a sound and healthy body is enough to produce a sound mind; while, on the contrary, the sound mind has power in itself to make the bodily condition as perfect as it can be. What do you say?

Glaucon:: I agree with you.

Socrates:: We should do well, then, to leave the care of the body in detail to those minds which have already been thoroughly cared for themselves. We may save time by giving only a rough outline.

Glaucon:: Certainly.

Socrates:: Drunkenness we have already forbidden. A Guardian is surely the last person to be allowed to get drunk and not know where he is.

Glaucon:: Yes, it would be absurd that a Guardian should need to be guarded.

Socrates:: What of their food? Our men will be in training for the greatest of all contests. Will the habit of body of the ordinary athlete be suitable for them?

Glaucon:: Perhaps.

Socrates:: But it is rather a drowsy condition, and precarious for health. You must have noticed how athletes sleep their life away, and fall seriously ill whenever they depart only slightly from their prescribed diet. A finer sort of training will be needed for our warrior athletes, who must be as wakeful as watchdogs and have sharp eyes and ears. On their campaigns too they will be exposed to so many changes of food and drinking-water and extremes of heat and cold that it will not do for their health to be too nicely balanced.

Glaucon:: I believe you are right.

Socrates:: Then the best training will be closely akin to that education ¦ in poetry and music which we described, in being simple and flexible, especially training for war.

Glaucon:: What will it be like?

Socrates:: That, at any rate, may be learnt from Homer. As you know, he gives his heroes on their campaign no fish for their meals, although they are on the shores of the Hellespont, and no boiled meat; nothing but roast, which is convenient for soldiers: they have only to light a fire wherever they may be and not to carry pots and pans about with them. I fancy, too, that Homer never mentions sweets. Even the ordinary athlete knows that you must not eat anything of that sort, if you want to be in good condition.

Glaucon:: Yes, they are wise to be so abstemious.

Socrates:: It seems, then, you would not approve of those refinements of Sicilian cookery for which the tables of Syracuse are famous, or of our Athenian confectionery, supposed to be so delicious; and you would not advise a man who is to keep himself fit to take a Corinthian girl as a mistress.

Glaucon:: Of course not.

Socrates:: We might, in fact, see an analogy between this luxurious living and that style of music which uses every variation of mode and rhythm. Variety there engendered license in the soul, and simplicity temperance. So in the body, variety breeds maladies and simplicity health.

Glaucon:: That is perfectly true.

Socrates:: In a community where licentiousness and disease are rife, law-courts and dispensaries have their doors constantly open. Law and medicine begin to give themselves airs, when, even among free men, large numbers take too keen an interest in them.

Glaucon:: That is inevitable.

Socrates:: Is it not the surest sign of a disgracefully low state of education that highly skilled physicians and judges should be in request, not merely among the lower classes who work with their hands, but among those who lay claim to a liberal upbringing? Could anything show a more shameful lack of culture than to have so little justice in oneself that one must get it from others, who thus become masters and judges over one?

Glaucon:: There could be no worse disgrace.

Socrates:: Or is there a yet lower depth, when, not content with spending most of his life in courts of law as plaintiff or defendant, a man is actually led to take a vulgar pride in being so litigious; one who fancies himself as an expert in dishonesty, up to every turn and twist that will enable him to evade punishment, and all for the sake of trivial or worthless ends, because he does not know how much better it is so to order one’s life as never to stand in need of a drowsy judge?

Glaucon:: That is indeed a lower depth.

Socrates:: Is it not also disgraceful to need doctoring, not merely for a wound or an attack of some seasonal disorder, but because, through living in idleness and luxury, our bodies are infested with winds and humors, like marsh gas in a stagnant pool, so that the sons of Asclepius are put to inventing for diseases such ingenious names as flatulence and catarrh?

Glaucon:: Yes; they are queer, these modern terms.

Socrates:: And not in use, I fancy, in the days of Asclepius himself, to judge from the behavior of his sons at Troy. When Eurypylus was wounded, they had no fault to find with the woman who gave him a draught of Pramnian wine well sprinkled with barley meal and grated cheese—rather an inflammatory mixture, you might think—nor did they blame Patroclus, who was in charge of the case.

Glaucon:: It certainly was an odd drink for a wounded man.

Socrates:: Not if you reflect that in the old days, until the time of Herodicus, the sons of Asclepius had no use for the modern coddling treatment of disease. But Herodicus, who was a gymnastic master and lost his health, combined training and doctoring in such a way as to become a plague to himself first and foremost and to many others after him.

Glaucon:: How?

Socrates:: By lingering out his death. He had a mortal disease, and he spent all his life at its beck and call, with no hope of a cure and no time for anything but doctoring himself. Every departure from his fixed regimen was a torment; and his skill only enabled him to reach old age in a prolonged death struggle.

Glaucon:: A fine reward for his art to win him!

Socrates:: Yes, but a suitable one for a man who never understood that, if Asclepius did not reveal these valetudinarian arts to his descendants, it was not from ignorance or lack of experience, but because he realized that in every well-ordered community each man has his appointed task which he must perform; no one has leisure to spend all his life in being ill and doctoring himself. We can see how that is true for an artisan, but absurdly enough we do not see that it applies to the rich, who are supposed to be so fortunate. When a carpenter is ill, he asks his doctor to give him an emetic or a purge to expel the trouble, or to rid him of it by cautery or the knife. But if he is advised to take a long course of treatment, to keep his head wrapped up, and all that sort of thing, he soon replies that he has not time to be ill and it is not worth his while to live in that way, thinking of nothing but his illness and neglecting his proper work. And so he bids good-bye to that kind of doctor and goes back to his ordinary way of life. Then he either regains his health and lives to go about his proper business, or, if his body is not equal to the strain, gets rid of all his troubles by dying.

Glaucon:: Yes, we should think that the right attitude towards medicine for a man of his class.

Socrates:: Because he had work to do, and it was not worth his while to live if he could not do it; whereas the rich man, we imagine, has no function such that life will not be worth living if he is prevented from performing it.

Glaucon:: I never heard of any.

Socrates:: Why, don't you know that saying of Phocylides, that a man should practice virtue when he has made enough to live on?

Glaucon:: I should have thought he might begin sooner.

Socrates:: We need not quarrel with Phocylides on that point. We had better assure ourselves whether the practice of virtue is the rich man's business and his life is not worth living otherwise, or whether that valetudinarianism which prevents any craftsman from attending to his work, does not equally stand in the way of following Phocylides' advice.

Glaucon:: Yes. Surely there could be no worse hindrance than this excessive care of the body, over and above the exercise it needs to keep it in health. It becomes a nuisance to anyone who has to manage a household or serve in the field or hold any office at home.

Socrates:: Worst of all, it is prejudicial to learning of all kinds and to thought and meditation. The constant apprehension of headaches and dizziness, for which study is held responsible, is a bar to any exercise or test of intellectual qualities, when a man is always fancying himself ill and never stops being anxious about his body.

Glaucon:: Naturally.

Socrates:: Shall we say, then, that Asclepius recognized this and revealed the art of medicine for the benefit of people of sound constitution who normally led a healthy life, but had contracted some definite ailment? He would rid them of their disorders by means of drugs or the knife and tell them to go on living as usual, so as not to impair their usefulness as citizens. But where the body was diseased through and through, he would not try, by nicely calculated evacuations and doses, to prolong a miserable existence and let his patient beget children who were likely to be as sickly as himself. Treatment, he thought, would be wasted on a man who could not live in his ordinary round of duties and was consequently useless to himself and to society.

Glaucon:: A statesmanlike person, your Asclepius!

Socrates:: Obviously; and because he was so, his sons, you may observe, not only fought bravely at Troy, but practiced medicine in the way I am describing. You will remember how, when Menelaus was shot with an arrow by Pandarus, they 'sucked the blood and spread mild simples' on the wound; but what he was to eat and drink afterwards they no more prescribed for him than for Eurypylus. Simples were enough to cure a wounded man who had hitherto lived a regular and healthy life, even if he should drink the next moment a mixture of meal, wine, and cheese. But if a man had a sickly constitution and intemperate habits, his life was worth nothing to himself or to anyone else; medicine was not meant for such people and they should not be treated, though they might be richer than Midas.

Glaucon:: Shrewd fellows, these sons of Asclepius, by your account.

Socrates:: As they should be; and yet Pindar and the tragedians, in defiance of our principles, allege that Asclepius, although he was Apollo's son, took a bribe to raise to life a rich man already at the point of death, and was struck by a thunderbolt for doing so. As we said before, we cannot accept both statements; if he was the son of a god, he was not avaricious; if avaricious, he was not the son of a god.

Glaucon:: All that is certainly true, Socrates; but what do you say to this? The physicians in our commonwealth must surely be good ones; and the best, I suppose, would be those who had had the widest experience in dealing with healthy and sick people; and in the same way the best judges will be men who have associated with every type of character.

Socrates:: I agree, we must have good ones. But do you know which I should call good?

Glaucon:: I shall, if you will tell me.

Socrates:: Well, I will try. But your question referred to two different things as if they were alike. It is true enough of physicians that the ablest might prove to be men who, from childhood up, besides mastering their profession, had been in contact with the largest number of the worst cases, and moreover were not of a robust constitution and had themselves suffered from every malady. That is because what they use in taking care of people's bodies is not their own body; if it were, it would never do for that body to be in a bad condition; it is their mind, and if that is or has been in a bad state, it cannot take proper care of anything. But with a judge it is otherwise; his is the jurisdiction of mind over mind; and that mind must not have been brought up from childhood in the society of vicious minds and itself have been guilty of the whole catalogue of crimes in order to sharpen its wits in drawing inferences about the crimes of others from its own experience, as was permissible in the case of bodily disease. It can be a sound judge of what is right only if it is itself good and honorable; and to that end it must not have been tainted in youth by familiarity with evil characters. That is, of course, why decent people seem simple-minded when they are young, and are easily taken in by dishonesty: they have no pattern of wickedness in themselves enabling them to detect it in others by their own feelings.

Glaucon:: True, they are at a great disadvantage.

Socrates:: For that reason, to make a good judge, a man must be old. The knowledge of what wickedness is should have come late in life, not from a consciousness of its presence in his own soul, but from long practice in observing its evil effects in the souls of others. It should be a matter of knowledge, not of personal experience.

Glaucon:: A good portrait of a genuine judge.

Socrates:: Yes, and of the good judge, to whom your question referred; for his merit consists in the goodness of his soul. Your cunning person, who is quick to suspect evil through having been so often guilty of it himself, and fancies himself master of all the tricks, has all his own wickedness to put him on his guard against others, and so he seems formidable, so long as he is dealing with men of his own stamp. But as soon as he comes in contact with honest men older than himself, he appears stupid with his ill-timed suspicions; he cannot recognize a sound character, because he has no soundness in himself to judge by. If he passes in his own eyes and in others' estimation as on the whole more clever than stupid, it is because he falls in with more rogues than honest men.

Glaucon:: Quite true.

Socrates:: For a good and understanding judge, then, we must look rather to the other type. Vice can never know both itself and virtue; but virtue, in a well-trained nature, will in time come to a knowledge of vice, as well as of itself. So it is the virtuous man, as I believe, that will make the wise judge.

Glaucon:: I agree.

Socrates:: Then you will establish in your state physicians and judges such as we have described. They will look after those citizens whose bodies and souls are constitutionally sound. The physically unsound they will leave to die; and they will actually put to death those who are incurably corrupt in mind.

Glaucon:: Yes; that, as we can now see, will be the best thing for them as well as for the community.

Socrates:: And your young men, so long as they keep to that simple education which, we said, engenders temperance, will take good care never to fall in need of legal correction; while if they follow similar lines in physical training, they may, if they choose, become independent of medicine in all but extreme cases.

Glaucon:: I think they may.

Socrates:: Now, the ordinary athlete undergoes the rigors of training for the sake of muscular strength; but ours will do so rather with a view to stimulating the spirited element in their nature. So perhaps the purpose of the two established branches of education is not, as some suppose, the improvement of the soul in one case and of the body in the other. Both, it may be, aim chiefly at improving the soul.

Glaucon:: How so?

Socrates:: Have you noticed how a life-long devotion to either branch, to the exclusion of the other, affects the mind, resulting in an uncivilized hardness in the one case, and an over-civilized softness in the other?

Glaucon:: I have certainly noticed that unmitigated athletics produce a sort of ferocity, and a merely literary and musical education makes men softer than is good for them.

Socrates:: Surely that ferocity is the outcome of the spirited element in our nature. A proper training would produce courage; but if that element is overstrained, it naturally becomes hard and savage. Gentleness, on the other hand, is characteristic of the philosophic disposition. Here again, too much relaxation will result in over-softness; the right training will produce a gentleness that is steady and disciplined. Now we agree that our Guardians must combine both these dispositions; and they will have to be harmonized so that courage and steadfastness may be united in a soul that would otherwise be either unmanly or boorish.

Glaucon:: Certainly.

Socrates:: When a man surrenders himself to music, allowing his soul to be flooded through the channels of his ears with those sweet and soft and mournful airs we spoke of, and gives up all his time to the delights of song and melody, then at first he tempers the high-spirited part of his nature, like iron whose brittle hardness is softened to make it serviceable; but if he persists in subduing it to such incantation, he will end by melting it away altogether.

He will have cut the sinews of his soul and made himself what Homer calls a faint-hearted warrior. Moreover, this result follows quickly in a temperament that is naturally spiritless; while a high-spirited one is rendered weak and unstable, readily flaring up and dying down again, on slight provocation. Such men become rather irritable, bad-tempered, and peevish.

Glaucon:: Quite so.

Socrates:: On the other hand, there are the consequences of hard bodily exercise and high living, with no attempt to cultivate the mind or use the intellect in study. At first, the sense of physical fitness fills a man with self-confidence and energy and makes him twice the man he was. But suppose he does nothing else and holds aloof from any sort of culture; then, even if there was something in him capable of desiring knowledge, it is starved of instruction and never encouraged to think for itself by taking part in rational discussion or intellectual pursuits of any kind; and so it grows feeble for lack of stimulus and nourishment, and deaf and blind because the darkness that clouds perception is never cleared away. Such a man ends by being wholly uncultivated and a hater of reason. Having no more use for reasonable persuasion, he gains all his ends by savage violence, like a brute beast, and he lives in a dull stupor of ignorance with no touch of inward harmony or grace.

Glaucon:: That is exactly what happens.

Socrates:: There are, then, these two elements in the soul, the spirited and the philosophic; and it is for their sake, as I should say, and not (except incidentally) for the sake of soul and body, that heaven has given to mankind those two branches of education. The purpose is to bring the two elements into tune with one another by adjusting the tension of each to the right pitch. So one who can apply to the soul both kinds of education blended in perfect proportion will be master of a nobler sort of musical harmony than was ever made by tuning the strings of the lyre.

Glaucon:: We may well say that, Socrates.

Socrates:: And our commonwealth will need the constant vigilance of such a master, to preserve its constitution.

Glaucon:: Certainly, he will be indispensable.

Socrates:: So much, then, for the outlines of education and nurture. We need not go into all the details of their musical performances or of their hunting and athletic contests and races. Obviously these will follow from our principles and can easily be worked out.

Glaucon:: Yes, easily.

Socrates:: Good; and what is the next point to be settled? Is it not the question, which of these Guardians are to be rulers and which are to obey?

Glaucon:: No doubt.

Socrates:: Well, it is obvious that the elder must have authority over the young, and that the rulers must be the best.

Glaucon:: Yes.

Socrates:: And as among farmers the best are those with a natural turn for farming, so, if we want the best among our Guardians, we must take those naturally fitted to watch over a commonwealth. They must have the right sort of intelligence and ability; and also they must look upon the commonwealth as their special concern—the sort of concern that is felt for something so closely bound up with oneself that its interests and fortunes, for good or ill, are held to be identical with one's own.

Glaucon:: Exactly.

Socrates:: So the kind of men we must choose from among the Guardians will be those who, when we look at the whole course of their lives, are found to be full of zeal to do whatever they believe is for the good of the commonwealth and never willing to act against its interest.

Glaucon:: Yes, they will be the men we want.

Socrates:: We must watch them, I think, at every age and see whether they are capable of preserving this conviction that they must do what is best for the community, never forgetting it or allowing themselves to be either forced or bewitched into throwing it over.

Glaucon:: How does this throwing over come about?

Socrates:: I will explain. When a belief passes out of the mind, a man may be willing to part with it, if it is false and he has learnt better, or unwilling, if it is true.

Glaucon:: I see how he might be willing to let it go; but you must explain how he can be unwilling.

Socrates:: Where is your difficulty? Don't you agree that men are unwilling to be deprived of good, though ready enough to part with evil? Or that to be deceived about the truth is evil, to possess it good? Or don't you think that possessing truth means thinking of things as they really are?

Glaucon:: You are right. I do agree that men are unwilling to be robbed of a true belief.

Socrates:: When that happens to them, then, it must be by theft, or violence, or bewitchment.

Glaucon:: Again I do not understand.

Socrates:: Perhaps my metaphors are too high-flown. I call it theft when one is persuaded out of one's belief or forgets it. Argument in the one case, and time in the other, steal it away without one's knowing what is happening. You understand now?

Glaucon:: Yes.

Socrates:: And by violence I mean being driven to change one's mind by pain or suffering.

Glaucon:: That too I understand, and you are right.

Socrates:: And bewitchment, as I think you would agree, occurs when a man is beguiled out of his opinion by the allurements of pleasure or scared out of it under the spell of panic.

Glaucon:: Yes, all delusions are like a sort of bewitchment.

Socrates:: As I said just now, then, we must find out who are the best guardians of this inward conviction that they must always do what they believe to be best for the commonwealth. We shall have to watch them from earliest childhood and set them tasks in which they would be most likely to forget or to be beguiled out of this duty. We shall then choose only those whose memory holds firm and who are proof against delusion.

Glaucon:: Yes.

Socrates:: We must also subject them to ordeals of toil and pain and watch for the same qualities there. And we must observe them when exposed to the test of yet a third kind of bewitchment. As people lead colts up to alarming noises to see whether they are timid, so these young men must be brought into terrifying situations and then into scenes of pleasure, which will put them to severer proof than gold tried in the furnace. If we find one bearing himself well in all these trials and resisting every enchantment, a true guardian of himself, preserving always that perfect rhythm and harmony of being which he has acquired from his training in music and poetry, such a one will be of the greatest service to the commonwealth as well as to himself. Whenever we find one who has come unscathed through every test in childhood, youth, and manhood, we shall set him as a Ruler to watch over the commonwealth; he will be honored in life, and after death receive the highest tribute of funeral rites and other memorials. All who do not reach this standard we must reject. And that, I think, my dear Glaucon, may be taken as an outline of the way in which we shall select Guardians to be set in authority as Rulers.

Glaucon:: I am very much of your mind.

Socrates:: These, then, may properly be called Guardians in the fullest sense, who will ensure that neither foes without shall have the power, nor friends within the wish, to do harm. Those young men whom up to now we have been speaking of as Guardians, will be better described as Auxiliaries, who will enforce the decisions of the Rulers.

Glaucon:: I agree.

Socrates:: Now, can we devise something in the way of those convenient fictions we spoke of earlier, a single bold flight of invention, which we may induce the community in general, and if possible the Rulers themselves, to accept?

Glaucon:: What kind of fiction?

Socrates:: Nothing new; something like an Eastern tale of what, according to the poets, has happened before now in more than one part of the world. The poets have been believed; but the thing has not happened in our day, and it would be hard to persuade anyone that it could ever happen again.

Glaucon:: You seem rather shy of telling this story of yours.

Socrates:: With good reason, as you will see when I have told it.

Glaucon:: Out with it; don't be afraid.

Socrates:: Well, here it is; though I hardly know how to find the courage or the words to express it. I shall try to convince, first the Rulers and the soldiers, and then the whole community, that all that nurture and education which we gave them was only something they seemed to experience as it were in a dream. In reality they were the whole time down inside the earth, being molded and fostered while their arms and all their equipment were being fashioned also; and at last, when they were complete, the earth sent them up from her womb into the light of day. So now they must think of the land they dwell in as a mother and nurse, whom they must take thought for and defend against any attack, and of their fellow citizens as brothers born of the same soil.

Glaucon:: You might well be bashful about coming out with your fiction.

Socrates:: No doubt; but still you must hear the rest of the story. It is true, we shall tell our people in this fable, that all of you in this land are brothers; but the god who fashioned you mixed gold in the composition of those among you who are fit to rule, so that they are of the most precious quality; and he put silver in the Auxiliaries, and iron and brass in the farmers and craftsmen. Now, since you are all of one stock, although your children will generally be like their parents, sometimes a golden parent may have a silver child or a silver parent a golden one, and so on with all the other combinations. So the first and chief injunction laid by heaven upon the Rulers is that, among all the things of which they must show themselves good guardians, there is none that needs to be so carefully watched as the mixture of metals in the souls of the children. If a child of their own is born with an alloy of iron or brass, they must, without the smallest pity, assign him the station proper to his nature and thrust him out among the craftsmen or the farmers. If, on the contrary, these classes produce a child with gold or silver in his composition, they will promote him, according to his value, to be a Guardian or an Auxiliary. They will appeal to a prophecy that ruin will come upon the state when it passes into the keeping of a man of iron or brass. Such is the story; can you think of any device to make them believe it?

Glaucon:: Not in the first generation; but their sons and descendants might believe it, and finally the rest of mankind.

Socrates:: Well, even so it might have a good effect in making them care more for the commonwealth and for one another; for I think I see what you mean.

So we will leave the success of our story to the care of popular tradition; and now let us arm these sons of Earth and lead them, under the command of their Rulers, to the site of our city. There let them look round for the best place to fix their camp, from which they will be able to control any rebellion against the laws from within and to beat off enemies who may come from without like wolves to attack the fold. When they have pitched their camp and offered sacrifice to the proper divinities, they must arrange their sleeping quarters; and these must be sufficient to shelter them from winter cold and summer heat.

Glaucon:: Naturally. You mean they are going to live there?

Socrates:: Yes; but live like soldiers, not like men of business.

Glaucon:: What is the difference?

Socrates:: I will try to explain. It would be very strange if a shepherd were to disgrace himself by keeping, for the protection of his flock, dogs who were so ill-bred and badly trained that hunger or unruliness or some bad habit or other would set them worrying the sheep and behaving no better than wolves. We must take every precaution against our Auxiliaries treating the citizens in any such way and, because they are stronger, turning into savage tyrants instead of friendly allies; and they will have been furnished with the best of safeguards, if they have really been educated in the right way.

Glaucon:: But surely there is nothing wrong with their education.

Socrates:: We must not be too positive about that, my dear Glaucon; but we can be sure of what we said not long ago, that if they are to have the best chance of being gentle and humane to one another and to their charges, they must have the right education, whatever that may be.

Glaucon:: We were certainly right there.

Socrates:: Then besides that education, it is only common sense to say that the dwellings and other belongings provided for them must be such as will neither make them less perfect Guardians nor encourage them to maltreat their fellow citizens.

Glaucon:: True.

Socrates:: With that end in view, let us consider how they should live and be housed. First, none of them must possess any private property beyond the barest necessaries. Next, no one is to have any dwelling or store-house that is not open for all to enter at will. Their food, in the quantities required by men of temperance and courage who are in training for war, they will receive from the other citizens as the wages of their guardianship, fixed so that there shall be just enough for the year with nothing over; and they will have meals in common and all live together like soldiers in a camp. Gold and silver, we shall tell them they will not need, having the divine counterparts of those metals always in their souls as a god-given possession, whose purity it is not lawful to sully by the acquisition of that mortal dross, current among mankind, which has been the occasion of so many unholy deeds. They alone of all the citizens are forbidden to touch and handle silver or gold, or to come under the same roof with them, or wear them as ornaments, or drink from vessels made of them. This manner of life will be their salvation and make them the saviors of the commonwealth. If ever they should come to possess land of their own and houses and money, they will give up their guardianship for the management of their farms and households and become tyrants at enmity with their fellow citizens instead of allies. And so they will pass all their lives in hating and being hated, plotting and being plotted against, in much greater fear of their enemies at home than of any foreign foe, and fast heading for the destruction that will soon overwhelm their country with themselves. For all these reasons let us say that this is how our Guardians are to be housed and otherwise provided for, and let us make laws accordingly.

Glaucon:: By all means.

Adeimantus:: Socrates, how would you meet the objection that you are not making these people particularly happy? It is their own fault too, if they are not; for they are really masters of the state, and yet they get no good out of it as other rulers do, who own lands, build themselves fine houses with handsome furniture, offer private sacrifices to the gods, and entertain visitors from abroad; who possess, in fact, that gold and silver you spoke of, with everything else that is usually thought necessary for happiness. These people seem like nothing so much as a garrison of mercenaries posted in the city and perpetually mounting guard.

Socrates:: Yes, and what is more they will serve for their food only without getting a mercenary's pay, so that they will not be able to travel on their own account or to make presents to a mistress or to spend as they please in other ways, like the people who are commonly thought happy. You have forgotten to include these counts in your indictment, and many more to the same effect.

Adeimantus:: Well, take them as included now.

Socrates:: And you want to hear the answer?

Adeimantus:: Yes.

Socrates:: We shall find one, I think, by keeping to the line we have followed so far. We shall say that, though it would not be surprising if even these people were perfectly happy under such conditions, our aim in founding the commonwealth was not to make any one class specially happy, but to secure the greatest possible happiness for the community as a whole. We thought we should have the best chance of finding justice in a state so constituted, just as we should find injustice where the constitution was of the worst possible type; we could then decide the question which has been before us all this time. For the moment, we are constructing, as we believe, the state which will be happy as a whole, not trying to secure the well-being of a select few; we shall study a state of the opposite kind presently. It is as if we were coloring a statue and someone came up and blamed us for not putting the most beautiful colors on the noblest parts of the figure; the eyes, for instance, should be painted crimson, but we had made them black. We should think it a fair answer to say: Really, you must not expect us to paint eyes so handsome as not to look like eyes at all. This applies to all the parts: the question is whether, by giving each its proper color, we make the whole beautiful. So too, in the present case, you must not press us to endow our Guardians with a happiness that will make them anything rather than guardians. We could quite easily clothe our farmers in gorgeous robes, crown them with gold, and invite them to till the soil at their pleasure; or we might set our potters to lie on couches by their fire, passing round the wine and making merry, with their wheel at hand to work at whenever they felt so inclined. We could make all the rest happy in the same sort of way, and so spread this well-being through the whole community. But you must not put that idea into our heads; if we take your advice, the farmer will be no farmer, the potter no longer a potter; none of the elements that make up the community will keep its character. In many cases this does not matter so much: if a cobbler goes to the bad and pretends to be what he is not, he is not a danger to the state; but, as you must surely see, men who make only a vain show of being guardians of the laws and of the commonwealth bring the whole state to utter ruin, just as, on the other hand, its good government and well-being depend entirely on them. We, in fact, are making genuine Guardians who will be the last to bring harm upon the commonwealth; if our critic aims rather at producing a happiness like that of a party of peasants feasting at a fair, what he has in mind is something other than a civic community. So we must consider whether our aim in establishing Guardians is to secure the greatest possible happiness for them, or happiness is something of which we should watch the development in the whole commonwealth. If so, we must compel these Guardians and Auxiliaries of ours to second our efforts; and they, and all the rest with them, must be induced to make themselves perfect masters each of his own craft. In that way, as the community grows into a well-ordered whole, the several classes may be allowed such measure of happiness as their nature will compass.

Adeimantus:: I think that is an admirable reply.

Socrates:: I wonder whether you will agree on another point closely connected with that and concerned with the craftsmen. Is it not true that they also are spoilt and turned into bad workmen by wealth and by poverty alike?

Adeimantus:: How so?

Socrates:: In this way. When a potter grows rich, will he go on with his trade? Does he not become idle and careless, and consequently a worse potter? And equally, if he is too poor to provide himself with tools and other things he needs for his craft, his work will be worse, and he will not make such good craftsmen of his sons and apprentices. So work and workmen suffer from both causes, poverty and riches as well.

Adeimantus:: Evidently.

Socrates:: Here, then, are some more evils which must not elude the vigilance of our Guardians and find their way into the commonwealth: riches and poverty. The one produces luxury and idleness, the other low standards of conduct and workmanship; and both have a subversive tendency.

Adeimantus:: True enough. But I should like to know, Socrates, how our state will be able to go to war, if it has no money, especially if it is forced to fight a rich and powerful enemy.

Socrates:: Obviously it would be hard to fight one such enemy, but easier to deal with two.

Adeimantus:: What do you mean by that?

Socrates:: In the first place, if they have to fight, they will be highly trained soldiers matched against rich men.

Adeimantus:: True, so far as that goes.

Socrates:: Well then, Adeimantus, would not a single boxer in perfect training easily be a match for two wealthy and corpulent antagonists who could not box?

Adeimantus:: Not for both at once perhaps.

Socrates:: Not even if he could give ground and then turn and plant a blow on whichever came up first? Suppose he kept on doing that under a burning sun, would he not get the better of even more than two?

Adeimantus:: It would certainly not be surprising.

Socrates:: Well, don’t you think that rich people know more of the theory and practice of boxing than of the art of war?

Adeimantus:: I am sure they do.

Socrates:: In that case it will probably be an easy matter for our trained warriors to fight twice or three times their number.

Adeimantus:: I will grant you that; I believe you are right.

Socrates:: And now suppose they sent envoys to one of the two enemy countries to tell them what is in fact the truth: ‘We have no use for gold and silver; we are not allowed to possess them. But you are allowed; so join forces with us, and you may have the spoils of the other country.’ After such an offer would anyone choose to fight against tough, wiry dogs sooner than join the dogs in attacking the fat and tender sheep?

Adeimantus:: I should say not. But if a single state amasses the wealth of all the others, will not that be a danger to a state that has none?

Socrates:: I congratulate you on your idea that any state other than the one we are constructing deserves the name.

Adeimantus:: Why, what should the others be called?

Socrates:: By some grander name, for each of them is not one state, but many: two at least, which are at war with one another, one of the rich, the other of the poor, and each of these is divided into many more. To treat them all as a single state is a complete mistake. If you treat them as many and offer to make over to one class the wealth and power and even the persons of the others, you will always find that your allies outnumber your enemies. Consequently, so long as your commonwealth is ordered wisely on the lines we have laid down, it will be the greatest of all; I do not mean the most famous, but greatest in the literal sense, even though it have no more than a thousand men to fight in its defense. You will not easily find in Hellas or elsewhere a state of that size which is really one, though there are plenty which look like single states and are many times as large. Don’t you agree?

Adeimantus:: I do indeed.

Socrates:: Here, then, our Rulers will find the best principle for determining the size of the state and the proportionate amount of territory, beyond which they will not go: the state should be allowed to grow only so far as it can increase in size without loss of unity.

Adeimantus:: An excellent rule.

Socrates:: So we must lay yet another command on our Guardians: they are to take all possible care that the state shall neither be too small nor yet one that seems great but has no unity.

Adeimantus:: You think that will be easy!

Socrates:: Not so hard as the duty we mentioned earlier, of moving down any inferior child born to the Guardians into the other classes and promoting from those classes any child who is good enough to be a Guardian. Our intention there was to set the other citizens to work, one man at one task for which his nature fitted him, so that by keeping to that one business he might come to be a single man and not many. In that way the state as a whole would grow to be a single community, and not many.

Adeimantus:: You may well call that not so easy!

Socrates:: No, but really, my good Adeimantus, we are not laying upon the Guardians a whole number of burdensome duties, as you might suppose. It will all be easy enough, if only they will see to ‘the one great thing’, as the saying goes, though I would rather call it the one thing that is sufficient: education and nurture. If a sound education has made them reasonable men, they will easily see their way through all these matters as well as others which we will pass over for the moment, such as the possession of wives, marriage, and child-bearing, and the principle that here we should follow, as far as possible, the proverb which says that friends have all things in common.

Adeimantus:: Yes, all should go well then.

Socrates:: Moreover, when a community has once made a good start, its growth proceeds in a sort of cycle. If a sound system of nurture and education is maintained, it produces men of a good disposition; and these in their turn, taking advantage of such education, develop into better men than their forebears, and their breeding qualities improve among the rest, as may be seen in animals.

Adeimantus:: That is likely enough.

Socrates:: In short, then, those who keep watch over our commonwealth must take the greatest care not to overlook the least infraction of the rule against any innovation upon the established system of education either of the body or of the mind. When the poet says that men care most for ‘the newest air that hovers on the singer’s lips’, they will be afraid lest he be taken not merely to mean new songs, but to be commending a new style of music. Such innovation is not to be commended, nor should the poet be so understood. The introduction of novel fashions in music is a thing to beware of as endangering the whole fabric of society, whose most important conventions are unsettled by any revolution in that quarter. So Damon declares, and I believe him.

Adeimantus:: You may count me too among his supporters.

Socrates:: It seems, then, that it is here, in the field of music and poetry, that our Guardians must build their watch-tower.

Adeimantus:: It is certainly there that lawlessness easily creeps in unobserved.

Socrates:: Yes, in the guise of a pastime, which seems so harmless.

Adeimantus:: It would be harmless, were it not that, little by little, this lawless spirit gains a lodgment and spreads imperceptibly to manners and pursuits; and from thence with gathering force invades men’s dealings with one another, and next goes on to attack the laws and the constitution with wanton recklessness, until it ends by overthrowing the whole structure of public and private life.

Socrates:: Really? Is all that true?

Adeimantus:: So I believe.

Socrates:: Our children’s pastimes, then, as I began by saying, must be kept from the first within stricter bounds; if any license be admitted, they will catch the spirit and will never grow into law-abiding and well-conducted men. And so, when children have made a good beginning in their play and musical education has instilled a spirit of order, this reverence for law, in complete contrast to the license you were describing just now, will attend them in all their doings and foster their growth, restoring any institutions that may earlier have fallen into decay.

Adeimantus:: That is true.

Socrates:: As a consequence, they will rediscover rules of behavior which their predecessors have let fall into disuse, including matters supposed to be of little importance: how the young should be silent in the presence of their elders, give up their seats to them, and take dutiful care of their parents; not to mention details of personal appearance, such as the way their hair is cut and the clothes and shoes’ they wear. It would be silly, I think, to make laws on these matters; such habits cannot be established or kept up by written legislation. It is probable, at any rate, that the bent given by education will determine the quality of later life, by that sort of attraction which like things always have for one another, till they finally mount up to one imposing result, whether for good or ill. For that reason I should not myself be inclined to push legislation to that length.

Adeimantus:: With good reason.

Socrates:: But now look here, what are we to do about business transactions, dealings between buyers and sellers, contracts with tradesmen, actions for foul language and assault, legal proceedings and the impaneling of juries, collection and payment of any market or harbor dues that may be needed, and generally regulations for markets, police, custom houses, and all that sort of thing? Can we go so far as to legislate on any of these matters?

Adeimantus:: No; there will be no need to dictate to men of good breeding. They will soon find out for themselves what regulations are needed.

Socrates:: Yes, my friend, provided that, by the grace of heaven, they preserve the institutions we have already described.

Adeimantus:: Quite so. Otherwise they will spend their lives making a host of petty regulations and amending them in the hope of reaching perfection.

Socrates:: Living, in fact, like those invalids who are too self-indulgent to give up their unwholesome habits.

Adeimantus:: Exactly.

Socrates:: And a pretty sort of life they have of it. All they gain from being doctored is that their ailments grow more severe and complicated, though they are always expecting to be cured by every fresh remedy that someone recommends.

Adeimantus:: Yes, that is a good description of a certain type of invalid.

Socrates:: And another amusing thing about them is that they take for their worst enemy anyone who tells them frankly that until they give up eating and drinking too much and idleness and debauchery, no medicine or surgery and no charms or amulets will do them any good.

Adeimantus:: I see nothing very amusing in being in a rage with good advice.

Socrates:: You don't seem to be an admirer of people like that.

Adeimantus:: I certainly am not.

Socrates:: Then neither will you admire the same sort of behavior in a whole society. You will find something very like those invalids in some states with a bad form of government, which forbid their citizens, under pain of death, to make any radical change in the constitution, and at the same time honor as a good and profoundly wise person any obsequious flatterer who, without attempting such drastic treatment, can minister agreeably to their humors, which he is clever enough to anticipate.

Adeimantus:: The resemblance is very close, and I have nothing to say for them.

Socrates:: And what of the men who are willing and eager to minister to these invalid states? Have you no admiration for such cool temerity?

Adeimantus:: Yes, except when they are deluded by popular applause into fancying themselves to be real statesmen.

Socrates:: Why can't you make some allowances for them? When a man who cannot measure is told by a lot of equally ignorant people that he is six feet high, you cannot expect him not to believe them.

Adeimantus:: No, not in that instance.

Socrates:: Don't be so hard upon them, then. Surely there is something very amusing in the way they go on enacting their petty laws and amending them, always imagining they will find some way to put an end to fraud in business and in all those other transactions I was speaking of. They have no idea that really they are cutting off the heads of a hydra.

Adeimantus:: It is true; that is all they are doing.

Socrates:: I should have thought that laws and institutions of that order do not deserve the attention of a law-giver worthy of the name, no matter whether the constitution be good or bad. If it is bad, they are useless and effect nothing; if good, some are such as anyone could devise, and the rest will follow of themselves from the practices we have already instituted.

Adeimantus:: Then, what is there left for us to do in the way of legislation?

Socrates:: For us, nothing; but there are institutions of the highest worth and importance that must be left to the Delphian Apollo.

Adeimantus:: What are they?

Socrates:: The founding of temples, sacrifices, and the cults of gods, demigods, and heroes; the burial of the dead, and services to propitiate the powers of the other world. These are matters we do not understand ourselves, and in founding our commonwealth we shall be wise to consult no other religious authority than our national divinity. Indeed in religious matters, the authority of this god, from his seat at the very navel of the earth, may be said to extend to all mankind.

Adeimantus:: Good. Let us do so.

Socrates:: So now at last, son of Ariston, your commonwealth is established. The next thing is to bring to bear upon it all the light you can get from any quarter, with the help of your brother and Polemarchus and all the rest, in the hope that we may see where justice is to be found in it and where injustice, how they differ, and which of the two will bring happiness to its possessor, no matter whether god and men see that he has it or not.

Glaucon:: Nonsense; you promised to conduct the search yourself, because it would be a sin not to uphold justice by every means in your power.

Socrates:: That is true; I must do as you say, but you must all help.

Glaucon:: We will.

Socrates:: I suspect, then, we may find what we are looking for in this way. I take it that our state, having been founded and built up on the right lines, is good in the complete sense of the word.

Glaucon:: It must be.

Socrates:: Obviously, then, it is wise, brave, temperate, and just.

Glaucon:: Obviously.

Socrates:: Then if we find some of these qualities in it, the remainder will be the one we have not found. It is as if we were looking somewhere for one of any four things: if we detected that one immediately, we should be satisfied; whereas if we recognized the other three first, that would be enough to indicate the thing we wanted; it could only be the remaining one. So here we have four qualities. Had we not better follow that method in looking for the one we want?

Glaucon:: Surely.

Socrates:: To begin then: the first quality to come into view in our state seems to be its wisdom; and there appears to be something odd about this quality.

Glaucon:: What is there odd about it?

Socrates:: I think the state we have described really has wisdom; for it will be prudent in counsel, won’t it?

Glaucon:: Yes.

Socrates:: And prudence in counsel is clearly a form of knowledge; good counsel cannot be due to ignorance and stupidity.

Glaucon:: Clearly.

Socrates:: But there are many and various kinds of knowledge in our Commonwealth. There is the knowledge possessed by the carpenters or the smiths, and the knowledge how to raise crops. Are we to call the state wise and prudent on the strength of these forms of skill?

Glaucon:: No; they would only make it good at furniture-making or working in copper or agriculture.

Socrates:: Well then, is there any form of knowledge, possessed by some among the citizens of our new-founded commonwealth, which will enable it to take thought, not for some particular interest, but for the best possible conduct of the state as a whole in its internal and external relations?

Glaucon:: Yes, there is.

Socrates:: What is it, and where does it reside?

Glaucon:: It is precisely that art of guardianship which resides in those Rulers whom we just now called Guardians in the full sense.

Socrates:: And what would you call the state on the strength of that knowledge?

Glaucon:: Prudent and truly wise.

Socrates:: And do you think there will be more or fewer of these genuine Guardians in our state than there will be smiths?

Glaucon:: Far fewer.

Socrates:: Fewer, in fact, than any of those other groups who are called after the kind of skill they possess?

Glaucon:: Much fewer.

Socrates:: So, if a state is constituted on natural principles, the wisdom it possesses as a whole will be due to the knowledge residing in the smallest part, the one which takes the lead and governs the rest. Such knowledge is the only kind that deserves the name of wisdom, and it appears to be ordained by nature that the class privileged to possess it should be the smallest of all.

Glaucon:: Quite true.

Socrates:: Here then we have more or less made out one of our four qualities and its seat in the structure of the commonwealth.

Glaucon:: To my satisfaction, at any rate.

Socrates:: Next there is courage. It is not hard to discern that quality or the part of the community in which it resides so as to entitle the whole to be called brave.

Glaucon:: Why do you say so?

Socrates:: Because anyone who speaks of a state as either brave or cowardly can only be thinking of that part of it which takes the field and fights in its defense; the reason being, I imagine, that the character of the state is not determined by the bravery or cowardice of the other parts.

Glaucon:: No.

Socrates:: Courage, then, is another quality which a community owes to a certain part of itself. And its being brave will mean that, in this part, it possesses the power of preserving, in all circumstances, a conviction about the sort of things that it is right to be afraid of—the conviction implanted by the education which the law-giver has established. Is not that what you mean by courage?

Glaucon:: I do not quite understand. Will you say it again?

Socrates:: I am saying that courage means preserving something.

Glaucon:: Yes, but what?

Socrates:: The conviction, inculcated by lawfully established education, about the sort of things which may rightly be feared. When I added ‘in all circumstances’, I meant preserving it always and never abandoning it, whether under the influence of pain or of pleasure, of desire or of fear. If you like, I will give an illustration.

Glaucon:: Please do.

Socrates:: You know how dyers who want wool to take a purple dye, first select the white wool from among all the other colors, next treat it very carefully to make it take the dye in its full brilliance, and only then dip it in the vat. Dyed in that way, wool gets a fast color, which no washing, even with soap, will rob of its brilliance; whereas if they choose wool of any color but white, or if they neglect to prepare it, you know what happens.

Glaucon:: Yes, it looks washed-out and ridiculous.

Socrates:: That illustrates the result we were doing our best to achieve when we were choosing our fighting men and training their minds and bodies. Our only purpose was to contrive influences whereby they might take the color of our institutions like a dye, so that, in virtue of having both the right temperament and the right education, their convictions about what ought to be feared and on all other subjects might be indelibly fixed, never to be washed out by pleasure and pain, desire and fear, solvents more terribly effective than all the soap and fuller’s earth in the world. Such a power of constantly preserving, in accordance with our institutions, the right conviction about the things which ought, or ought not, to be feared, is what I call courage. That is my position, unless you have some objection to make.

Glaucon:: None at all; if the belief were such as might be found in a slave or an animal—correct, but not produced by education—you would hardly describe it as in accordance with our institutions, and you would give it some other name than courage.

Socrates:: Quite true.

Glaucon:: Then I accept your account of courage.

Socrates:: You will do well to accept it, at any rate as applying to the courage of the ordinary citizen; if you like we will go into it more fully some other time. At present we are in search of justice, rather than of courage; and for that purpose we have said enough.

Glaucon:: I quite agree.

Socrates:: Two qualities, I went on, still remain to be made out in our state, temperance and the object of our whole inquiry, justice. Can we discover justice without troubling ourselves further about temperance?

Glaucon:: I do not know, and I would rather not have justice come to light first, if that means that we should not go on to consider temperance. So if you want to please me, take temperance first.

Socrates:: Of course I have every wish to please you.

Glaucon:: Do go on then.

Socrates:: I will. At first sight, temperance seems more like some sort of concord or harmony than the other qualities did.

Glaucon:: How so?

Socrates:: Temperance surely means a kind of orderliness, a control of certain pleasures and appetites. People use the expression, ‘master of oneself’, whatever that means, and various other phrases that point the same way.

Glaucon:: Quite true.

Socrates:: Is not ‘master of oneself’ an absurd expression? A man who was master of himself would presumably be also subject to himself, and the subject would be master; for all these terms apply to the same person.

Glaucon:: No doubt.

Socrates:: I think, however, the phrase means that within the man himself, in his soul, there is a better part and a worse; and that he is his own master when the part which is better by nature has the worse under its control. It is certainly a term of praise; whereas it is considered a disgrace, when, through bad breeding or bad company, the better part is overwhelmed by the worse, like a small force outnumbered by a multitude. A man in that condition is called a slave to himself and intemperate.

Glaucon:: Probably that is what is meant.

Socrates:: Then now look at our newly founded state and you will find one of these two conditions realized there. You will agree that it deserves to be called master of itself, if temperance and self-mastery exist where the better part rules the worse.

Glaucon:: Yes, I can see that is true.

Socrates:: It is also true that the great mass of multifarious appetites and pleasures and pains will be found to occur chiefly in children and women and slaves, and, among free men so called, in the inferior multitude; whereas the simple and moderate desires which, with the aid of reason and right belief, are guided by reflection, you will find only in a few, and those with the best inborn dispositions and the best educated.

Glaucon:: Yes, certainly.

Socrates:: Do you see that this state of things will exist in your commonwealth, where the desires of the inferior multitude will be controlled by the desires and wisdom of the superior few? Hence, if any society can be called master of itself and in control of pleasures and desires, it will be ours.

Glaucon:: Quite so.

Socrates:: On all these grounds, then, we may describe it as temperate. Furthermore, in our state, if anywhere, the governors and the governed will share the same conviction on the question who ought to rule. Don’t you think so?

Glaucon:: I am quite sure of it.

Socrates:: Then, if that is their state of mind, in which of the two classes of citizens will temperance reside—in the governors or in the governed?

Glaucon:: In both, I suppose.

Socrates:: So we were not wrong in divining a resemblance between temperance and some kind of harmony. Temperance is not like courage and wisdom, which made the state wise and brave by residing each in one particular part. Temperance works in a different way; it extends throughout the whole gamut of the state, producing a consonance of all its elements from the weakest to the strongest as measured by any standard you like to take—wisdom, bodily strength, numbers, or wealth. So we are entirely justified in identifying with temperance this unanimity or harmonious agreement between the naturally superior and inferior elements on the question which of the two should govern, whether in the state or in the individual.

Glaucon:: I fully agree.

Socrates:: Good. We have discovered in our commonwealth three out of our four qualities, to the best of our present judgment. What is the remaining one, required to make up its full complement of goodness? For clearly this will be justice.

Glaucon:: Clearly.

Socrates:: Now is the moment, then, Glaucon, for us to keep the closest watch, like huntsmen standing round a covert, to make sure that justice does not slip through and vanish undetected. It must certainly be somewhere hereabouts; so keep your eyes open for a view of the quarry, and if you see it first, give me the alert.

Glaucon:: I wish I could; but you will do better to give me a lead and not count on me for more than eyes to see what you show me.

Socrates:: Pray for luck, then, and follow me.

Glaucon:: I will, if you will lead on.

Socrates:: The thicket looks rather impenetrable; too dark for it to be easy to start up the game. However, we must push on.

Glaucon:: Of course we must.

Socrates:: Here I gave the view halloo. Glaucon, I exclaimed, I believe we are on the track and the quarry is not going to escape us altogether.

Glaucon:: That is good news.

Socrates:: Really, we have been extremely stupid. All this time the thing has been under our very noses from the start, and we never saw it We have been as absurd as a person who hunts for something he has all the time got in his hand. Instead of looking at the thing, we have been staring into the distance. No doubt that is why it escaped us.

Glaucon:: What do you mean?

Socrates:: I believe we have been talking about the thing all this while without ever understanding that we were giving some sort of account of it.

Glaucon:: Do come to the point. I am all ears.

Socrates:: Listen, then, and judge whether I am right. You remember how, when we first began to establish our commonwealth and several times since, we have laid down, as a universal principle, that everyone ought to perform the one function in the community for which his nature best suited him. Well, I believe that that principle, or some form of it, is justice.

Glaucon:: We certainly laid that down.

Socrates:: Yes, and surely we have often heard people say that justice means minding one's own business and not meddling with other men's concerns; and we have often said so ourselves.

Glaucon:: We have.

Socrates:: Well, my friend, it may be that this minding of one's own business, when it takes a certain form, is actually the same thing as justice. Do you know what makes me think so?

Glaucon:: No, tell me.

Socrates:: I think that this quality which makes it possible for the three we have already considered, wisdom, courage, and temperance, to take their place in the commonwealth, and so long as it remains present secures their continuance, must be the remaining one. And we said that, when three of the four were found, the one left over would be justice.

Glaucon:: It must be so.

Socrates:: Well now, if we had to decide which of these qualities will contribute most to the excellence of our commonwealth, it would be hard to say whether it was the unanimity of rulers and subjects, or the soldier’s fidelity to the established conviction about what is, or is not, to be feared, or the watchful intelligence of the Rulers; or whether its excellence were not above all due to the observance by everyone, child or woman, slave or freeman or artisan, ruler or ruled, of this principle that each one should do his own proper work without interfering with others.

Glaucon:: It would be hard to decide, no doubt.

Socrates:: It seems, then, that this principle can at any rate claim to rival wisdom, temperance, and courage as conducing to the excellence of a state. And would you not say that the only possible competitor of these qualities must be justice?

Glaucon:: Yes, undoubtedly.

Socrates:: Here is another thing which points to the same conclusion. The judging of law-suits is a duty that you will lay upon your Rulers, isn’t it?

Glaucon:: Of course.

Socrates:: And the chief aim of their decisions will be that neither party shall have what belongs to another or be deprived of what is his own.

Glaucon:: Yes.

Socrates:: Because that is just?

Glaucon:: Yes.

Socrates:: So here again justice admittedly means that a man should possess and concern himself with what properly belongs to him.

Glaucon:: True.

Socrates:: Again, do you agree with me that no great harm would be done to the community by a general interchange of most forms of work, the carpenter and the cobbler exchanging their positions and their tools and taking on each other's jobs, or even the same man undertaking both?

Glaucon:: Yes, there would not be much harm in that.

Socrates:: But I think you will also agree that another kind of interchange would be disastrous. Suppose, for instance, someone whom nature designed to be an artisan or tradesman should be emboldened by some advantage, such as wealth or command of votes or bodily strength, to try to enter the order of fighting men; or some member of that order should aspire, beyond his merits, to a seat in the council-chamber of the Guardians. Such interference and exchange of social positions and tools, or the attempt to combine all these forms of work in the same person, would be fatal to the commonwealth.

Glaucon:: Most certainly.

Socrates:: Where there are three orders, then, any plurality of functions or shifting from one order to another is not merely utterly harmful to the community, but one might fairly call it the extreme of wrongdoing. And you will agree that to do the greatest of wrongs to one's own community is injustice.

Glaucon:: Surely.

Socrates:: This, then, is injustice. And, conversely, let us repeat that when each order—tradesman, Auxiliary, Guardian—keeps to its own proper business in the commonwealth and does its own work, that is justice and what makes a just society.

Glaucon:: I entirely agree.

Socrates:: We must not be too positive yet. If we find that this same quality when it exists in the individual can equally be identified with justice, then we can at once give our assent; there will be no more to be said; otherwise, we shall have to look further. For the moment, we had better finish the inquiry which we began with the idea that it would be easier to make out the nature of justice in the individual if we first tried to study it in something on a larger scale. That larger thing we took to be a state, and so we set about constructing the best one we could, being sure of finding justice in a state that was good. The discovery we made there must now be applied to the individual. If it is confirmed, all will be well; but if we find that justice in the individual is something different, we must go back to the state and test our new result. Perhaps if we brought the two cases into contact like flint and steel, we might strike out between them the spark of justice, and in its light confirm the conception in our own minds.

Glaucon:: A good method. Let us follow it.

Socrates:: Now, if two things, one large, the other small, are called by the same name, they will be alike in that respect to which the common name applies. Accordingly, in so far as the quality of justice is concerned, there will be no difference between a just man and a just society.

Glaucon:: No.

Socrates:: Well, but we decided that a society was just when each of the three types of human character it contained performed its own function; and again, it was temperate and brave and wise by virtue of certain other affections and states of mind of those same types.

Glaucon:: True.

Socrates:: Accordingly, my friend, if we are to be justified in attributing those same virtues to the individual, we shall expect to find that the individual soul contains the same three elements and that they are affected in the same way as are the corresponding types in society.

Glaucon:: That follows.

Socrates:: Here, then, We have stumbled upon another little problem: Does the soul contain these three elements or not?

Glaucon:: Not such a very little one, I think. It may be a true saying, Socrates, that what is worth while is seldom easy.

Socrates:: Apparently; and let me tell you, Glaucon, it is my belief that we shall never reach the exact truth in this, matter by following our present methods of discussion; the road leading to that goal is longer and more laborious. However, perhaps we can find an answer that will be up to the standard we have so far maintained in our speculations.

Glaucon:: Is not that enough? I should be satisfied for the moment.

Socrates:: Well, it will more than satisfy me.

Glaucon:: Don’t be disheartened, then, but go on.

Socrates:: Surely we must admit that the same elements and characters that appear in the state must exist in every one of us; where else could they have come from? It would be absurd to imagine that among peoples with a reputation for a high-spirited character, like the Thracians and Scythians and northerners generally, the states have not derived that character from their individual members; or that it is otherwise with the love of knowledge, which would be ascribed chiefly to our own part of the world, or with the love of money, which one would specially connect with Phoenicia and Egypt.

Glaucon:: Certainly.

Socrates:: So far, then, we have a fact which is easily recognized. But here the difficulty begins. Are we using the same part of ourselves in all these three experiences, or a different part in each? Do we gain knowledge with one part, feel anger with another, and with yet a third desire the pleasures of food, sex, and so on? Or is the whole soul at work in every impulse and in all these forms of behavior? The difficulty is to answer that question satisfactorily.

Glaucon:: I quite agree.

Socrates:: Let us approach the problem whether these elements are distinct or identical in this way. It is clear that the same thing cannot act in two opposite ways or be in two opposite states at the same time, with respect to the same part of itself, and in relation to the same object. So if we find such contradictory actions or states among the elements concerned, we shall know that more than one must have been involved.

Glaucon:: Very well.

Socrates:: Consider this proposition of mine, then. Can the same thing, at the same time and with respect to the same part of itself, be at rest and in motion?

Glaucon:: Certainly not.

Socrates:: We had better state this principle in still more precise terms, to guard against misunderstanding later on. Suppose a man is standing still, but moving his head and arms. We should not allow anyone to say that the same man was both at rest and in motion at the same time, but only that part of him was at rest, part in motion. Isn't that so?

Glaucon:: Yes.

Socrates:: An ingenious objector might refine still further and argue that a peg-top, spinning with its peg fixed at the same spot, or indeed any body that revolves in the same place, is both at rest and in motion as a whole. But we should not agree, because the parts in respect of which such a body is moving and at rest are not the same. It contains an axis and a circumference; and in respect of the axis it is at rest inasmuch as the axis is not inclined in any direction, while in respect of the circumference it revolves; and if, while it is spinning, the axis does lean out of the perpendicular in all directions, then it is in no way at rest.

Glaucon:: That is true.

Socrates:: No objection of that sort, then, will disconcert us or make us believe that the same thing can ever act or be acted upon in two opposite ways, or be two opposite things, at the same time, in respect of the same part of itself, and in relation to the same object.

Glaucon:: I can answer for myself at any rate.

Socrates:: Well, anyhow, as we do not want to spend time in reviewing all such objections to make sure that they are unsound, let us proceed on this assumption, with the understanding that, if we ever come to think otherwise, all the consequences based upon it will fall to the ground.

Glaucon:: Yes, that is a good plan.

Socrates:: Now, would you class such things as assent and dissent, striving after something and refusing it, attraction and repulsion, as pairs of opposite actions or states of mind—no matter which?

Glaucon:: Yes, they are opposites.

Socrates:: And would you not class all appetites such as hunger and thirst, and again willing and wishing, with the affirmative members of those pairs I have just mentioned? For instance, you would say that the soul of a man who desires something is striving after it, or trying to draw to itself the thing it wishes to possess, or again, in so far as it is willing to have its want satisfied, it is giving its assent to its own longing, as if to an inward question.

Glaucon:: Yes.

Socrates:: And, on the other hand, disinclination, unwillingness, and dislike, we should class on the negative side with acts of rejection or repulsion.

Glaucon:: Of course.

Socrates:: That being so, shall we say that appetites form one class, the most conspicuous being those we call thirst and hunger?

Glaucon:: Yes.

Socrates:: Thirst being desire for drink, hunger for food?

Glaucon:: Yes.

Socrates:: Now, is thirst, just in so far as it is thirst, a desire in the soul for anything more than simply drink? Is it, for instance, thirst for hot drink or for cold, for much drink or for little, or in a word for drink of any particular kind? Is it not rather true that you will have a desire for cold drink only if you are feeling hot as well as thirsty, and for hot drink only if you are feeling cold; and if you want much drink or little, that will be because your thirst is a great thirst or a little one? But, just in itself, thirst or hunger is a desire for nothing more than its natural object, drink or food, pure and simple.

Glaucon:: Yes, each desire, just in itself, is simply for its own natural object. When the object is of such and such a particular kind, the desire will be correspondingly qualified.

Socrates:: We must be careful here, or we might be troubled by the objection that no one desires mere food and drink, but always wholesome food and drink. We shall be told that what we desire is always something that is good; so if thirst is a desire, its object must be, like that of any other desire, something—drink or whatever it may be—that will be good for one.

Glaucon:: Yes, there might seem to be something in that objection.

Socrates:: But surely, wherever you have two correlative terms, if one is qualified, the other must always be qualified too; whereas if one is unqualified, so is the other.

Glaucon:: I don't understand.

Socrates:: Well, 'greater' is a relative term; and the greater is greater than the less; if it is much greater, then the less is much less; if it is greater at some moment, past or future, then the less is less at that same moment. The same principle applies to all such correlatives, like 'more' and 'fewer', 'double' and 'half'; and again to terms like 'heavier' and 'lighter', 'quicker' and 'slower', and to things like hot and cold.

Glaucon:: Yes.

Socrates:: Or take the various branches of knowledge: is it not the same there? The object of knowledge pure and simple is the knowable—if that is the right word—without any qualification; whereas a particular kind of knowledge has an object of a particular kind. For example, as soon as men learnt how to build houses, their craft was distinguished from others under the name of architecture, because it had a unique character, which was itself due to the character of its object; and all other branches of craft and knowledge were distinguished in the same way.

Glaucon:: True.

Socrates:: This, then, if you understand me now, is what I meant by saying that, where there are two correlatives, the one is qualified if, and only if, the other is so. I am not saying that the one must have the same quality as the other—that the science of health and disease is itself healthy and diseased, or the knowledge of good and evil is itself good and evil—but only that, as soon as you have a knowledge that is restricted to a particular kind of object,-namely health and disease, the knowledge itself becomes a particular kind of knowledge. Hence we no longer call it merely knowledge, which would have for its object whatever can be known, but we add the qualification and call it medical science.

Glaucon:: I understand now and I agree.

Socrates:: Now, to go back to thirst: is not that one of these relative terms? It is essentially thirst for something.

Glaucon:: Yes, for drink.

Socrates:: And if the drink desired is of a certain kind, the thirst will be correspondingly qualified. But thirst which is just simply thirst is not for drink of any particular sort—much or little, good or bad—but for drink pure and simple.

Glaucon:: Quite so.

Socrates:: We conclude, then, that the soul of a thirsty man, just in so far as he is thirsty, has no other wish than to drink. That is the object of its craving, and towards that it is impelled.

Glaucon:: That is clear.

Socrates:: Now if there is ever something which at the same time pulls it the opposite way, that something must be an element in the soul other than the one which is thirsting and driving it like a beast to drink; in accordance with our principle that the same thing cannot behave in two opposite ways at the same time and towards the same object with the same part of itself. It is like an archer drawing the bow: it is not accurate to say that his hands are at the same time both pushing and pulling it. One hand does the pushing, the other the pulling.

Glaucon:: Exactly.

Socrates:: Now, is it sometimes true that people are thirsty and yet unwilling to drink?

Glaucon:: Yes, often.

Socrates:: What, then, can one say of them, if not that their soul contains something which urges them to drink and something which holds them back, and that this latter is a distinct thing and overpowers the other?

Glaucon:: I agree.

Socrates:: And is it not true that the intervention of this inhibiting principle in such cases always has its origin in reflection; whereas the impulses driving and dragging the soul are engendered by external influences and abnormal conditions?

Glaucon:: Evidently.

Socrates:: We shall have good reason, then, to assert that they are two distinct principles. We may call that part of the soul whereby it reflects, rational; and the other, with which it feels hunger and thirst and is distracted by sexual passion and all the other desires, we will call irrational appetite, associated with pleasure in the replenishment of certain wants.

Glaucon:: Yes, there is good ground for that view.

Socrates:: Let us take it, then, that we have now distinguished two elements in the soul. What of that passionate element which makes us feel angry and indignant? Is that a third, or identical in nature with one of those two?

Glaucon:: It might perhaps be identified with appetite.

Socrates:: I am more inclined to put my faith in a story I once heard about Leontius, son of Aglaion. On his way up from the Piraeus outside the north wall, he noticed the bodies of some criminals lying on the ground, with the executioner standing by them. He wanted to go and look at them, but at the same time he was disgusted and tried to turn away. He struggled for some time and covered his eyes, but at last the desire was too much for him. Opening his eyes wide, he ran up to the bodies and cried, 'There you are, curse you; feast yourselves on this lovely sight!'

Glaucon:: Yes, I have heard that story too.

Socrates:: The point of it surely is that anger is sometimes in conflict with appetite, as if they were two distinct principles. Do we not often find a man whose desires would force him to go against his reason, reviling himself and indignant with this part of his nature which is trying to put constraint on him? It is like a struggle between two factions, in which indignation takes the side of reason. But I believe you have never observed, in yourself or anyone else, indignation make common cause with appetite in behavior which reason decides to be wrong.

Glaucon:: No, I am sure I have not.

Socrates:: Again, take a man who feels he is in the wrong. The more generous his nature, the less can he be indignant at any suffering, such as hunger and cold, inflicted by the man he has injured. He recognizes such treatment as just, and, as I say, his spirit refuses to be roused against it.

Glaucon:: That is true.

Socrates:: But now contrast one who thinks it is he that is being wronged. His spirit boils with resentment and sides with the right as he conceives it. Persevering all the more for the hunger and cold and other pains he suffers, it triumphs and will not give in until its gallant struggle has ended in success or death; or until the restraining voice of reason, like a shepherd calling off his dog, makes it relent.

Glaucon:: An apt comparison; and in fact it fits the relation of our Auxiliaries to the Rulers: they were to be like watch-dogs obeying the shepherds of the commonwealth.

Socrates:: Yes, you understand very well what I have in mind. But do you see how we have changed our view? A moment ago we were supposing this spirited element to be something of the nature of appetite; but now it appears that, when the soul is divided into factions, it is far more ready to be up in arms on the side of reason.

Glaucon:: Quite true.

Socrates:: Is it, then, distinct from the rational element or only a particular form of it, so that the soul, will contain no more than two elements, reason and appetite? Or is the soul like the state, which had three orders to hold it together, traders, Auxiliaries, and counselors? Does the spirited element make a third, the natural auxiliary of reason, when not corrupted by bad upbringing?

Glaucon:: It must be a third.

Socrates:: Yes, provided it can be shown to be distinct from reason, as we saw it was from appetite.

Glaucon:: That is easily proved. You can see that much in children: they are full of passionate feelings from their very birth; but some, I should say, never become rational, and most of them only late in life.

Socrates:: A very sound observation, the truth of which may also be seen in animals. And besides, there is the witness of Homer in that line I quoted before: ‘He smote his breast and spoke, chiding his heart.’ The poet is plainly thinking of the two elements as distinct, when he makes the one which has chosen the better course after reflection rebuke the other for its unreasoning passion.

Glaucon:: I entirely agree.

Socrates:: And so, after a stormy passage, we have reached the land. We are fairly agreed that the same three elements exist alike in the state and in the individual soul.

Glaucon:: That is so.

Socrates:: Does it not follow at once that state and individual will be wise or brave by virtue of the same element in each and in the same way? Both will possess in the same manner any quality that makes for excellence.

Glaucon:: That must be true.

Socrates:: Then it applies to justice: we shall conclude that a man is just in the same way that a state was just. And we have surely not forgotten that justice in the state meant that each of the three orders in it was doing its own proper work. So we may henceforth bear in mind that each one of us likewise will be a just person, fulfilling his proper function, only if the several parts of our nature fulfill theirs.

Glaucon:: Certainly.

Socrates:: And it will be the business of reason to rule with wisdom and forethought on behalf of the entire soul; while the spirited element ought to act as its subordinate and ally. The two will be brought into accord, as we said earlier, by that combination of mental and bodily training which will tune up one string of the instrument and relax the other, nourishing the reasoning part on the study of noble literature and allaying the other's wildness by harmony and rhythm. When both have been thus nurtured and trained to know their own true functions, they must be set in command over the appetites, which form the greater part of each man's soul and are by nature insatiably covetous. They must keep watch lest this part, by battening on the pleasures that are called bodily, should grow so great and powerful that it will no longer keep to its own work, but will try to enslave the others and usurp a dominion to which it has no right, thus turning the whole of life upside down. At the same time, those two together will be the best of guardians for the entire soul and for the body against all enemies from without: the one will take counsel, while the other will do battle, following its ruler's commands and by its own bravery giving effect to the ruler’s designs.

Glaucon:: Yes, that is all true.

Socrates:: And so we call an individual brave in virtue of this spirited part of his nature, when, in spite of pain or pleasure, it holds fast to the injunctions of reason about what he ought or ought not to be afraid of.

Glaucon:: True.

Socrates:: And wise in virtue of that small part which rules and issues these injunctions, possessing as it does the knowledge of what is good for each of the three elements and for all of them in common.

Glaucon:: Certainly.

Socrates:: And, again, temperate by reason of the unanimity and concord of all three, when there is no internal conflict between the ruling element and its two subjects, but all are agreed that reason should be ruler.

Glaucon:: Yes, that is an exact account of temperance, whether in the state or in the individual.

Socrates:: Finally, a man will be just by observing the principle we have so often stated.

Glaucon:: Necessarily.

Socrates:: Now is there any indistinctness in our vision of justice, that might make it seem somehow different from what we found it to be in the state?

Glaucon:: I don’t think so.

Socrates:: Because, if we have any lingering doubt, we might make sure by comparing it with some commonplace notions. Suppose, for instance, that a sum of money were entrusted to our state or to an individual of corresponding character and training, would anyone imagine that such a person would be specially likely to embezzle it?

Glaucon:: No.

Socrates:: And would he not be incapable of sacrilege and theft, or of treachery to friend or country; never false to an oath or any other compact; the last to be guilty of adultery or of neglecting parents or the due service of the gods?

Glaucon:: Yes.

Socrates:: And the reason for all this is that each part of his nature is exercising its proper function, of ruling or of being ruled.

Glaucon:: Yes, exactly.

Socrates:: Are you satisfied, then, that justice is the power which produces states or individuals of whom that is true, or must we look further?

Glaucon:: There is no need; I am quite satisfied.

Socrates:: And so our dream has come true—I mean the inkling we had that, by some happy chance, we had lighted upon a rudimentary form of justice from the very moment when we set about founding our commonwealth. Our principle that the born shoemaker or carpenter had better stick to his trade turns Out to have been an adumbration of justice; and that is why it has helped us. But in reality justice, though evidently analogous to this principle, is not a matter of external behavior, but of the inward self and of attending to all that is, in the fullest sense, a man's proper concern. The just man does not allow the several elements in his soul to usurp one another's functions; he is indeed one who sets his house in order, by self-mastery and discipline coming to be at peace with himself, and bringing into tune those three parts, like the terms in the proportion of a musical scale, the highest and lowest notes and the mean between them, with all the intermediate intervals. Only when he has linked these parts together in well-tempered harmony and has made himself one man instead of many, will he be ready to go about whatever he may have to do, whether it be making money and satisfying bodily wants, or business transactions, or the affairs of state. In all these fields when he speaks of just and honorable conduct, he will mean the behavior that helps to produce and to preserve this habit of mind; and by wisdom he will mean the knowledge which presides over such conduct. Any action which tends to break down this habit will be for him unjust; and the notions governing it he will call ignorance and folly.

Glaucon:: That is perfectly true, Socrates.

Socrates:: Good. I believe we should not be thought altogether mistaken, if we claimed to have discovered the just man and the just state, and wherein their justice consists.

Glaucon:: Indeed we should not.

Socrates:: Shall we make that claim, then?

Glaucon:: Yes, we will.

Socrates:: So be it. Next, I suppose, we have to consider injustice.

Glaucon:: Evidently.

Socrates:: This must surely be a sort of civil strife among the three elements, whereby they usurp and encroach upon one another's functions and some one part of the soul rises up in rebellion against the whole, claiming a supremacy to which it has no right because its nature fits it only to be the servant of the ruling principle. Such turmoil and aberration we shall, I think, identify with injustice, intemperance, cowardice, ignorance, and in a word with all wickedness.

Glaucon:: Exactly.

Socrates:: And now that we know the nature of justice and injustice, we can be equally clear about what is meant by acting justly and again by unjust action and wrongdoing.

Glaucon:: How do you mean?

Socrates:: Plainly, they are exactly analogous to those wholesome and unwholesome activities which respectively produce a healthy or unhealthy condition in the body; in the same way just and unjust conduct produce a just or unjust character. Justice is produced in the soul, like health in the body, by establishing the elements concerned in their natural relations of control and subordination, whereas injustice is like disease and means that this natural order is inverted.

Glaucon:: Quite so.

Socrates:: It appears, then, that virtue is as it were the health and comeliness and well-being of the soul, as wickedness is disease, deformity, and weakness.

Glaucon:: True.

Socrates:: And also that virtue and wickedness are brought about by one’s way of life, honorable or disgraceful.

Glaucon:: That follows.

Socrates:: So now it only remains to consider which is the more profitable course: to do right and live honorably and be just, whether or not anyone knows what manner of man you are, or to do wrong and be unjust, provided that you can escape the chastisement which might make you a better man.

Glaucon:: But really, Socrates, it seems to me ridiculous to ask that question now that the nature of justice and injustice has been brought to light. People think that all the luxury and wealth and power in the world cannot make life worth living when the bodily constitution is going to rack and ruin; and are we to believe that, when the very principle whereby we live is deranged and corrupted, life will be worth living so long as a man can do as he will, and wills to do anything rather than to free himself from vice and wrongdoing and to win justice and virtue?

Socrates:: Yes, it is a ridiculous question. Nevertheless, we are now within sight of the clearest possible proof of our conclusions, and we ought not to slacken our efforts.

Glaucon:: No, anything rather than that.

Socrates:: If you will take your stand with me, then, on this point of vantage to which we have climbed, you shall see all the forms that evil takes, or at least all that it seems worth while to look at.

Glaucon:: Lead the way and tell me what you see.

Socrates:: What I see is that, whereas there is only one form of excellence, imperfection exists in innumerable shapes, of which there are four that specially deserve notice.

Glaucon:: What do you mean?

Socrates:: It looks as if there were as many types of character as there are distinct varieties of political constitution.

Glaucon:: How many?

Socrates:: Five of each.

Glaucon:: Will you define them?

Socrates:: Yes. One form of constitution will be the form we ‘have been describing, though it may be called by two names: monarchy, when there is one man who stands out above the rest of the Rulers; aristocracy, when there are more than one.

Glaucon:: True.

Socrates:: That, then, I regard as a single form; for, so long as they observe our principles of upbringing and education, whether the Rulers be one or more, they will not subvert the important institutions in our commonwealth.

Glaucon:: Naturally not.

Socrates:: Such, then, is the type of state or constitution that I call good and right, and the corresponding type of man. By this standard, the other forms in which a state or an individual character may be organized are depraved and wrong. There are four of these vicious forms.

Glaucon:: What are they?

Socrates:: Here I was going on to describe these forms in the order in which, as I thought, they develop one from another, when Polemarchus, who was sitting a little way from Adeimantus, reached out his hand and took hold of his garment by the shoulder. Leaning forward and drawing Adeimantus towards him, he whispered something in his ear, of which I only caught the words: What shall we do? Shall we leave it alone?

Adeimantus, raising his voice said;

Adeimantus:: Certainly not.

Socrates:: What is this, I asked, that you are not going to leave alone?

Adeimantus:: You.

Socrates:: Why, in particular? I inquired.

Adeimantus:: Because we think you are shirking the discussion of a very important part of the subject and trying to cheat us out of an explanation. Everyone, you said, must of course see that the maxim, ‘friends have all things in common’ applies to women and children. You thought we should pass over such a casual remark!

Socrates:: But wasn’t that right, Adeimantus?

Adeimantus:: Yes, but ‘right’ in this case, as in others, needs to be defined. There may be many ways of having things in common, and you must tell us which you mean. We have been waiting a long time for you to say something about the conditions in which children are to be born and brought up and your whole plan of having wives and children held in common. This seems to us a matter in which right or wrong management will make all the difference to society; and now, instead of going into it thoroughly, you are passing on to some other form of constitution. So we came to the resolution which you overheard, not to let you off discussing it as fully as all the other institutions.

Glaucon:: I will vote for your resolution too.

Thrasymachus:: In fact, Socrates, you may take it as carried unanimously.

Socrates:: You don’t know what you are doing, in holding me up like this. You want to start, all over again, on an enormous subject, just as I was rejoicing at the idea that we had done with this form of constitution. I was only too glad that my casual remark should be allowed to pass. And now, when you demand an explanation, you little know what a swarm of questions you are stirring up. I let it alone, because I foresaw no end of trouble.

Thrasymachus:: Well, what do you think we came here for—to play pitch-and-toss or to listen to a discussion?

Socrates:: A discussion, no doubt; but within limits.

Glaucon:: No man of sense, would think the whole of life too long to spend on questions of this importance. But never mind about us; don’t be faint-hearted yourself. Tell us what you think about this question: how our Guardians are to have wives and children in common, and how they will bring up the young in the interval between their birth and education, which is thought to be the most difficult time of all. Do try to explain how all this is to be arranged.

Socrates:: I wish it were as easy as you seem to think. These arrangements are even more open to doubt than any we have so far discussed. It may be questioned whether the plan is feasible, and even if entirely feasible, whether it would be for the best. So I have some hesitation in touching on what may seem to be an idle dream.

Glaucon:: You need not hesitate. This is not an unsympathetic audience; we are neither incredulous nor hostile.

Socrates:: Thank you; I suppose that remark is meant to be encouraging.

Glaucon:: Certainly it is.

Socrates:: Well, it has just the opposite effect. You would do well to encourage me, if I had any faith in my own understanding of these matters. If one knows the truth, there is no risk to be feared in speaking about the things one has most at heart among intelligent friends; but if one is still in the position of a doubting inquirer, as I am now, talking becomes a slippery venture. Not that I am afraid of being laughed at—that would be childish—but I am afraid I may miss my footing just where a false step is most to be dreaded and drag my friends down with me in my fall. I devoutly hope, Glaucon, that no nemesis will overtake me for what I am going to say; for I really believe that to kill a man unintentionally is a lighter offence than to mislead him concerning the goodness and justice of social institutions. Better to run that risk among enemies than among friends; so your encouragement is out of place.

Glaucon laughed at this.

Glaucon:: No, Socrates, if your theory has any untoward effect on us, our blood shall not be on your head;

we absolve you of any intention to mislead us. So have no fear.

Socrates:: Well, when a homicide is absolved of all intention, the law holds him clear of guilt; and the same principle may apply to my case.

Glaucon:: Yes, so far as that goes, you may speak freely.

Socrates:: We must go back, then, to a subject which ought, perhaps, to have been treated earlier in its proper place; though, after all, it may be suitable that the women should have their turn on the stage when the men have quite finished their performance, especially since you are so insistent. In my judgment, then, the question under what conditions people born and educated as we have described should possess wives and children, and how they should treat them, can be rightly settled only by keeping to the course on which we started them at the outset. We undertook to put these men in the position of watch-dogs guarding a flock. Suppose we follow up the analogy and imagine them bred and reared in the same sort of way. We can then see if that plan will suit our purpose.

Glaucon:: How will that be?

Socrates:: In this way. Which do we think right for watch-dogs: should the females guard the flock and hunt with the males and take a share in all they do,, or should they be kept within doors as fit for no more than bearing and feeding their puppies, while all the hard work of looking after the flock is left to the males?

Glaucon:: They are expected to take their full share, except that we treat them as not quite so strong.

Socrates:: Can you employ any creature for the same work as another, if you do not give them both the same upbringing and education?

Glaucon:: No.

Socrates:: Then, if we are to set women to the same tasks as men, we must teach them the same things. They must have the same two branches of training for mind and body and also be taught the art of war, and they must receive the same treatment.

Glaucon:: That seems to follow.

Socrates:: Possibly, if these proposals were carried out, they might be ridiculed as involving a good many breaches of custom.

Glaucon:: They might indeed.

Socrates:: The most ridiculous—don't you think?—being the notion of women exercising naked along with the men in the wrestling-schools; some of them elderly women too, like the old men who still have a passion for exercise when they are wrinkled and not very agreeable to look at.

Glaucon:: Yes, that would be thought laughable, according to our present notions.

Socrates:: Now we have started on this subject, we must not be frightened of the many witticisms that might be aimed at such a revolution, not only in the matter of bodily exercise but in the training of women's minds, and not least when it comes to their bearing arms and riding on horseback. Having begun upon these rules, we must not draw back from the harsher provisions. The wits may be asked to stop being witty and try to be serious; and we may remind them that it is not so long since the Greeks, like most foreign nations of the present day, thought it ridiculous and shameful for men to be seen naked. When gymnastic exercises were first introduced in Crete and later at Sparta, the humorists had their chance to make fun of them; but when experience had shown that nakedness is better uncovered than muffled up, the laughter died down and a practice which the reason approved ceased to look ridiculous to the eye. This shows how idle it is to think anything ludicrous but what is base. One who tries to raise a laugh at any spectacle save that of baseness and folly will also, in his serious moments, set before himself some other standard than goodness of what deserves to be held in honor.

Glaucon:: Most assuredly.

Socrates:: The first thing to be settled, then, is whether these proposals are feasible; and it must be open to anyone, whether a humorist or serious-minded, to raise the question whether, in the case of mankind, the feminine nature is capable of taking part with the other sex in all occupations, or in none at all, or in some only; and in particular under which of these heads this business of military service falls. Well begun is half done, and would not this be the best way to begin?

Glaucon:: Yes.

Socrates:: Shall we take the other side in this debate and argue against ourselves? We do not want the adversary's position to be taken by storm for lack of defenders.

Glaucon:: I have no objection.

Socrates:: Let us state his case for him. 'Socrates and Glaucon', he will say, 'there is no need for others to dispute your position; you yourselves, at the very outset of founding your commonwealth, agreed that everyone should do the one work for which nature fits him.' Yes, of course; I suppose we did. 'And isn't there a very great difference in nature between man and woman?' Yes, surely. 'Does not that natural difference imply a corresponding difference in the work to be given to each?' Yes. 'But if so, surely you must be mistaken now and contradicting yourselves when you say that men and women, having such widely divergent natures, should do the same things?' What is your answer to that, my ingenious friend?

Glaucon:: It is not easy to find one at the moment. I can only appeal to you to state the case on our own side, whatever it may be.

Socrates:: This, Glaucon, is one of many alarming objections which I foresaw some time ago. That is why I shrank from touching upon these laws concerning the possession of wives and the rearing of children.

Glaucon:: It looks like anything but an easy problem.

Socrates:: True; but whether a man tumbles into a swimming-pool or into mid-ocean, he has to swim all the same. So must we, and try if we can reach the shore, hoping for some Arion's dolphin or other miraculous deliverance to bring us safe to land.

Glaucon:: I suppose so.

Socrates:: Come then, let us see if we can find the way out. We did agree that different natures should have different occupations, and that the natures of man and woman are different; and yet we are now saying that these different natures are to have the same occupations. Is that the charge against us?

Glaucon:: Exactly.

Socrates:: It is extraordinary, Glaucon, what an effect the practice of debating has upon people.

Glaucon:: Why do you say that?

Socrates:: Because they often seem to fall unconsciously into mere disputes which they mistake for reasonable argument, through being unable to draw the distinctions proper to their subject; and so, instead of a philosophical exchange of ideas, they go off in chase of contradictions which are purely verbal.

Glaucon:: I know that happens to many people; but does it apply to us at this moment?

Socrates:: Absolutely. At least I am afraid we are slipping unconsciously into a dispute about words. We have been strenuously insisting on the letter of our principle that different natures should not have the same occupations, as if we were scoring a point in a debate; but we have altogether neglected to consider what sort of sameness or difference we meant and in what respect these natures and occupations were to be defined as different or the same. Consequently, we might very well be asking one another whether there is not an opposition in nature between bald and long-haired men, and, when that was admitted, forbid one set to be shoemakers, if the other were following that trade.

Glaucon:: That would be absurd.

Socrates:: Yes, but only because we never meant any and every sort of sameness or difference in nature, but the sort that was relevant to the occupations in question. We meant, for instance, that a man and a woman have the same nature if both have a talent for medicine; whereas two men have different natures if one is a born physician, the other a born carpenter.

Glaucon:: Yes, of course.

Socrates:: If, then, we find that either the male sex or the female is specially qualified for any particular form of occupation, then that occupation, we shall say, ought to be assigned to one sex or the other. But if the only difference appears to be that the male begets and the female brings forth, we shall conclude that no difference between man and woman has yet been produced that is relevant to our purpose. We shall continue to think it proper for our Guardians and their wives to share in the same pursuits.

Glaucon:: And quite rightly.

Socrates:: The next thing will be to ask our opponent to name any profession or occupation in civic life for the purposes of which woman's nature is different from man's.

Glaucon:: That is a fair question.

Socrates:: He might reply, as you did just now, that it is not easy to find a satisfactory answer on the spur of the moment, but that there would be no difficulty after a little reflection.

Glaucon:: Perhaps.

Socrates:: Suppose, then, we invite him to follow us and see if we can convince him that there is no occupation concerned with the management of social affairs that is peculiar to women. We will confront him with a question: When you speak of a man having a natural talent for something, do you mean that he finds it easy to learn, and after a little instruction can find out much more for himself; whereas a man who is not so gifted learns with difficulty and no amount of instruction and practice will make him even remember what he has been taught? Is the talented man one whose bodily powers are readily at the service of his mind, instead of being a hindrance? Are not these the marks by which you distinguish the presence of a natural gift for any pursuit?

Glaucon:: Yes, precisely.

Socrates:: Now do you know of any human occupation in which the male sex is not superior to the female in all these respects? Need I waste time over exceptions like weaving and watching over saucepans and batches of cakes, though women are supposed to be good at such things and get laughed at when a man does them better?

Glaucon:: It is true, in almost everything one sex is easily beaten by the other. No doubt many women are better at many things than many men; but taking the sexes as a whole, it is as you say.

Socrates:: To conclude, then, there is no occupation concerned with the management of social affairs which belongs either to woman or to man, as such. Natural gifts are to be found here and there in both creatures alike; and every occupation is open to both, so far as their natures are concerned, though woman is for all purposes the weaker.

Glaucon:: Certainly.

Socrates:: Is that a reason for making over all occupations to men only?

Glaucon:: Of course not.

Socrates:: No, because one woman may have a natural gift for medicine or for music, another may not.

Glaucon:: Surely.

Socrates:: Is it not also true that a woman may, or may not, be warlike or athletic?

Glaucon:: I think so.

Socrates:: And again, one may love knowledge, another hate it; one may be high-spirited, another spiritless?

Glaucon:: True again.

Socrates:: It follows that one woman will be fitted by nature to be a Guardian, another will not; because these were the qualities for which we selected our men Guardians. So for the purpose of keeping watch over the commonwealth, woman has the same nature as man, save in so far as she is weaker.

Glaucon:: So it appears.

Socrates:: It follows that women of this type must be selected to share the life and duties of Guardians with men of the same type, since they are competent and of a like nature, and the same natures must be allowed the same pursuits.

Glaucon:: Yes.

Socrates:: We come round, then, to our former position, that there is nothing contrary to nature in giving our Guardians' wives the same training for mind and body. The practice we proposed to establish was not impossible or visionary, since it was in accordance with nature. Rather, the contrary practice which now prevails turns out to be unnatural.

Glaucon:: So it appears.

Socrates:: Well, we set out to inquire whether the plan we proposed was feasible and also the best. That it is feasible is now agreed; we must next settle whether it is the best.

Glaucon:: Obviously.

Socrates:: Now, for the purpose of producing a woman fit to be a Guardian, we shall not have one education for men and another for women, precisely because the nature to be taken in hand is the same.

Glaucon:: True.

Socrates:: What is your opinion on the question of one man being better than another? Do you think there is no such difference?

Glaucon:: Certainly I do not.

Socrates:: And in this commonwealth of ours which will prove the better men—the Guardians who have received the education we described, or the shoemakers who have been trained to make shoes?

Glaucon:: It is absurd to ask such a question.

Socrates:: Very well. So these Guardians will be the best of all the citizens?

Glaucon:: By far.

Socrates:: And these women the best of all the women?

Glaucon:: Yes.

Socrates:: Can anything be better for a commonwealth than to produce in it men and women of the best possible type?

Glaucon:: No.

Socrates:: And that result will be brought about by such a system of mental and bodily training as we have described?

Glaucon:: Surely.

Socrates:: We may conclude that the institution we proposed was not only practicable, but also the best for the commonwealth.

Glaucon:: Yes.

Socrates:: The wives of our Guardians, then, must strip for exercise, since they will be clothed with virtue, and they must take their share in war and in the other social duties of guardianship. They are to have no other occupation; and in these duties the lighter part must fall to the women, because of the weakness of their sex. The man who laughs at naked women, exercising their bodies for the best of reasons, is like one that 'gathers fruit unripe', for he does not know what it is that he is laughing at or what he is doing. There will never be a finer saying than the one which declares that whatever does good should be held in honor, and the only shame is in doing harm.

Glaucon:: That is perfectly true.

Socrates:: So far, then, in regulating the position of women, we may claim to have come safely through with one hazardous proposal, that male and female Guardians shall have all occupations in common. The consistency of the argument is an assurance that the plan is a good one and also feasible. We are like swimmers who have breasted the first wave without being swallowed up.

Glaucon:: Not such a small wave either.

Socrates:: You will not call it large when you see the next.

Glaucon:: Let me have a look at the next one, then.

Socrates:: Here it is: a law which follows from that principle and all that has gone before, namely that, of these Guardians, no one man and one woman are to set up house together privately: wives are to be held in common by all; so too are the children, and no parent is to know his own child, nor any child his parent.

Glaucon:: It will be much harder to convince people that that is either a feasible plan or a good one.

Socrates:: As to its being a good plan, I imagine no one would deny the immense advantage of wives and children being held in common, provided it can be done. I should expect dispute to arise chiefly over the question whether it is possible.

Glaucon:: There may well be a good deal of dispute over both points.

Socrates:: You mean, I must meet attacks on two fronts. I was hoping to escape one by running away: if you agreed it was a good plan, then I should only have had to inquire whether it was feasible.

Glaucon:: No, we have seen through that maneuver. You will have to defend both positions.

Socrates:: Well, I must pay the penalty for my cowardice. But grant me one favor. Let me indulge my fancy, like one who entertains himself with idle day-dreams on a solitary walk. Before he has any notion how his desires can be realized, he will set aside that question, to save himself the trouble of reckoning what may or may not be possible. He will assume that his wish has come true, and amuse himself with settling all the details of what he means to do then. So a lazy mind encourages itself to be lazier than ever; and I am giving way to the same weakness myself. I want to put off till later that question, how the thing can be done. For the moment, with your leave, I shall assume it to be possible, and ask how the Rulers will work out the details in practice; and I shall argue that the plan, once carried into effect, would be the best thing in the world for our commonwealth and for its Guardians. That is what I shall now try to make out with your help, if you will allow me to postpone the other question.

Glaucon:: Very good; I have no objection.

Socrates:: Well, if our Rulers are worthy of the name, and their Auxiliaries likewise, these latter will be ready to do what they are told, and the Rulers, in giving their commands, will themselves obey our laws and will be faithful to their spirit in any details we leave to their discretion.

Glaucon:: No doubt.

Socrates:: It is for you, then, as their lawgiver, who have already selected the men, to select for association with them women who are so far as possible of the same natural capacity. Now since none of them will have any private home of his own, but they will share the same dwelling and eat at common tables, the two sexes will be together; and meeting without restriction for exercise and all through their upbringing, they will surely be drawn towards union with one another by a necessity of their nature—necessity is not too strong a word, I think?

Glaucon:: Not too strong for the constraint of love, which for the mass of mankind is more persuasive and compelling than even the necessity of mathematical proof.

Socrates:: Exactly. But in the next place, Glaucon, anything like unregulated unions would be a profanation in a state whose citizens lead the good life. The Rulers will not allow such a thing.

Glaucon:: No, it would not be right.

Socrates:: Clearly, then, we must have marriages, as sacred as we can make them; and this sanctity will attach to those which yield the best results.

Glaucon:: Certainly.

Socrates:: How are we to get the best results? You must tell me, Glaucon, because I see you keep sporting dogs and a great many game birds at your house; and there is something about their mating and breeding that you must have noticed.

Glaucon:: What is that?

Socrates:: In the first place, though they may all be of good stock, are there not some that turn out to be better than the rest?

Glaucon:: There are.

Socrates:: And do you breed from all indiscriminately? Are you not careful to breed from the best so far as you can?

Glaucon:: Yes.

Socrates:: And from those in their prime, rather than the very young or the very old?

Glaucon:: Yes.

Socrates:: Otherwise, the stock of your birds or dogs would deteriorate very much, wouldn’t it?

Glaucon:: It would.

Socrates:: And the same is true of horses or of any animal?

Glaucon:: It would be very strange if it were not.

Socrates:: Dear me; we shall need consummate skill in our Rulers, if it is also true of the human race.

Glaucon:: Well, it is true. But why must they be so skilful?

Socrates:: Because they will have to administer a large dose of that medicine we spoke of earlier. An ordinary doctor is thought good enough for a patient who will submit to be dieted and can do without medicine; but he must be much more of a man if drugs are required.

Glaucon:: True, but how does that apply?

Socrates:: It applies to our Rulers: it seems they will have to give their subjects a considerable dose of imposition and deception for their good. We said, if you remember, that such expedients would be useful as a sort of medicine.

Glaucon:: Yes, a very sound principle.

Socrates:: Well, it looks as if this sound principle will play no small part in this matter of marriage and child-bearing.

Glaucon:: How so?

Socrates:: It follows from what we have just said that, if we are to keep our flock at the highest pitch of excellence, there should be as many unions of the best of both sexes, and as few of the inferior, as possible, and that only the offspring of the better unions should be kept. And again, no one but the Rulers must know how all this is being effected; otherwise our herd of Guardians may become rebellious.

Glaucon:: Quite true.

Socrates:: We must, then, institute certain festivals at which we shall bring together the brides and the bridegrooms. There will be sacrifices, and our poets will write songs befitting the occasion. The number of marriages we shall leave to the Rulers' discretion. They will aim at keeping the number of the citizens as constant as possible, having regard to losses caused by war, epidemics, and so on; and they must do their best to see that our state does not become either great or small.

Glaucon:: Very good.

Socrates:: I think they will have to invent some ingenious system of drawing lots, so that, at each pairing off, the inferior candidate may blame his luck rather than the Rulers.

Glaucon:: Yes, certainly.

Socrates:: Moreover, young men who acquit themselves well in war and other duties, should be given, among other rewards and privileges, more liberal opportunities to sleep with a wife, for the further purpose that, with good excuse, as many as possible of the children may be begotten of such fathers.

Glaucon:: Yes.

Socrates:: As soon as children are born, they will be taken in charge by officers appointed for the purpose, who may be men or women or both, since offices are to be shared by both sexes. The children of the better parents they will carry to the crèche to be reared in the care of nurses living apart in a certain quarter of the city. Those of the inferior parents and any children of the rest that are born defective will be hidden away, in some appropriate manner that must be kept secret.

Glaucon:: They must be, if the breed of our Guardians is to be kept pure.

Socrates:: These officers will also superintend the nursing of the children. They will bring the mothers to the crèche when their breasts are full, while taking every precaution that no mother shall know her own child; and if the mothers have not enough milk, they will provide wet-nurses. They will limit the time during which the mothers will suckle their children, and hand over all the hard work and sitting up at night to nurses and attendants.

Glaucon:: That will make child-bearing an easy business for the Guardians' wives.

Socrates:: So it should be. To go on with our scheme: we said that children should be born from parents in the prime of life. Do you agree that this lasts about twenty years for a woman, and thirty for a man? A woman should bear children for the commonwealth from her twentieth to her fortieth year; a man should begin to beget them when he has passed 'the racer's prime in swiftness', and continue till he is fifty-five.

Glaucon:: Those are certainly the years in which both the bodily and the mental powers of man and woman are at their best.

Socrates:: If a man either above or below this age meddles with the begetting of children for the commonwealth, we shall hold it an offence against divine and human law. He will be begetting for his country a child conceived in darkness and dire incontinence, whose birth, if it escape detection, will not have been sanctioned by the sacrifices and prayers offered at each marriage festival, when priests and priestesses join with the whole community in praying that the children to be born may be even better and more useful citizens than their parents.

Glaucon:: You are right.

Socrates:: The same law will apply to any man within the prescribed limits who touches a woman also of marriageable age when the Ruler has not paired them. We shall say that he is foisting on the commonwealth a bastard, unsanctioned by law or by religion.

Glaucon:: Perfectly right.

Socrates:: As soon, however, as the men and the women have passed the age prescribed for producing children, we shall leave them free to form a connection with whom they will, except that a man shall not take his daughter or daughter's daughter or mother or mother's mother, nor a woman her son or father or her son's son or father's father; and all this only after we have exhorted them to see that no child, if any be conceived, shall be brought to light, or, if they cannot prevent its birth, to dispose of it on the understanding that no such child can be reared.

Glaucon:: That too is reasonable. But how are they to distinguish fathers and daughters and those other relations you mentioned?

Socrates:: They will not. But, reckoning from the day when he becomes a bridegroom, a man will call all children born in the tenth or the seventh month sons and daughters, and they will call him father. Their children again he will call grandchildren, and they will call his group grandfathers and grandmothers; and all who are born within the period during which their mothers and fathers were having children will be called brothers and sisters. This will provide for those restrictions on unions that we mentioned; but the law will allow brothers and sisters to live together, if the lot so falls out and the Delphic oracle also approves.

Glaucon:: Very good.

Socrates:: This, then, Glaucon, is the manner in which the Guardians of your commonwealth are to hold their wives and children in common. Must we not next find arguments to establish that it is consistent with our other institutions and also by far the best plan?

Glaucon:: Yes, surely.

Socrates:: We had better begin by asking what is the greatest good at which the lawgiver should aim in laying down the constitution of a state, and what is the worst evil. We can then consider whether our proposals are in keeping with that good and irreconcilable with the evil.

Glaucon:: By all means.

Socrates:: Does not the worst evil for a state arise from anything that tends to rend it asunder and destroy its unity, while nothing does it more good than whatever tends to bind it together and make it one?

Glaucon:: That is true.

Socrates:: And are not citizens bound together by sharing in the same pleasures and pains, all feeling glad or grieved on the same occasions of gain or loss; whereas the bond is broken when such feelings are no longer universal, but any event of public or personal concern fills some with joy and others with distress?

Glaucon:: Certainly.

Socrates:: And this disunion comes about when the words ‘mine’ and ‘not mine’, ‘another’s’ and ‘not another’s’ are not applied to the same things throughout the community. The best ordered state will be the one in which the largest number of persons use these terms in the same sense, and which accordingly most nearly resembles a single person. When one of us hurts his finger, the whole extent of those bodily connections which are gathered up in the soul and unified by its ruling element is made aware and it all shares as a whole in the pain of the suffering part; hence we say that the man has a pain in his finger. The same thing is true of the pain or pleasure felt when any other part of the person suffers or is relieved.

Glaucon:: Yes; I agree that the best organized community comes nearest to that condition.

Socrates:: And so it will recognize as a part of itself the individual citizen to whom good or evil happens, and will share as a whole in his joy or sorrow.

Glaucon:: It must, if the constitution is sound.

Socrates:: It is time now to go back to our own commonwealth and see whether these conclusions apply to it more than to any other type of state. In all alike there are rulers and common people, a of whom will call one another fellow citizens.

Glaucon:: Yes.

Socrates:: But in other states the people have another name as well for their rulers, haven't they?

Glaucon:: Yes; in most they call them masters; in democracies, simply the government.

Socrates:: And in ours?

Glaucon:: The people will look upon their rulers as preservers and protectors.

Socrates:: And how will our rulers regard the people?

Glaucon:: As those who maintain them and pay them wages.

Socrates:: And elsewhere?

Glaucon:: As slaves.

Socrates:: And what do rulers elsewhere call one another?

Glaucon:: Colleagues.

Socrates:: And ours?

Glaucon:: Fellow Guardians.

Socrates:: And in other states may not a ruler regard one colleague as a friend in whom he has an interest, and another as a stranger with whom he has nothing in common?

Glaucon:: Yes, that often happens.

Socrates:: But that could not be so with your Guardians? None of them could ever treat a fellow Guardian as a stranger.

Glaucon:: Certainly not. He must regard everyone whom he meets as brother or sister, father or mother, son or daughter, grandchild or grandparent.

Socrates:: Very good; but here is a further point. Will you not require them, not merely to use these family terms, but to behave as a real family? Must they not show towards all whom they call 'father' the customary reverence, care, and obedience due to a parent, if they look for any favor from gods or men, since to act otherwise is contrary to divine and human law? Should not all the citizens constantly reiterate in the hearing of the children from their earliest years such traditional maxims of conduct towards those whom they are taught to call father and their other kindred?

Glaucon:: They should. It would be absurd that terms of kinship should be on their lips without any action to correspond.

Socrates:: In our community, then, above all others, when things go well or ill with any individual everyone will use that word 'mine' in the same sense and say that all is going well or ill with him and his.

Glaucon:: Quite true.

Socrates:: And, as we said, this way of speaking and thinking goes with fellow-feeling; so that our citizens, sharing as they do in a common interest which each will call his own, will have all their feelings of pleasure or pain in common.

Glaucon:: Assuredly.

Socrates:: A result that will be due to our institutions, and in particular to our Guardians' holding their wives and children in common.

Glaucon:: Very much so.

Socrates:: But you will remember how, when we compared a well-ordered community to the body which shares in the pleasures and pains of any member, we saw in this unity the greatest good that a state can enjoy. So the conclusion is that our commonwealth owes to this sharing of wives and children by its protectors its enjoyment of the greatest of all goods.

Glaucon:: Yes, that follows.

Socrates:: Moreover, this agrees with our principle that they were not to have houses or lands or any property of their own, but to receive sustenance from the other citizens, as wages for their guardianship, and to consume it in common. Only so will they keep to their true character; and our present proposals will do still more to make them genuine Guardians. They will not rend the community asunder by each applying that word 'mine' to different things and dragging off whatever he can get for himself into a private home, where he will have his separate family, forming a centre of exclusive joys and sorrows. Rather they will all, so far as may be, feel together and aim at the same ends, because they are convinced that all their interests are identical.

Glaucon:: Quite so.

Socrates:: Again, if a man’s person is his only private possession, lawsuits and prosecutions will all but vanish, and they will be free of those quarrels that arise from ownership of property and from having family ties. Nor would they be justified even in bringing actions for assault and outrage; for we shall pronounce it right and honorable for a man to defend himself against an assailant of his own age, and in that way they will be compelled to keep themselves fit.

Glaucon:: That would be a sound law.

Socrates:: And it would also have the advantage that, if a man’s anger can be satisfied in this way, a fit of passion is less likely to grow into a serious quarrel.

Glaucon:: True.

Socrates:: But an older man will be given authority over all younger persons and power to correct them; whereas the younger will, naturally, not dare to strike the elder or do him any violence, except by command of a Ruler. He will not show him any sort of disrespect. Two guardian spirits, fear and reverence, will be enough to restrain him—reverence forbidding him to lay hands on a parent, and fear of all those others who as sons or brothers or fathers would come to the rescue.

Glaucon:: Yes, that will be the result.

Socrates:: So our laws will secure that these men will live in complete peace with one another; and if they never quarrel among themselves, there is no fear of the rest of the community being divided either against them or against itself.

Glaucon:: No.

Socrates:: There are other evils they will escape, so mean and petty that I hardly like to mention them: the poor man’s flattery of the rich, and all the embarrassments and vexations of rearing a family and earning just enough to maintain a household; now borrowing and now refusing to repay, and by any and every means scraping together money to be handed over to wife and servants to spend. These sordid troubles are familiar and not worth describing.

Glaucon:: Only too familiar.

Socrates:: Rid of all these cares, they will live a more enviable life than the Olympic victor, who is counted happy on the strength of far fewer blessings than our Guardians will enjoy. Their victory is the nobler, since by their success the whole commonwealth is preserved; and their reward of maintenance at the public cost is more complete, since their prize is to have every need of life supplied for themselves and for their children; their country honors them while they live, and when they die they receive a worthy burial.

Glaucon:: Yes, they will be nobly rewarded.

Socrates:: Do you remember, then, how someone who shall be nameless reproached us for not making our Guardians happy: they were to possess nothing, though all the wealth of their fellow citizens was within their grasp? We replied, I believe, that we would consider that objection later, if it came in our way: for the moment we were bent on making our Guardians real guardians, and molding our commonwealth with a view to the greatest happiness, not of one section of it, but of the whole.

Glaucon:: Yes, I remember.

Socrates:: Well, it appears now that these protectors of our state will have a life better and more honorable than that of any Olympic victor; and we can hardly rank it on a level with the life of a shoemaker or other artisan or of a farmer.

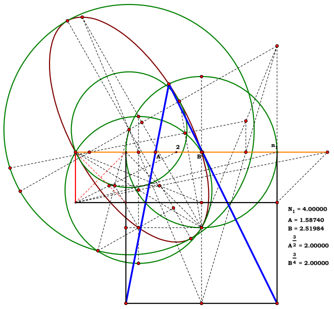
Glaucon:: I should think not.

Socrates:: However, it is right to repeat what I said at the time: if ever a Guardian tries to make himself happy in such a way that he will be a guardian no longer; if, not content with the moderation and security of this way of living which we think the best, he becomes possessed with some silly and childish notion of happiness, impelling him to make his power a means to appropriate all the citizens' wealth, then he will learn the wisdom of Hesiod's saying that the half is more than the whole.

Glaucon:: My advice would certainly be that he should keep to his own way of living.

Socrates:: You do agree, then, that women are to take their full share with men in education, in the care of children, and in the guardianship of the other citizens; whether they stay at home or go out to war, they will be like watch-dogs which take their part either in guarding the fold or in hunting and share in every task so far as their strength allows. Such conduct will not be unwomanly, but all for the best and in accordance with the natural partnership of the sexes.

Glaucon:: Yes, I agree.



Socrates:: It remains to ask whether such a partnership can be established among human beings, as it can among animals, and if so, how.

Glaucon:: I was just going to put that question.

Socrates:: So far as fighting is concerned, it is easy to see how they will go out to war.

Glaucon:: How?

Socrates:: Men and women will take the field together and moreover bring with them the children who are sturdy enough, to learn this trade, like any other, by watching what they will have to do themselves when they are grown up; and besides looking on, they will fetch and carry for their fathers and mothers and see to all their needs in time of war. You must have noticed how, in the potter's trade for example, the children watch their fathers and wait on them long before they may touch the wheel. Ought our Guardians to be less careful to train theirs by letting them look on and become familiar with their duties?

Glaucon:: No, that would be absurd.

Socrates:: Moreover, any creature will fight better in the presence of its young.

Glaucon:: That is so. But in case of defeat, which may always happen in war, there will be serious danger of their children's lives being lost with their own, so that the country could never recover.

Socrates:: True; but, in the first place, do you think we must make sure that they never run any risk?

Glaucon:: No, far from it.

Socrates:: Well, if they are ever to take their chance, should it not be on some occasion when, if all goes well, they will be the better for it?

Glaucon:: No doubt.

Socrates:: And is it of no importance that men who are to be warriors should see something of war in childhood? Is that not worth some danger?

Glaucon:: Yes; it is important.

Socrates:: Granted, then, that the children are to go to war as spectators, all will be well if we can contrive that they shall do so in safety. To begin with, their fathers will not be slow to judge, so far as human foresight can, which expeditions are hazardous and which are safe; and they will be careful not to take the children into danger. Also they will put them in charge of officers qualified by age and experience to lead and take care of them.

Glaucon:: Yes, that would be the proper way.

Socrates:: All the same, the unexpected often happens; and to guard against such chances we must see that they have, from their earliest years, wings to fly away with if need be.

Glaucon:: What do you mean by wings?

Socrates:: Horses, which they must be taught to ride at the earliest possible age; then, when they are taken to see the fighting, their mounts must not be spirited chargers but the swiftest we can find and the easiest to manage. In that way they will get a good view of their future business, and in case of need they will be able to keep up with their older leaders and escape in safety.

Glaucon:: That seems an excellent plan.

Socrates:: Now, as to the conduct of war and your soldiers' relations to one another and to the enemy: am I right in thinking that anyone guilty of an act of cowardice, such as deserting his post or throwing away his arms, should be reduced to the artisan or farmer class; while if any fall alive into the enemy's hands, we shall make them a present of him, and they may do what they like with their prey?

Glaucon:: Certainly.

Socrates:: And what shall be done to the hero who has distinguished himself by his velour? First, should he not be crowned on the field by the youths and children each in turn?

Glaucon:: Surely.

Socrates:: And they might shake his hand?

Glaucon:: Yes.

Socrates:: But you would stop there, no doubt. I am sure you would not approve of his exchanging kisses with them all?

Glaucon:: I am all for that; indeed I would add to the law the provision that, so long as they are on the campaign, no one whom he wishes to kiss may refuse. That would make any soldier who chanced to be in love with a youth or a girl all the more eager to win the prize of velour.

Socrates:: Very well. We have already said that the brave man is to be selected for marriage more frequently than the rest, so that as many children as possible may have such a man for their father. But besides that, these valiant youths may well be rewarded in the Homeric manner. When Ajax distinguished himself in the war, he was ‘honored with slices of the chine’s full length’, a suitable compliment to a lusty young hero, and one that would at the same time strengthen his muscles.

Glaucon:: An excellent idea.

Socrates:: Then here at any rate we will follow Homer. At sacrificial feasts and all such occasions, we shall reward the brave, in proportion to their merit, not only with songs and those privileges we mentioned but ‘with seats of honour, meat, and cups brimful'; and so at once pay tribute to the bravery of these men and women and improve their physique.

Glaucon:: Nothing could be better.

Socrates:: Good. And of those who are slain in the field, we shall say that all who fell with honour are of that Golden Race, who, when they die;

> Dwell here on earth, pure spirits, beneficent,
> Guardians to shield us mortal men from harm.

Shall we not believe those words of Hesiod?

Glaucon:: We shall.

Socrates:: Then we shall ask the Oracle with what special rites these men of more than human mould should be buried, and we shall do as it prescribes. And for all time to come we shall reverence their tombs and worship them as demigods. Others, too, who die in the natural course of old age or otherwise shall be honored in the same way, if they are judged to have led an exceptionally noble life.

Glaucon:: That is but fair.

Socrates:: And next, how will our soldiers deal with enemies?

Glaucon:: In what respect?

Socrates:: First take slavery. Is it right that Greek states should sell Greeks into slavery? Ought they not rather to do all they can to stop this practice and substitute the custom of sparing their own race, for fear of falling into bondage to foreign nations?

Glaucon:: That would be better, beyond all comparison.

Socrates:: They must not, then, hold any Greek in slavery themselves, and they should advise the rest of Greece not to do so.

Glaucon:: Certainly. Then they would be more likely to keep their hands off one another and turn their energies against foreigners.

Socrates:: Next, is it well to strip the dead, after a victory, of anything but their arms? It only gives cowards an excuse for not facing the living enemy, as if they were usefully employed in poking about over a dead body. Many an army has been lost through this pillaging. There is something mean and greedy in plundering a corpse; and a sort of womanish pettiness in treating the body as an enemy, when the spirit, the real enemy, has flown, leaving behind only the instrument with which he fought. It is to behave no better than a dog who growls at the stone that has hit him and leaves alone the man who threw it.

Glaucon:: True.

Socrates:: So we will have no stripping of the slain and we shall not prevent their comrades from burying them. Nor shall we dedicate in the temples trophies of their weapons, least of all those of Greeks, if we are concerned to show loyalty towards the rest of Hellas. We shall rather be afraid of desecrating a sanctuary by bringing to it such spoils of our own people, unless indeed the Oracle should pronounce otherwise.

Glaucon:: That is very right.

Socrates:: And what of ravaging Greek lands and burning houses? How will your soldiers deal with their enemies in this matter?

Glaucon:: I should like to hear your own opinion.

Socrates:: I think they should do neither, but only carry off the year’s harvest. Shall I tell you why?

Glaucon:: Please do.

Socrates:: It seems to me that war and civil strife differ in nature as they do in name, according to the two spheres in which disputes may arise: at home or abroad, among men of the same race or with foreigners. War means fighting with a foreign enemy; when the enemy is of the same kindred, we call it civil strife.

Glaucon:: That is a reasonable distinction.

Socrates:: Is it not also reasonable to assert that Greeks are a single people, all of the same kindred and alien to the outer world of foreigners?

Glaucon:: Yes.

Socrates:: Then we shall speak of war when Greeks fight with foreigners, whom we may call their natural enemies. But Greeks are by nature friends of Greeks, and when they fight, it means that Hellas is afflicted by dissension which ought to be called civil strife.

Glaucon:: I agree with that view.

Socrates:: Observe, then, that in what is commonly known as civil strife, that is to say, when one of our Greek states is divided against itself, it is thought an abominable outrage for either party to ravage the lands or burn the houses of the other. No lover of his country would dare to mangle the land which gave him birth and nursed him. It is thought fair that the victors should carry off the others' crops, but do no more. They should remember that the war will not last for ever; some day they must make friends again.

Glaucon:: That is a much more civilized state of mind.

Socrates:: Well then, is not this commonwealth you are founding a Greek state, and its citizens good and civilized people?

Glaucon:: Very much so.

Socrates:: And lovers of Greece, who will think of all Hellas as their home, where they share in one common religion with the rest?

Glaucon:: Most certainly.

Socrates:: Accordingly, the Greeks being their own people, a quarrel with them will not be called a war. It will only be civil strife, which they will carry on as men who will some day be reconciled. So they will not behave like a foreign enemy seeking to enslave or destroy, but will try to bring their adversaries to reason by well-meant correction. As Greeks they will not devastate the soil of Greece or burn the homesteads; nor will they allow that all the inhabitants of any state, men, women, and children, are their enemies, but only the few who are responsible for the quarrel. The greater number are friends, whose land and houses, on all these accounts, they will not consent to lay waste and destroy. They will pursue the quarrel only until the guilty are compelled by the innocent sufferers to give satisfaction.

Glaucon:: For my part, I agree that our citizens should treat their adversaries in that way, and deal with foreigners as Greeks now deal with one another.

Socrates:: We will make this a law, then, for our Guardians: they are not to ravage lands or burn houses.

Glaucon:: Yes, we will; it is as satisfactory as all our other laws. But really, Socrates, if you are allowed to go on like this, I am afraid you will forget all about the question you thrust aside some time ago: whether a society so constituted can ever come into existence, and if so, how. No doubt, if it did exist, all manner of good things would come about. I can even add some that you have passed over. Men who acknowledged one another as fathers, sons, or brothers and always used those names among themselves would never desert one another; so they would fight with unequalled bravery. And if their womenfolk went out with them to war, either in the ranks or drawn up in the rear to intimidate the enemy and act as a reserve in case of need, I am sure all this would make them invincible. At home, too, I can see many advantages you have not mentioned. But, since I admit that our commonwealth would have all these merits and any number more, if once it came into existence, you need not describe it in further detail. All we have now to do is to convince ourselves that it can be brought into being and how.

Socrates:: This is a very sudden onslaught; you have no mercy on my shilly-shallying. Perhaps you do not realize that, after I have barely escaped the first two waves, the third, which you are now bringing down upon me, is the most formidable of all. When you have seen what it is like and heard my reply, you will be ready to excuse the very natural fears which made me shrink from putting forward such a paradox for discussion.

Glaucon:: The more you talk like that, the less we shall be willing to let you off from telling us how this constitution can come into existence; so you had better waste no more time.

Socrates:: Well, let me begin by reminding you that what brought us to this point was our inquiry into the nature of justice and injustice.

Glaucon:: True; but what of that?

Socrates:: Merely this: suppose we do find out what justice is, are we going to demand that a man who is just shall have a character which exactly corresponds in every respect to the ideal of justice? Or shall we be satisfied if he comes as near to the ideal as possible and has in him a larger measure of that quality than the rest of the world?

Glaucon:: That will satisfy me.

Socrates:: If so, when we set out to discover the essential nature of justice and injustice and what a perfectly just and a perfectly unjust man would be like, supposing them to exist, our purpose was to use them as ideal patterns: we were to observe the degree of happiness or unhappiness that each exhibited, and to draw the necessary inference that our own destiny would be like that of the one we most resembled. We did not set out to show that these ideals could exist in fact.

Glaucon:: That is true.

Socrates:: Then suppose a painter had drawn an ideally beautiful figure complete to the last touch, would you think any the worse of him, if he could not show that a person as beautiful as that could exist?

Glaucon:: No, I should not.

Socrates:: Well, we have been constructing in discourse the pattern of an ideal state. Is our theory any the worse, if we cannot prove it possible that a state so organized should be actually founded?

Glaucon:: Surely not.

Socrates:: That, then, is the truth of the matter. But if, for your satisfaction, I am to do my best to show under what conditions our ideal would have the best chance of being realized, I must ask you once more to admit that the same principle applies here. Can theory ever be fully realized in practice? Is it not in the nature of things that action should come less close to truth than thought? People may not think so; but do you agree or not?

Glaucon:: I do.

Socrates:: Then you must not insist upon my showing that this construction we have traced in thought could be reproduced in fact down to the last detail. You must admit that we shall have found a way to meet your demand for realization, if we can discover how a state might be constituted in the closest accordance with our description. Will not that content you? It would be enough for me.

Glaucon:: And for me too.

Socrates:: Then our next attempt, it seems, must be to point out what defect in the working of existing states prevents them from being so organized, and what is the least change that would effect a transformation into this type of government—a single change if possible, or perhaps two; at any rate let us make the changes as few and insignificant as may be.

Glaucon:: By all means.

Socrates:: Well, there is one change which, as I believe we can show, would bring about this revolution—not a small change, certainly, nor an easy one, but possible.

Glaucon:: What is it?

Socrates:: I have now to confront what we called the third and greatest wave. But I must state my paradox, even though the wave should break in laughter over my head and drown me in ignominy. Now mark what I am going to say.

Glaucon:: Go on.

Socrates:: Unless either philosophers become kings in their countries or those who are now called kings and rulers come to be sufficiently inspired with a genuine desire for wisdom; unless, that is to say, political power and philosophy meet together, while the many natures who now go their several ways in the one or the other direction are forcibly debarred from doing so, there can be no rest from troubles, my dear Glaucon, for states, nor yet, as I believe, for all mankind; nor can this commonwealth which we have imagined ever till then see the light of day and grow to its full stature. This it was that I have so long hung back from saying; I knew what a paradox it would be, because it is hard to see that there is no other way of happiness either for the state or for the individual.

Glaucon:: Socrates, after delivering yourself of such a pronouncement as that, you must expect a whole multitude of by no means contemptible assailants to fling off their coats, snatch up the handiest weapon, and make a rush at you, breathing fire and slaughter. If you cannot find arguments to beat them off and make your escape, you will learn what it means to be the target of scorn and derision.

Socrates:: Well, it was you who got me into this trouble.

Glaucon:: Yes, and a good thing too.

Socrates:: However, I will not leave you in the lurch. You shall have my friendly encouragement for what it is worth; and perhaps you may find me more complaisant than some would be in answering your questions. With such backing you must try to convince the unbelievers.

Glaucon:: I will, now that I have such a powerful ally.

Socrates:: Now, if we are to elude those assailants you have described, we must, I think, define for them whom we mean by these lovers of wisdom who, we have dared to assert, ought to be our rulers. Once we have a clear view of their character, we shall be able to defend our position by pointing to some who are naturally fitted to combine philosophic study with political leadership, while the rest of the world should accept their guidance and let philosophy alone.

Glaucon:: Yes, this is the moment for a definition.

Socrates:: Here, then, is a line of thought which may lead to a satisfactory explanation. Need I remind you that a man will deserve to be called a lover of this or that, only if it is clear that he loves that thing as a whole, not merely in parts?

Glaucon:: You must remind me, it seems; for I do not see what you mean.

Socrates:: That answer would have come better from someone less susceptible to love than yourself, Glaucon. You ought not to have forgotten that any boy in the bloom of youth will arouse some sting of passion in a man of your amorous temperament and seem worthy of his attentions. Is not this your way with your favorites? You will praise a snub nose as piquant and a hooked one as giving a regal air, while you call a straight nose perfectly proportioned; the swarthy, you say, have a manly look, the fair are children of the gods; and what do you think is that word 'honey-pale', if not the euphemism of some lover who had no fault to find with sallowness on the cheek of youth? In a word, you will carry pretence and extravagance to any length sooner than reject a single one that is in the flower of his prime.

Glaucon:: If you insist on taking me as an example of how lovers behave, I will agree for the sake of argument.

Socrates:: Again, do you not see the same behavior in people with a passion for wine? They are glad of any excuse to drink wine of any sort. And there are the men who covet honour, who, if they cannot lead an army, will command a company, and if they cannot win the respect of important people, are glad to be looked up to by nobodies, because they must have someone to esteem them.

Glaucon:: Quite true.

Socrates:: Do you agree, then, that when we speak of a man as having a passion for a certain kind of thing, we mean that he has an appetite for everything of that kind without discrimination?

Glaucon:: Yes.

Socrates:: So the philosopher, with his passion for wisdom, will be one who desires all wisdom, not only some part of it. If a student is particular about his studies, especially while he is too young to know which are useful and which are not, we shall say he is no lover of learning or of wisdom; just as, if he were dainty about his food, we should say he was not hungry or fond of eating, but had a poor appetite. Only the man who has a taste for every sort of knowledge and throws himself into acquiring it with an insatiable curiosity will deserve to be called a philosopher. Am I not right?

Glaucon:: That description would include a large and ill-assorted company. It is curiosity, I suppose, and a delight in fresh experience that gives some people a passion for all that is to be seen and heard at theatrical and musical performances. But they are a queer set to reckon among philosophers, considering that they would never go near anything like a philosophical discussion, though they run round at all the Dionysiac festivals in town or country as if they were under contract to listen to every company of performers without fail. Will curiosity entitle all these enthusiasts, not to mention amateurs of the minor arts, to be called philosophers?

Socrates:: Certainly not; though they have a certain counterfeit resemblance.

Glaucon:: And whom do you mean by the genuine philosophers?

Socrates:: Those whose passion it is to see the truth.

Glaucon:: That must be so; but will you explain?

Socrates:: It would not be easy to explain to everyone; but you, I believe, will grant my premise.

Glaucon:: Which is-------?

Socrates:: That since beauty and ugliness are opposite, they are two things; and consequently each of them is one. The same holds of justice and injustice, good and bad, and all the essential Forms: each in itself is one; but they manifest themselves in a great variety of combinations, with actions, with material things, and with one another, and so each seems to be many.

Glaucon:: That is true.

Socrates:: On the strength of this premise, then, I can distinguish your amateurs of the arts and men of action from the philosophers we are concerned with, who are alone worthy of the name.

Glaucon:: What is your distinction?

Socrates:: Your lovers of sights and sounds delight in beautiful tones and colors and shapes and in all the works of art into which these enter; but they have not the power of thought to behold and to take delight in the nature of Beauty itself. That power to approach Beauty and behold it as it is in itself, is rare indeed.

Glaucon:: Quite true.

Socrates:: Now if a man believes in the existence of beautiful things, but not of Beauty itself, and cannot follow a guide who would lead him to a knowledge of it, is he not living in a dream? Consider: does not dreaming, whether one is awake or asleep, consist in mistaking a semblance for the reality it resembles?

Glaucon:: I should certainly call that dreaming.

Socrates:: Contrast with him the man who holds that there is such a thing as Beauty itself and can discern that essence as well as the things that partake of its character, without ever confusing the one with the other—is he a dreamer or living in a waking state?

Glaucon:: He is very much awake.

Socrates:: So may we say that he knows, while the other has only a belief in appearances; and might we call their states of mind knowledge and belief?

Glaucon:: Certainly.

Socrates:: But this person who, we say, has only belief without knowledge may be aggrieved and challenge our statement. Is there any means of soothing his resentment and converting him gently, without telling him plainly that he is not in his right mind?

Glaucon:: We surely ought to try.

Socrates:: Come then, consider what we are to say to him. Or shall we ask him a question, assuring him that, far from grudging him any knowledge he may have, we shall be only too glad to find that there is something he knows? But, we shall say, tell us this: When a man knows, must there not be something that he knows? Will you answer for him, Glaucon?

Glaucon:: My answer will be, that there must.

Socrates:: Something real or unreal?

Glaucon:: Something real; how could a thing that is unreal ever be known?

Socrates:: Are we satisfied, then, on this point, from however many points of view we might examine it: that the perfectly real is perfectly knowable, and the utterly unreal is entirely unknowable?

Glaucon:: Quite satisfied.

Socrates:: Good. Now if there is something so constituted that it both is and is not, will it not lie between the purely real and the utterly unreal?

Glaucon:: It will.

Socrates:: Well then, as knowledge corresponds to the real, and absence of knowledge necessarily to the unreal, so, to correspond to this intermediate thing, we must look for something between ignorance and knowledge, if such a thing there be.

Glaucon:: Certainly.

Socrates:: Is there not a thing we call belief?

Glaucon:: Surely.

Socrates:: A different power from knowledge, or the same?

Glaucon:: Different.

Socrates:: Knowledge and belief, then, must have different objects, answering to their respective powers.

Glaucon:: Yes.

Socrates:: And knowledge has for its natural object the real—to know the truth about reality. However, before going further, I think we need a definition. Shall we distinguish under the general name of faculties' those powers which enable us—or anything else—to do what we can do? Sight and hearing, for instance, are what I call faculties, if that will help you to see the class of things I have in mind.

Glaucon:: Yes, I understand.

Socrates:: Then let me tell you what view I take of them. In a faculty I cannot find any of those qualities, such as color or shape, which, in the case of many other things, enable me to distinguish one thing from another. I can only look to its field of objects and the state of mind it produces, and regard these as sufficient to identify it and to distinguish it from faculties which have different fields and produce different states. Is that how you would go to work?

Glaucon:: Yes.

Socrates:: Let us go back, then, to knowledge. Would you class that as a faculty?

Glaucon:: Yes; and I should call it the most powerful of all.

Socrates:: And is belief also a faculty?

Glaucon:: It can be nothing else, since it is what gives us the power of believing.

Socrates:: But a little while ago you agreed that knowledge and belief are not the same thing.

Glaucon:: Yes; there could be no sense in identifying the infallible with the fallible.

Socrates:: Good. So we are quite clear that knowledge and belief are different things?

Glaucon:: They are.

Socrates:: If so, each of them, having a different power, must have a different field of objects.

Glaucon:: Necessarily.

Socrates:: The field of knowledge being the real; and its power, the power of knowing the real as it is.

Glaucon:: Yes.

Socrates:: Whereas belief, we say, is the power of believing. Is its object the same as that which knowledge knows? Can the same things be possible objects both of knowledge and of belief?

Glaucon:: Not if we hold to the principles we agreed upon. If it is of the nature of a different faculty to have a different field, and if both knowledge and belief are faculties and, as we assert, different ones, it follows that the same things cannot be possible objects of both.

Socrates:: So if the real is the object of knowledge, the object of belief must be something other than the real.

Glaucon:: Yes.

Socrates:: Can it be the unreal? Or is that an impossible object even for belief? Consider: if a man has a belief, there must be something before his mind; he cannot be believing nothing, Can he?

Glaucon:: No.

Socrates:: He is believing something, then; whereas the unreal could only be called nothing at all.

Glaucon:: Certainly.

Socrates:: Now we said that ignorance must correspond to the unreal, knowledge to the real. So what he is believing cannot be real nor yet unreal.

Glaucon:: True.

Socrates:: Belief, then, cannot be either ignorance or knowledge.

Glaucon:: It appears not.

Socrates:: Then does it lie outside and beyond these two? Is it either more clear and certain than knowledge or less clear and certain than ignorance?

Glaucon:: No, it is neither.

Socrates:: It rather seems to you to be something more obscure than knowledge, but not so dark as ignorance, and so to lie between the two extremes?

Glaucon:: Quite so.

Socrates:: Well, we said earlier that if some object could be found such that it both is and at the same time is not, that object would lie between the perfectly real and the utterly unreal; and that the corresponding faculty would be neither knowledge nor ignorance, but a faculty to be found situated between the two.

Glaucon:: Yes.

Socrates:: And now what we have found between the two is the faculty we call belief.

Glaucon:: True.

Socrates:: It seems, then, that what remains to be discovered is that object which can be said both to be and not to be and cannot properly be called either purely real or purely unreal. If that can be found, we may justly call it the object of belief, and so give the intermediate faculty the intermediate object, while the two extreme objects will fall to the extreme faculties.

Glaucon:: Yes.

Socrates:: On these assumptions, then, I shall call for an answer from our friend who denies the existence of Beauty itself or of anything that can be called an essential Form of Beauty remaining unchangeably in the same state for ever, though he does recognize the existence of beautiful things as a plurality—that lover of things seen who will not listen to anyone who says that Beauty is one, Justice is one, and so on. I shall say to him, Be so good as to tell us: of all these many beautiful things is there one which will not appear ugly? Or of these many just or righteous actions, is there one that will not appear unjust or unrighteous?

Glaucon:: No, they must inevitably appear to be in some way both beautiful and ugly; and so with all the other terms your question refers to.

Socrates:: And again the many things which are doubles are just as much halves as they are doubles. And the things we call large or heavy have just as much right to be called small or light.

Glaucon:: Yes; any such thing will always have a claim to both opposite designations.

Socrates:: Then, whatever any one of these many things may be said to be, can you say that it absolutely is that, any more than that it is not that?

Glaucon:: They remind me of those punning riddles people ask at dinner parties, or the child's puzzle about what the eunuch threw at the bat and what the bat was perched on. These things have the same ambiguous character, and one cannot form any stable conception of them either as being or as not being, or as both being and not being, or as neither.

Socrates:: Can you think of any better way of disposing of them than by placing them between reality and unreality? For I suppose they will not appear more obscure and so less real than unreality, or clearer and so more real than reality.

Glaucon:: Quite true.

Socrates:: It seems, then, we have discovered that the many conventional notions of the mass of mankind about what is beautiful or honorable or just and so on are adrift in a sort of twilight between pure reality and pure unreality.

Glaucon:: We have.

Socrates:: And we agreed earlier that, if any such object were discovered, it should be called the object of belief and not of knowledge. Fluctuating in that half-way region, it would be seized upon by the intermediate faculty.

Glaucon:: Yes.

Socrates:: So when people have an eye for the multitude of beautiful things or of just actions or whatever it may be, but can neither behold Beauty or Justice itself nor follow a guide who would lead them to it, we shall say that all they have is beliefs, without any real knowledge of the objects of their belief.

Glaucon:: That follows.

Socrates:: But what of those who contemplate the realities themselves as they are for ever in the same unchanging state? Shall we not say that they have, not mere belief, but knowledge?

Glaucon:: That too follows.

Socrates:: And, further, that their affection goes out to the objects of knowledge, whereas the others set their affections on the objects of belief; for it was they, you remember, who had a passion for the spectacle of beautiful colors and sounds, but would not hear of Beauty itself being a real thing.

Glaucon:: I remember.

Socrates:: So we may fairly call them lovers of belief rather than of wisdom—not philosophical, in fact, but philodoxical. Will they be seriously annoyed by that description?

Glaucon:: Not if they will listen to my advice. No one ought to take offence at the truth.

Socrates:: The name of philosopher, then, will be reserved for those whose affections are set, in every case, on the reality-By all means. So at last, Glaucon, after this long and weary way, we have come to see who are the philosophers and who are not.

Glaucon:: I doubt if the way could have been shortened.

Socrates:: Apparently not. I think, however, that we might have gained a still clearer view, if this had been the only topic to be discussed; but there are so many others awaiting us, if we mean to discover in what ways the just life is better than the unjust.

Glaucon:: Which are we to take up now?

Socrates:: Surely the one that follows next in order. Since the philosophers are those who can apprehend the eternal and unchanging, while those who cannot do so, but are lost in the mazes of multiplicity and change, are not philosophers, which of the two ought to be in control of a state?

Glaucon:: I wonder what would be a reasonable solution.

Socrates:: To establish as Guardians whichever of the two appear competent to guard the laws and ways of life in society.

Glaucon:: True.

Socrates:: Well, there can be no question whether a guardian who is to keep watch over anything needs to be keen-sighted or blind. And is not blindness precisely the condition of men who are entirely cut off from knowledge of any reality, and have in their soul no clear pattern of perfect truth, which they might study in every detail and constantly refer to, as a painter looks at his model, before they proceed to embody notions of justice, honour, and goodness in earthly institutions or, in their character of Guardians, to preserve such institutions as already exist?

Glaucon:: Certainly such a condition is very like blindness.

Socrates:: Shall we, then, make such as these our Guardians in preference to men who, besides their knowledge of realities, are in no way inferior to them in experience and in every excellence of character?

Glaucon:: It would be absurd not to choose the philosophers, whose knowledge is perhaps their greatest point of superiority, provided they do not lack those other qualifications.

Socrates:: What we have to explain, then, is how those qualifications can be combined in the same persons with philosophy.

Glaucon:: Certainly.

Socrates:: The first thing, as we said at the outset, is to get a clear view of their inborn disposition. When we are satisfied on that head, I think we shall agree that such a combination of qualities is possible and that we need look no further for men fit to be in control of a commonwealth. One trait of the philosophic nature we may take as already granted: a constant passion for any knowledge that will reveal to them something of that reality which endures for ever and is not always passing into and out of existence. And, we may add, their desire is to know the whole of that reality; they will not willingly renounce any part of it as relatively small and insignificant, as we said before when we compared them to the lover and to the man who covets honour.

Glaucon:: True.

Socrates:: Is there not another trait which the nature we are seeking cannot fail to possess—truthfulness, a love of truth and a hatred of falsehood that will not tolerate untruth in any form?

Glaucon:: Yes, it is natural to expect that.

Socrates:: It is not merely natural, but entirely necessary that an instinctive passion for any object should extend to all that is closely akin to it; and there is nothing more closely akin to wisdom than truth. So the same nature cannot love wisdom and falsehood; the genuine lover of knowledge cannot fail, from his youth up, to strive after the whole of truth.

Glaucon:: I perfectly agree.

Socrates:: Now we surely know that when a man's desires set strongly in one direction, in every other channel they flow more feebly, like a stream diverted into another bed. So when the current has set towards knowledge and all that goes with it, desire will abandon those pleasures of which the body is the instrument and be concerned only with the pleasure which the soul enjoys independently—if, that is to say, the love of wisdom is more than a mere pretence. Accordingly, such a one will be temperate and no lover of money; for he will be the last person to care about the things for the sake of which money is eagerly sought and lavishly spent.

Glaucon:: That is true.

Socrates:: Again, in seeking to distinguish the philosophic nature, you must not overlook the least touch of meanness. Nothing could be more contrary than pettiness to a mind constantly bent on grasping the whole of things, both divine and human.

Glaucon:: Quite true.

Socrates:: And do you suppose that one who is so high-minded and whose thought can contemplate all time and all existence will count this life of man a matter of much concern?

Glaucon:: No, he could not.

Socrates:: So for such a man death will have no terrors.

Glaucon:: None.

Socrates:: A mean and cowardly nature, then, can have no part in the genuine pursuit of wisdom.

Glaucon:: I think not.

Socrates:: And if a man is temperate and free from the love of money, meanness, pretentiousness, and cowardice, he will not be hard to deal with or dishonest. So, as another indication of the philosophic temper, you will observe whether, from youth up, he is fair-minded, gentle, and sociable.

Glaucon:: Certainly.

Socrates:: Also you will not fail to notice whether he is quick or slow to learn. No one can be expected to take a reasonable delight in a task in which much painful effort makes little headway. And if he cannot retain what he learns, his forgetfulness will leave no room in his head for knowledge; and so, having all his toil for nothing, he can only end by hating himself as well as his fruitless occupation. We must not, then, count a forgetful mind as competent to pursue wisdom; we must require a good memory.

Glaucon:: By all means.

Socrates:: Further, there is in some natures a crudity and awkwardness that can only tend to a lack of measure and proportion; and there is a close affinity between proportion and truth. Hence, besides our other requirements, we shall look for a mind endowed with measure and grace, which will be instinctively drawn to see every reality in its true light.

Glaucon:: Yes.

Socrates:: Well then, now that we have enumerated the qualities of a mind destined to take its full part in the apprehension of reality, have you any doubt about their being indispensable and all necessarily going together?

Glaucon:: None whatever.

Socrates:: Then have you any fault to find with a pursuit which none can worthily follow who is not by nature quick to learn and to remember, magnanimous and gracious, the friend and kinsman of truth, justice, courage, temperance?

Glaucon:: No; Momus himself could find no flaw in it.

Socrates:: Well then, when time and education have brought such characters as these to maturity, would you entrust the care of your commonwealth to anyone else?

Adeimantus:: No one could deny all that, Socrates; but, whenever you talk in this way, your hearers feel a certain misgiving: they think that, because they are inexperienced in your method of question and answer, at each question the reasoning leads them a little farther astray, until at last these slight divergences amount to a serious error and they find themselves contradicting their original position. Just as in draughts the less skilful player is finally hemmed into a corner where he cannot make a move, so in this game where words take the place of counters they feel they are being cornered and reduced to silence, but that does not really prove them in the wrong. I say this with an eye to the present situation. Anyone might say now that at each question you ask there is no contradicting you, but that nevertheless, as a matter of plain fact, the votaries of philosophy, when they carry on the study too long, instead of taking it up in youth as a part of general culture and then dropping it, almost always become decidedly queer, not to say utterly worthless; while even the most respectable are so far the worse for this pursuit you are praising as to become useless to society.

Socrates:: Well, do you think that charge is untrue?

Adeimantus:: I do not know; I should like to hear your opinion.

Socrates:: You shall; I think it is true.

Adeimantus:: Then how can it be right to say that there will be no rest from trouble until states are ruled by these philosophers whom we are now admitting to be of no use to them?

Socrates:: That is a question which needs to be answered by means of a parable.

Adeimantus:: Whereas you, of course, never talk in parables!

Socrates:: Ah mocking me, are you? after forcing upon me a thesis that is so hard to prove. But never mind; listen to my parable, and you will see once more what an effort it costs me to scrape one together. The better sort of philosophers are placed in such a cruel position in relation to their country that there is no one thing in nature to be compared to it; I can plead their cause only by collecting materials for my parable from more than one quarter, like an artist drawing a goat-stag or other such composite monster. Imagine this state of affairs on board a ship or a number of ships. The master is bigger and burlier than any of the crew, but a little deaf and short-sighted and no less deficient in seamanship. The sailors are quarrelling over the control of the helm; each thinks he ought to be steering the vessel, though he has never learnt navigation and cannot point to any teacher under whom he has served his apprenticeship; what is more, they assert that navigation is a thing that cannot be taught at all, and are ready to tear in pieces anyone who says it can. Meanwhile they besiege the master himself, begging him urgently to trust them with the helm; and sometimes, when others have been more successful in gaining his ear, they kill them or throw them overboard, and, after somehow stupefying the worthy master with strong drink or an opiate, take control of the ship, make free with its stores, and turn the voyage, as might be expected of such a crew, into a drunken carousal. Besides all this, they cry up as a skilled navigator and master of seamanship anyone clever enough to lend a hand in persuading or forcing the master to set them in command. Every other kind of man they condemn as useless. They do not understand that the genuine navigator can only make himself fit to command a ship by studying the seasons of the year, sky, stars, and winds, and all that belongs to his craft; and they have no idea that, along with the science of navigation, it is possible for him to gain, by instruction or practice, the skill to keep control of the helm whether some of them like it or not. If a ship were managed in that way, would not those on board be likely to call the expert in navigation a mere star-gazer, who spent his time in idle talk and was useless to them?

Adeimantus:: They would indeed.

Socrates:: I think you understand what I mean and do not need to have my parable interpreted in order to see how it illustrates the attitude of existing states towards the true philosopher.

Adeimantus:: Quite so.

Socrates:: Use it, then, to enlighten that critic whom you spoke of as astonished that philosophers are not held in honour by their country. You may try, in the first place, to convince him that it would be far more astonishing if they were; and you may tell him further that he is right in calling the best sort of philosophers useless to the public; but for that he must rather blame those who make no use of them. It is not in the natural course of things for the pilot to beg the crew to take his orders, any more than for the wise to wait on the doorsteps of the rich; the author of that epigram was mistaken. What is natural is that the sick man, whether rich or poor, should wait at the door of the physician, and that all who need to be governed should seek out the man who can govern them; it is not for him to beg them to accept his rule, if there is really any help in him. But our present rulers may fairly be compared to the sailors in our parable, and the useless visionaries, as the politicians call them, to the real masters of navigation.

Adeimantus:: Quite true.

Socrates:: Under these conditions, the noblest of pursuits can hardly be thought much of by men whose own way of life runs counter to it. But by far the most formidable reproach is brought upon philosophy by those professed followers whom your critic no doubt had in mind when he denounced almost all of its votaries as utterly worthless and the best of them as of no use. I admitted the truth of that, did I not?

Adeimantus:: Yes.

Socrates:: Well, we have explained why the better sort are of no use. Shall we now go on to the question why the majority cannot fail to be worthless, and try to show, if we can, that here again the fault does not lie with philosophy?

Adeimantus:: Yes, by all means.

Socrates:: Before we begin the discussion, let us recall the point from which we started in describing the inborn disposition required for the making of a noble character. The leading characteristic, if you remember, was truth, which he must always and everywhere follow or else be an impostor with no part in true philosophy. This was one point where the current estimate of the philosopher is very much against us.

Adeimantus:: It is.

Socrates:: But might we not fairly plead in defense our account of the true lover of knowledge as one born to strive towards reality, who cannot linger among that multiplicity of things which men believe to be real, but holds on his way with a passion that will not faint or fail until he has laid hold upon the essential nature of each thing with that part of his soul which can apprehend reality because of its affinity therewith; and when he has by that means approached real being and entered into union with it, the offspring of this marriage is intelligence and truth; so that at last, having found knowledge and true life and nourishment, he is at rest from his travail?

Adeimantus:: No defense could be fairer.

Socrates:: Well then, such a one cannot but hate falsehood and love the truth; and when truth takes the lead, we may look to find in its train, not a whole company of defects, but a sound character, in which temperance attends on justice. Nor is there any need to prove once more that a whole array of other qualities must go with the philosophic nature: you will remember how it entailed courage, magnanimity, quickness to learn, and a good memory. Then you objected that, though everyone must assent to all this, yet, if he turned his attention from theory to fact, he would find the actual persons in question to be some of them useless, and most of them having every possible fault. Looking for the grounds of this reproach, we are now inquiring why the majority have these defects; and it was with a view to this problem that we have defined once more the qualities which the genuinely philosophic nature cannot fail to possess.

Adeimantus:: That is so.

Socrates:: Next then, we must study the influences that corrupt this nature and in many cases completely ruin it, though some few escape, who, as you remark, are said to be of no use, but not altogether worthless. Then we will consider the quality of those counterfeit natures which take to a pursuit too high and too good for them and by their manifold delinquencies have fastened upon philosophy, all the world over, the reputation you spoke of.

Adeimantus:: What are these corrupting influences?

Socrates:: I will describe them as well as I can. Everyone, I think, would agree that a nature with all the qualities we required to make the perfect philosopher is a rare growth, seldom seen among men.

Adeimantus:: Extremely rare.

Socrates:: Consider, then, how many grave dangers threaten to destroy these few. Strangest of all, every one of those qualities which we approved—courage, temperance, and all the rest—tends to ruin its possessor and to wrest his mind away from philosophy.

Adeimantus:: That does sound strange.

Socrates:: And, besides this, all the good things of life, as they are called, corrupt and distract the soul: beauty, wealth, strength, powerful connections, and so forth—you know the sort of thing I mean.

Adeimantus:: Yes, but I should like you to explain in more detail.

Socrates:: The matter will be clear enough, and what I have just said will not seem so strange, when you have grasped the underlying principle. We know it to be true of any seed or growing thing, whether plant or animal, that if it fails to find its proper nourishment or climate or soil, then the more vigorous it is, the more it will lack the qualities it should possess. Evil is a worse enemy to the good than to the indifferent; so it is natural that bad conditions of nurture should be peculiarly uncongenial to the finest nature and that it should come off worse under them than natures of an insignificant order.

Adeimantus:: That is so.

Socrates:: Is not the same principle true of the mind, Adeimantus: if their early training is bad, the most gifted turn out the worst. Great crimes and unalloyed wickedness are the outcome of a nature full of generous promise, ruined by bad upbringing; no great harm, or great good either, will ever come of a slight or feeble disposition.

Adeimantus:: That is true.

Socrates:: So is it, then, with this temperament we have postulated for the philosopher: given the right instruction, it must grow to the full flower of excellence; but if the plant is sown and reared in the wrong soil, it will develop every contrary defect, unless saved by some miracle. Or do you hold the popular belief that, here and there, certain young men are demoralized by the private instructions of some individual sophist? Does that sort of influence amount to much? Is not the public itself the greatest of all sophists, training up young and old, men and women alike, into the most accomplished specimens of the character it desires to produce?

Adeimantus:: When does that happen?

Socrates:: Whenever the populace crowds together at any public gathering, in the Assembly, the law-courts, the theatre, or the camp, and sits there clamoring its approval or disapproval, both alike excessive, of whatever is being said or done; booing and clapping till the rocks ring and the whole place redoubles the noise of their applause and outcries. In such a scene what do you suppose will be a young man's state of mind? What sort of private instruction will have given him the strength to hold out against the force of such a torrent, or will save him from being swept away down the stream, until he accepts all their notions of right and wrong, does as they do, and comes to be just such a man as they are?

Adeimantus:: Yes, Socrates, such influence must be irresistible.

Socrates:: And I have said nothing of the most powerful engines of persuasion which the masters in this school of wisdom bring to bear when words have no effect. As you know, they punish the recalcitrant with disfranchisement, fines, and death.

Adeimantus:: They do.

Socrates:: How could the private teaching of any individual sophist avail in counteracting theirs? It would be great folly even to try; for no instruction aiming at an ideal contrary to the training they give has ever produced, or ever will produce, a different type of character—on the level, that is to say, of common humanity: one must always make an exception of the superhuman; and you may be sure that, in the present state of society, any character that escapes and comes to good can only have been saved by some miraculous interposition.

Adeimantus:: I quite agree.

Socrates:: Then I hope you will also agree to this. Every one of these individuals who make a living by teaching in private and whom the public are pleased to call sophists and to regard as their rivals, is teaching nothing else than the opinions and beliefs expressed by the public itself when it meets on any occasion; and that is what he calls wisdom. It is as if the keeper of some huge and powerful creature should make a study of its moods and desires, how it may best be approached and handled, when it is most savage or gentle and what makes it so, the meaning of its various cries and the tones of voice that will soothe or provoke its anger; and, having mastered all this by long familiarity, should call it wisdom, reduce it to a system, and set up a school. Not in the least knowing which of these humors and desires is good or bad, right or wrong, he will fit all these terms to the fancies of the great beast and call what it enjoys good and what vexes it bad. He has no other account to give of their meaning; for him any action will be 'just' and 'right' that is done under necessity, since he is too blind to tell how great is the real difference between what must be and what ought to be. It would be a queer sort of education that such a person could offer, would it not?

Adeimantus:: It would indeed.

Socrates:: And is there anything to choose between him and one who thinks it is wisdom to have studied the moods and tastes of the assembled multitude, either in painting and music or in politics? Certainly, no one can go into such mixed company and submit to their judgment a poem or a work of art or some service he would render to the state, thus going out of his way to make the public his masters, without falling under the fatal necessity to give them whatever they like and do whatever they approve; but have you ever heard any argument which was not beneath contempt to show that what they admire is really beautiful or what they approve really good?

Adeimantus:: No; and I do not expect to hear one.

Socrates:: Now, with all this in mind, recall that distinction we drew earlier, between Beauty itself and the multiplicity of beautiful things. Is it conceivable that the multitude should ever believe in the existence of any real essence, as distinct from its many manifestations, or listen to anyone who asserts such a reality?

Adeimantus:: Assuredly not.

Socrates:: If that is so, the multitude can never be philosophical. Accordingly it is bound to disapprove of all who pursue wisdom; and so also, of course, are those individuals who associate with the mob and set their hearts on pleasing it.

Adeimantus:: That is clear.

Socrates:: What hope can you see, then, that a philosophic nature should be saved to persevere in the pursuit until the goal is reached? Remember how we agreed that the born philosopher will be distinguished by quickness of understanding, good memory, courage, and generosity. With such gifts, already as a boy he will stand out above all his companions, especially if his person be a match for his mind; and when he grows older, his friends and his fellow citizens will no doubt want to make use of him for their own purposes. They will fawn upon him with their entreaties and promises of advancement, flattering beforehand the power that will some day be his.

Adeimantus:: Yes, that happens often enough.

Socrates:: What will become of a youth so circumstanced, above all if he belongs to a great country and is conspicuous there for his birth and wealth, as well as for a tall and handsome person? Will he not be filled with unbounded ambition, believing himself well able to manage the affairs of all the world, at home and abroad, and thereupon give himself airs and be puffed up with senseless self-conceit?

Adeimantus:: No doubt.

Socrates:: Now suppose that while this frame of mind is gaining upon him, someone should come and quietly tell him the truth, that there is no sense in him and that the only way to get the understanding he needs is to work for it like a slave: will he find it easy to listen, surrounded by all these evil influences?

Adeimantus:: Certainly not.

Socrates:: Perhaps, however, because there is something in a fine nature that responds to the voice of reason, he might be sensitive to the force which would draw him towards philosophy and begin to yield. But then those friends of his will see that they are in danger of losing one who might do so much for their party. Sooner than let him be won over, there is no engine of force or persuasion, from private intrigue to prosecution in the courts, that they will not bring to bear either upon him or upon his counselor. How can he ever become a lover of wisdom?

Adeimantus:: He never will.

Socrates:: You see, then, I was not wrong in saying that, in a way, the very qualities which make up the philosopher's nature may, with a bad upbringing, be the cause of his falling away, no less than wealth and all other so-called advantages.

Adeimantus:: Yes, you were right.

Socrates:: These, then, are the dangers which threaten the noblest natures, rare enough in any case, and spoil them for the highest of all pursuits. And among men of this type will be found those who do the greatest harm or, if the current should chance to set the other way, the greatest good, to society and to individuals; whereas no great good or harm will come to either from a little mind.

Adeimantus:: Quite true.

Socrates:: So Philosophy is left forlorn, like a maiden deserted by her nearest kin; and while these apostates take to a life that is no true life for them, she, bereft of her natural protectors, is dishonored by unworthy interlopers, who fasten on her the reproach you have repeated, that some who have to do with her are worthless and most of them deserve heavy punishment.

Adeimantus:: That is what people say.

Socrates:: Naturally enough; when any poor creature who has proved his cleverness in some mechanical craft, sees here an opening for a pretentious display of high-sounding words and is glad to break out of the prison of his paltry trade and take sanctuary in the shrine of philosophy. For as compared with other occupations, philosophy, even in its present case, still enjoys a higher prestige, enough to attract a multitude of stunted natures, whose souls a life of drudgery has warped and maimed no less surely than their sedentary crafts have disfigured their bodies. For all the world they are like some little bald-headed tinker, who, having come into some money, has just got out of prison, had a good wash at the baths, and dressed himself up in a new coat as a bridegroom, ready to marry his master's daughter, who has been left poor and friendless. Could the issue of such a match ever be anything but pitiful base-born creatures? And, by the same token, what sort of ideas and opinions will be begotten of the misalliance of Philosophy with men incapable of culture? Not any true-born child of wisdom; the only right name for them will be sophistry.

Adeimantus:: Quite true.

Socrates:: So, Adeimantus, the remnant who are worthy to consort with Philosophy will be small indeed: perhaps some noble and well-nurtured character, saved by exile from those influences which would have impaired his natural impulse to be constant in her service; or it may be a great mind born in a petty state whose affairs are beneath its notice; and, possibly, a gifted few who have turned to philosophy from some other calling which they rightly disdain. Some, again, might be held back like our friend Theages, who, with every temptation to abandon study for a public life, has been restrained by ill health. Of my own case there is little need to speak; the warning of the divine sign, I dare say, has come to few men, if any, before me. One who has joined this small company and tasted the happiness that is their portion; who has, watched the frenzy of the multitude and seen that there is no soundness in the conduct of public life, nowhere an ally at whose side a champion of justice could hope to escape destruction; but that, like a man fallen among wild beasts, if he should refuse to take part in their misdeeds and could not hold out alone against the fury of all, he would be destined, before he could be of any service to his country or his friends, to perish, having done no good to himself or to anyone else—one who has weighed all this keeps quiet and goes his own way, like the traveler who takes shelter under a wall from a driving storm of dust and hail; and seeing lawlessness spreading on all sides, is content if he can keep his hands clean from iniquity while this life lasts, and when the end comes take his departure, with good hopes, in serenity and peace.

Adeimantus:: Surely, that would be no small achievement.

Socrates:: Yes; but far less than he might achieve, if his lot were cast in a society congenial to his nature, where he could grow to his full height and save his country as well as himself.

Well then, I went on, enough has been said about the prejudice against philosophy, why it exists and how unfair it is, unless you have anything to add.

Adeimantus:: No, nothing on that head. But is there any existing form of society that you would call congenial to philosophy?

Socrates:: Not one. That is precisely my complaint: no existing constitution is worthy of the philosophic nature; that is why it is perverted and loses its character. As a foreign seed sown in a different soil yields to the new influence and degenerates into the local variety, so this nature cannot now keep its proper virtue, but falls away and takes on an alien character. If it can ever find the ideal form of society, as perfect as itself, then we shall see that it is in reality something divine, while all other natures and ways of life are merely human. No doubt you will ask me next, what this ideal society is.

Adeimantus:: You are mistaken; I was going to ask whether you meant the commonwealth we have been founding.

Socrates:: Yes, in all points but one: our state must always contain some authority which will hold to the same idea of its constitution that you had before you in framing its laws. We did, in fact, speak of that point before, but not clearly enough; you frightened me with your objections, which have shown that the explanation is a long and difficult matter; and the hardest part is still to come.

Adeimantus:: What is that?

Socrates:: The question how a state can take in hand the pursuit of philosophy without disaster; for all great attempts are hazardous, and the proverb is only too true, that what is worth while is never easy.

Adeimantus:: All the same, this point must be cleared up to complete your account.

Socrates:: If I fail, it will not be for want of goodwill; 'yourself shall see me do my uttermost'. In proof of which I shall at once be rash enough to remark that the state should deal with this pursuit, not as it does now, but in just the opposite way. As things are, those who take it up at all are only just out of their childhood. In the interval before they set up house and begin 'to earn their living, they are introduced to the hardest part—by which I mean abstract discussions—and then, when they have done with that, their philosophic education is supposed to be complete. Later, they think they have done much if they accept an invitation to listen to such a discussion, which is, in their eyes, to be taken as a pastime; and as age draws on, in all but a very few the light is quenched more effectually than the sun of Heraclitus, inasmuch as it is never rekindled.

Adeimantus:: And what would be the right plan?

Socrates:: Just the opposite. Boys and youths should be given a liberal education suitable to their age; and, while growing up to manhood, they should take care to make their bodies into good instruments for the service of philosophy. As the years go on in which the mind begins to reach maturity, intellectual training should be intensified. Finally, when strength fails and they are past civil and military duties, let them range at will, free from all serious business but philosophy; for theirs is to be a life of happiness, crowned after death with a fitting destiny in the other world.

Adeimantus:: You really do seem to be doing your uttermost, Socrates. But I fancy most of your hearers will be even more in earnest on the other side. They are not at all likely to agree; least of all Thrasymachus.

Socrates:: Don’t try to make a quarrel between Thrasymachus and me, when we have just become friends—not that we were enemies before. You and I will spare no effort until we convince him and the rest of the company, or at least take them some way with us, against the day when they may find themselves once more engaged in discussions like ours in some future incarnation.

Adeimantus:: Rather a distant prospect!

Socrates:: No more than a moment in the whole course of time. However, it is no wonder that most people have no faith in our proposals, for they have never seen our words come true in fact. They have heard plenty of eloquence, not like our own unstudied discourse, but full of balanced phrases and artfully matched antitheses; but a man with a character so finely balanced as to be a match for the ideal of virtue in word and deed, ruling in a society as perfect as himself—that they have never yet seen in a single instance.

Adeimantus:: They have not.

Socrates:: Nor yet have they cared to listen seriously to frank discussion of the nobler sort that is entirely bent on knowing the truth for its own sake and leaves severely alone those tricks of special pleading in the law-court or the lecture-room which aim only at influencing opinion or winning a case.

Adeimantus:: Quite true.

Socrates:: These, then, were the obstacles I foresaw when, in spite of my fears, truth compelled me to declare that there will never be a perfect state or constitution, nor yet a perfect man, until some happy circumstance compels these few philosophers who have escaped corruption but are now called useless, to take charge, whether they like it or not, of a state which will submit to their authority; or else until kings and rulers or their sons are divinely inspired with a genuine passion for true philosophy. If either alternative or both were impossible, we might justly be laughed at as idle dreamers; but, as I maintain, there is no ground for saying so. Accordingly, if ever in the infinity of time, past or future, or even to-day in some foreign region far beyond our horizon, men of the highest gifts for philosophy are constrained to take charge of a commonwealth, we are ready to maintain that, then and there, the constitution we have described has been realized, or will be realized when once the philosophic muse becomes mistress of a state. For that might happen. Our plan is difficult—we have admitted as much—but not impossible.

Adeimantus:: I agree to that.

Socrates:: But the public, you are going to say, think otherwise?

Adeimantus:: Perhaps.

Socrates:: My dear Adeimantus, you must not condemn the public so sweepingly; they will change their opinion, if you avoid controversy and try gently to remove their prejudice against the love of learning. Repeat our description of the philosopher’s nature and of his pursuits, and they will see that you do not mean the sort of person they imagine. It is only ill-temper and malice in oneself that call out those qualities in others who are not that way inclined; and I will anticipate you by declaring that, in my belief, the public with a few exceptions is not of such an unyielding temper.

Adeimantus:: Yes, I agree with you there.

Socrates:: Will you also agree that, if it is ill-disposed towards philosophy, the blame must fall on that noisy crew of interlopers who are always bandying abuse and spiteful personalities—the last thing of which a philosopher can be guilty? For surely, Adeimantus, a man whose thoughts are fixed on true reality has no leisure to look downwards on the affairs of men, to take part in their quarrels, and to catch the infection of their jealousies and hates. He contemplates a world of unchanging and harmonious order, where reason governs and nothing can do or suffer wrong; and, like one who imitates an admired companion, he cannot fail to fashion himself in its likeness. So the philosopher, in constant companionship with the divine order of the world, will reproduce that order in his soul and, so far as man may, become godlike; though here, as everywhere, there will be scope for detraction.

Adeimantus:: Quite true.

Socrates:: Suppose, then, he should find himself compelled to mould other characters besides his own and to shape the pattern of public and private life into conformity with his vision of the ideal, he will not lack the skill to produce such counterparts of temperance, justice, and all the virtues as can exist in the ordinary man. And the public, when they see that we have described him truly, will be reconciled to the philosopher and no longer disbelieve our assertion that happiness can only come to a state when its lineaments are traced by an artist working after the divine pattern.

Adeimantus:: Yes, they will be reconciled when once they understand. But how will this artist set to work?

Socrates:: He will take society and human character as his canvas, and begin by scraping it clean. That is no easy matter; but, as you know, unlike other reformers, he will not consent to take in hand either an individual or a state or to draft laws, until he is given a clean surface to work on or has cleansed it himself.

Adeimantus:: Quite rightly.

Socrates:: Next, he will sketch in the outline of the constitution. Then, as the work goes on, he will frequently refer to his model, the ideals of justice, goodness, temperance, and the rest, and compare with them the copy of those qualities which he is trying to create in human society. Combining the various elements of social life as a painter mixes his colors, he will reproduce the complexion of true humanity, guided by that divine pattern whose likeness Homer saw in the men he called godlike. He will rub out and paint in again this or that feature, until he has produced, so far as may be, a type of human character that heaven can approve.

Adeimantus:: No picture could be more beautiful than that.

Socrates:: Are we now making any impression on those assailants who, you said, would fall upon us so furiously when we spoke in praise of the philosopher and proposed to give him control of the state? Will they be calmer now that we have told them we mean an artist who will use his skill in this way to design a constitution?

Adeimantus:: They ought to be, if they have any sense.

Socrates:: Yes, for what ground is left for dispute? It would be absurd to deny that a philosopher is a lover of truth and reality; or that his nature, as we have described it, is allied to perfection; or again, that given the right training, no other will be so completely good and enlightened. They will hardly give the preference to those impostors whom we have ruled out.

Adeimantus:: Surely not.

Socrates:: So they will no longer be angry with us for saying that, until philosophers hold power, neither states nor individuals will have rest from trouble, and the commonwealth we have imagined will never be realized.

Adeimantus:: Less angry perhaps.

Socrates:: I suggest that, if we go farther and assume them to be completely pacified and convinced, then, perhaps, they might agree with us for very shame.

Adeimantus:: Certainly they might.

Socrates:: Granted, then, that they are convinced so far, no one will dispute our other point, that kings and hereditary rulers might have sons with a philosophic nature, and these might conceivably escape corruption. It would be hard to save them, we admit; but can anyone say that, in the whole course of time, not a single one could be saved?

Adeimantus:: Surely not.

Socrates:: Well, one would be enough to effect all this reform that now seems so incredible, if he had subjects disposed to obey; for it is surely not impossible that they should consent to carry out our laws and customs when laid down by a ruler. It would be no miracle if others should think as we do; and we have, I believe, sufficiently shown that our plan, if practicable, is. the best. So, to conclude: our institutions would be the best, if they could be realized, and to realize them, though hard, is not impossible.

Adeimantus:: Yes, that is the conclusion.

Socrates:: One difficulty, then, has been surmounted. It remains to ask how we can make sure of having men who will preserve our constitution. What must they learn, and at what age should they take up each branch of study?

Adeimantus:: Yes, that is the next point.

Socrates:: I gained nothing by my cunning in putting off those thorny questions of the possession of wives and children and the appointment of Rulers. I knew that the ideal plan would give offence and be hard to carry out; none the less I have had to discuss these matters. We have now disposed of the women and children, but we must start all over again upon the training of the Rulers. You remember how their love for their country was to be proved, by the tests of pain and pleasure, to be a faith that no toil or danger, no turn of fortune could make them abandon. All who failed were to be rejected; only the man who came out flawless, like gold tried in the fire, was to be made a Ruler with privileges and rewards in life and after death. So much was said, when our argument turned aside, as if hoping, with veiled face, to slip past the danger that now lies in our path.

Adeimantus:: Quite true, I remember.

Socrates:: Yes, I shrank from the bold words which have now been spoken; but now we have ventured to declare that our Guardians in the fullest sense must be philosophers. So much being granted, you must reflect how few are likely to be available. The natural gifts we required will rarely grow together into one whole; they tend to split apart.

Adeimantus:: How do you mean?

Socrates:: Qualities like ready understanding, a good memory, sagacity, quickness, together with a high-spirited, generous temper, are seldom combined with willingness to live a quiet life of sober constancy. Keen wits are apt to lose all steadiness and to veer about in every direction. On the other hand, the steady reliable characters, whose impassivity is proof against the perils of war, are equally proof against instruction. Confronted with intellectual work, they become comatose and do nothing but yawn.

Adeimantus:: That is true.

Socrates:: But we insist that no one must be given the highest education or hold office as Ruler, who has not both sets of qualities in due measure. This combination will be rare. So, besides testing it by hardship and danger and by the temptations of pleasure, we may now add that its strength must be tried in many forms of study, to see whether it has the courage and endurance to pursue the highest kind of knowledge, without flinching as others flinch under physical trials.

Adeimantus:: By all means; but what kinds of study do you call the highest?

Socrates:: You remember how we deduced the definitions of justice, temperance, courage, and wisdom by distinguishing three parts of the soul?

Adeimantus:: If I had forgotten that, I should not deserve to hear any more.

Socrates:: Do you also remember my warning you beforehand that in order to gain the clearest possible view of these qualities we should have to go round a longer way, although we could give a more superficial account in keeping with our earlier argument. You said that would do; and so we went on in a way which seemed to me not sufficiently exact; whether you were satisfied, it is for you to say.

Adeimantus:: We all thought you gave us a fair measure of truth.

Socrates:: No measure that falls in the least degree short of the whole truth can be quite fair in so important a matter. What is imperfect can never serve as a measure; though people sometimes think enough has been done and there is no need to look further.

Adeimantus:: Yes, indolence is common enough.

Socrates:: But the last quality to be desired in the Guardian of a commonwealth and its laws. So he will have to take the longer way and work as hard at learning as at training his body; otherwise he will never reach the goal of the highest knowledge, which most of all concerns him.

Adeimantus:: Why, are not justice and the other virtues we have discussed the highest? Is there something still higher to be known?

Socrates:: There is; and of those virtues themselves we have as yet only a rough outline, where nothing short of the finished picture should content us. If we strain every nerve to reach precision and clearness in things of little moment, how absurd not to demand the highest degree of exactness in the things that matter most.

Adeimantus:: Certainly. But what do you mean by the highest kind of knowledge and with what is it concerned? You cannot hope to escape that question.

Socrates:: I do not; you may ask me yourself. All the same, you have been told many a time; but now either you are not thinking or, as I rather suspect, you mean to put me to some trouble with your insistence. For you have often been told that the highest object of knowledge is the essential nature of the Good, from which everything that is good and right derives its value for us. You must have been expecting me to speak of this now, and to add that we have no sufficient knowledge of it. I need not tell you that, without that knowledge, to know everything else, however well, would be of no value to us, just as it is of no use to possess anything without getting the good of it. What advantage can there be in possessing everything except what is good, or in understanding everything else while of the good and desirable we know nothing?

Adeimantus:: None whatever.

Socrates:: Well then, you know too that most people identify the Good with pleasure, whereas the more enlightened think it is knowledge.

Adeimantus:: Yes, of course.

Socrates:: And further that these latter cannot tell us what knowledge they mean, but are reduced at last to saying, 'knowledge of the Good'.

Adeimantus:: That is absurd.

Socrates:: It is; first they reproach us with not knowing the Good, and then tell us that it is knowledge of the Good, as if we did after all understand the meaning of that word 'Good' when they pronounce it.

Adeimantus:: Quite true.

Socrates:: What of those who define the Good as pleasure? Are they any less confused in their thoughts? They are obliged to admit that there are bad pleasures; from which it follows that the same things are both good and bad.

Adeimantus:: Quite so.

Socrates:: Evidently, then, this is a matter of much dispute. It is also evident that, although many are content to do what seems just or honorable without really being so, and to possess a mere semblance of these qualities, when it comes to good things, no one is satisfied with possessing what only seems good: here all reject the appearance and demand the reality.

Adeimantus:: Certainly.

Socrates:: A thing, then, that every soul pursues as the end of all her actions, dimly divining its existence, but perplexed and unable to grasp its nature with the same clearness and assurance as in dealing with other things, and so missing whatever value those other things might have—a thing of such supreme importance is not a matter about which those chosen Guardians of the whole fortunes of our commonwealth can be left in the dark.

Adeimantus:: Most certainly not. ‘

Socrates:: At any rate, institutions or customs which are desirable and right will not, I imagine, find a very efficient guardian in one who does not know in what way they are good. I should rather guess that he will not be able to recognize fully that they are right and desirable.

Adeimantus:: No doubt.

Socrates:: So the order of our commonwealth will be perfectly regulated only when it is watched over by a Guardian who does possess this knowledge.

Adeimantus:: That follows. But, Socrates, what is your own account of the Good? Is it knowledge, or pleasure, or something else?

Socrates:: There you are! I exclaimed; I could see all along that you were not going to be content with what other people think.

Adeimantus:: Well, Socrates, it does not seem fair that you should be ready to repeat other people’s opinions but not to state your own, when you have given so much thought to this subject.

Socrates:: And do you think it fair of anyone to speak as if he knew what he does not know?

Adeimantus:: No, not as if he knew, but he might give his opinion for what it is worth.

Socrates:: Why, have you never noticed that opinion without knowledge is always a shabby sort of thing? At the best it is blind. One who holds a true belief without intelligence is just like a blind man who happens to take the right road, isn’t he?

Adeimantus:: No doubt.

Socrates:: Well, then, do you want me to produce one of these poor blind cripples, when others could discourse to you with illuminating eloquence?

Glaucon:: No really, Socrates, you must not give up within sight of the goal. We should be quite content with an account of the Good like the one you gave us of justice and temperance and the other virtues.

Socrates:: So should I be, my dear Glaucon, much more than content! But I am afraid it is beyond my powers; with the best will in the world I should only disgrace myself and be laughed at. No, for the moment let us leave the question of the real meaning of good; to arrive at what I at any rate believe it to be would call for an effort too ambitious for an inquiry like ours. However, I will tell you, though only if you wish it, what I picture to myself as the offspring of the Good and the thing most nearly resembling it.

Glaucon:: Well, tell us about the offspring, and you shall remain in our debt for an account of the parent.

Socrates:: I only wish it were within my power to offer, and within yours to receive, a settlement of the whole account. But you must be content now. with the interest only; and you must see to it that, in describing this offspring of the Good, I do not inadvertently cheat you with false coin.

Glaucon:: We will keep a good eye on you. Go on.

Socrates:: First we must come to an understanding. Let me remind you of the distinction we drew earlier and have often drawn on other occasions, between the multiplicity of things that we call good or beautiful or whatever it may be and, on the other hand, Goodness itself or Beauty itself and so on. Corresponding to each of these sets of many things, we postulate a single Form or real essence, as we call it.

Glaucon:: Yes, that is so.

Socrates:: Further, the many things, we say, can be seen, but are not objects of rational thought; whereas the Forms are objects of thought, but invisible.

Glaucon:: Yes, certainly.

Socrates:: And we see things with our eyesight, just as we hear sounds with our ears and, to speak generally, perceive any sensible thing with our sense-faculties.

Glaucon:: Of course.

Socrates:: Have you noticed, then, that the artificer who designed the senses has been exceptionally lavish of his materials in making the eyes able to see and their objects visible?

Glaucon:: That never occurred to me.

Socrates:: Well, look at it in this way. Hearing and sound do not stand in need of any third thing, without which the ear will not hear nor sound be heard; and I think the same is true of most, not to say all, of the other senses. Can you think of one that does require anything of the sort?

Glaucon:: No, I cannot.

Socrates:: But there is this need in the case of sight and its objects. You may have the power of vision in your eyes and try to use it, and color may be there in the objects; but sight will see nothing and the colors will remain invisible in the absence of a third thing peculiarly constituted to serve this very purpose.

Glaucon:: By which you mean-----------?

Socrates:: Naturally I mean what you call light; and if light is a thing of value, the sense of sight and the power of being visible are linked together by a very precious bond, such as unites no other sense with its object.

Glaucon:: No one could say that light is not a precious thing.

Socrates:: And of all the divinities in the skies is there one whose light, above all the rest, is responsible for making our eyes see perfectly and making objects perfectly visible?

Glaucon:: There can be no two opinions: of course you mean the Sun.

Socrates:: And how is sight related to this deity? Neither sight nor the eye which contains it is the Sun, but of all the sense-organs it is the most sun-like; and further, the power it possesses is dispensed by the Sun, like a stream flooding the eye. And again, the Sun is not vision, but it is the cause of vision and also is seen by the vision it causes.

Glaucon:: Yes.

Socrates:: It was the Sun, then, that I meant when I spoke of that offspring which the Good has created in the visible world, to stand there in the same relation to vision and visible things as that which the Good itself bears in the intelligible world to intelligence and to intelligible objects.

Glaucon:: How is that? You must explain further.

Socrates:: You know what happens when the colors of things are no longer irradiated by the daylight, but only by the fainter luminaries of the night: when you look at them, the eyes are dim and seem almost blind, as if there were no unclouded vision in them. But when you look at things on which the Sun is shining, the same eyes see distinctly and it becomes evident that they do contain the power of vision.

Glaucon:: Certainly.

Socrates:: Apply this comparison, then, to the soul. When its gaze is fixed upon an object irradiated by truth and reality, the soul gains understanding and- knowledge and is manifestly in possession of intelligence. But when it looks towards that twilight world of things that come into existence and pass away, its sight is dim and it has only opinions and beliefs which shift to and fro, and now it seems like a thing that has no intelligence.

Glaucon:: That is true.

Socrates:: This, then, which gives to the objects of knowledge their truth and to him who knows them his power of knowing, is the Form or essential nature of Goodness. It is the cause of knowledge and truth; and so, while you may think of it as an object of knowledge, you will do well to regard it as something beyond truth and knowledge and, precious as these both are, of still higher worth. And, just as in our analogy light and vision were to be thought of as like the Sun, but not identical with it, so here both knowledge and truth are to be regarded as like the Good, but to identify either with the Good is wrong. The Good must hold a yet higher place of honor.

Glaucon:: You are giving it a position of extraordinary splendor, if it is the source of knowledge and truth and itself surpasses them in worth. You surely cannot mean that it is pleasure.

Socrates:: Heaven forbid. But I want to follow up our analogy still further. You will agree that the Sun not only makes the things we see visible, but also brings them into existence and gives them growth and nourishment; yet he is not the same thing as existence. And so with the objects of knowledge: these derive from the Good not only their power of being known, but their very being and reality; and Goodness is not the same thing as being, but even beyond being, surpassing it in dignity and power.

Glaucon exclaimed with some amusement at my exalting Goodness in such extravagant terms.

Socrates:: It is your fault; you forced me to say what I think.

Glaucon:: Yes, and you must not stop there. At any rate, complete your comparison with the Sun, if there is any more to be said.

Socrates:: There is a great deal more.

Glaucon:: Let us hear it, then; don't leave anything out.

Socrates:: I am afraid much must be left unspoken. However, I will not, if I can help it, leave out anything that can be said on this occasion.

Glaucon:: Please do not.

Socrates:: Conceive, then, that there are these two powers I speak of, the Good reigning over the domain of all that is intelligible, the Sun over the visible world—or the heaven as I might call it; only you would think I was showing off my skill in etymology. At any rate you have these two orders of things clearly before your mind: the visible and the intelligible?

Glaucon:: I have.

Socrates:: Now take a line divided into two unequal parts, one to represent the visible order, the other the intelligible; and divide each part again in the same proportion, symbolizing degrees of comparative clearness or obscurity. Then (A) one of the two sections in the visible world will stand for images. By images I mean first shadows, and then reflections in water or in close-grained, polished surfaces, and everything of that kind, if you understand.

Glaucon:: Yes, I understand.

Socrates:: Let the second section (B) stand for the actual things of which the first are likenesses, the living creatures about us and all the works of nature or of human hands.

Glaucon:: So be it.

Socrates:: Will you also take the proportion in which the visible world has been divided as corresponding to degrees of reality and truth, so that the likeness shall stand to the original in the same ratio as the sphere of appearances and belief to the sphere of knowledge?

Glaucon:: Certainly.

Socrates:: Now consider how we are to divide the part which stands for the intelligible world. There are two sections. In the first (C) the mind uses as images those actual things which themselves had images in the visible world; and it is compelled to pursue its inquiry by starting from assumptions and travelling, not up to a principle, but down to a conclusion. In the second (D) the( mind moves in the other direction, from an assumption up towards a principle which is not hypothetical; and it makes no use of the images employed in the other section, but only of Forms, and conducts its inquiry solely by their means.

Glaucon:: I don’t quite understand what you mean.

Socrates:: Then we will try again; what I have just said will help you to understand. (C) You know, of course, how students of subjects like geometry and arithmetic begin by postulating odd and even numbers, or the various figures and the three kinds of angle, and other such data in each subject. These data they take as known; and, having adopted them as assumptions, they do not feel called upon to give any account of them to themselves or to anyone else, but treat them as self-evident. Then, starting from these assumptions, they go on until they arrive, by a series of consistent steps, at all the conclusions they set out to investigate.

Glaucon:: Yes, I know that.

Socrates:: You also know how they make use of visible figures and discourse about them, though what they really have in mind is the originals of which these figures are images: they are not reasoning, for instance, about this particular square and diagonal which they have drawn, but about the Square and the Diagonal; and so in all cases. The diagrams they draw and the models they make are actual things, which may have their shadows or images in water; but now they serve in their turn as images, while the student is seeking to behold those realities which only thought can apprehend.

Glaucon:: True.

Socrates:: This, then, is the class of things that I spoke of as intelligible, but with two qualifications: first, that the mind, in studying them, is compelled to employ assumptions, and, because it cannot rise above these, does not travel upwards to a first principle; and second, that it uses as images those actual things which have images of their own in the section below them and which, in comparison with those shadows and reflections, are reputed to be more palpable and valued accordingly.

Glaucon:: I understand: you mean the procedure of geometry and of the kindred arts.

Socrates:: (D) Then by the second section of the intelligible world you may understand me to mean all that unaided reasoning apprehends by the power of dialectic, when it treats its assumptions, not as first principles, but as hypotheses in the literal sense, things ‘laid down’ like a flight of steps up which it may mount all the way to something that is not hypothetical, the first principle of all; and having grasped this, may turn back and, holding on to the consequences which depend upon it, descend at last to a conclusion, never making use of any sensible object, but only of Forms, moving through Forms from one to another, and ending with Forms.

Glaucon:: I understand, though not perfectly; for the procedure you describe sounds like an enormous undertaking. But I see that you mean to distinguish the field of intelligible reality studied by dialectic as having a greater certainty and truth than the subject-matter of the ‘arts’, as they are called, which treat their assumptions as first principles. The students of these arts are, it is true, compelled to exercise thought in contemplating objects which the senses cannot perceive; but because they start from assumptions without going back to a first principle, you do not regard them as gaining true understanding about those objects, although the objects themselves, when connected with a first principle, are intelligible. And I think you would call the state of mind of the students of geometry and other such arts, not intelligence, but thinking, as being something between intelligence and mere acceptance of appearances.

Socrates:: You have understood me quite well enough. And now you may take, as corresponding to the four sections, these four states of mind: intelligence for the highest, thinking for the second, belief for the third, and for the last imagining. These you may arrange as the terms in a proportion, assigning to each a degree of clearness and certainty corresponding to the measure in which their objects possess truth and reality.

Glaucon:: I understand and agree with you. I will arrange them as you say.

Socrates:: Next, here is a parable to illustrate the degrees in which our nature may be enlightened or unenlightened. Imagine the condition of men living in a sort of cavernous chamber underground, with an entrance open to the light and a long passage all down the cave. Here they have been from childhood, chained by the leg and also by the neck, so that they cannot move and can see only what is in front of them, because the chains will not let them turn their heads. At some distance higher up is the light of a fire burning behind them; and between the prisoners and the fire is a track with a parapet built along it, like the screen at a puppet-show, which hides the performers while they show their puppets over the top.

Glaucon:: I see.

Socrates:: Now behind this parapet imagine persons carrying along various artificial objects, including figures of men and animals in wood or stone or other materials, which project above the parapet. Naturally, some of these persons will be talking, others silent.

Glaucon:: It is a strange picture, and a strange sort of prisoners.

Socrates:: Like ourselves; for in the first place prisoners so confined would have seen nothing of themselves or of one another, except the shadows thrown by the fire-light on the wall of the Cave facing them, would they?

Glaucon:: Not if all their lives they had been prevented from moving their heads.

Socrates:: And they would have seen as little of the objects carried past.

Glaucon:: Of course.

Socrates:: Now, if they could talk to one another, would they not suppose that their words referred only to those passing shadows which they saw.

Glaucon:: Necessarily.

Socrates:: And suppose their prison had an echo from the wall facing them? When one of the people crossing behind them spoke, they could only suppose that the sound came from the shadow passing before their eyes.

Glaucon:: No doubt.

Socrates:: In every way, then, such prisoners would recognize as reality nothing but the shadows of those artificial objects.

Glaucon:: Inevitably.

Socrates:: Now consider what would happen if their release from the chains and the healing of their unwisdom should come about in this way. Suppose one of them set free and forced suddenly to stand up, turn his head, and walk with eyes lifted to the light; all these movements would be painful, and he would be too dazzled to make out the objects whose shadows he had been used to see. What do you think he would say, if someone told him that what he had formerly seen was meaningless illusion, but now, being somewhat nearer to reality and turned towards more real objects, he was getting a truer view? Suppose further that he were shown the various objects being carried by and were made to say, in reply to questions, what each of them was. Would he not be perplexed and believe the objects now shown him to be not so real as what he formerly saw?

Glaucon:: Yes, not nearly so real.

Socrates:: And if he were forced to look at the fire-light itself, would not his eyes ache, so that he would try to escape and turn back to the things which he could see distinctly, convinced that they really were clearer than these other objects now being shown to him?

Glaucon:: Yes.

Socrates:: And suppose someone were to drag him away forcibly up the steep and rugged ascent and not let him go until he had hauled him out into the sunlight, would he not suffer pain and vexation at such treatment, and, when he had come out into the light, find his eyes so full of its radiance that he could not see a single one of the things that he was now told were real?

Glaucon:: Certainly he would not see them all at once.

Socrates:: He would need, then, to grow accustomed before he could see things in that upper world. At first it would be easiest to make out shadows, and then the images of men and things reflected in water, and later on the things themselves. After that, it would be easier to watch the heavenly bodies and the sky itself by night, looking at the light of the moon and stars rather than the Sun and the Sun’s light in the day-time.

Glaucon:: Yes, surely.

Socrates:: Last of all, he would be able to look at the Sun and contemplate its nature, not as it appears when reflected in water or any alien medium, but as it is in itself in its own domain.

Glaucon:: No doubt.

Socrates:: And now he would begin to draw the conclusion that it is the Sun that produces the seasons and the course of the year and controls everything in the visible world, and moreover is in a way the cause of all that he and his companions used to see.

Glaucon:: Clearly he would come at last to that conclusion.

Socrates:: Then if he called to mind his fellow prisoners and what passed for wisdom in his former dwelling-place, he would surely think himself happy in the change and be sorry for them. They may have had a practice of honoring and commending one another, with prizes for the man who had the keenest eye for the passing shadows and the best memory for the order in which they followed or accompanied one another, so that he could make a good guess as to which was going to come next. Would our released prisoner be likely to covet those prizes or to envy the men exalted to honor and power in the Cave? Would he not feel like Homer's Achilles, that he would far sooner 'be on earth as a hired servant in the house of a landless man' or endure anything rather than go back to his old beliefs and live in the old way?

Glaucon:: Yes, he would prefer any fate to such a life.

Socrates:: Now imagine what would happen if he went down again to take his former seat in the Cave. Coming suddenly out of the sunlight, his eyes would be filled with darkness. He might be required once more to deliver his opinion on those shadows, in competition with the prisoners who had never been released, while his eyesight was still dim and unsteady; and it might take some time to become used to the darkness. They would laugh at him and say that he had gone up only to come back with his sight ruined; it was worth no one's while even to attempt the ascent. If they could lay hands on the man who was trying to set them free and lead them up, they would kill him.

Glaucon:: Yes, they would.

Socrates:: Every feature in this parable, my dear Glaucon, is meant to fit our earlier analysis. The prison dwelling corresponds to the region revealed to us through the sense of sight, and the firelight within it to the power of the Sun. The ascent to see the things in the upper world you may take as standing for the upward journey of the soul into the region of the intelligible; then you will be in possession of what I surmise, since that is what you wish to be told. Heaven knows whether it is true; but this, at any rate, is how it appears to me. In the world of knowledge, the last thing to be perceived and only with great difficulty is the essential Form of Goodness. Once it is perceived, the conclusion must follow that, for all things, this is the cause of whatever is right and good; in the visible world it gives birth to light and to the lord of light, while it is itself sovereign in the intelligible world and the parent of intelligence and truth. Without having had a vision of this Form no one ran act with wisdom, either in his own life or in matters of state.

Glaucon:: So far as I can understand, I share your belief.

Socrates:: Then you may also agree that it is no wonder if those who have reached this height are reluctant to manage the affairs of men. Their souls long to spend all their time in that upper world—naturally enough, if here once more our parable holds true. Nor, again, is it at all strange that one who comes from the contemplation of divine things to the miseries of human life should appear awkward and ridiculous when, with eyes still -dazed and not yet accustomed to the darkness, he is compelled, in a law-court or elsewhere, to dispute about the shadows of justice or the images that cast those shadows, and to wrangle over the notions of what is right in the minds of men who have never beheld Justice itself.

Glaucon:: It is not at all strange.

Socrates:: No; a sensible man will remember that the eyes may, be confused in two ways—by a change from light to darkness or from darkness to light; and he will recognize that the same thing happens to the soul. When he sees it troubled and unable to discern anything clearly, instead of laughing thoughtlessly, he will ask whether, coming from a brighter existence, its unaccustomed vision is obscured by the darkness, in which case he will think its condition enviable and its life a happy one; or whether, emerging from the depths of ignorance, it is dazzled by excess of light. If so, he will rather feel sorry for it; or, if he were inclined to laugh, that would be less ridiculous than to laugh at the soul which has come down from the light.

Glaucon:: That is a fair statement.

Socrates:: If this is true, then, we must conclude that education is not what it is said to be by some, who profess to put knowledge into a soul which does not possess it, as if they could put sight into blind eyes. On the contrary, our own account signifies that the soul of every man does possess the power of learning the truth and the organ to see it with; and that, just as one might have to turn the whole body round in order that the eye should see light instead of darkness, so the entire soul must be turned away from this changing world, until its eye can bear to contemplate reality and that supreme splendor which we have called the Good. Hence there may well be an art whose aim would be to effect this very thing, the conversion of the soul, in the readiest way; not to put the power of sight into the soul’s eye, which already has it, but to ensure that, instead of looking in the wrong direction, it is turned the way it ought to be.

Glaucon:: Yes it may well be so.

Socrates:: It looks, then, as though wisdom were different from those ordinary virtues, as they are called, which are not far removed from bodily qualities, in that they can be produced by habituation and exercise in a soul which has not possessed them from the first. Wisdom, it seems, is certainly the virtue of some diviner faculty, which never loses its power, though its use for good or harm depends on the direction towards which it is turned. You must have noticed in dishonest men with a reputation for sagacity the shrewd glance of a narrow intelligence piercing the objects to which it is directed. There is nothing wrong with their power of vision, but it has been forced into the service of evil, so that the keener its sight, the more harm it works.

Glaucon:: Quite true.

Socrates:: And yet if the growth of a nature like this had been pruned from earliest childhood, cleared of those clinging overgrowths which come of gluttony and all luxurious pleasure and, like leaden weights charged with affinity to this mortal world, hang upon the soul, bending its vision downwards; if, freed from these, the soul were turned round towards true reality, then this same power in these very men would see the truth as keenly as the objects it is turned to now.

Glaucon:: Yes, very likely.

Socrates:: Is it not also likely, or indeed certain after what has been said, that a state can never be properly governed either by the uneducated who know nothing of truth or by men who are allowed to spend all their days in the pursuit of culture? The ignorant have no single mark before their eyes at which they must aim in all the conduct of their own lives and of affairs of state; and the others will not engage in action if they can help it, dreaming that, while still alive, they have been translated to the Islands of the Blest.

Glaucon:: Quite true.

Socrates:: It is for us, then, as founders of a commonwealth, to bring compulsion to bear on the noblest natures. They must be made to climb the ascent to the vision of Goodness, which we called the highest object of knowledge; and, when they have looked upon it long enough, they must not be allowed, as they now are, to remain on the heights, refusing to come down again to the prisoners or to take any part in their labors and rewards, however much or little these may be worth.

Glaucon:: Shall we not be doing them an injustice, if we force on them a worse life than they might have?

Socrates:: You have forgotten again, my friend, that the law is not concerned to make any one class specially happy, but to ensure the welfare of the commonwealth as a whole. By persuasion or constraint it will unite the citizens in harmony, making them share whatever benefits each class can contribute to the common good; and its purpose in forming men of that spirit was not that each should be left to go his own way, but that they should be instrumental in binding the community into one.

Glaucon:: True, I had forgotten.

Socrates:: You will see, then, Glaucon, that there will be no real injustice in compelling our philosophers to watch over and care for the other citizens. We can fairly tell them that their compeers in other states may quite reasonably refuse to collaborate: there they have sprung up, like a self-sown plant, in despite of their country's institutions; no one has fostered their growth, and they cannot be expected to show gratitude for a care they have never received. 'But', we shall say, 'it is not so with you. We have brought you into existence for your country's sake as well as for your own, to be like leaders and king-bees in a hive; you have been better and more thoroughly educated than those others and hence you are more capable of playing your part both as men of thought and as men of action. You must go down, then, each in his turn, to live with the rest and let your eyes grow accustomed to the darkness. You will then see a thousand times better than those who live there always; you will recognize every image for what it is and know what it represents, because you have seen justice, beauty, and goodness in their reality; and so you and we shall find life in our commonwealth no mere dream, as it is in most existing states, where men live fighting one another about shadows and quarrelling for power, as if that were a great prize; whereas in truth government can be at its best and free from dissension only where the destined rulers are least desirous of holding office.'

Glaucon:: Quite true.

Socrates:: Then will our pupils refuse to listen and to take their turns at sharing in the work of the community, though they may live together for most of their time in a purer air?

Glaucon:: No; it is a fair demand, and they are fair-minded men. No doubt, unlike any ruler of the present day, they will think of holding power as an unavoidable necessity.

Socrates:: Yes, my friend; for the truth is that you can have a well-governed society only if you can discover for your future rulers a better way of life than being in office;

then only will power be in the hands of men who are rich, not in gold, but in the wealth that brings happiness, a good and wise life. All goes wrong when, starved for lack of anything good in their own lives, men turn to public affairs hoping to snatch from thence the happiness they hunger for. They set about fighting for power, and this internecine conflict ruins them and their country. The life of true philosophy is the only one that looks down upon offices of state; and access to power must be confined to men who are not in love with it; otherwise rivals will start fighting. So whom else can you compel to undertake the guardianship of the commonwealth, if not those who, besides understanding best the principles of government, enjoy a nobler life than the politician's and look for rewards of a different kind?

Glaucon:: There is indeed no other choice.

Socrates:: Shall we next consider how men of this quality are to be produced and how they may be led upward to the light, as some are fabled to have ascended from the underworld to the gods?

Glaucon:: By all means.

Socrates:: It is a question of 'night or day', to be determined not, as in the children's game, by spinning a shell, but by the turning about of the soul from a day that is like night to the veritable day, that journey up to the real world which we shall call the true pursuit of wisdom. We have to ask what studies will have this effect.

Glaucon:: Yes.

Socrates:: What form of study is there, Glaucon, that would draw the soul from the world of change to reality? At this moment it occurs to me that our young men were to be trained warriors; so the study we are looking for ought to be not without use in warfare as well.

Glaucon:: Yes, if possible.

Socrates:: Now, of the two branches of their earlier education, physical training is certainly concerned with perishable things, for bodily strength grows and decays. So this cannot be the study we are in search of. Can it be education in poetry and music carried to the point we laid down earlier?

Glaucon:: No; that, if you remember, was the counterpart of bodily training. It educated our Guardians by the influence of habit, imparting no real knowledge, but only a kind of measure and harmony by means of melody and rhythm, and forming the character in similar ways through the content of the literature, fabulous or true. It taught nothing useful for so high a purpose as you now have in view.

Socrates:: Quite true; your memory is very exact. But where shall we find what we want? The manual crafts, we agreed, were all rather degrading.

Glaucon:: Yes, of course. But if you exclude them as well as all that early education, what is there left to study?

Socrates:: Well, if we cannot find anything over and above these subjects, suppose we take something that has a bearing upon them all. There is one, for instance, which is universally useful in all, crafts and in every form of knowledge and intellectual operation—the first thing everyone has to learn.

Glaucon:: What do you mean?

Socrates:: A simple matter: learning to tell the difference between one, two, and three, or, to put it shortly, number and calculation. Is it not true that this is something which no art or science can dispense with?

Glaucon:: Certainly.

Socrates:: Including the art of war. On the stage, at any rate, Agamemnon is made to look a very ridiculous sort of general. You must remember how often the tragedians make Palamedes claim to have invented number and by that means to have marshaled the ranks of the army at Troy and counted the ships and everything. Apparently nothing could be counted before, and Agamemnon could not even tell how many feet he had—an odd kind of general, don’t you think?

Glaucon:: Very odd, if that is really true.

Socrates:: So we may conclude that a soldier must know how to count and calculate?

Glaucon:: He must, or he could not be a human being at all, to say nothing of marshalling an army.

Socrates:: Does it strike you, then, that this study is one of those we are looking for, which naturally awaken the power of thought, though no one makes a right use of its tendency to draw us towards reality?

Glaucon:: How do you mean?

Socrates:: I will try to explain how I distinguish in my own mind the things which have that tendency. If you will consider them too and say whether or not you agree, we shall see if I am right in my surmise.

Glaucon:: Please explain.

Socrates:: Take our perceptions, then. I can point to some of these which do not provoke thought to reflect upon them, because we are satisfied with the judgment of the senses. But in other cases perception seems to yield no trustworthy result, and reflection is instantly demanded.

Glaucon:: You mean objects seen from a great distance, or illusory effects in scene-painting.

Socrates:: No, you have not understood me. I mean that reflection is provoked when perception yields a contradictory impression, presenting two opposite qualities with equal clearness, no matter whether the object be distant or close at hand. When there is no such contradiction, we are not encouraged to reflect. Let me illustrate what I mean. Here are three fingers, the middle finger, the third, and the little one. I am assuming that you have a close view of them. The point is this. Each one of them presents itself equally as a finger, and in this respect it makes no difference whether we see it at either end of the row or in the middle, as fair or dark, thick or thin, and so on. In any case we see it as a finger, and the ordinary mind is not driven to call in its power of reflection and ask for a definition of 'finger', because at no stage has the sense of sight intimated that the finger is at the same moment the opposite of a finger. So an impression of this kind naturally has no tendency to arouse reflection.

Glaucon:: Naturally.

Socrates:: But now take the size of these fingers. Can sight satisfactorily distinguish their bigness and smallness, and does it make no difference whether any particular one of them is at the end of the row or in between? Or can touch discriminate between thick and thin or hard and soft? In reporting on qualities like these all the senses are deficient. They seem to work in this way. The sense which takes cognizance of hardness must also take cognizance of softness, and it reports to the mind that it feels the same thing as both hard and soft.

Glaucon:: That is true.

Socrates:: In such cases, then, the mind must be at a loss to know what this sensation means by hard, since it declares the same thing to be also soft; or what sensations of lightness and heaviness mean by light and heavy, if they intimate that what is light is heavy and what is heavy is light.

Glaucon:: Yes; these reports strike the mind as paradoxical and they do call for reflection.

Socrates:: So it is natural in these circumstances for the mind to invoke the help of reason with its power of calculation, to consider whether any given message it receives refers to a single thing or to two. If there appear to be two things, each of them will appear as one thing, distinct from the other; and accordingly, each being one and both together making two, the mind will conceive them as separate; otherwise it would think of them not as two, but as one.

Glaucon:: Quite so.

Socrates:: Now sight, too, as we said, perceives both big and little; only not as separate, but in a confused impression. In order to clear up this confusion, intelligence was driven to look at bigness and smallness in the opposite way, as distinct things. It is some such experience as this that first prompts us to ask what is meant by bigness or smallness. And that is how we came to distinguish what we call the object of intelligence from the thing seen.

Glaucon:: Exactly.

Socrates:: Well then, that is the distinction I was trying to express just now, when I defined as provocative of thought impressions of sense in which opposites are combined; whereas, if there is no contradictory impression, there is nothing to awaken reflection.

Glaucon:: I understand now and I agree.

Socrates:: Now what about unity and number? To which of those two classes do they belong?

Glaucon:: I cannot be sure.

Socrates:: What we have just said should help you to a conclusion. If unity can be satisfactorily apprehended, just by itself, by sight or any other sense, as we said of the finger, then it will not have the quality of drawing the mind towards reality. But if it is always seen in some contradictory combination, so as to appear no more one than the opposite of one, then a judge will be needed to decide; the mind will be forced to seek a way out of the difficulty, setting thought in motion and asking what unity means. In this way the study of unity would be one of those which convert the soul and lead it to the contemplation of reality. Well, unity is a case in which sight certainly does present a contradiction. We see the same thing as both one and also indefinitely many. Then if that is true of unity, all number has the same property, hasn’t it?

Glaucon:: Yes.

Socrates:: Well now, number is the subject of the whole art of calculation and of the science of number; and since the properties of number appear to have the power of leading us towards reality, these must be among the studies we are in search of. The soldier must learn them in order to marshal his troops; the philosopher, because he must rise above the world of change and grasp true being, or he will never become proficient in the calculations of reason. Our Guardian is both soldier and philosopher; so this will be a suitable study for our law to prescribe. Those who are to take part in the highest functions of state must be induced to approach it, not in an amateur spirit, but perseveringly, until, by the aid of pure thought, they come to see the real nature of number. They are to practice calculation, not like merchants or shopkeepers for purposes of buying and selling, but with a view to war and to help in the conversion of the soul itself from the world of becoming to truth and reality.

Glaucon:: Excellent.

Socrates:: Moreover, talking of this study, it occurs to me now what a fine thing it is and in how many ways it will further our intentions, if it is pursued for the sake of knowledge and not for commercial ends. As we were saying, it has a great power of leading the mind upwards and forcing it to reason about pure numbers, refusing to discuss collections of material things which can be seen and touched. Good mathematicians, as of course you know, scornfully reject any attempt to cut up the unit itself into parts: if you try to break it up small, they will multiply it up again, taking good care that the unit shall never lose its oneness and appear as a multitude of parts.

Glaucon:: Quite true.

Socrates:: And if they are asked what are these numbers they are talking about, in which every unit, as they claim, is exactly equal to every other and contains no parts, what would be their answer?

Glaucon:: This, I should say: that the numbers they mean can only be conceived by thought: there is no other way of dealing with them.

Socrates:: You see, then, that this study is really indispensable for our purpose, since it forces the mind to arrive at pure truth by the exercise of pure thought.

Glaucon:: Yes, it has a powerful effect of that kind.

Socrates:: Have you noticed, too, how people with a talent for calculation are naturally quick at learning almost any other subject; and how a training in it makes a slow mind quicker, even if it does no other good?

Glaucon:: That is true.

Socrates:: Also, it would not be easy to find many branches of study which require more effort from the learner. For all these reasons we cannot do without this form of training for the most gifted natures.

Glaucon:: I agree.

Socrates:: It is settled, then, that arithmetic is to be one of our subjects. Have we any use for the one that comes next?

Glaucon:: You mean geometry?

Socrates:: I do.

Glaucon:: Obviously, so much of it as bears on warlike operations will concern us. For pitching a camp, occupying a position, closing up or deploying troops, and for other formations in battle or on the march, a knowledge of geometry will be an advantage.

Socrates:: But still, for such purposes a small amount of geometry and arithmetic will be enough. We have to ask whether a much more advanced study will help towards a comprehension of the essential Form of Goodness. Any study, as we said, will have that tendency, if it forces the soul to turn towards the region of that beatific reality, which it must by all means behold. So geometry will be suitable or not, according as it makes us contemplate reality or the world of change.

Glaucon:: That is our view.

Socrates:: In this respect, then, no one who has even a slight acquaintance with geometry will deny that the nature of this science is in flat contradiction with the absurd language used by mathematicians, for want of better terms. They constantly talk of ‘operations’ like ‘squaring’, ‘applying’, ‘adding’, and so on, as if the object were to do something, whereas the true purpose of the whole subject is knowledge—knowledge, moreover, of what eternally exists, not of anything that comes to be this or that at some time and ceases to be.

Glaucon:: Yes, that will be readily agreed: geometry is knowledge of the eternally existent.

Socrates:: If so, it will tend to draw the soul towards truth and to direct upwards the philosophic intelligence which is now wrongly turned earthwards.

Glaucon:: There is no doubt about that.

Socrates:: Then there can be no doubt that geometry must by no means be neglected by the citizens of your Callipolis. It has incidental advantages, too, which are not to be despised. There are its uses in war, which you mentioned; and also we know that a training in geometry makes all the difference in preparing the mind for any kind of study.

Glaucon:: It does indeed.

Socrates:: Then we will make this the second subject of study for our young men.

Glaucon:: We will.

Socrates:: Shall we put astronomy third? Do you agree?

Glaucon:: Certainly I do. It is important for military purposes, no less than for agriculture and navigation, to be able to tell accurately the times of the month or year.

Socrates:: I am amused by your evident fear that the public will think you are recommending useless knowledge. True, it is quite hard to realize that every soul possesses an organ better worth saving than a thousand eyes, because it is our only means of seeing the truth; and that when its light is dimmed or extinguished by other interests, these studies will purify the hearth and rekindle the sacred fire. Those who believe in this faculty will approve of your proposals without reserve; all who are unaware of its existence will of course think them nonsense, because they can see in such knowledge no ulterior profit worth mentioning. So you had better decide at once which party you mean to reason with. Or you may ignore both and carry on the discussion chiefly for your own satisfaction, though anyone who can benefit by it may be welcome to do so.

Glaucon:: I would rather go on with the conversation for my own sake in the main.

Socrates:: Well then, we must retrace our steps. We made a mistake just now about the subject that comes next after geometry. From plane geometry we went straight on to the study of solid bodies in circular motion. We ought first to take solid bodies in themselves; for the third dimension should come after the second, and that brings us to the cube and all the figures which have depth.

Glaucon:: That is so. But this subject, Socrates, seems not to have been investigated.

Socrates:: There are two reasons for that. These inquiries, difficult as they are, languish because no state thinks them worth encouraging. Secondly, students are not likely to make discoveries without a director, who is hard to find, and supposing him found,, as matters now stand, the men with a gift for these researches would be too proud to accept his guidance. They would be amenable only if a whole community were to conceive a respect for such work and give a director its support. The problems might then be solved by continuous and energetic investigation. Even now, despised as the subject is by the public and curtailed, by students who do not take account of its true utility, in spite of everything it is gaining ground, thanks to its inherent charm; and it would not be surprising if inquiry should succeed in bringing the truth to light.

Glaucon:: Yes, it has a remarkable charm. But please explain further. Just now you spoke of geometry as the study of plane surfaces, and you put astronomy next. But then you went back on that.

Socrates:: Yes, I was in too great a hurry to cover all the ground; more haste less speed. The study of solids should have come next; I passed it over because it is in such a pitiable state, and went on to astronomy, which studies the motion of solid bodies.

Glaucon:: True.

Socrates:: Then let us put astronomy fourth, assuming the subject now neglected to have been established, provided that the state will take it up.

Glaucon:: That may well happen. And now, Socrates, I will praise astronomy on your own principles, instead of commending its usefulness in the vulgar spirit for which you upbraided me. Anyone can see that this subject forces the mind to look upwards, away from this world of ours to higher things.

Socrates:: Anyone except me, perhaps. I do not agree.

Glaucon:: Why not?

Socrates:: As it is now handled by those who are trying to lead us up to philosophy, I think it simply turns the mind's eye downwards.

Glaucon:: What do you mean?

Socrates:: You put a too generous construction on the study of 'higher things'. Apparently you would think a man who threw his head back to contemplate the decorations on a ceiling was using his reason, not his eyes, to gain knowledge. Perhaps you are right and my notion is foolish; but I cannot think of any study as making the mind look upwards, except one which has to do with unseen reality. No one, I should say, can ever gain knowledge of any sensible object by gaping upwards any more than by shutting his eyes and searching for it on the ground, because there can be no knowledge of sensible things. His mind will be looking downwards, though he may pursue his studies lying on his back or floating on the sea.

Glaucon:: I deserve to be rebuked. But how did you mean the study of astronomy to be reformed, so as to serve our purposes?

Socrates:: In this way. These intricate traceries in the sky are, no doubt, the loveliest and most perfect of material things, but still part of the visible world, and therefore they fall far short of the true realities—the real relative velocities, in the world of pure number and all perfect geometrical figures, of the movements which carry round the bodies involved in them. These, you will agree, can be conceived by reason and thought, not seen by the eye.

Glaucon:: Exactly.

Socrates:: Accordingly, we must use the embroidered heaven as a model to illustrate our study of those realities, just as one might use diagrams exquisitely drawn by some consummate artist like Daedalus. An expert in geometry, meeting with such designs, would admire their finished workmanship, but he would think it absurd to study them in all earnest with the expectation of finding in their proportions the exact ratio of any one number to another.

Glaucon:: Of course it would be absurd.

Socrates:: The genuine astronomer, then, will look at the motions of the stars with the same feelings. He will admit that the sky with all that it contains has been framed by its artificer with the highest perfection of which such works are capable. But when it comes to the proportions of day to night, of day and night to month, of month to year, and of the periods of other stars to Sun and Moon and to one another, he will think it absurd to believe that these visible material things go on for ever without change or the slightest deviation, and to spend all his pains on trying to find exact truth in them.

Glaucon:: Now you say so, I agree.

Socrates:: If we mean, then, to turn the soul's native intelligence to its proper use by a genuine study of astronomy, we shall proceed, as we do in geometry, by means of problems, and leave the starry heavens alone.

Glaucon:: That will make the astronomer's labor many times greater than it is now.

Socrates:: Yes; and if we are to be of any use as lawgivers, the other tasks we set will be no less burdensome. And now, have you any further suitable study to suggest?

Glaucon:: Not at the moment.

Socrates:: Yet there is more than one variety of motion, I fancy. An expert would be able to name them all; but even people like U can distinguish two.

Glaucon:: What are they?

Socrates:: Besides the motion studied in astronomy, there is its counterpart, the harmonious movement for which our ears are framed, as our eyes are for the study of the stars. These are sister sciences, so the Pythagoreans say, and we may agree with them. This is a large subject and we will ask what they have to tell us about it, and perhaps about some other questions. Only we must constantly hold by our own principle, not to let our pupils take up any study in an imperfect form, stopping short of that higher region to which all studies should attain, as we said just now in speaking of astronomy. As you will know, the students of harmony make the same sort of mistake as the astronomers: they waste their time in measuring audible concords and sounds one against another.

Glaucon:: Yes, they are absurd enough, with their talk of ‘groups of quarter-tones’ and all the rest of it. They lay their ears to the instrument as if they were trying to overhear the conversation from next door. One says he can still detect a note in between, giving the smallest possible interval, which ought to be taken as the unit of measurement, while another insists that there is now no difference between the two notes. Both prefer their ears to their intelligence.

Socrates:: You are thinking of those worthy musicians who tease and torture the strings, racking them on the pegs. I will not push the metaphor so far as to picture the musician beating them with the plectrum and charging them with faults which the strings deny or brazen out. I will drop the comparison and tell you that I am thinking rather of those Pythagoreans whom we were going to consult about harmony. They are just like the astronomers—intent upon the numerical properties embodied in these audible consonances: they do not rise to the level of formulating problems and inquiring which numbers are inherently consonant and which are not, and for what reasons.

Glaucon:: That sounds like a superhuman undertaking.

Socrates:: I would rather call it a ‘useful study; but useful only when pursued as a means to the knowledge of beauty and goodness.

Glaucon:: No doubt.

Socrates:: Further, this whole course of study will, I believe, contribute to the end we desire and not be labor wasted, only if it is carried to the point at which reflection can take a comprehensive view of the mutual relations and affinities which bind all these sciences together.

Glaucon:: So I suspect; but it is an enormous task, Socrates.

Socrates:: What do you refer to? The prelude? Do we not know that all this is no more than an introduction to the main theme which has yet to be learnt? Surely you would not regard experts in mathematics as masters of dialectic.

Glaucon:: Certainly not, except a very few of those I have met.

Socrates:: Well, can the knowledge we are demanding ever be attained by people who cannot give a rational account of their statements or make others give an account of theirs?

Glaucon:: Once more I should say No.

Socrates:: Here at last, then, we come to the main theme, to be developed in philosophic discussion. It falls within the domain of the intelligible world; but its progress is like that of the power of vision in the released prisoner of our parable. When he had reached the stage of trying to look at the living creatures outside the Cave, then at the stars, and lastly at the Sun himself, he arrived at the highest object in the visible world. So here, the summit of the intelligible world is reached in philosophic discussion by one who aspires, through the discourse of reason unaided by any of the senses, to make his way in every case to the essential reality and perseveres until he has grasped by pure intelligence the very nature of Goodness itself. This journey is what we call Dialectic.

Glaucon:: Yes, certainly.

Socrates:: There was also that earlier stage when the prisoner, set free from his chains, turned from the shadows to the images which cast them and to the fire-light, and climbed up out of the cavern into the sunshine. When there, he was still unable to look at the animals and plants and the sunlight; he could only see the shadows of things and their reflections in water, though these, it is true, are works of divine creation and come from real things, not mere shadows of images thrown by the light of the fire, which was itself only an image as compared with the Sun. Now the whole course of study in the arts we have reviewed has the corresponding effect of leading up the noblest faculty of the soul towards the contemplation of the highest of all realities, just as in our allegory the bodily organ which has the clearest perceptions was led up towards the brightest of visible things in the material world.

Glaucon:: I agree to what you are saying; I find it very hard to accept, but in another way no less hard to deny. However, there will be many other opportunities to reconsider it; so let us assume for the moment that it is true, and go on to develop what you call the main theme as fully as we have treated the prelude. I want you to describe the function of philosophic discussion, into what divisions it falls, and what are its methods; for here, it seems, we have come to the procedure which should lead to the resting-place at our journey’s end.

Socrates:: My dear Glaucon, you will not be able to follow me farther, though not for want of willingness on my part. It would mean that, instead of illustrating the truth by an allegory, I should be showing you the, truth itself, at least as it appears to me. I cannot be sure whether or not I see it as it really is; but we can be sure that there is some such reality which it concerns us to see. Is not that so?

Glaucon:: No doubt.

Socrates:: And also that it can be revealed only to one who is trained in the studies we have discussed, and to him only by the power of dialectic?

Glaucon:: That also we can assert.

Socrates:: At any rate, no one will maintain against us that there is any other method of inquiry which systematically attempts in every case to grasp the nature of each thing as it is in itself. The other arts are nearly all concerned with human opinions and desires, or with the production of natural and artificial things, or with the care of them when produced. There remain geometry and those other allied studies which, as we said, do in some measure apprehend reality; but we observe that they cannot yield anything clearer than a dream-like vision of the real so long as they leave the assumptions they employ unquestioned and can give no account of them. If your premise is something you do not really know and your conclusion and the intermediate steps are a tissue of things you do not really know, your reasoning may be consistent with itself, but how can it ever amount to knowledge?

Glaucon:: It cannot.

Socrates:: So, the method of dialectic is the only one which takes this course, doing away with assumptions and travelling up to the first principle of all, so as to make sure of confirmation there. When the eye of the soul is sunk in a veritable slough of barbarous ignorance, this method gently draws it forth and guides it upwards, assisted in this work of conversion by the arts we have enumerated. From force of habit we have several times spoken of these as branches of knowledge; but they need some other name implying something less clear than knowledge, though not so dim as the apprehension of appearances. ‘Thinking’, I believe, was the term we fixed on earlier; but in considering matters of such high importance we shall not quarrel about a name.

Glaucon:: Certainly not.

Socrates:: We shall be satisfied, then, with the names we gave earlier to our four divisions: first, knowledge; second, thinking; third, belief; and fourth, imagining. The last two taken together constitute the apprehension of appearances in the world of Becoming; the first two, intelligence concerned with true Being. Finally, as Being is to Becoming, so is intelligence to the apprehension of appearances; and in the same relation again stand knowledge to belief, and thinking to imagining. We had better not discuss the corresponding objects, the intelligible world and the world of appearance, or the twofold division of each of those provinces and the proportion in which the divisions stand. We might be involved in a discussion many times as long as the one we have already had.

Glaucon:: Well, I certainly agree on those other points, so far as I can follow you.

Socrates:: And by a master of dialectic do you also mean one who demands an account of the essence of each thing? And would you not say that, in so far as he can render no such account to himself or to others, his intelligence is at fault?

Glaucon:: I should.

Socrates:: And does not this apply to the Good? He must be able to distinguish the essential nature of Goodness, isolating it from all other Forms; he must fight his way through all criticisms, determined to examine every step by the standard, not of appearances and opinions, but of reality and truth, and win through to the end without sustaining a fall. If he cannot do this, he will know neither Goodness itself nor any good thing; if he does lay hold upon some semblance of good, it will be only a matter of belief, not of knowledge; and he will dream away his life here in a, sleep which has no awakening on this side of that world of Death where he will sleep at last for ever.

Glaucon:: I do most earnestly agree with you.

Socrates:: Well then, if you should ever be charged in actual fact with the upbringing and education of these imaginary children of yours, you will not allow them, I suppose, to bear rule in your commonwealth so long as their minds are, as a mathematician might say, irrational quantities, not commensurate with the highest responsibilities. So you will make a law that they must devote themselves especially to the discipline which will make them masters of the technique of asking and answering questions.

Glaucon:: Yes, I will, with your collaboration.

Socrates:: May we conclude, then, that our account of the subjects of study is now complete? Dialectic will stand as the coping-stone of the whole structure; there is no other study that deserves to be put above it.

Glaucon:: Yes, I agree.

Socrates:: It only remains, then, to draw up a scheme showing how, and to whom, these studies are to be allotted.

Glaucon:: Clearly.

Socrates:: You remember what sort of people we chose earlier to be Rulers?

Glaucon:: Of course I do.

Socrates:: In most respects, then, natures of that quality are to be selected: we shall prefer the steadiest, the bravest, and, so far as possible, the handsomest persons. But, besides that, we must look not only for generous and virile characters, but for gifts fitting them for this sort of education. They must be eager students and learn with ease, because the mind is more apt to shrink from severe study than from hard physical exercise, in which part of the burden falls upon the body. Also we must demand a good memory and a dogged appetite for hard work of every kind. How else can you expect a man to undergo all the hardships of bodily training and, on the top of that, to carry through such a long course of study?

Glaucon:: He will certainly need every natural advantage.

Socrates:: At any rate, this explains what is wrong now with the position of Philosophy and why she has fallen into disrepute: as I said before, she ought never to have been wooed by the base-born, who are unworthy of her favors. To begin with, the genuine aspirant should not be one-sided in his love of work, liking one half of it and neglecting the other; as happens with one who throws himself into athletics and hunting and all sorts of bodily exertion, but hates the trouble of learning anything from others or of thinking for himself. His industry goes halting on one foot; and so it does too if it takes the opposite direction.

Glaucon:: Quite true.

Socrates:: Also with regard to truth, we shall count as equally crippled a mind which, while it hates deliberate falsehood, cannot bear to tell lies, and is very angry when others do so, yet complacently tolerates involuntary error and is in no way vexed at being caught wallowing in swinish ignorance. We must be no less on the watch to distinguish the base metal from the true in respect of temperance, courage, high-mindedness, and every kind of virtue. A state which chooses its rulers, or a man who chooses his friends, without a searching eye for these qualities will find themselves, in respect of one or another of them, cheated by a counterfeit or leaning on a broken reed. So all such precautions are very much our concern. If we can find, for this long course of training and study, men who are at all points sound of limb and sound in mind, then Justice herself will have no fault to find with us and we shall ensure the safety of our commonwealth and its institutions. We should only ruin it by choosing pupils of a different stamp; and moreover we should bring down upon philosophy an even greater storm of ridicule.

Glaucon:: That would be a discreditable result.

Socrates:: It would. But at the moment I seem to be inviting ridicule myself.

Glaucon:: In what way?

Socrates:: By speaking with so much warmth and forgetting that these speculations are only an amusement for our leisure. As I spoke, I seemed to see Philosophy suffering undeserved insults, and was so vexed with her persecutors that I lost my temper and became too vehement.

Glaucon:: I did not think so as I listened.

Socrates:: No, but I felt it myself. However, here is something we must not forget. When we spoke earlier of selecting Rulers, we said we should choose old men; but that will not do for the selection we are making now. We must not let Solon persuade us that a man can learn many things as he grows old; he could sooner learn to run. Youth is the time for hard work of all sorts.

Glaucon:: Undoubtedly.

Socrates:: Arithmetic, then, and geometry and all branches of the preliminary education which is to pave the way for Dialectic should be introduced in childhood; but not in the guise of compulsory instruction, because for the free man there should be no element of slavery in learning. Enforced exercise does no harm to the body, but enforced learning will not stay in the mind. So avoid compulsion, and let your children's lessons take the form of play. This will also help you to see what they are naturally fitted for.

Glaucon:: That is a reasonable plan.

Socrates:: You remember, too, our children were to be taken to the wars on horseback to watch the fighting, and, when it was safe, brought close up like young hounds to be given a taste of blood.

Glaucon:: I remember.

Socrates:: Then we must make a select list including everyone who shows forwardness in all these studies and exercises and dangers.

Glaucon:: At what age?

Socrates:: As soon as they are released from the necessary physical training. This may take two or three years, during which nothing else can be done; for weariness and sleep are unfavorable to study. And at the same time, these exercises will provide not the least important test of character.

Glaucon:: No doubt.

Socrates:: When that time is over, then, some of those who are now twenty years old will be selected for higher privileges. The detached studies in which they were educated as children will now be brought together in a comprehensive view of their connections with one another and with reality.

Glaucon:: Certainly that is the only kind of knowledge which takes firm root in the mind.

Socrates:: Yes, and the chief test of a natural gift for Dialectic, which is the same thing as the ability to see the connections of things.

Glaucon:: I agree.

Socrates:: You will keep an eye, then, on these qualities and make a further selection of those who possess them in the highest degree and show most steadfastness in study as well as in warfare and in their other duties. When they reach thirty they will be promoted to still higher privileges and tested by the power of Dialectic, to see which can dispense with sight and the other senses and follow truth into the region of pure reality. And here, my friend, you will need the greatest watchfulness.

Glaucon:: Why in particular?

Socrates:: You must have seen how much harm is done now by philosophical discussion—how it infects people with a spirit of lawlessness.

Glaucon:: Yes, I have.

Socrates:: Does that surprise you? Can you not make allowances for them? Imagine a child brought up in a rich family with powerful connections and surrounded by a host of flatterers; and suppose that, when he comes to manhood, he learns that he is not the son of those who call themselves his parents and his true father and mother are not to be found. Can you guess how he would feel towards his supposed parents and towards his flatterers before he knew about his parentage and after learning the truth? Or shall I tell you what I should expect?

Glaucon:: Please do.

Socrates:: I should Say that, so long as he did not know the truth, he would have more respect for his reputed parents and family than for the flatterers, and be less inclined to neglect them in distress or to be insubordinate in word or deed; and in important matters the flatterers would have less influence with him. But when he learnt the facts, his respect would be transferred to them; their influence would increase, and he would openly associate with them and adopt their standards of behavior, paying no heed to his reputed father and family, unless his disposition were remarkably good.

Glaucon:: Yes; all that would be likely to happen. But how does your illustration apply to people who are beginning to take part in philosophical discussions?

Socrates:: In this way. There are certain beliefs about right and honorable conduct, which we have been brought up from childhood to regard with the same sort of reverent obedience that is shown to parents. In opposition to these, other courses attract us with flattering promises of pleasure; though a moderately good character will resist such blandishments and remain loyal to the beliefs of his fathers. But now suppose him confronted by the question, What does 'honorable' mean? He gives the answer he has been taught by the lawgiver, but he is argued out of his position. He is refuted again and again from many different points of view and at last reduced to thinking that what he called honorable might just as well be called disgraceful. He comes to the same conclusion about justice, goodness, and all the things he most revered. What will become now of his old respect and obedience?

Glaucon:: Obviously they cannot continue as before.

Socrates:: And when he has disowned these discredited principles and failed to find the true ones, naturally he can only turn to the life which flatters his desires; and we shall see him renounce all morality and become a lawless rebel. If this is the natural consequence of plunging the young into philosophical discussion, ought we not to make allowances, as I said before?

Glaucon:: Yes, and be sorry for them too.

Socrates:: Then, if you do not want to be sorry for those pupils of yours who have reached the age of thirty, you must be very careful how you introduce them to such discussions. One great precaution is to forbid their taking part while they are still young. You must have seen how youngsters, when they get their first taste of it, treat argument as a form of sport solely for purposes of contradiction. When someone has proved them wrong, they copy his methods to confute others, delighting like puppies in tugging and tearing at anyone who comes near them. And so, after a long course of proving others wrong and being proved wrong themselves, they rush to the conclusion that all they once believed is false; and the result is that in the eyes of the world they discredit, not themselves only, but the whole business of philosophy. An older man will not share this craze for making a sport of contradiction. He will prefer to take for his model the conversation of one who is bent on seeking truth, and his own reasonableness will bring credit on the pursuit. We meant to ensure this result by all that we said earlier against the present practice of admitting anybody, however unfit, to philosophic discussions, and about the need for disciplined and steadfast character.

Glaucon:: Certainly.

Socrates:: If a man, then, is to devote himself to such discussion as continuously and exclusively as he gave himself up earlier to the corresponding training of his body, will twice as long a time be enough?

Glaucon:: Do you mean six years or four?

Socrates:: No matter; let us say five. For after that they must be sent down again into that Cave we spoke of and compelled to take military commands and other offices suitable to the young, so that they may not be behind their fellow citizens in experience. And at this stage they must once more be tested to see whether they will stand firm against all seductions.

Glaucon:: How much time do you allow for this?

Socrates:: Fifteen years. Then, when they are fifty, those who have come safely through and proved the best at all points in action and in study must be brought at last to the goal. They must lift up the eye of the soul to gaze on that which sheds light on all things; and when they have seen the Good itself, take it as a pattern for the right ordering of the state and of the individual, themselves included. For the rest of their lives, most of their time will be spent in study; but they will all take their turn at the troublesome duties of public life and act as Rulers for their country's sake, not regarding it as a distinction, but as an unavoidable task. And so, when each generation has educated others like themselves to take their place as Guardians of the commonwealth, they will depart to dwell in the Islands of the Blest. The state will set up monuments for them and sacrifices, honoring them as divinities, if the Pythian Oracle approves, or at least as men blest with a godlike spirit.

Glaucon:: That is a fine portrait of our Rulers, Socrates.

Socrates:: Yes, Glaucon, and you must not forget that some of them will be women. All I have been saying applies just as much to any women who are found to have the necessary gifts.

Glaucon:: Quite right, if they are to share equally with the men in everything, as we said.

Socrates:: Well then, do you agree that our scheme of a commonwealth and its constitution has not been a mere day-dream? Difficult it may be, but possible, though only on the one condition we laid down, that genuine philosophers—one or more of them—shall come into power in a state; men who will despise all existing honors as mean and worthless, caring only for the right and the honors to be gained from that, and above all for justice as the one indispensable thing in whose service and maintenance they will reorganize their own state.

Glaucon:: How will they do that?

Socrates:: They must send out into the country all citizens who are above ten years old, take over the children, away from the present habits and manners of their parents, and bring them up in their own ways under the institutions we have described. Would not that be the quickest and easiest way in which our polity could be established, so as to prosper and be a blessing to any nation in which it might arise?

Glaucon:: Yes, certainly; and I think, Socrates, you have satisfactorily explained how, if ever, it might come into being.

Socrates:: Have we now said enough, then, about this commonwealth and also about the corresponding type of man; for it must be clear what sort of person we shall expect him to be?

Glaucon:: It is clear; and, to answer your question, I believe our account is complete.

Socrates:: Very well. So far, then, Glaucon, we agree that in a state destined to reach the height of good government wives and children must be held in common; men and women must have the same education throughout and share all pursuits, warlike or peaceful; and those who have proved themselves the best both in philosophy and in war are to be kings among them. Further, the Rulers, as soon as they are appointed, will lead the soldiers and settle them in quarters such as we prescribed, common to all, with nothing private about them; and besides these dwellings we agreed, if you remember, how far they should have anything they could call their own.

Glaucon:: Yes, I remember we thought they should have no property in the ordinary sense, but, as Guardians in training for war, they should receive as wages from the other citizens enough to keep them for the year while they fulfilled their duty of watching over the community, themselves included.

Socrates:: That is right. But when we had done with those matters, we went off into the digression which has brought us to this point. Let us go back now into our old path. Where did we leave it?

Glaucon:: That is easy to remember.- You were talking, very much as you are now, as if your description of the state were complete, and telling us that such a constitution and the corresponding type of man were what you would call good; although, as it now appears, you had it in your power to tell of a state and an individual of a still higher quality. But at any rate you said that, if this constitution were right, all others must be wrong, mentioning, if I remember, four varieties as worth considering with an eye to their defects. We were also to look at all the corresponding types of individual character, decide which was the best and which the worst, and then consider whether or not the best is also the happiest, the worst the most miserable. I was asking what these four constitutions were, when Polemarchus and Adeimantus interrupted us; and so you entered on the discussion which has brought us to this point.

Socrates:: Your memory is very accurate. Let us be like wrestlers, then, who go back to the same grip after an indecisive fall. If I repeat my question, try to give me the answer you were going to make.

Glaucon:: I will do my best.

Socrates:: Well, I am just as eager to hear what are the four type of government you meant. There is no difficulty about that; they are the types which have names in common use. First there is the constitution of Crete and Sparta, which is so commonly admired; second and next in esteem oligarchy, as it is called, a constitution fraught with many evils; next follows its antagonist, democracy; then despotism, which is thought so glorious and goes beyond them all as the fourth and final disease of society. Can you mention any other type of government, I mean any that is obviously a distinct species? There are, of course, types like hereditary monarchy, and states where the highest offices can be bought; but these are rather intermediate forms, to be found quite as frequently outside Greece as within it.

Glaucon:: True, one hears of many strange varieties.

Socrates:: Do you see, then, that there must be as many types of human character as there are forms of government? Constitutions cannot come out of stocks and stones; they must result from the preponderance of certain characters which draw the rest of the community in their wake. So if there are five forms of government, there must be five kinds of mental constitution among individuals.

Glaucon:: Naturally.

Socrates:: Now we have already described the man whom we regard as in the full sense good and just and who corresponds to aristocracy, the government of the best. We have next to consider the inferior types: the competitive and ambitious temperament, answering to the Spartan constitution, and then the oligarchic, democratic, and despotic characters, in order that, by setting the extreme examples in contrast, we may finally answer the question how pure justice and pure injustice stand in respect of the happiness or misery they bring, and so decide to pursue the one or the other, according as we listen to Thrasymachus or to the argument we are now developing.

Glaucon:: Yes, that is the next thing to be done.

Socrates:: When we were studying moral qualities earlier, we began with the state, because they stood out more clearly there than in the individual. On the same principle we had better now take, in each case, the constitution first, and then, in the light of our results, examine the corresponding character. We shall start with the constitution dominated by motives of ambition—it has no name in common use that I know of; let us call it timarchy or timocracy—and then go on to oligarchy and democracy, and lastly visit a state under despotic government and look into the despot’s soul. We ought then to be in a position to decide the question before us.

Glaucon:: Yes, such a systematic review should give us the materials for judgment.

Socrates:: Come then, let us try to explain how the government of the best might give place to a timocracy. Is it not a simple fact that in any form of government revolution always starts from the outbreak of internal dissension in the ruling class? The constitution cannot be upset so long as that class is of one mind, however small it may be.

Glaucon:: That is true.

Socrates:: Then how, Glaucon, will trouble begin in our commonwealth? How will our Auxiliaries and Rulers come to be divided against each other or among themselves? Shall we, like Homer, invoke the Muses to tell us 'how first division came', and imagine them amusing themselves at our expense by talking in high-flown language, as one teases a child with a pretence of being in earnest?

Glaucon:: What have they to say?

Socrates:: Something of this sort. 'Hard as it may be for a state so framed to be shaken, yet, since all that comes into being must decay, even a fabric like this will not endure for ever, but will suffer dissolution. In this manner: not only for plants that grow in the earth, but also for all creatures that move thereon, there are seasons of fruitfulness and unfruitfulness for soul and body alike, which come whenever a certain cycle is completed, in a period short or long according to the length of life of each species. For your own race, the rulers you have bred for your commonwealth, wise as they are, will not be able, by observation and reckoning, to hit upon the times propitious or otherwise for birth; some day the moment will slip by and they will beget children out of due season. For the divine creature there is a period embraced by a perfect number; while for the human there is a geometrical number determining the better or worse quality of the births. When your Guardians, from ignorance of this, bring together brides and bridegrooms out of season, their children will not be well-endowed or fortunate. The best of these may be appointed by the elder generation; but when they succeed to their fathers' authority as Guardians, being unworthy, they will begin to neglect us and to think too lightly first of the cultivation of the mind, and then of bodily training, so that your young men will come to be worse educated. Then Rulers appointed from among them will fail in their duty as Guardians to try the mettle of your citizens, those breeds of gold and silver, brass and iron that Hesiod told of; and when the silver is alloyed with iron and the gold with brass, diversity, inequality, and disharmony will beget, as they always must, enmity and war. Such, everywhere, is the birth and lineage of civil strife.'

Glaucon:: Yes, we will take that as a true answer to our question.

Socrates:: How could it be otherwise, when it comes from the Muses?

Glaucon:: And what will they go on to tell us?

Socrates:: Once civil strife is born, the two parties begin to pull different ways: the breed of iron and brass towards money-making and the possession of house and land, silver and gold; while the other two, wanting no other wealth than the gold and silver in the composition of their souls, try to draw them towards virtue and the ancient ways. But the violence of their contention ends in a compromise: they agree to distribute land and houses for private ownership; they enslave their own people who formerly lived as free men under their guardianship and gave them maintenance; and, holding them as serfs and menials, devote themselves to war and to keeping these subjects under watch and ward.

Glaucon:: I agree: that is how the transition begins.

Socrates:: And this form of government will be midway between the rule of the best and oligarchy, will it not?

Glaucon:: Yes.

Socrates:: Such being the transition, how will the state be governed after the change? Obviously, as intermediate between the earlier constitution and oligarchy, it will resemble each of these in some respects and have some features of its own.

Glaucon:: True.

Socrates:: It will be like the earlier constitution in several ways. Authority will be respected; the fighting class will abstain from any form of business, farming, or handicrafts; they will keep up their common meals and give their time to physical training and martial exercises.

Glaucon:: Yes.

Socrates:: On the other hand, it will have some peculiar characteristics. It will be afraid to admit intellectuals to office. The men of that quality now at its disposal will no longer be single-minded and sincere; it will prefer simpler characters with plenty of spirit, better suited for war than for peace. War will be its constant occupation, and military tricks and stratagems will be greatly admired.

Glaucon:: Yes.

Socrates:: At the same time, men of this kind will resemble the ruling class of an oligarchy in being avaricious, cherishing furtively a passionate regard for gold and silver; for they will now have private homes where they can hoard their treasure in secret and live ensconced in a nest of their own, lavishing their riches on their women or whom they please. They will also be miserly, prizing the money they may not openly acquire, though prodigal enough of other people's wealth for the satisfaction of their desires. They will enjoy their pleasures in secret, like truant children, in defiance of the law; because they have been educated not by gentle influence but under compulsion, cultivating the body in preference to the mind and caring nothing for the spirit of genuine culture which seeks truth by the discourse of reason.

Glaucon:: The society you describe is certainly a mixture of good and evil.

Socrates:: Yes, it is a mixture; but, thanks to the predominance of the spirited part of our nature, it has one most conspicuous feature: ambition and the passion to excel.

Glaucon:: Quite so.

Socrates:: Such, then, is the origin and character of this form of government. We have given only an outline, for no more finished picture is needed for the purpose of setting before our eyes the perfect types of just and unjust men. It would be an endless task to go through all the forms of government and of human character without omitting any detail.

Glaucon:: True.

Socrates:: And now what of the corresponding individual? How does he come into being, and what is he like?

Adeimantus:: I imagine, his desire to excel, so far as that goes, would make him rather like Glaucon.

Socrates:: Perhaps; but in other ways the likeness fails. He must be more self-willed than Glaucon and rather uncultivated, though fond of music; one who will listen readily, but is no speaker. Not having a properly educated man’s consciousness of superiority to slaves, he will treat them harshly; though he will be civil to free men, and very obedient to those in authority. Ambitious for office, he will base his claims, not on any gifts of speech, but on his exploits in war and the soldierly qualities he has acquired through his devotion to athletics and hunting. In his youth he will despise money, but the older he grows the more he will care for it, because of the touch of avarice in his nature; and besides his character is not thoroughly sound, for lack of the only safeguard that can preserve it throughout life, a thoughtful and cultivated mind.

Adeimantus:: Quite true.

Socrates:: If that is the sort of young man whose character reflects a timocratical regime, his history will be something like this. He may be the son of an excellent father who, living in an ill-governed state, holds aloof from public life because he would sooner forgo some of his rights than take part in the scramble for office or be troubled with going to law. His son's character begins to take shape when he hears his mother complaining that she is slighted by the other women because her husband has no official post. She sees too that he cares little for money, and is indifferent to all the scurrilous battle of words that goes on in the Assembly and the law-courts; and she finds him always absorbed in his thoughts, without much regard for her, or disregard either. Nursing all these grievances, she tells her son that his father is not much of a man and far too easy-going, and has all the other weaknesses that the wives of such men are fond of harping on.

Adeimantus:: Yes, we hear plenty of these feminine complaints.

Socrates:: Besides, as you know, servants who are esteemed loyal to the family sometimes talk privately to the sons in the same way. If they see the father taking no action against a swindler or a defaulting debtor, they urge the son, when he is grown up, to stand up for his rights and be more of a man than his father. When the boy goes out, he sees and hears the same sort of thing: one man is made light of as a fool for minding his own business, whereas another who has a finger in every pie is praised and respected. All this experience affects the young man, and on the other hand he listens to his father's conversation and can see at close quarters how his way of life compares with other people's; and so he is pulled both ways. His father tends the growth of reason in his soul, while the rest of the world is fostering the other two elements, ambition and appetite. By temperament he is not a bad man, but he has fallen into bad company, and the two contrary influences result in a compromise: he gives himself up to the control of the middle principle of high-spirited emulation and becomes an arrogant and ambitious man.

Adeimantus:: That is a good account of his history, I think.

Socrates:: So now we have an idea of the second form of government and the corresponding individual.

Adeimantus:: Yes.

Socrates:: Shall we go on then, as Aeschylus might say, to tell of 'another man, matched with another state', or rather keep to our plan of taking the state first?

Adeimantus:: By all means.

Socrates:: Then I suppose the next type of constitution will be oligarchy.

Adeimantus:: What sort of regime do you mean?

Socrates:: The one which is based on a property qualification, where the rich are in power and the poor man cannot hold office.

Adeimantus:: I see.

Socrates:: We must start, then, by describing the transition from timocracy to oligarchy. No one could fail to see how that happens. The downfall of timocracy is due to the flow of gold into those private stores we spoke of. In finding new ways of spending their money, men begin by stretching the law for that purpose, until they and their wives obey it no longer. Then, as each keeps an envious eye on his neighbor, their rivalry infects the great mass of them; and as they go to further lengths in the pursuit of riches, the more they value money and the less they care for virtue. Virtue and wealth are balanced against one another in the scales; as the rich rise in social esteem, the virtuous sink. These changes of valuation, moreover, are always reflected in practice. So at last the competitive spirit of ambition in these men gives way to the passion for gain; they despise the poor man and promote to power the rich, who wins all their praise and admiration. At this point they fix by statute the qualification for privilege in an oligarchy, an amount of wealth which varies with the strength of the oligarchical principle; no one may hold office whose property falls below the prescribed sum. This measure is carried through by armed force, unless they have already set up their constitution by terrorism. That, then, is how an oligarchy comes to be established.

Adeimantus:: Yes; but what is the character of this regime, and what are the defects we said it would have?

Socrates:: In the first place, the principle on which it limits privilege. How would it be, if the captain of a ship were appointed on a property qualification, and a poor man could never get a command, though he might know much more about seamanship?

Adeimantus:: The voyage would be likely to end in disaster.

Socrates:: Is not the same true of any position of authority? Or is the government of a state an exception?

Adeimantus:: Anything but an exception, inasmuch as a state is the hardest thing to govern and the most important.

Socrates:: So this is one serious fault of oligarchy.

Adeimantus:: Evidently.

Socrates:: Is it any less serious that such a state must lose its unity and become two, one of the poor, the other of the rich, living together and always plotting against each other?

Adeimantus:: Quite as serious.

Socrates:: Another thing to its discredit is that they may well be unable to carry on a war. Either they must call out the common people or not. If they do, they will have more to fear from the armed multitude than from the enemy; and if they do not, in the day of battle these oligarchs will find themselves only too literally a government of the few. Also, their avarice will make them unwilling to pay war-taxes.

Adeimantus:: True.

Socrates:: And again, is it right that the same persons should combine many occupations, agriculture, business, and soldiering? We condemned that practice some time ago.

Adeimantus:: No, not at all right.

Socrates:: Worst of all, a man is allowed to sell all he has to another and then to go on living in a community where he plays no part as tradesman or artisan or as a soldier capable of providing his own equipment; he is only what they call a pauper. This is an evil which first becomes possible under an oligarchy, or at least there is nothing to prevent it; otherwise there would not be some men excessively wealthy and others destitute.

Adeimantus:: True.

Socrates:: Now think of this pauper in his earlier days when he was well off. By spending his money, was he doing any more good to the community in those useful ways I mentioned? He seemed to belong to the ruling class, but really he was neither ruling the state nor serving it; he was a mere consumer of goods. His house might be compared to one of those cells in the honeycomb where a drone is bred to be the plague of the hive. The drones which can fly were all created without stings; but these walking drones are of two sorts: some have formidable stings, the rest have none. In society, the stingless drones end as beggars in their old age; the ones which have stings become what is known as the criminal class. It follows that, in any community where beggars are to be seen, there are also thieves and pickpockets and temple-robbers and other such artists in crime concealed somewhere about the place. And you will certainly see beggars in any state governed by an oligarchy.

Adeimantus:: Yes, nearly everywhere, outside the ruling class.

Socrates:: Then we may assume that there are also plenty of drones with stings, criminals whom the government takes care to hold down by force; and we shall conclude that they are bred by lack of education, bad upbringing, and a vicious form of government.

Adeimantus:: Yes.

Socrates:: Such, then, is the character of a state ruled by an oligarchy. It has all these evils and perhaps more.

Adeimantus:: Very likely.

Socrates:: We have finished, then, with the constitution known as oligarchy, where power is held on a property qualification, and we may turn now to the history and character of the corresponding individual.

Adeimantus:: Yes, let us do so.

Socrates:: The transition from the timocratic type to the oligarchical happens somewhat in this way. The timocratical man has a son, who at first emulates his father and follows in his steps. Then suddenly he sees him come up against society, like a ship striking a sunken rock, and founder with all his possessions; he may have held some high office or command and then have been brought to trial by informers and put to death or banished or outlawed with the loss of all his property.

Adeimantus:: All this might well happen.

Socrates:: The son is terror-stricken at the sight of this ruin, in which his own fortunes are involved. At once that spirit of eager ambition which hitherto ruled in his heart is thrust headlong from the throne. Humbled by poverty, he turns to earning his living and, little by little, through hard work and petty savings, scrapes together a fortune. And now he will install another spirit on the vacant throne, the money-loving spirit of sensual appetite, like an eastern monarch with diadem and golden chain and scimitar girt at his side. At its footstool, on either hand, will crouch the two slaves he has forced into subjection: Reason, whose thought is now confined to calculating how money may breed more money, and Ambition, suffered to admire and value nothing but wealth and its possessors and to excel in nothing but the struggle to gain money by any and every means.

Adeimantus:: There is no swifter and surer way by which an ambitious young man may be transformed into a lover of money.

Socrates:: Is this, then, our oligarchical type?

Adeimantus:: Well, at any rate, the type from which he has developed corresponded to the constitution from which oligarchy arose.

Socrates:: Let us see, then, whether he will not have the same sort of character. The first point of resemblance is that he values wealth above everything. Another is that he is niggardly and a worker who satisfies only his necessary wants and will go to no further expense; his other desires he keeps in subjection as leading nowhere. There is something squalid about him, with his way of always expecting to make a profit and add to his hoard—the sort of person who is much admired by the vulgar. Surely there is a likeness here to the state under an oligarchy?

Adeimantus:: I think there is, especially in the way that money is valued above everything.

Socrates:: Because, I suspect, he has never thought of cultivating his mind.

Adeimantus:: Never; or he would not have promoted the blind god of Wealth to lead the dance.

Socrates:: Good; and here is another point. As a consequence of his lack of education, appetites will spring up in him, comparable to those drones in society whom we classified as either beggars or criminals, though his habitual carefulness will keep them in check. If you want to see his criminal tendencies at work, you must look to any occasions, such as the guardianship of orphans, where he has a chance to be dishonest without risk. It will then be clear that in his other business relations, where his apparent honesty gives him a good reputation, he is only exercising a sort of enforced moderation. The base desires are there, not tamed by a reasonable conviction that it is wrong to gratify them, but only held down under stress of fear, which makes him tremble for the safety of his whole fortune. Moreover, you may generally be sure of discovering these drone-like appetites whenever men of this sort have other people's money to spend.

Adeimantus:: That is very true.

Socrates:: Such a man, then, will not be single-minded but torn in two by internal conflict, though his better desires will usually keep the upper hand over the worse. Hence he presents a more decent appearance than many; but the genuine virtue of a soul in peace and harmony with itself will be utterly beyond his reach.

Adeimantus:: I agree.

Socrates:: Further, his stinginess weakens him as a competitor for any personal success or honorable distinction. He is unwilling to spend his money in a struggle for that sort of renown, being afraid to stir up his expensive desires by calling upon them to second his ambition. So, like a true oligarch, fighting with only a small part of his forces, he is usually beaten and remains a rich man.

Adeimantus:: Quite so.

Socrates:: Have we any further doubts, then, about the likeness between a state under an oligarchy and this parsimonious money-getter?

Adeimantus:: None at all.

Socrates:: Democracy, I suppose, should come next. A study of its rise and character should help us to recognize the democratic type of man and set him beside the others for judgment.

Adeimantus:: Certainly that course would fit in with our plan.

Socrates:: If the aim of life in an oligarchy is to become as rich as possible, that insatiable craving would bring about the transition to democracy. In this way: since the power of the ruling class is due to its wealth, they will not want to have laws restraining prodigal young men from ruining themselves by extravagance. They will hope to lend these spendthrifts money on their property and buy it up, so as to become richer and more influential than ever. We can see at once that a society cannot hold wealth in honor and at the same time establish a proper self-control in its citizens. One or the other must be sacrificed.

Adeimantus:: Yes, that is fairly obvious.

Socrates:: In an oligarchy, then, this neglect to curb riotous living sometimes reduces to poverty men of a not ungenerous nature. They settle down in idleness, some of them burdened with debt, some disfranchised, some both at once; and these drones are armed and can sting. Hating the men who have acquired their property and conspiring against them and the rest of society, they long for a revolution. Meanwhile the usurers, intent upon their own business, seem unaware of their existence; they are too busy planting their own stings into any fresh victim who offers them an opening to inject the poison of their money; and while they multiply their capital by usury, they are also multiplying the drones and the paupers. When the danger threatens to break out, they will do nothing to quench the flames, either in the way we mentioned, by forbidding a man to do what he likes with his own, or by the next best remedy, which would be a law enforcing a respect for right conduct. If it were enacted that, in general, voluntary contracts for a loan should be made at the lender's risk, there would be less of this shameless pursuit of wealth and a scantier crop of those evils I have just described.

Adeimantus:: Quite true.

Socrates:: But, as things are, this is the plight to which the rulers of an oligarchy, for all these reasons, reduce their subjects. As for themselves, luxurious indolence of body and mind makes their young men too lazy and effeminate to resist pleasure or to endure pain; and the fathers, neglecting everything but money, have no higher ideals in life than the poor. Such being the condition of rulers and subjects, what will happen when they are thrown together, perhaps as fellow-travelers by sea or land to some festival or on a campaign, and can observe one another's demeanor in a moment of danger? The rich will have no chance to feel superior to the poor. On the contrary, the poor man, lean and sunburnt, may find himself posted in battle beside one who, thanks to his wealth and indoor life, is panting under his burden of fat and showing every mark of distress. 'Such men', he will think, 'are rich because we are cowards'; and when he and his friends meet in private, the word will go round: 'These men are no good: they are at our mercy.'

Adeimantus:: Yes, that is sure to happen.

Socrates:: This state, then, is in the same precarious condition as a person so unhealthy that the least shock from outside will upset the balance or, even without that, internal disorder will break out. It falls sick and is at war with itself on the slightest occasion, as soon as one party or the other calls in allies from a neighboring oligarchy or democracy; and sometimes civil war begins with no help from without.

Adeimantus:: Quite true.

Socrates:: And when the poor win, the result is a democracy. They kill some of the opposite party, banish others, and grant the rest an equal share in civil rights and government, officials being usually appointed by lot.

Adeimantus:: Yes, that is how a democracy comes to be established, whether by force of arms or because the other party is terrorized into giving way.

Socrates:: Now what is the character of this new regime? Obviously the way they govern themselves will throw light on the democratic type of man.

Adeimantus:: No doubt.

Socrates:: First of all, they are free. Liberty and free speech are rife everywhere; anyone is allowed to do what he likes.

Adeimantus:: Yes, so we are told.

Socrates:: That being so, every man will arrange his own manner of life to suit his pleasure. The result will be a greater variety of individuals than under any other constitution. So it may be the finest of all, with its variegated pattern of all sorts of characters. Many people may think it the best, just as women and children might admire a mixture of colors of every shade in the pattern of a dress. At any rate if we are in search of a constitution, here is a good place to look for one. A democracy is so free that it contains a sample of every kind; and perhaps anyone who intends to found a state, as we have been doing, ought first to visit this emporium of constitutions and choose the model he likes best.

Adeimantus:: He will find plenty to choose from.

Socrates:: Here, too, you are not obliged to be in authority, however competent you may be, or to submit to authority, if you do not like it; you need not fight when your fellow citizens are at war, nor remain at peace when they do, unless you want peace; and though you may have no legal right to hold office or sit on juries, you will do so all the same if the fancy takes you. A wonderfully pleasant life, surely, for the moment.

Adeimantus:: For the moment, no doubt.

Socrates:: There is a charm, too, in the forgiving spirit shown by some who have been sentenced by the courts. In a democracy you must have seen how men condemned to death or exile stay on and go about in public, and no one takes any more notice than he would of a spirit that walked invisible. There is so much tolerance and superiority to petty considerations; such a contempt for all those fine principles we laid down in founding our commonwealth, as when we said that only a very exceptional nature could turn out a good man, if he had not played as a child among things of beauty and given himself only to creditable pursuits. A democracy tramples all such notions under foot; with a magnificent indifference to the sort of life a man has led before he enters politics, it will promote to honor anyone who merely calls himself the people’s friend.

Adeimantus:: Magnificent indeed.

Socrates:: These then, and such as these, are the features of a democracy, an agreeable form of anarchy with plenty of variety and an equality of a peculiar kind for equals and unequals alike.

Adeimantus:: All that is notoriously true.

Socrates:: Now consider the corresponding individual character. Or shall we take his origin first, as we did in the case of the constitution?

Adeimantus:: Yes.

Socrates:: I imagine him as the son of our miserly oligarch, brought up under his father's eye and in his father's ways. So he too will enforce a firm control over all such pleasures as lead to expense rather than profit—unnecessary pleasures, as they have been called. But, before going farther, shall we draw the distinction between necessary and unnecessary appetites, so as not to argue in the dark?

Adeimantus:: Please do so.

Socrates:: There are appetites which cannot be got rid of, and there are all those which it does us good to fulfill. Our nature cannot help seeking to satisfy both these kinds; so they may fairly be described as necessary. On the other hand, 'unnecessary' would be the right name for all appetites which can be got rid of by early training and which do us no good and in some cases do harm. Let us take an example of each kind, so as to form a general idea of them. The desire to eat enough plain food—just bread and meat—to keep in health and good condition may be called necessary. In the case of bread the necessity is twofold, since it not only does us good but is indispensable to life; whereas meat is only necessary in so far as it helps to keep us in good condition. Beyond these simple needs the desire for a whole variety of luxuries is unnecessary. Most people can get rid of it by early discipline and education; and it is as prejudicial to intelligence and self-control as it is to bodily health. Further, these unnecessary appetites might be called expensive, whereas the necessary ones are rather profitable, as helping a man to do his work. The same distinctions could be drawn in the case of sexual appetite and all the rest.

Adeimantus:: Yes.

Socrates:: Now, when we were speaking just now of drones, we meant the sort of man who is under the sway of a host of unnecessary pleasures and appetites, in contrast with our miserly oligarch, over whom the necessary desires are in control. Accordingly, we can now go back to describe how the democratic type develops from the oligarchical. I imagine it usually happens in this way. When a young man, bred, as we were saying, in a stingy and uncultivated home, has once tasted the honey of the drones and keeps company with those dangerous and cunning creatures, who know how to purvey pleasures in all their multitudinous variety, then the oligarchical constitution of his soul begins to turn into a democracy. The corresponding revolution was effected in the state by one of the two factions calling in the help of partisans from outside. In the same way one of the conflicting sets of desires in the soul of this youth will be reinforced from without by a group of kindred passions; and if the resistance of the oligarchical faction in him is strengthened by remonstrances and reproaches coming from his father, perhaps, or his friends, the opposing parties will soon be battling within him. In some cases the democratic interest yields to the oligarchical: a sense of shame gains a footing in the young man’s soul, and some appetites are crushed, others banished, until order is restored.

Adeimantus:: Yes, that happens sometimes.

Socrates:: But then again, perhaps, owing to the father's having no idea how to bring up his son, another brood of desires, akin to those which were banished, are secretly nursed up until they become numerous and strong. These draw the young man back into clandestine commerce with his old associates, and between them they breed a whole multitude. In the end, they seize the citadel of the young man's soul, finding it unguarded by the trusty sentinels which keep watch over the minds of men favored by heaven. Knowledge, right principles, true thoughts, are not at their post; and the place lies open to the assault of false and presumptuous notions. So he turns again to those lotus-eaters and now throws in his lot with them openly. If his family send reinforcements to the support of his thrifty instincts, the impostors who have seized the royal fortress shut the gates upon them, and will not even come to parley with the fatherly counsels of individual friends. In the internal conflict they gain the day; modesty and self-control, dishonored and insulted as the weaknesses of an unmanly fool, are thrust out into exile; and the whole crew of unprofitable desires take a hand in banishing moderation and frugality, which, as they will have it, are nothing but churlish meanness. So they take possession of the soul which they have swept clean, as if purified for initiation into higher mysteries; and nothing remains but to marshal the great procession bringing home Insolence, Anarchy, Waste, and Impudence, those resplendent divinities crowned with garlands, whose praises they sing under flattering names: Insolence they call good breeding, Anarchy freedom, Waste magnificence, and Impudence a manly spirit. Is not, that a fair account of! the revolution which gives free rein to unnecessary and harmful pleasures in a young man brought up in the satisfaction only of the necessary desires?

Adeimantus:: Yes, it is a vivid description.

Socrates:: In his life thenceforward he spends as much time and pains and money on his superfluous pleasures as on the necessary ones. If he is lucky enough not to be carried beyond all bounds, the tumult may begin to subside as he grows older. Then perhaps he may recall some of the banished virtues and cease to give himself up entirely to the passions which ousted them; and now he will set all his pleasures on a footing of equality, denying to none its equal rights and maintenance, and allowing each in turn, as it presents itself, to succeed, as if by the chance of the lot, to the government of his soul until it is satisfied. When he is told that some pleasures should be sought and valued as arising from desires of a higher order, others chastised and enslaved because the desires are base, he will shut the gates of the citadel against the messengers of truth, shaking his head and declaring that one appetite is as good as another and all must have their equal rights. So he spends his days indulging the pleasure of the moment, now intoxicated with wine and music, and then taking to a spare diet and drinking nothing but water; one day in hard training, the next doing nothing at all, the third apparently immersed in study. Every now and then he takes a part in politics, leaping to his feet to say or do whatever comes into his head. Or he will set out to rival someone he admires, a soldier it may be, or, if the fancy takes him, a man of business. His life is subject to no order or restraint, and he has no wish to change an existence which he calls pleasant, free, and happy.

Adeimantus:: That well describes the life of one whose motto is liberty and equality.

Socrates:: Yes, and his character contains the same fine variety of pattern that we found in the democratic state; it is as multifarious as that epitome of all types of constitution. Many a man, and many a woman too, will find in it something to envy. So we may see in him the counterpart of democracy, and call him the democratic man.

Adeimantus:: We may.

Socrates:: Now there remains only the most admired of all constitutions and characters—despotism and the despot. How does despotism arise? That it comes out of democracy is fairly clear. Does the change take place in the same sort of way as the change from oligarchy to democracy? Oligarchy was established by men with a certain aim in life: the good they sought was wealth, and it was the insatiable appetite for money-making to the neglect of everything else that proved its undoing. Is democracy likewise ruined by greed for what it conceives to be the supreme good?

Adeimantus:: What good do you mean?

Socrates:: Liberty. In a democratic country you will be told that liberty is its noblest possession, which makes it the only fit place for a free spirit to live in.

Adeimantus:: True; that is often said.

Socrates:: Well then, as I was saying, perhaps the insatiable desire for this good to the neglect of everything else may transform a democracy and lead to a demand for despotism. A democratic state may fall under the influence of unprincipled leaders, ready to minister to its thirst for liberty with too deep draughts of this heady wine; and then, if its rulers are not complaisant enough to give it unstinted freedom, they will be arraigned as accursed oligarchs and punished. Law-abiding citizens will be insulted as nonentities who hug their chains; and all praise and honor will be bestowed, both publicly and in private, on rulers who behave like subjects and subjects who behave like rulers. In such a state the spirit of liberty is bound to go to all lengths.

Adeimantus:: Inevitably.

Socrates:: It will make its way into the home, until at last the very animals catch the infection of anarchy. The parent falls into the habit of behaving like the child, and the child like the parent: the father is afraid of his sons, and they show no fear or respect for their parents, in order to assert their freedom. Citizens, resident aliens, and strangers from abroad are all on an equal footing. To descend to smaller matters, the schoolmaster timidly flatters his pupils, and the pupils make light of their masters as well as of their attendants. Generally speaking, the young copy their elders, argue with them, and will not do as they are told; while the old, anxious not to be thought disagreeable tyrants, imitate the young and condescend to enter into their jokes and amusements. The full measure of popular liberty is reached when the slaves of both sexes are quite as free as the owners who paid for them; and I had almost forgotten to mention the spirit of freedom and equality in the mutual relations of men and women.

Adeimantus:: Well, to quote Aeschylus, we may as well speak 'the word that rises to our lips'.

Socrates:: Certainly; so I will No one who had not seen it would believe how much more freedom the domestic animals enjoy in a democracy than elsewhere. The very dogs behave as if the proverb 'like mistress, like maid' applied to them; and the horses and donkeys catch the habit of walking down the street with all the dignity of freemen, running into anyone they meet who does not get out of their way. The whole place is simply bursting with the spirit of liberty.

Adeimantus:: No need to tell me that. I have often suffered from it on my way out of the town.

Socrates:: Putting all these items together, you can see the result: the citizens become so sensitive that they resent the slightest application of control as intolerable tyranny, and in their resolve to have no master they end by disregarding even the law, written or unwritten.

Adeimantus:: Yes, I know that only too well.

Socrates:: Such then, I should say, is the seed, so full of fair promise, from which springs despotism.

Adeimantus:: Promising indeed. But what is the next stage?

Socrates:: The same disease that destroyed oligarchy breaks out again here, with all the more force because of the prevailing license, and enslaves democracy. The truth is that, in the constitution of society, quite as much as in the weather or in plants and animals, any excess brings about an equally violent reaction. So the only outcome of too much freedom is likely to be excessive subjection, in the state or in the individual; which means that the culmination of liberty in democracy is precisely what prepares the way for the cruelest extreme of servitude under a despot. But I think you were asking rather about the nature of that disease which afflicts democracy in common with oligarchy and reduces it to slavery.

Adeimantus:: Yes, I was.

Socrates:: What I had in mind was that set of idle spendthrifts, among whom the bolder spirits take the lead. We compared these leaders, if you remember, to drones armed with stings, the sting-less drones being their less enterprising followers. In any society where these two groups appear they create disorder, as phlegm and bile do in the body. Hence the lawgiver, as a good physician of the body politic, should take measures in advance, no less than the prudent bee-keeper who tries to forestall the appearance of drones, or, failing that, cuts them out, cells and all, as quickly as he can.

Adeimantus:: Quite true.

Socrates:: Then, to gain a clearer view of our problem, let us suppose the democratic commonwealth to be divided into three parts, as in fact it is. One consists of the drones we have just described. Bred by the spirit of license, in a democracy this class is no less numerous and much more energetic than in an oligarchy, where it is despised and kept out of office and so remains weak for lack of exercise. But in a democracy it furnishes all the leaders, with a few exceptions; its keenest members make the speeches and transact the business, while the other drones settle on the benches round, humming applause to drown any opposition. Thus nearly the whole management of the commonwealth is in its hands.

Adeimantus:: Quite true.

Socrates:: Meanwhile, a second group is constantly emerging from the mass. Where everyone is bent upon making money, the steadiest characters tend to amass the greatest wealth. Here is a very convenient source from which the drones can draw an abundance of honey.

Adeimantus:: No doubt; they cannot squeeze any out of men of small means.

Socrates:: 'The rich', I believe, is what they call this class which provides provender for the drones.

Adeimantus:: Yes.

Socrates:: The third class will be the 'people', comprising all the peasantry who work their own farms, with few possessions and no interest in politics. In a democracy this is the largest class and, when once assembled, its power is supreme.

Adeimantus:: Yes, but it will not often meet, unless it gets some share of the honey.

Socrates:: Well, it always does get its share, when the leaders are distributing to the people what they have taken from the well-to-do, always provided they can keep the lion’s share for themselves. The plundered rich are driven to defend themselves in debate before the Assembly and by any measures they can compass; and then, even if they have no revolutionary designs, the other party accuse them of plotting against the people and of being reactionary oligarchs. At last, when they see the people unwittingly misled by such denunciation into attempts to treat them unjustly, then, whether they wish it or not, they become reactionaries in good earnest. There is no help for it; the poison is injected by the sting of those drones we spoke of. Then follow impeachments and trials, in which each party arraigns the other.

Adeimantus:: Quite so.

Socrates:: And the people always put forward a single champion of their interests, whom they nurse to greatness. Here, plainly enough, is the root from which despotism invariably springs.

Adeimantus:: Yes.

Socrates:: How does the transformation of the people’s champion into a despot begin? You have heard the legend they tell of the shrine of Lycaean Zeus in Arcadia: how one who tastes a single piece of human flesh mixed in with the flesh of the sacrificial victims is fated to be changed into a wolf. In the same way the people’s champion, finding himself in full control of the mob, may not scruple to shed a brother’s blood; dragging him before a tribunal with the usual unjust charges, he may foully murder him, blotting out a man's life and tasting kindred blood with unhallowed tongue and lips; he may send men to death or exile with hinted promises of debts to be cancelled and estates to be redistributed. Is it not thenceforth his inevitable fate either to be destroyed by his enemies or to seize absolute power and be transformed from a human being into a wolf?

Adeimantus:: It is.

Socrates:: Here, then, we have the party-leader in the civil war against property. If he is banished, and then returns from exile in despite of his enemies, he will come back a finished despot. If they cannot procure his banishment or death by denouncing him to the state, they will conspire to assassinate him. Then comes the notorious device of all who have reached this stage in the despot's career, the request for a bodyguard to keep the people's champion safe for them. The request is granted, because the people, in their alarm on his account, have no fear for themselves.

Adeimantus:: Quite true.

Socrates:: This is a terrifying sight for the man of property, who is charged with being not merely rich but the people's enemy. He will follow the oracle's advice to Croesus;

> To flee by Hermus' pebbly shore,
> Dreading the coward's shame no more.

Adeimantus:: Well, he would have little chance to dread it a second time.

Socrates:: True; if he is caught, no doubt he will be done to death; whereas our champion himself does not, like Hector's charioteer, 'measure his towering length in dust', but on the contrary, overthrows a host of rivals and stands erect in the chariot of the state, no longer protector of the people, but its absolute master.

Adeimantus:: Yes, it must come to that.

Socrates:: And now shall we describe the happy condition of the man and of the country which harbors a creature of this stamp?

Adeimantus:: By all means.

Socrates:: In the early days he has a smile and a greeting for everyone he meets; disclaims any absolute power; makes large promises to his friends and to the public; sets about the relief of debtors and the distribution of land to the people and to his supporters; and assumes a mild and gracious air towards everybody. But as soon as he has disembarrassed himself of his exiled enemies by coming to terms with some and destroying others, he begins stirring up one war after another, in order that the people may feel their need of a leader, and also be so impoverished by taxation that they will be forced to think of nothing but winning their daily bread, instead of plotting against him. Moreover, if he suspects some of cherishing thoughts of freedom and not submitting to his rule, he will find a pretext for putting them at the enemy's mercy and so making away with them. For all these reasons a despot must be constantly provoking wars.

Adeimantus:: He must.

Socrates:: This course will lead to his being hated by his countrymen more and more. Also, the bolder spirits among those who have helped him to power and now hold positions of influence will begin to speak their mind to him and among themselves and to criticize his policy. If the despot is to maintain his rule, he must gradually make away with all these malcontents, until he has not a friend or an enemy left who is of any account. He will need to keep a sharp eye open for anyone who is courageous or high-minded or intelligent or rich; it is his happy fate to be at war with all such, whether he likes it or not, and to lay his plans against them until he has purged the commonwealth.

Adeimantus:: A fine sort of purgation!

Socrates:: Yes, the exact opposite of the medical procedure, which removes the worst elements in the bodily condition and leaves the best.

Adeimantus:: There seems to be no choice, if he is to hold his power.

Socrates:: No; he is confined to the happy alternatives of living with people most of whom are good for nothing and who hate him into the bargain, or not living at all. And the greater the loathing these actions inspire in his countrymen, the more he will need trustworthy recruits to strengthen his bodyguard. Where will he turn to find men on whom he can rely?

Adeimantus:: They will come flocking of their own accord, if he offers enough pay.

Socrates:: Foreigners of all sorts, you mean—yet another swarm of drones. But why not draw upon the home supply? He could rob the citizens of their slaves, emancipate them, and enroll them in his bodyguard.

Adeimantus:: No doubt they would be the most faithful adherents he could find.

Socrates:: What an enviable condition for the despot, to put his trust in such friends as these, when he has made away with his earlier supporters! He will, of course, be the admiration of all this band of new-made citizens, whose company he will enjoy when every decent person shuns him with loathing. It is not for nothing that the tragic drama is thought to be a storehouse of wisdom, and above all Euripides, whose profundity of thought appears in the remark that ‘despots grow wise by converse with the wise’, meaning no doubt by the wise these associates we have described.

Adeimantus:: Yes, and Euripides praises absolute power as godlike, with much more to the same effect. So do the other poets.

Socrates:: That being so, the tragedians will give a further proof of their wisdom if they will excuse us and all states whose constitution resembles ours, when we deny them admittance on the ground that they sing the praises of despotism. At the same time, I expect they will go the round of other states, where they will hire actors with fine sonorous voices to sway the inclination of the assembled crowd towards a despotic or a democratic constitution. Naturally they are honored and well paid for these services, by despots chiefly, and in a less degree by democracies. But the higher they mount up the scale of commonwealths, the more their reputation flags, like a climber who gives in for lack of breath. However, we are wandering from our subject. Let us go back to the despot’s army. How is he to maintain this fine, ever-shifting array of nondescripts?

Adeimantus:: No doubt he will spend any treasure there may be in the temples, so long as it will last, as well as the property of his victims, thus lightening the war-taxes imposed on the people.

Socrates:: And when that source fails?

Adeimantus:: Clearly he will support himself, with his boon-companions, minions, and mistresses, from his parent’s estate.

Socrates:: I understand: the despot and his comrades will be maintained by the common people which gave him birth.

Adeimantus:: Inevitably.

Socrates:: But how if the people resent this and say it is not right for the father to support his grown-up son—it ought to be the other way about; they did not bring him into being and set him up in order that, when he had grown great, they should be the slaves of their own slaves and support them together with their master and the rest of his rabble; he was to be the champion to set them free from the rich and the so-called upper class. Suppose they now order him and his partisans to leave the country, as a father might drive his son out of the house along with his riotous friends?

Adeimantus:: Then, to be sure, the people will learn what sort of a creature it has bred and nursed to greatness in its bosom, until now the child is too strong for the parent to drive out.

Socrates:: Do you mean that the despot will dare to lay violent hands on this father of his and beat him if he resists?

Adeimantus:: Yes, when once he has disarmed him.

Socrates:: So the despot is a parricide, with no pity for the weakness of age. Here, it seems, is absolutism openly avowed. The people, as they say, have escaped the smoke only to fall into the fire, exchanging service to free men for the tyranny of slaves. That freedom which knew no bounds must now put on the livery of the most harsh and bitter servitude, where the slave has become the master.

Adeimantus:: Yes, that is what happens.

Socrates:: May we say, then, that we have now sufficiently described the transition from democracy to despotism, and what despotism is like when once established?

Adeimantus:: Yes, quite sufficiently.

Socrates:: Last comes the man of despotic character. It remains to ask how he develops from the democratic type, what he is like, and whether his life is one of happiness or of misery.

Adeimantus:: Yes.

Socrates:: Here I feel the need to define, more fully than we have so far done, the number and nature of the appetites. Otherwise it will not be so easy to see our way to a conclusion.

Adeimantus:: Well, it is not too late.

Socrates:: Quite so. Now, about the appetites, here is the point I want to make plain. Among the unnecessary pleasures and desires, some, I should say, are unlawful. Probably they are innate in every one; but when they are disciplined by law and by the higher desires with the aid of reason, they can in some people be got rid of entirely, or at least left few and feeble, although in others they will be comparatively strong and numerous.

Adeimantus:: What kind of desires do you mean?

Socrates:: Those which bestir themselves in dreams, when the gentler part of the soul slumbers and the control of reason is withdrawn; then the wild beast in us, full-fed with meat or drink, becomes rampant and shakes off sleep to go in quest of what will gratify its own instincts. As you know, it will cast away all shame and prudence at such moments and stick at nothing. In fantasy it will not shrink from intercourse with a mother or anyone else, man, god, or brute, or from forbidden food or any deed of blood. In a word, it will go to any length of shamelessness and folly.

Adeimantus:: Quite true.

Socrates:: It is otherwise with a man sound in body and mind, who, before he goes to sleep, awakens the reason within him to feed on high thoughts and questionings in collected meditation. If he has neither starved nor surfeited his appetites, so that, lulled to rest, no delights or griefs of theirs may trouble that better part, but leave it free to reach out, in pure and independent thought, after some new knowledge of things past, present, or to come; if, likewise, he has soothed his passions so as not to fall asleep with his anger roused against any man; if, in fact, he does not take his rest until he has quieted two of the three elements in his soul and awakened the third wherein wisdom dwells, then he is in a fair way to grasp the truth of things, and the visions of his dreams will not be unlawful. However, we have been carried away from our point, which is that in every one of us, even those who seem most respectable, there exist desires, terrible in their untamed lawlessness, which reveal themselves in dreams. Do you agree?

Adeimantus:: I do.

Socrates:: Remember, then, our account of the democratic man, how his character was shaped by his early training under a parsimonious father, who respected only the businesslike desires, dismissing the unnecessary ones as concerned with frivolous embellishments. Then, associating with more sophisticated people who were a prey to those lawless appetites we have just described, he fell into their ways, and hatred of his father's miserliness drove him into every sort of extravagance. But, having a better disposition than his corrupters, he came to a compromise between the two conflicting ways of life, making the best of both with what he called moderation and avoiding alike the meanness of the one and the license of the other. So the oligarchical man was transformed into the democratic type.

Adeimantus:: Yes, I hold by that description.

Socrates:: Now imagine him grown old in his turn, with a young son bred in his ways, who is exposed to the same influences, drawn towards the utter lawlessness which his seducers call perfect freedom, while on the other side his father and friends lend their support to the compromise. When those terrible wizards who would conjure up an absolute ruler in the young man's soul begin to doubt the power of their spells, in the last resort they contrive to engender in him a master passion, to champion the mob of idle appetites which are for dividing among themselves all available plunder—a passion that can only be compared to a great winged drone. Like a swarm buzzing round this creature, the other desires come laden with incense and perfumes, garlands and wine, feeding its growth to the full on the pleasures of a dissolute life, until they have implanted the sting of a longing that cannot be satisfied. Then at last this passion, as leader of the soul, takes madness for the' captain of its guard and breaks out in frenzy; if it can lay hold upon any thoughts or desires that are of good report and still capable of shame, it kills them or drives them forth, until it has purged the soul of all sobriety and called in the partisans of madness to fill the vacant place.

Adeimantus:: That is a complete picture of how the despotic character develops.

Socrates:: Is not this the reason why lust has long since been called a tyrant? A drunken man, too, has something of this tyrannical spirit; and so has the lunatic who dreams that he can lord it over all mankind and heaven besides. Thus, when nature or habit or both have combined the traits of drunkenness, lust, and lunacy, then you have the perfect specimen of the despotic man.

Adeimantus:: Quite true.

Socrates:: Such, then, being his origin and character, what will his life be like?

Adeimantus:: I give it up. You must tell me.

Socrates:: I will. When a master passion is enthroned in absolute dominion over every part of the soul, feasting and reveling with courtesans and all such delights will become the order of the day. And every day and night a formidable crop of fresh appetites springs up, whose numerous demands quickly consume whatever income there may be. Soon he will be borrowing and trenching on his capital; and when all resources fail, the lusty brood of appetites will crowd about him clamoring. Goaded on to frenzy by them and above all by that ruling passion to which they serve as a sort of bodyguard, he will look out for any man of property whom he can rob by fraud or violence. Money he must have, no matter how, if he is not to suffer torments.

Adeimantus:: All that is inevitable.

Socrates:: Now, just as a succession of new pleasures asserted themselves in his soul at the expense of the older ones, so this young man will claim the right to live at his parents' expense and help himself to their property when his own portion is spent. If they resist, he will first try to cheat them; and failing that, he will rob them by force. If the old people still hold out, will any scruple restrain him from behaving like a despot?

Adeimantus:: I should not have much hope for the parents of such a son.

Socrates:: And yet consider, Adeimantus: his father and mother have been bound to him by the closest ties all his life; and now that they are old and faded, would he really be ready to beat them for the sake of the charms of some new-found mistress or favorite who has no sort of claim on him? Is he going to bring these creatures under the same roof and let them lord it over his parents?

Adeimantus:: I believe he would.

Socrates:: It is no very enviable lot, then, to give birth to a despotic son.

Adeimantus:: It is not.

Socrates:: And now suppose that his parents' resources begin to fail, while his appetites for new pleasures have mustered into a great swarm in his soul; he will begin by breaking into someone's house or robbing a traveler by night, and go on to sweep some temple clean of its treasures. Meanwhile, the old approved beliefs about right and wrong which he had as a child will be overpowered by thoughts, once held in subjection, but now emancipated to second that master passion whose bodyguard they form. In his democratic days when he was still under the control of his father and of the laws, they broke loose only in sleep; but now that this passion has set up an absolute dominion, he has become for all his waking life the man he used to be from time to time in his dreams, ready to shed blood or eat forbidden food or do any dreadful deed. The desire that lives in him as sole ruler in a waste of lawless disrule will drive him, as a tyrant would drive his country, into any desperate venture which promises to maintain it with its horde of followers, some of whom evil communication has brought in from without, while others have been released from bondage by the same evil practices within. Is that a fair account of his manner of life?

Adeimantus:: Yes.

Socrates:: If there are a few such characters in a country where most men are law-abiding, they will go elsewhere to join some despot's bodyguard or serve as mercenaries in any war that is toward. In quiet times of peace, they stay at home and commit crimes on a small scale, as thieves, burglars, pickpockets, temple-robbers, kidnappers; or, if they have a ready tongue, they may take to selling their services as informers and false witnesses.

Adeimantus:: Such crimes will be a small matter, you mean, so long as the criminals are few in number.

Socrates:: Small is a relative term; and all of them put together do not, as they say, come within sight of the degradation and misery of society under a despot. When the number of such criminals and their hangers-on increases and they become aware of their strength, then it is they who, helped by the folly of the common people, create the despot out of that one among their number whose soul is itself under the most tyrannical despotism.

Adeimantus:: Yes, such a state of mind would naturally be his best qualification.

Socrates:: All goes smoothly if men are ready to submit. But the country may resist; and then, just as he began by calling his father and mother to order, so now he will discipline his once loved fatherland, or motherland as the Cretans call it, and see that it shall live in subjection to the new-found partisans he has called in to enslave it. So this man's desires come to their fulfillment.

Adeimantus:: Yes, that is true.

Socrates:: In private life, before they gain power, men of this stamp either consort with none but parasites ready to do them any service, or, if they have a favor to beg, they will not hesitate themselves to cringe and posture in simulated friendliness, which soon cools off when their end is gained. So, throughout life, the despotic character has not a friend in the world; he is sometimes master, sometimes slave, but never knows true friendship or freedom. There is no faithfulness in him; and, if we were right in our notion of justice, he is the perfect example of the unjust man.

Adeimantus:: Certainly.

Socrates:: To sum up, then: this worst type of man is he who behaves in waking life as we said men do in their dreams. The born despot who gains absolute power must come to this, and the longer he lives as a tyrant, the more this character grows upon him.

Glaucon:: Inevitably, who now took his turn to answer.

Socrates:: Now shall we find that the lowest depth of wickedness goes with the lowest depth of unhappiness, and that the misery of the despot is really in proportion to the extent and duration of his power, though the mass of mankind may hold many different opinions?

Glaucon:: Yes, that much is certain.

Socrates:: It is true, is it not? that each type of individual—the despotic, the democratic, and so on—resembles the state with the corresponding type of constitution, and will be good and happy in a corresponding degree.

Glaucon:: Yes, of course.

Socrates:: In point of excellence, then, how does a state under a despotism compare with the one governed by kings, such as we first described?

Glaucon:: They are at opposite extremes: the best and the worst.

Socrates:: I shall not ask which is which, for that is obvious. Is your estimate the same with respect to their degrees of happiness or misery? We must not let our eyes be dazzled by fixing them only on the despot himself and some few of his supporters; we should not decide until we have looked into every corner and inspected the life of the whole community.

Glaucon:: That is a fair demand. Everyone must see that a state is most wretched under a despot and happiest under a true king.

Socrates:: And in judging between the corresponding individuals, is it not equally fair to demand the verdict of one who is not dazzled, like a child, by the outward pomp and parade of absolute power, but whose understanding can enter into a man's heart and see all that goes on within? Should we not all do well to listen to such a competent judge, if he had also lived under the same roof and witnessed the despot's behavior, not only in the emergencies of public life, but towards intimates in his own household, where he can best be seen stripped of his theatrical garb? We might then ask for a report on the happiness or misery of the despot as compared with the rest of the world.

Glaucon:: Yes, that would be perfectly fair.

Socrates:: Shall we, then, make believe that we ourselves are qualified to judge from having been in contact with despots, so that we may have someone to answer our questions?

Glaucon:: By all means.

Socrates:: Bearing in mind, then, the analogy between state and individual, you shall tell me what you think of the condition of each in turn. To begin with the state: is it free under a despot, or enslaved?

Glaucon:: Utterly enslaved.

Socrates:: And yet you see it contains some who are masters and free men.

Glaucon:: Yes, a few; but almost the whole of it, including the most respectable part, is degraded to a miserable slavery.

Socrates:: If the individual, then, is analogous to the state, we shall find the same order of things in him: a soul laboring under the meanest servitude, the best elements in it being enslaved, while a small part, which is also the most frenzied and corrupt, plays the master. Would you call such a condition of the soul freedom or slavery?

Glaucon:: Slavery, of course.

Socrates:: And just as a state enslaved to a tyrant cannot do what it really wishes, so neither can a soul under a similar tyranny do what it wishes as a whole. Goaded on against its will by the sting of desire, it will be filled with confusion and remorse. Like the corresponding state, it must always be poverty-stricken, unsatisfied, and haunted by fear. Nowhere else will there be so much lamentation, groaning, and anguish as in a country under a despotism, and in a soul maddened by the tyranny of passion and lust.

Glaucon:: It cannot be otherwise.

Socrates:: These, I think, were the considerations that made you judge such a state to be the most unhappy of all.

Glaucon:: Was I not right?

Socrates:: Certainly. But, in view of the same facts, what would you say of the despotic type of individual?

Glaucon:: That he is by far the most miserable of men.

Socrates:: There I think you are wrong. You will perhaps agree that there is a still lower depth of misery, to be found in a man of this temperament who has not the good fortune to remain in a private station but is thrust by circumstance into the position of an actual despot.

Glaucon:: Judging by what we have said already, I should think that must be true.

Socrates:: Yes; but this is the most important of all questions, the choice between a good and an evil life; and we must be content with nothing short of a reasoned conviction. Am I right in thinking that some light may be gained from considering those wealthy private individuals who own a large number of slaves? In that respect they are like the despot, though his subjects are still more numerous. Now, as you know, they do not live in terror of their servants.

Glaucon:: No; what have they to fear?

Socrates:: Nothing. But do you see why?

Glaucon:: Yes; it is because the individual is protected by the whole community.

Socrates:: True; but imagine a man owning fifty or more slaves, miraculously caught up with his wife and children and planted, along with all his household goods and servants, in some desert place where there were no freemen to come to his rescue. Would he not be horribly afraid that his servants would make away with him and his family? He would be driven to fawn upon some of the slaves with liberal promises and give them their freedom, much against his will. So he would become a parasite, dependent on his own henchmen.

Glaucon:: That would be his only way to escape destruction.

Socrates:: Moreover, the place he was transported to might be surrounded by neighbors who would not tolerate the claims of one man to lord it over others, but would retaliate fiercely on anyone they caught in such an attempt.

Glaucon:: In that case he would be in still more desperate straits, hemmed in on all sides by enemies.

Socrates:: Is not that a picture of the prison to which the despot is confined? His nature is such as we have described, infested with all manner of fears and lusts. However curious he may be, he alone can never travel abroad to attend the great festivals which every freeman wants to witness, but must live like a woman ensconced in the recesses of his house, envying his countrymen who can leave their homes to see what is worth seeing in foreign lands. You spoke just now of the despotic character, ill governed in his own soul, as the most miserable of men; but these disadvantages I have mentioned add to his wretchedness when he is driven by ill luck out of his private station to become an actual despot and undertake to rule others when he is not his own master. You might as well force a paralytic to leave the sheltered life of an invalid and spend his days in fighting or in trials of physical strength.

Glaucon:: Quite true, Socrates; that is a fair comparison.

Socrates:: So the despot's condition, my dear Glaucon, is supremely wretched, even harder than the life you pronounced the hardest of all. Whatever people may think, the actual tyrant is really the most abject slave, a parasite of the vilest scoundrels. Never able to satisfy his desires, he is always in need, and, to an eye that sees a soul in its entirety, he will seem the poorest of the poor. His condition is like that of the country he governs, haunted throughout life by terrors and convulsed with anguish. Add to this what we said before, that power is bound to exaggerate every fault and make him ever more envious, treacherous, unjust, friendless, impure, harboring every vice in his bosom, and hence only less of a calamity to all about him than he is to himself.

Glaucon:: No man of sense will dispute that.

Socrates:: Then the time has come for you, as the final judge in this competition, to decide who stands first in point of happiness and to arrange in order all our five types of character, the kingly, the timocratic, the oligarchic, the democratic, the despotic.

Glaucon:: The decision is easy. In respect both of goodness and of happiness I range them in the order in which they have entered the lists.

Socrates:: Shall we hire a herald, then, or shall I myself proclaim that, in the judgment of the son of Ariston, the happiest man is he who is first in goodness and justice, namely the true king who is also king over himself; and the most miserable is that lowest example of injustice and vice, the born despot whose tyranny prevails in his own soul and also over his country.

Glaucon:: Yes, you may proclaim that.

Socrates:: May I add that it would make no difference if the true character of both should remain unknown to heaven and to mankind?

Glaucon:: You may.

Socrates:: Very well; that may stand as one of our proofs. But I want to consider a second one, which can, I think, be based on our division of the soul into three parts, corresponding to the three orders in the state. Each part seems to me to have its own form of pleasure and its peculiar desire; and any one of the three may govern the soul.

Glaucon:: How do you mean?

Socrates:: There was the part with which a man gains knowledge and understanding, and another whereby he shows spirit. The third was so multifarious that we could find no single appropriate name; we called it after its chief and most powerful characteristic 'appetite', because of the intensity of all the appetites connected with eating and drinking and sex and so on. We also called it money-loving, because money is the principal means of satisfying desires of this kind. Gain is the source of its pleasures and the object of its affection; so ‘money-loving’ or ‘gain-loving’ might be the best single expression to sum up the nature of this part of the soul for the purpose of our discussion.

Glaucon:: I agree.

Socrates:: The spirited element, again, we think of as wholly bent upon winning power and victory and a good name. So we might call it honor-loving or ambitious.

Glaucon:: Very suitably.

Socrates:: Whereas the part whereby we gain knowledge and understanding is least of all concerned with wealth or reputation. Obviously its sole endeavor is to know the truth, and we may speak of it as loving knowledge and philosophic.

Glaucon:: Quite so.

Socrates:: And the human soul is sometimes governed by this principle, sometimes by one of the other two, as the case may be. Hence we recognize three main classes of men, the philosophic, the ambitious, and the lovers of gain. So there will also be three corresponding forms of pleasure.

Glaucon:: Certainly.

Socrates:: Now, if you choose to ask men of these three types, which of their lives is the pleasantest, each in turn will praise his own above the rest. The man of business will say that, as compared with profit-making, the pleasures of winning a high reputation or of learning are worthless, except in so far as they bring in money. The ambitious man will despise the pleasure derived from money as vulgar, and the pleasure of learning, if it does not bring fame, as moonshine. The philosopher, again, will think that the satisfaction of knowing the truth and always gaining fresh understanding is beyond all comparison with those other pleasures, which he will call ‘necessary’ in the fullest sense; for he would have no use for them, if they were not unavoidable. In this dispute about the pleasures of each class and as to which of the three lives as a whole is not merely better and nobler but actually pleasanter or less painful, how is one to know whose judgment is the truest?

Glaucon:: I am not prepared to say.

Socrates:: Well, think of it in this way. What is required for a sound judgment? Can it rest on any better foundation than experience, or insight, or reasoning?

Glaucon:: Surely not.

Socrates:: Take experience, then. Which of our three men has the fullest acquaintance with all the pleasures we have mentioned? Has the lover of gain such an understanding of the truth as to know by experience the pleasure of knowledge better than the philosopher knows the pleasure of gain?

Glaucon:: No, all the advantage lies with the philosopher, who cannot help experiencing both the other kinds of pleasure from childhood up; whereas the lover of gain is under no necessity to taste the sweetness of understanding the truth of things; rather he would not find it easy to gain that experience, however hard he should try.

Socrates:: In experience of both sorts of pleasure, then, the philosopher has the advantage over the lover of gain. How does he compare with the ambitious man? Is he less well acquainted with the pleasures of honor than the other is with the pleasures of wisdom?

Glaucon:: No, honor comes to them all, if they accomplish their several purposes; the rich man is esteemed by many people, and so are the brave man and the wise. So the pleasure of being honored is familiar to them all; but only the philosopher can know how sweet it is to contemplate the truth.

Socrates:: Then, so far as experience goes, he is the best judge of the three.

Glaucon:: Yes, by far.

Socrates:: And the only one in whom experience is seconded by insight.

Glaucon:: Yes.

Socrates:: Further, we agreed that the decision must be reached by means of reasoning; and this is peculiarly the tool of the philosopher, not of the money-lover or of the ambitious man.

Glaucon:: No doubt.

Socrates:: Now, if wealth and profit were the most satisfactory criteria, the judgments of value passed by the lover of gain would be nearest to the truth; and if honor, courage, and success were the test, the best judge would be the man who lives for honor and victory; but since the tests are experience, insight, and reasoning—?

Glaucon:: The truest values must be those approved by the philosopher, who uses reason for the pursuit of wisdom.

Socrates:: Of the three kinds of pleasure, then, the sweetest will belong to that part of the soul whereby we gain understanding and knowledge, and the man in whom that part predominates will have the pleasantest life.

Glaucon:: It must be so; in praising his own life the wise man speaks with authority.

Socrates:: What life or form of pleasure will this judge rank second?

Glaucon:: Obviously, that of the warlike and ambitious temperament. It comes nearer than the business man’s to his own.

Socrates:: And the pleasure of gain will come last, it seems.

Glaucon:: Surely.

Socrates:: So now the just man has scored a second victory over the unjust There remains the third round, for which the wrestlers at the Great Games invoke Olympian Zeus, the Preserver; and a fall in this bout should be decisive. I seem to have heard some wise man say that only the pleasures of intelligence are entirely true and pure; all the others are illusory.

Glaucon:: That should settle the matter. But what does it mean?

Socrates:: I shall discover the meaning, if you will help me by answering my questions. We speak of pain as the contrary of pleasure. Is there not also a neutral state between the two, in which the mind feels neither pleasure nor pain, but is as it were at rest from both?

Glaucon:: Yes.

Socrates:: Well, you must have heard people say, when they are ill, that nothing is pleasanter than to be well, though they never knew it until they were ill; and people in great pain will tell you that relief from pain is the greatest pleasure in the world. There are many such cases in which you find the sufferer saying that the height of pleasure is not positive enjoyment, but the peace which comes with the absence of pain.

Glaucon:: Yes; I suppose, at such moments the state of rest becomes pleasurable and all that can be desired.

Socrates:: In the same way, then, when enjoyment comes to an end, the cessation of pleasure will be painful.

Glaucon:: I suppose so.

Socrates:: If so, that state of rest which, we said, lies between pleasure and pain, will be sometimes one, sometimes the other. But if it is neither of the two, how can it become both?

Glaucon:: I do not think it can.

Socrates:: And besides, both pleasure and pain are processes of change which take place in the mind, are they not? whereas the neutral condition appeared to be a state of rest between the two. So can it be right to regard the absence of pain as pleasant or the absence of enjoyment as painful?

Glaucon:: No, it cannot.

Socrates:: It follows, then, that the state of rest is not really either pleasant or painful, but only appears so in these cases by contrast. There is no soundness in these appearances; by the standard of true pleasure they are a sort of imposture.

Glaucon:: That seems to be the conclusion.

Socrates:: You might be tempted, in these instances, to suppose that pleasure is the same thing as relief from pain, and pain the same as the cessation of pleasure; but, as an instance to the contrary, consider pleasures which do not follow on pain. There are plenty of them; the best example is the pleasures of smell. These occur suddenly with extraordinary intensity; they are not preceded by any pain and they leave no pain behind when they cease.

Glaucon:: Quite true.

Socrates:: We are not to be persuaded, then, that relief from pain is the same thing as pure pleasure, or cessation of pleasure the same as pure pain.

Glaucon:: No.

Socrates:: On the other hand, the class of pleasures which do involve some sort of relief from pain may be said to include the great majority and the most intense of all the pleasures, so called, which reach the mind by way of the body; and the same description applies to the pleasures or pains of anticipation which precede them.

Glaucon:: Yes.

Socrates:: Here is an analogy, to illustrate their nature. You think of the world as divided into an upper region and a lower, with a centre between them. Now if a person were transported from below to the centre, he would be sure to think he was moving ‘upwards’; and when he was stationed at the centre and looking in the direction he had come from, he would imagine he was in the upper region, if he had never seen the part which is really above the centre. And supposing he were transported back again, he would think he was travelling ‘downwards’, and this time he would be right. His mistake would be due to his ignorance of the real distinctions between the upper and lower regions and the centre.

Glaucon:: Clearly.

Socrates:: You will not be surprised, then, if people whose ignorance of truth and reality gives them many unsound ideas, are similarly confused about pleasure and pain and the intermediate state. When the movement is towards a painful condition, they are right in believing that the pain is real; but when they are passing from a state of pain to the neutral point, they are firmly convinced that they are approaching the pleasure of complete satisfaction. In their ignorance of true pleasure, they are deceived by the contrast between pain and the absence of pain, just as one who had never seen white might be deceived by the contrast between black and grey.

Glaucon:: Certainly; I should be much more surprised if it were not so.

Socrates:: Then look at it in this way. As hunger and thirst are states of bodily inanition, which can be replenished by food, so ignorance and unwisdom in the soul are an emptiness to be filled by gaining understanding. Of the two sorts of nourishment, will not the more real yield the truer satisfaction?

Glaucon:: Clearly.

Socrates:: Which kind of nourishment, then, has the higher claim to pure reality—food-stuffs like bread and meat and drink, or such things as true belief, knowledge, reason, and in a word all the excellences of the mind? You may decide by asking yourself whether something which is closely connected with the unchanging and immortal world of truth and itself shares that nature together with the thing in which it exists, has more or less reality than something which, like the thing which contains it, belongs to a world of mortality and perpetual change.

Glaucon:: No doubt it is much more real.

Socrates:: And a higher or lower degree of reality goes with a greater or less measure of knowledge and so of truth?

Glaucon:: Necessarily.

Socrates:: And is there not, to speak generally, less of truth and reality in the things which serve the needs of the body than in those which feed the soul?

Glaucon:: Much less.

Socrates:: And, again, less in the body itself than in the soul?

Glaucon:: Certainly.

Socrates:: And in proportion as the sustenance and thing sustained by it are more real, the satisfaction itself is a more real satisfaction.

Glaucon:: Of course.

Socrates:: Accordingly, if the appropriate satisfaction of natural needs constitutes pleasure, there will be more real enjoyment of true pleasure in such a case; whereas in the opposite case the satisfaction is not so genuine or secure and the pleasure is less true and trustworthy.

Glaucon:: Inevitably.

Socrates:: To conclude, then: those who have no experience of wisdom and virtue and spend their whole time in feasting and self-indulgence are all their lives, as it were, fluctuating downwards from the central point and back to it again, but never rise beyond it into the true upper region, to which they have not lifted their eyes. Never really satisfied with real nourishment, the pleasure they taste is uncertain and impure. Bent over their tables, they feed like cattle with stooping heads and eyes fixed upon the ground; so they grow fat and breed, and in their greedy struggle kick and butt one another to death with horns and hoofs of steel, because they can never satisfy with unreal nourishment that part of themselves which is itself unreal and incapable of lasting satisfaction.

Glaucon:: Your description of the way most people live is quite in the oracular style, Socrates.

Socrates:: Does it not follow that the pleasures of such a life are illusory phantoms of real pleasure, in which pleasure and pain are so combined that each takes its color and apparent intensity by contrast with the other? Hence the frenzied desire they implant in the breasts of fools, who fight for them as Stesichorus says the combatants at Troy fought in their blindness, for a phantom Helen.

Glaucon:: Yes, that is bound to be so.

Socrates:: Take, again, the satisfaction of the spirited element in our nature. Must not that be no less illusory, when a man seeks, at all costs, to gratify his ambition by envy, his love of victory by violence, and his ill-temper by outbursts of passion, without sense or reason?

Glaucon:: It must.

Socrates:: What then? May we boldly assert that all the desires both of the gain-loving and of the ambitious part of our nature will win the truest pleasures of which they are capable, if they accept the guidance of knowledge and reason and pursue only those pleasures which wisdom approves? Such pleasures will be true, because truth is their guide, and will also be proper to their nature, if it is a fact that a thing always finds in what is best for it something akin to its real self.

Glaucon:: Well, that is certainly a fact.

Socrates:: To conclude, then, each part of the soul will not only do its own work and be just when the whole soul, with no inward conflict, follows the guidance of the wisdom-loving part, but it also will enjoy the pleasures that are proper to it and the best and truest of which it is capable; whereas if either of the other two parts gains the upper hand, besides failing to find its own proper pleasure, it will force the others to pursue a false pleasure uncongenial to their nature.

Glaucon:: Yes.

Socrates:: Now would not these evil effects be most of all produced by the elements farthest removed from philosophy and reason, that is to say, from subordination to law? Such, we have seen, are the lustful and despotic appetites; whereas the orderly and kingly desires stand nearest to the controlling reason. Accordingly, the despot is at the farthest remove from the true pleasure proper to man’s nature, and his life is the least pleasant, in contrast with the king’s, who stands at the opposite extreme. Have you any notion how much less pleasant it is?

Glaucon:: No, tell me.

Socrates:: There are, it seems, three kinds of pleasure, one genuine and two spurious. The despot, in his flight from law and reason, goes beyond the bounds even of the spurious kinds, to surround himself with pleasures comparable to a bodyguard of slaves. The measure of his inferiority can hardly be expressed, unless perhaps in this way. The despot, you remember, was at the third remove from the oligarch; for the democratic man came between. If that was right, the pleasure he enjoys will be a phantom three times less real than the oligarch’s. And the oligarch himself was third in rank below the king, if we identify kingship with the rule of the best. So the number representing the distance that separates this phantom pleasure of the despot from reality will be three times three; and when that number is squared and cubed, calculation will show how great the interval becomes. Conversely, you will find that, in respect of truth and reality, the kingly life is seven hundred and twenty-nine times the pleasanter, and the despot's more painful by the same amount.

Glaucon:: I feel quite overwhelmed by your estimate of the difference between the just and unjust man, on the score of pleasure and pain.

Socrates:: All the same, my figure is correct and applicable to the lives of men as surely as the reckoning of days and nights, months, and years. And if the good and just man is so far superior to the bad and unjust in point of pleasure, there is no saying by how much more his life will surpass the other's in grace, nobility, and virtue.

Glaucon:: I entirely agree.

Socrates:: Good. And now that the argument has brought us to this point, let us recall something that was said at the outset, namely, if I remember aright, that wrongdoing is profitable when a man is completely unjust but has a reputation for justice.

Glaucon:: Yes, that position was stated.

Socrates:: Well, we are now agreed about the real meaning and consequences of doing wrong as well as of doing right, and the time has come to point out to anyone who maintains that position what his statement implies. We may do so by likening the soul to one of those many fabulous monsters said to have existed long ago, such as the Chimaera or Scylla or Cerberus, which combined the forms of several creatures in one. Imagine, to begin with, the figure of a multifarious and many-headed beast, girt round with heads of animals, tame and wild, which it can grow out of itself and transform at will.

Glaucon:: That would tax the skill of a sculptor; but luckily the stuff of imagination is easier to mould than wax.

Socrates:: Now add two other forms, a lion and a man. The many-headed beast is to be the largest by far, and the lion next to it in size. Then join them in such a way that the three somehow grow together into one. Lastly, mould the outside into the likeness of one of them, the man, so that, to eyes which cannot see inside the outward sheath, the whole may look like a single creature, a human being.

Glaucon:: Very well. What then?

Socrates:: We can now reply to anyone who says that for this human creature wrongdoing pays and there is nothing to be gained by doing right. This simply means, we shall tell him, that it pays to feed up and strengthen the composite beast and all that belongs to the lion, and to starve the man till he is so enfeebled that the other two can drag him whither they will, and he cannot bring them to live together in peace, but must leave them to bite and struggle and devour one another. On the other hand, to declare that justice pays is to assert that all our words and actions should tend towards giving the man within us complete mastery over the whole human creature, and letting him take the many-headed beast under his care and tame its wildness, like the gardener who trains his cherished plants while he checks the growth of weeds. He should enlist the lion as his ally, and, caring for all alike, should foster their growth by first reconciling them to one another and to himself.

Glaucon:: Yes, such are the implications when justice or injustice is commended.

Socrates:: From every point of view, then, whether of pleasure or reputation or advantage, one who praises justice speaks the truth; he who disparages it does not know what it is that he idly condemns.

Glaucon:: I agree; he has no conception.

Socrates:: But his error is not willful; so let us reason with him gently. We will ask him on what grounds conduct has come to be approved or disapproved by law and custom. Is it not according as conduct tends to subdue the brutish parts of our nature to the human—perhaps I should rather say to the divine in us—or to enslave our humanity to the savagery of the beast? Will he agree?

Glaucon:: Yes, if he has any regard for my opinion.

Socrates:: On that showing, then, can it profit a man to take money unjustly, if he is thereby enslaving the best part of his nature to the vilest? No amount of money could make it worth his while to sell a son or daughter as slaves into the hands of cruel and evil men; and when it is a matter of ruthlessly subjugating all that is most godlike in himself to whatsoever is most ungodly and despicable, is not the wretch taking a bribe far more disastrous than the necklace Eriphyle took as the price of her husband's life?

Glaucon:: Far more, if I may answer on his behalf.

Socrates:: You will agree, too, with the reasons why certain faults have always been condemned: profligacy, because it gives too much license to the multiform monster; self-will and ill temper, when the lion and serpent part of us is strengthened till its sinews are over-strung: luxury and effeminacy, because they relax those sinews till the heart grows faint; flattery and meanness, in that the heart's high spirit is subordinated to the turbulent beast, and for the sake of money to gratify the creature's insatiable greed the lion is browbeaten and schooled from youth up to become an ape. Why, again, is mechanical toil discredited as debasing? Is it not simply when the highest thing in a man's nature is naturally so weak that it cannot control the animal parts but can only learn how to pamper them?

Glaucon:: I suppose so.

Socrates:: Then, if we say that people of this sort ought to be subject to the highest type of man, we intend that the subject should be governed, not, as Thrasymachus thought, to his own detriment, but on the same principle as his superior, who is himself governed by the divine element within him. It is better for everyone, we believe, to be subject to a power of godlike wisdom residing within himself, or, failing that, imposed from without, in order that all of us, being under one guidance, may be so far as possible equal and united. This, moreover, is plainly the intention of the law in lending its support to every member of the community, and also of the government of children; for we allow them to go free only when we have established in each one of them as it were a constitutional ruler, whom we have trained to take over the guardianship from the same principle in ourselves.

Glaucon:: True.

Socrates:: On what ground, then, can we say that it is profitable for a man to be unjust or self-indulgent or to do any disgraceful act which will make him a worse man, though he may gain money and power? Or how can it profit the wrongdoer to escape detection and punishment? He will only grow still worse; whereas if he is found out, chastisement will tame the brute in him and lay it to rest, while the gentler part is set free; and thus the entire soul, restored to its native soundness, will gain, in the temperance and righteousness which wisdom brings, a condition more precious than the strength and beauty which health brings to the body, in proportion as the soul itself surpasses the body in worth. To this end the man of understanding will bend all his powers through life, prizing in the first place those studies only which will fashion these qualities in his soul; and, so far from abandoning the care of his bodily condition to the irrational pleasures of the brute and setting his face in that direction, he will not even make health his chief object. Health, strength, and beauty he will value only in so far as they bring soundness of mind, and you will find him keeping his bodily frame in tune always for the sake of the resulting concord in the soul.

Glaucon:: Yes, if he is to have true music in him.

Socrates:: And in the matter of acquiring wealth he will order his life in harmony with the same purpose. He will not be carried away by the vulgar notion of happiness into heaping up an unbounded store which would bring him endless troubles. Rather, in adding to or spending his substance, he will, to the best of his power, be guided by watchful care that neither want nor abundance may unsettle the constitution set up in his soul. Again, in accepting power and honors he will keep the same end in view, ready to enjoy any position in public or private life which he thinks will make him a better man, and avoiding any that would break down the established order within him.

Glaucon:: Then, if that is his chief concern, he will have no wish to take part in politics.

Socrates:: Indeed he will, in the politics of his own commonwealth, though not perhaps in those of his country, unless some miraculous chance should come about.

Glaucon:: I understand: you mean this commonwealth we have been founding in the realm of discourse; for I think it nowhere exists on earth.

Socrates:: No; but perhaps there is a pattern set up in the heavens for one who desires to see it and, seeing it, to found one in himself. But whether it exists anywhere or ever will exist is no matter; for this is the only commonwealth in whose politics he can ever take part.

Glaucon:: I suspect you are right.

Socrates:: Indeed, our commonwealth has many features which make me think it was based on very sound principles, especially our rule not on any account to admit the poetry of dramatic representation. Now that we have distinguished the several parts of the soul, it seems to me clearer than ever that such poetry must be firmly excluded.

Glaucon:: What makes you say so?

Socrates:: Between ourselves—for you will not denounce me to the tragedians and the other dramatists—poetry of that sort seems to be injurious to minds which do not possess the antidote in a knowledge of its real nature.

Glaucon:: What have you in mind?

Socrates:: I must speak out, in spite of a certain affection and reverence I have had from a child for Homer, who seems to have been the original master and guide of all this imposing company of tragic poets. However, no man must be honored above the truth; so, as I say, I must speak my mind.

Glaucon:: Do, by all means.

Socrates:: Listen then, or rather let me ask you a question. Can you tell me what is meant by representation in general? I have no very clear notion myself.

Glaucon:: So you expect me to have one!

Socrates:: Why not? It is not always the keenest eye that is the first to see something.

Glaucon:: True; but when you are there I should not be very desirous to tell what I saw, however plainly. You must use your own eyes.

Socrates:: Well then, shall we proceed as usual and begin by assuming the existence of a single essential nature or Form for every set of things which we call by the same name? Do you understand?

Glaucon:: I do.

Socrates:: Then let us take any set of things you choose. For instance there are any number of beds or of tables, but only two Forms, one of Bed and one of Table.

Glaucon:: Yes.

Socrates:: And we are in the habit of saying that the craftsman, when he makes the beds or tables we use or whatever it may be, has before his mind the Form of one or other of these pieces of furniture. The Form itself is, of course, not the work of any craftsman. How could it be?

Glaucon:: It could not.

Socrates:: Now what name would you give to a craftsman who can produce all the things made by every sort of workman?

Glaucon:: He would need to have very remarkable powers!

Socrates:: Wait a moment, and you will have even better reason to say so. For, besides producing any kind of artificial thing, this same craftsman can create all plants and animals, himself included, and earth and sky and gods and the heavenly bodies and all the things under the earth in Hades.

Glaucon:: That sounds like a miraculous feat of virtuosity.

Socrates:: Are you incredulous? Tell me, do you think there could be no such craftsman at all, or that there might be someone who could create all these things in one sense, though not in another? Do you not see that you could do it yourself, in a way?

Glaucon:: In what way, I should like to know.

Socrates:: There is no difficulty; in fact there are several ways in which the thing can be done quite quickly. The quickest perhaps would be to take a mirror and turn it round in all directions. In a very short time you could produce sun and stars and earth and yourself and all the other animals and plants and lifeless objects which we mentioned just now.

Glaucon:: Yes, in appearance, but not the actual things.

Socrates:: Quite so; you are helping out my argument. My notion is that a painter is a craftsman of that kind. You may say that the things he produces are not real; but there is a sense in which he too does produce a bed.

Glaucon:: Yes, the appearance of one.

Socrates:: And what of the carpenter? Were you not saying just now that he only makes a particular bed, not what we call the Form or essential nature of Bed?

Glaucon:: Yes, I was.

Socrates:: If so, what he makes is not the reality, but only something that resembles it. It would not be right to call the work of a carpenter or of any other handicraftsman a perfectly real thing, would it?

Glaucon:: Not in the view of people accustomed to thinking on these lines.

Socrates:: We must not be surprised, then, if even an actual bed is a somewhat shadowy thing as compared with reality.

Glaucon:: True.

Socrates:: Now shall we make use of this example to throw light on our question as to the true nature of this artist who represents things? We have here three sorts of bed: one which exists in the nature of things and which, I imagine, we could only describe as a product of divine workmanship; another made by the carpenter; and a third by the painter. So the three kinds of bed belong respectively to the domains of these three: painter, carpenter, and god.

Glaucon:: Yes.

Socrates:: Now the god made only one ideal or essential Bed, whether by choice or because he was under some necessity not to make more than one; at any rate two or more were not created, nor could they possibly come into being.

Glaucon:: Why not?

Socrates:: Because, if he made even so many as two, then once more a single ideal Bed would make its appearance, whose character those two would share; and that one, not the two, would be the essential Bed. Knowing this, the god, wishing to be the real maker of a real Bed, not a particular manufacturer of one particular bed, created one which is essentially unique.

Glaucon:: So it appears.

Socrates:: Shall we call him, then, the author of the true nature of Bed, or something of that sort?

Glaucon:: Certainly he deserves the name, since all his works constitute the real nature of things.

Socrates:: And we may call the carpenter the manufacturer of a bed?

Glaucon:: Yes.

Socrates:: Can we say the same of the painter?

Glaucon:: Certainly not.

Socrates:: Then what is he, with reference to a bed?

Glaucon:: I think it would be fairest to describe him as the artist who represents the things which the other two make.

Socrates:: Very well; so the work of the artist is at the third remove from the essential nature of the thing?

Glaucon:: Exactly.

Socrates:: The tragic poet, too, is an artist who represents things; so this will apply to him: he and all other artists are, as it were, third in succession from the throne of truth.

Glaucon:: Just so.

Socrates:: We are in agreement, then, about the artist. But now tell me about our painter: which do you think he is trying to represent—the reality that exists in the nature of things, or the products of the craftsman?

Glaucon:: The products of the craftsman.

Socrates:: As they are, or as they appear? You have still to draw that distinction.

Glaucon:: How do you mean?

Socrates:: I mean: you may look at a bed or any other object from straight in front or slantwise or at any angle. Is there then any difference in the bed itself, or does it merely look different?

Glaucon:: It only looks different.

Socrates:: Well, that is the point. Does painting aim at reproducing any actual object as it is, or the appearance of it as it looks? In other words, is it a representation of the truth or of a semblance?

Glaucon:: Of a semblance.

Socrates:: The art of representation, then, is a long way from reality; and apparently the reason why there is nothing it cannot reproduce is that it grasps only a small part of any object, and that only an image. Your painter, for example, will paint us a shoemaker, a carpenter, or other workman, without understanding any one of their crafts; and yet, if he were a good painter, he might deceive a child or a simple-minded person into thinking his picture was a real carpenter, if he showed it them at some distance.

Glaucon:: No doubt.

Socrates:: But I think there is one view we should take in all such cases. Whenever someone announces that he has met with a person who is master of every trade and knows more about every subject than any specialist, we should reply that he is a simple fellow who has apparently fallen in with some illusionist and been tricked into thinking him omniscient, because of his own inability to discriminate between knowledge and ignorance and the representation of appearances.

Glaucon:: Quite true.

Socrates:: Then it is now time to consider the tragic poets and their master, Homer, because we are sometimes told that they understand not only all technical matters but also all about human conduct, good or bad, and about religion; for, to write well, a good poet, so they say, must know his subject; otherwise he could not write about it. We must ask whether these people have not been deluded by meeting with artists who can represent appearances, and in contemplating the poets’ work have failed to see that it is at the third remove from reality, nothing more than semblances, easy to produce with no knowledge of the truth. Or is there something in what they say? Have the good poets a real mastery of the matters on which the public thinks they discourse so well?

Glaucon:: It is a question we ought to look into.

Socrates:: Well then, if a man were able actually to do the things he represents as well as to produce images of them, do you believe he would seriously give himself up to making these images and take that as a completely satisfying object in life? I should imagine that, if he had a real understanding of the actions he represents, he would far sooner devote himself to performing them in fact. The memorials he would try to leave after him would be noble deeds, and he would be more eager to be the hero whose praises are sung than the poet who sings them.

Glaucon:: Yes, I agree; he would do more good in that way and win a greater name.

Socrates:: Here is a question, then, that we may fairly put to Homer or to any other poet. We will leave out of account all mere matters of technical skill: we will not ask them to explain, for instance, why it is that, if they have a knowledge of medicine and not merely the art of reproducing the way physicians talk, there is no record of any poet, ancient or modern, curing patients and bequeathing his knowledge to a school of medicine, as Asclepius did. But when Homer undertakes to tell us about matters of the highest importance, such as the conduct of war, statesmanship, or education, we have a right to inquire into his competence. ‘Dear Homer’, we shall say, ‘we have defined the artist as one who produces images at the third remove from reality. If your knowledge of all that concerns human excellence was really such as to raise you above him to the second rank, and you could tell what courses of conduct will make men better or worse as individuals or as citizens, can you name any country which was better governed thanks to your efforts? Many states, great and small, have owed much to a good lawgiver, such as Lycurgus at Sparta, Charondas in Italy and Sicily, and our own Solon. Can you tell us of any that acknowledges a like debt to you?

Glaucon:: I should say not. The most devout admirers of Homer make no such claim.

Socrates:: Well, do we hear of any war in Homer's day being won under his command or thanks to his advice?

Glaucon:: No.

Socrates:: Or of a number of ingenious inventions and technical contrivances, which would show that he was a man of practical ability like Thales of Miletus or Anacharsis the Scythian?

Glaucon:: Nothing of the sort.

Socrates:: Well, if there is no mention of public services, do we hear of Homer in his own lifetime presiding, like Pythagoras, over a band of intimate disciples who loved him for the inspiration of his society and handed down a Homeric way of life, like the way of life which the Pythagoreans called after their founder and which to this day distinguishes them from the rest of the world?

Glaucon:: No; on the contrary, Homer's friend with the absurd name, Creophylus, would look even more absurd when considered as a product of the poet's training, if the story is true that he completely neglected Homer during his lifetime.

Socrates:: Yes, so they say. But what do you think, Glaucon? If Homer had really possessed the knowledge qualifying him to educate people and make them better men, instead of merely giving us a poetical representation of such matters, would he not have attracted a host of disciples to love and revere him? After all, any number of private teachers like Protagoras of Abdera and Prodicus of Ceos have succeeded in convincing their contemporaries that they will never be fit to manage affairs of state or their own households unless these masters superintend their education; and for this wisdom they are so passionately admired that their pupils are all but ready to carry them about on their shoulders. Can we suppose that Homer's contemporaries, or Hesiod's, would have left them to wander about reciting their poems, if they had really been capable of helping their hearers to be better men? Surely they would sooner have parted with their money and tried to make the poets settle down at home; or failing that, they would have danced attendance on them wherever they went, until they had learnt from them all they could.

Glaucon:: I believe you are quite right, Socrates.

Socrates:: We may conclude, then, that all poetry, from Homer onwards, consists in representing a semblance of its subject, whatever it may be, including any kind of human excellence, with no grasp of the reality. We were speaking just now of the painter who can produce what looks like a shoemaker to the spectator who, being as ignorant of shoemaking as he is himself, judges only by form and color. In the same way the poet, knowing nothing more than how to represent appearances, can paint in words his picture of any craftsman so as to impress an audience which is equally ignorant and judges only by the form of expression; the inherent charm of meter, rhythm, and musical setting is enough to make them think he has discoursed admirably about generalship or shoemaking or any other technical subject. Strip what the poet has to say of its poetical coloring, and I think you must have seen what it comes to in plain prose. It is like a face which was never really handsome, when it has lost the fresh bloom of youth.

Glaucon:: Quite so.

Socrates:: Here is a further point, then. The artist, we say, this maker of images, knows nothing of the reality, but only the appearance. But that is only half the story. An artist can paint a bit and bridle, while the smith and the leather-worker can make them. Does the painter understand the proper form which bit and bridle ought to have? Is it not rather true that not even the craftsmen who make them know that, but only the horseman who understands their use?

Glaucon:: Quite true.

Socrates:: May we not say generally that there are three arts concerned with any object—the art of using it, the art of making it, and the art of representing it?

Glaucon:: Yes.

Socrates:: And that the excellence or beauty or rightness of any implement or living creature or action has reference to the use for which it is made or designed by nature?

Glaucon:: Yes.

Socrates:: It follows, then, that the user must know most about the performance of the thing he uses and must report on its good or bad points to the maker. The flute-player, for example, will tell the instrument-maker how well his flutes serve the player's purpose, and the other will submit to be instructed about how they should be made. So the man who uses any implement will speak of its merits and defects with knowledge, whereas the maker will take his word and possess no more than a correct belief, which he is obliged to obtain by listening to the man who knows.

Glaucon:: Quite so.

Socrates:: But what of the artist? Has he either knowledge or correct belief? Does he know from direct experience of the subjects he portrays whether his representations are good and right or not? Has he even gained a correct belief by being obliged to listen to someone who does know and can tell him how they ought to be represented?

Glaucon:: No, he has neither.

Socrates:: If the artist, then, has neither knowledge nor even a correct belief about the soundness of his work, what becomes of the poet’s wisdom in respect of the subjects of his poetry?

Glaucon:: It will not amount to much.

Socrates:: And yet he will go on with his work, without knowing in what way any of his representations is sound or unsound. He must, apparently, be reproducing only what pleases the taste or wins the approval of the ignorant multitude.

Glaucon:: Yes, what else can he do?

Socrates:: We seem, then, so far to be pretty well agreed that the artist knows nothing worth mentioning about the subjects he represents, and that art is a form of play, not to be taken seriously. This description, moreover, applies above all to tragic poetry, whether in epic or dramatic form.

Glaucon:: Exactly.

Socrates:: But now look here; the content of this poetical representation is something at the third remove from reality, is it not?

Glaucon:: Yes.

Socrates:: On what part of our human nature, then, does it produce its effect?

Glaucon:: What sort of part do you mean?

Socrates:: Let me explain by an analogy. An object seen at a distance does not, of course, look the same size as when it is close at hand; a straight stick looks bent when part of it is under water; and the same thing appears concave or convex to an eye misled by colors. Every sort of confusion like these is to be found in our minds; and it is this weakness in our nature that is exploited, with a quite magical effect, by many tricks of illusion, like scene-painting and conjuring.

Glaucon:: True.

Socrates:: But satisfactory means have been found for dispelling these illusions by measuring, counting, and weighing. We are no longer at the mercy of apparent differences of size and quantity and weight; the faculty which has done the counting and measuring or weighing takes control instead. And this can only be the work of the calculating or reasoning element in the soul.

Glaucon:: True.

Socrates:: And when this faculty has done its measuring and announced that one quantity is greater than, or equal to, another, we often find that there is an appearance which contradicts it. Now, as we have said, it is impossible for the same part of the soul to hold two contradictory beliefs at the same time. Hence the part which agrees with the measurements must be a different part from the one which goes against them; and its confidence in measurement and calculation is a proof of its being the highest part; the other which contradicts it must be an inferior one.

Glaucon:: It must.

Socrates:: This, then, was the conclusion I had in view when I said that paintings and works of art in general are far removed from reality, and that the element in our nature which is accessible to art and responds to its advances is equally far from wisdom. The offspring of a connection thus formed on no true or sound basis must be as inferior as the parents. This will be true not only of visual art, but of art addressed to the ear, poetry as we call it.

Glaucon:: Naturally.

Socrates:: Then, instead of trusting merely to the analogy from painting, let us directly consider that part of the mind to which the dramatic element in poetry appeals, and see how much claim it has to serious worth. We can put the question in this way. Drama, we say, represents the acts and fortunes of human beings. It is wholly concerned with what they do, voluntarily or against their will, and how they fare, with the consequences which they regard as happy or otherwise, and with their feelings of joy and sorrow in all these experiences. That is all, is it not?

Glaucon:: Yes.

Socrates:: And in all these experiences has a man an undivided mind? Is there not an internal conflict which sets him at odds with himself in his conduct, much as we were saying that the conflict of visual impressions leads him to make contradictory judgments? However, I need not ask that question; for, now I come to think of it, we have already agreed that innumerable conflicts of this sort are constantly occurring in the mind. But there is a further point to be considered now. We have said that a man of high character will bear any stroke of fortune, such as the loss of a son or of anything else he holds, dear, with more equanimity than most people. We may now ask: will he feel no pain, or is that impossible? Will he not rather observe due measure in his grief?

Glaucon:: Yes, that is nearer the truth.

Socrates:: Now tell me: will he be more likely to struggle with his grief and resist it when he is under the eyes of his fellows or when he is alone?

Glaucon:: He will be far more restrained in the presence of others.

Socrates:: Yes; when he is by himself he will not be ashamed to do and say much that he would not like anyone to see or hear.

Glaucon:: Quite so.

Socrates:: What encourages him to resist his grief is the lawful authority of reason, while the impulse to give way comes from the feeling itself; and, as we said, the presence of contradictory impulses proves that two distinct elements in his nature must be involved. One of them is law-abiding, prepared to listen to the authority which declares that it is best to bear misfortune as quietly as possible without resentment, for several reasons: it is never certain that misfortune may not be a blessing; nothing is gained by chafing at it; nothing human is matter for great concern; and, finally, grief hinders us from calling in the help we most urgently need. By this I mean reflection on what has happened, letting reason decide on the best move in the game of life that the fall of the dice permits. Instead of behaving like a child who goes on shrieking after a fall and hugging the wounded part, we should accustom the mind to set itself at once to raise up the fallen and cure the hurt, banishing lamentation with a healing touch.

Glaucon:: Certainly that is the right way to deal with misfortune.

Socrates:: And if, as we think, the part of us which is ready to act upon these reflections is the highest, that other part which impels us to dwell upon our sufferings and can never have enough of grieving over them is unreasonable, craven, and faint-hearted.

Glaucon:: Yes.

Socrates:: Now this fretful temper gives scope for a great diversity of dramatic representation; whereas the calm and wise character in its unvarying constancy is not easy to represent, nor when represented is it readily understood, especially by a promiscuous gathering in a theatre, since it is foreign to their own habit of mind. Obviously, then, this steadfast disposition does not naturally attract the dramatic poet, and his skill is not designed to find favor with it. If he is to have a popular success, he must address himself to the fretful type with its rich variety of material for representation.

Glaucon:: Obviously.

Socrates:: We have, then, a fair case against the poet and we may set him down as the counterpart of the painter, whom he resembles in two ways: his creations are poor things by the standard of truth and reality, and his appeal is not to the highest part of the soul, but to one which is equally inferior. So we shall be justified in not admitting him into a well-ordered commonwealth, because he stimulates and strengthens an element which threatens to undermine the reason. As a country may be given over into the power of its worst citizens while the better sort are ruined, so, we shall say, the dramatic poet sets up a vicious form of government in the individual soul: he gratifies that senseless part which cannot distinguish great and small, but regards the same things as now one, now the other; and he is an image-maker whose images are phantoms far removed from reality.

Glaucon:: Quite true.

Socrates:: But, the heaviest count in our indictment is still to come. Dramatic poetry has a most formidable power of corrupting even men of high character, with a few exceptions.

Glaucon:: Formidable indeed, if it can do that.

Socrates:: Let me put the case for you to judge. When we listen to some hero in Homer or on the tragic stage moaning over his sorrows in a long tirade, or to a chorus beating their breasts as they chant a lament, you know how the best of us enjoy giving ourselves up to follow the performance with eager sympathy. The more a poet can move our feelings in this way, the better we think him. And yet when the sorrow is our own, we pride ourselves on being able to bear it quietly like a man, condemning the behavior we admired in the theatre as womanish. Can it be right that the spectacle of a man behaving as one would scorn and blush to behave oneself should be admired and enjoyed, instead of filling us with disgust?

Glaucon:: No, it really does not seem reasonable.

Socrates:: It does not, if you reflect that the poet ministers to the satisfaction of that very part of our nature whose instinctive hunger to have its fill of tears and lamentations is forcibly restrained in the case of our own misfortunes. Meanwhile the noblest part of us, insufficiently schooled by reason or habit, has relaxed its watch over these querulous feelings, with the excuse that the sufferings we are contemplating are not our own and it is no shame to us to admire and pity a man with some pretensions to a noble character, though his grief may be excessive. The enjoyment itself seems a clear gain, which we cannot bring ourselves to forfeit by disdaining the whole poem. Few, I believe, are capable of reflecting that to enter into another's feelings must have an effect on our own: the emotions of pity our sympathy has strengthened will not be easy to restrain when we are suffering ourselves.

Glaucon:: That is very true.

Socrates:: Does not the same principle apply to humor as well as to pathos? You are doing the same thing if, in listening at a comic performance or in ordinary life to buffooneries which you would be ashamed to indulge in yourself, you thoroughly enjoy them instead of being disgusted with their ribaldry. There is in you an impulse to play the clown, which you have held in restraint from a reasonable fear of being set down as a buffoon; but now you have given it rein, and by encouraging its impudence at the theatre you may be unconsciously carried away into playing the comedian in your private life. Similar effects are produced by poetic representation of love and anger and all those desires and feelings of pleasure or pain which accompany our every action. It waters the growth of passions which should be allowed to wither away and sets them up in control, although the goodness and happiness of our lives depend on their being held in subjection.

Glaucon:: I cannot but agree with you.

Socrates:: If so, Glaucon, when you meet with admirers of Homer who tell you that he has been the educator of Hellas and that on questions of human conduct and culture he deserves to be constantly studied as a guide by whom to regulate your whole life, it is well to give a friendly hearing to such people, as entirely well-meaning according to their lights, and you may acknowledge Homer to be the first and greatest of the tragic poets; but you must be quite sure that we can admit into our commonwealth only the poetry which celebrates the praises of the gods and of good men. If you go further and admit the honeyed muse in epic or in lyric verse, then pleasure and pain will usurp the sovereignty of law and of the principles always recognized by common consent as the best.

Glaucon:: Quite true.

Socrates:: So now, since we have recurred to the subject of poetry, let this be our defense: it stands to reason that we could not but banish such an influence from our commonwealth. But, lest poetry should convict us of being harsh and unmannerly, let us tell her further that there is a long-standing quarrel between poetry and philosophy. There are countless tokens of this old antagonism, such as the lines which speak of 'the cur which at his master yelps', or 'one mighty in the vain talk of fools' or 'the throng of all-too-sapient heads', or 'subtle thinkers all in rags'. None the less, be it declared that, if the dramatic poetry whose end is to give pleasure can show good reason why it should exist in a well-governed society, we for our part should welcome it back, being ourselves conscious of its charm; only it would be a sin to betray what we believe to be the truth. You too, my friend, must have felt this charm, above all when poetry speaks through Homer's lips.

Glaucon:: I have indeed.

Socrates:: It is fair, then, that before returning from exile poetry should publish her defense in lyric verse or some other measure; and I suppose we should allow her champions who love poetry but are not poets to plead for her in prose, that she is no mere source of pleasure but a benefit to society and to human life. We shall listen favorably; for we shall clearly be the gainers, if that can be proved.

Glaucon:: Undoubtedly.

Socrates:: But if it cannot, then we must take a lesson from the lover who renounces at any cost a passion which he finds is doing him no good. The love for poetry of this kind, bred in us by our own much admired institutions, will make us kindly disposed to believe in her genuine worth; but so long as she cannot make good her defense we shall, as we listen, rehearse to ourselves the reasons we have just given, as a counter-charm to save us from relapsing into a passion which most people have never outgrown. We shall reiterate that such poetry has no serious claim to be valued as an apprehension of truth. One who lends an ear to it should rather beware of endangering the order established in his soul, and would do well to accept the view of poetry which we have expressed.

Glaucon:: I entirely agree.

Socrates:: Yes, Glaucon; for much is at stake, more than most people suppose: it is a choice between becoming a good man or a bad; and poetry, no more than wealth or power or honors, should tempt us to be careless of justice and virtue.

Glaucon:: Your argument has convinced me, as I think it would anyone else.

Socrates:: And yet, we have not so far described the chief wages of virtue or the greatest prize it can hope to win.

Glaucon:: It is hard to conceive any greater than those you have already spoken of.

Socrates:: Can there be anything great in a short span of time? And, as compared with all time, the whole of this life from childhood to old age is short enough.

Glaucon:: Indeed it is nothing.

Socrates:: Well, ought not an immortal thing to be more seriously concerned with all time than with so brief a span?

Glaucon:: No doubt; but what do you mean by that?

Socrates:: Are you not aware that our soul is immortal and never perishes?

Glaucon looked at me in astonishment.

Glaucon:: Indeed I am not. Are you prepared to assert that?

Socrates:: I ought to be; and so, I think, ought you. There is no difficulty.

Glaucon:: There is for me; but if you find it so easy a matter, I should like to hear your account.

Socrates:: You shall. When you speak of a certain thing as ‘a good’, and of another as ‘an evil’, do you agree with me in thinking of the evil as always being the thing which corrupts and destroys, and of the good as that which benefits and preserves?

Glaucon:: Yes.

Socrates:: And would you say that everything has its peculiar evil as well as its good, for instance, ophthalmia for the eyes, disease for the body in general, mildew for grain, rot for timber, rust for iron and copper—and, as I say, that almost anything has some special evil or malady, which impairs the thing it attacks and ends by breaking it up and destroying it altogether?

Glaucon:: Yes, no doubt.

Socrates:: Everything, then, is destroyed by its own peculiar evil or corruption; or if that will not destroy it, there is at any rate nothing else that can bring it to an end; for clearly what is good for it will never destroy it, nor yet what is neither good nor evil. Hence if we find that there is a thing whose peculiar evil does indeed deprave it but cannot bring about its utter dissolution, shall we not at once be sure that it is by nature indestructible?

Glaucon:: That seems likely.

Socrates:: What of the soul, then? Has it not some special evil which depraves it?

Glaucon:: Certainly; there are all the vices we have been speaking of, injustice, intemperance, cowardice, ignorance.

Socrates:: And does any of these vices work its complete destruction? We must be careful here not to be misled into supposing that when a wicked and foolish man is found out, he has been destroyed by his wickedness, which is a depraved condition of his soul. Think of it rather in this way. It is true of the body, is it not? that physical evil, namely disease, wastes and destroys it until it is no longer a body at all, and all the other things we instanced are annihilated by the pervading corruption of the evil which peculiarly besets them. Now is it true in the same way of the soul that injustice and other forms of vice, by besetting and pervading it, waste it away in corruption until they sever it from the body and bring about its death?

Glaucon:: No, certainly not.

Socrates:: On the other hand, it would be unreasonable to suppose that a thing which cannot be destroyed by its own vice should be destroyed by the vicious condition of something else. Observe that we should not think it proper to say of the body that it was destroyed simply by the badness of its food, which might be rotten or moldy; only when such food has induced a bad condition of the body itself do we say that the body is destroyed by its own diseased state, occasioned by the bad food. The body is one thing, the food another; and we shall not allow that the evil belonging to that other thing can ever destroy the body, unless it engenders the body’s own peculiar evil. By the same reasoning, if bodily evil does not engender in the soul the soul's peculiar evil, we must never allow that the soul is destroyed merely by an evil peculiar to something else.

Glaucon:: That is reasonable.

Socrates:: Either, then, we must prove this argument unsound, or, so long as it stands unrefuted, we must deny that fever or any other disease or even slaughtering the body and cutting it to atoms can effect anything towards the destruction of the soul, until it can be shown that the soul itself becomes more wicked and impure because the body suffers in those ways. We shall not allow anyone to say that the soul or anything else perishes merely through the occurrence in another thing of that other thing's peculiar evil.

Glaucon:: Well, no one will ever prove that death makes the dying man's soul more wicked.

Socrates:: No; and if anyone does venture to challenge our argument and try to escape the conclusion that souls are immortal by asserting that a dying man does become wickeder, we shall argue that, if what he says is true, wickedness must be a sort of fatal disease with a power of its own to kill those who catch it, quickly or slowly according to the severity of the attack; instead of being merely the occasion of their death, which is in fact caused by other people who punish them for their crimes.

Glaucon:: Yes, if that were so, surely there would be nothing very terrible about wickedness, for a fatal attack would be the end of all troubles. But I think we shall find that, on the contrary, it brings about the death of other people to the best of its power, and, far from being deadly to the wicked man himself, it makes him very much alive and fills him with an unsleeping energy.

Socrates:: You are right. For if its own evil and depravity cannot kill the soul, it is hardly likely that an evil designed for the destruction of a different thing will destroy the soul or anything but its own proper object. So, since the soul is not destroyed by any evil, either its own or another's, clearly it must be a thing that exists for ever, and is consequently immortal.

Glaucon:: That follows.

Socrates:: Let us take this, then, as proved. And if it is so, there must always be the same number of souls in existence. For if none perishes, their number cannot grow less; nor yet can it be increased, since any increase of the immortal must come from the mortal, and then all things would end by being immortal.

Glaucon:: True.

Socrates:: Well, reason forbids us to imagine that conclusion. And again, we must not think of the soul, in her truest nature, as full of diversity and unlikeness and perpetually at variance with herself.

Glaucon:: In what way do you mean?

Socrates:: We were thinking just now of the soul as composed of a number of parts not put together in the most satisfactory way; and such a composite thing could hardly be everlasting.

Glaucon:: Probably not.

Socrates:: Well then, that the soul is immortal is established beyond doubt by our recent argument and the other proofs; but to understand her real nature, we must look at her, not as we see her now, marred by association with the body and other evils, but when she has regained that pure condition which the eye of reason can discern; you will then find her to be a far lovelier thing and will distinguish more clearly justice and injustice and all the qualities we have discussed. Our description of the soul is true of her present appearance; but we have seen her afflicted by countless evils, like the sea-god Glaucus, whose original form can hardly be discerned, because parts of his body have been broken off or crushed and altogether marred by the waves, and the clinging overgrowth of weed and rock and shell has made him more like some monster than his natural self. But we must rather fix our eyes, Glaucon, on her love of wisdom and note how she seeks to apprehend and hold converse with the divine, immortal, and everlasting world to which she is akin, and what she would become if her affections were entirely set on following the impulse that would lift her out of the sea in which she is now sunken, and disencumber her of all that wild profusion of rock and shell, whose earthy substance has encrusted her, because she seeks what men call happiness by making earth her food. Then one might see her true nature, whatever it may be, whether manifold or simple. For the moment we have described—sufficiently, as I think—the aspects shown by the soul in the experiences of human life.

Glaucon:: True.

Socrates:: And now, we have fulfilled the conditions of the argument; in particular, we have not introduced those rewards which, as you two complained, Homer and Hesiod hold out to men who have acquired a reputation for justice. We have found that, apart from all such consequences, justice is the best thing for the soul, which should do what is right, whether or not it possess the ring of Gyges and the cap of invisibility besides. Accordingly, there can now be no objection to our crediting justice and virtue in general with a full measure of those due rewards which they win for the soul from gods and men, both during life and after death.

Glaucon:: I quite agree.

Socrates:: Then you must let me take back the concession I made when you asked me to grant, for the sake of argument, that the just man should have the reputation of being unjust, and the unjust man of being just It might be impossible, you said, that heaven and mankind should be so deceived, but you wished that justice and injustice simply in themselves should be confronted for judgment That judgment has now been given; and I must ask you in return to allow justice to enjoy the estimation in which it is actually held among gods and men. We have seen that justice never defrauds its possessor of the blessings that come of being really just Let us now add the prizes which fall to those whose justice is apparent to all.

Glaucon:: That is a fair demand.

Socrates:: You will concede, then, to begin with, that neither of the two characters is hidden from the sight of the gods, who will accordingly, as we agreed at the outset, favor the just and hate the unjust And the favorite of heaven may expect, in the fullest measure, all the blessings that heaven can give, save perhaps for some suffering entailed by offences in a former life. So we must suppose that, if the righteous man is afflicted with poverty or sickness or any other seeming evil, all this will come to some good for him in the end, either in this life or after death. For the gods, surely, can never be regardless of one who sets his heart on being just and making himself by the practice of virtue as like a god as man may.

Glaucon:: No, naturally they would not neglect one who is like themselves.

Socrates:: And must we not think the opposite of the unjust man?

Glaucon:: Most certainly.

Socrates:: Such, then, are the prizes which the just man wins from the gods. What may he expect from mankind? If we look at the facts, is it not true that the clever rogue is like the runner who runs well for the first half of the course, but flags before reaching the goal: he is quick off the mark, but ends in disgrace and slinks away crestfallen and uncrowned. The crown is the prize of the really good runner who perseveres to the end. Is it not usually so with the just, that towards the close of any course of action or of their dealings with other people or of life itself they win a good name and bear off the prize from the hands of their fellows?

Glaucon:: Yes, that is true.

Socrates:: Will you allow me, then, to say now of the just all that you said yourself of the unjust: that when they are advanced in years they will hold positions of authority in their own country if they so desire, ally themselves in marriage to any family they choose, and so forth? Of the unjust, on the other hand, I will say that most of them, though they may go undetected in their youth, are caught and disgraced at the end of their course; in old age their misery is insulted by citizen and stranger alike; they are beaten and suffer all those torments which you truly called unmentionable: I need not repeat them. May I say all this?

Glaucon:: Yes; it is a fair statement.

Socrates:: Such then are the prizes, rewards, and gifts that the just man may expect at the hands of gods and men in his lifetime, in addition to those other blessings which come simply from being just.

Glaucon:: Yes, the rewards are splendid and sure.

Socrates:: These, however, are as nothing, in number or in greatness, when compared with the recompense awaiting the just and the unjust after death. This must now be told, in order that each may be paid in full what the argument shows to be his due.

Glaucon:: Go on; there are not many things I would sooner hear about.

Socrates:: My story will not be like Odysseus’ tale to Alcinous; but its hero was a valiant man, Er, the son of Armenius, a native of Pamphylia, who was killed in battle. When the dead were taken up for burial ten days later, his body alone was found undecayed. They carried him home, and two days afterwards were going to bury him, when he came to life again as he lay on the funeral pyre. He then told what he had seen in the other world.

He said that, when the soul had left his body, he journeyed with many others until they came to a marvelous place, where there were two openings side by side in the earth, and opposite them two others in the sky above. Between them sat Judges, who, after each sentence given, bade the just take the way to the right upwards through the sky, first binding on them in front tokens signifying the judgment passed upon them. The unjust were commanded to take the downward road to the left, and these bore evidence of all their deeds fastened on their backs. When Er himself drew near, they told him that he was to carry tidings of the other world to mankind, and he must now listen and observe all that went on in that place. Accordingly he saw the souls which had been judged departing by one of the openings in the sky and one of those in the earth; while at the other two openings souls were coming up out of the earth travel-stained and dusty, or down from the sky clean and bright. Each company, as if they had come on a long journey, seemed glad to turn aside into the Meadow, where they encamped like pilgrims at a festival. Greetings passed between acquaintances, and as either party questioned the other of what had befallen them, some wept as they sorrowfully recounted all that they had seen and suffered on their journey under the earth, which had lasted a thousand years; while others spoke of the joys of heaven and sights of inconceivable beauty. There was much, Glaucon, that would take too long to tell; but the sum, was this. For every wrong done to any man sinners had in due course paid the penalty ten times over, that is to say, once in each hundred years, such being the span of human life, in order that the punishment for every offence might be tenfold. Thus, all who have been guilty of bringing many to death or slavery by betraying their country or their comrades in arms, or have taken part in any other iniquity, suffer tenfold torments for each crime; while deeds of kindness and a just and sinless life are rewarded in the same measure. Concerning infants who die at birth or live but a short time he had more to say, not worthy of mention.

The wages earned by honoring the gods and parents, or by dishonoring them and by doing murder, were even greater. He was standing by when one spirit asked another, 'Where is Ardiaeus the Great?' This Ardiaeus had been despot in some city of Pamphylia just a thousand years before, and, among many other wicked deeds, he was said to have killed his old father and his elder brother. The answer was: 'He has not come back hither, nor will he ever come. This was one of the terrible sights we saw. When our sufferings were ended and we were near the mouth, ready to pass upwards, suddenly we saw Ardiaeus and others with him. Most of them were despots, but there were some private persons who had been great sinners. They thought that at last they were going to mount upwards, but the mouth would not admit them; it bellowed whenever one whose wickedness was incurable or who had not paid the penalty in full tried to go up. Then certain fierce and fiery-looking men, who stood by and knew what the sound meant, seized some and carried them away; but Ardiaeus and others they bound hand and foot and neck and flinging them down flayed them. They dragged them along the wayside, carding their flesh like wool with thorns and telling all who passed by why this was done to them and that they were being taken to be cast into Tartarus. We had gone through many terrors of every sort, but none so great as the fear each man felt lest the sound should come as he went up; and when it was not heard, his joy was great.' Such were the judgments and penalties, and the blessings received were in corresponding measure.

Now when each company had spent seven days in the Meadow, on the eighth they had to rise up and journey on. And on the fourth day afterwards they came to a place whence they could see a straight shaft of light, like a pillar, stretching from above throughout heaven and earth, more like the rainbow than anything else, but brighter and purer. To this they came after a day's journey, and there, at the middle of the light, they saw stretching from heaven the extremities of its chains; for this light binds the heavens, holding together all the revolving firmament, like the under-girths of a ship of war.

And from the extremities stretched the Spindle of Necessity, by means of which all the circles revolve. The shaft of the Spindle and the hook were of adamant, and the whorl partly of adamant and partly of other substances. The whorl was of this fashion. In shape it was like an ordinary whorl; but from Er's account we must imagine it as a large whorl with the inside completely scooped out, and within it a second smaller whorl, and a third and a fourth and four more, fitting into one another like a nest of bowls. For there were in all eight whorls, set one within another, with their rims showing above as circles and making up the continuous surface of a single whorl round the shaft, which pierces right through the centre of the eighth. The circle forming the rim of the first and outermost whorl (Fixed Stars) is the broadest; next in breadth is the sixth (Venus); then the fourth (Mars); then the eighth (Moon); then the seventh (Sun); then the fifth (Mercury); then the third (Jupiter); and the second (Saturn) is narrowest of all. The rim of the largest whorl (Fixed Stars) was spangled; the seventh (Sun) brightest; the eighth (Moon) colored by the reflected light of the seventh; the second and fifth (Saturn, Mercury) like each other and yellower; the third (Jupiter) whitest; the fourth (Mars) somewhat ruddy; the sixth (Venus) second in whiteness. The Spindle revolved as a whole with one motion; but, within the whole as it turned, the seven inner circles revolved slowly in the opposite direction; and of these the eighth (Moon) moved most swiftly; second in speed and all moving together, the seventh, sixth, and fifth (Sun, Venus, Mercury); next in speed moved the fourth (Mars) with what appeared to them to be a counter-revolution; next the third (Jupiter), and slowest of all the second (Saturn).

The Spindle turned on the knees of Necessity. Upon each of its circles stood a Siren, who was carried round with its movement, uttering a single sound on one note, so that all the eight made up the concords of a single scale. Round about, at equal distances, were seated, each on a throne, the three daughters of Necessity, the Fates, robed in white with garlands on their heads, Lachesis, Clotho, and Atropos, chanting to the Sirens’ music, Lachesis of things past, Clotho of the present, and Atropos of things to come. And from time to time Clotho lays her right hand on the outer rim of the Spindle and helps to turn it, while Atropos turns the inner circles likewise with her left, and

Lachesis with either hand takes hold of inner and outer alternately.

The souls, as soon as they came, were required to go before Lachesis. An Interpreter first marshaled them in order; and then, having taken from the lap of Lachesis a number of lots and samples of lives, he mounted on a high platform and said:

'The word of Lachesis, maiden daughter of Necessity, Souls of a day, here shall begin a new round of earthly life, to end in death. No guardian spirit will cast lots for you, but you shall choose your own destiny. Let him to whom the first lot falls choose first a life to which he will be bound of necessity. But Virtue owns no master: as a man honors or dishonors her, so shall he have more of her or less. The blame is his who chooses; Heaven is blameless'.

With these words the Interpreter scattered the lots among them all. Each took up the lot which fell at his feet and showed what number he had drawn; only Er himself was forbidden to take one. Then the Interpreter laid on the ground before them the sample lives, many more than the persons there. They were of every sort: lives of all living creatures, as well as of all conditions of men. Among them were lives of despots, some continuing in power to the end, others ruined in mid course and ending in poverty, exile, or beggary. There were lives of men renowned for beauty of form and for strength and prowess, or for distinguished birth and ancestry; also lives of unknown men; and of women likewise. All these qualities were variously combined with one another and with wealth or poverty, health or sickness, or intermediate conditions; but in none of these lives was there anything to determine the condition of the soul, because the soul must needs change its character according as it chooses one life or another.

Here, it seems, my dear Glaucon, a man's whole fortunes are at stake. On this account each one of us should lay aside all other learning, to study only how he may discover one who can give him the knowledge enabling him to distinguish the good life from the evil, and always and everywhere to choose the best within his reach, taking into account all these qualities we have mentioned and how, separately or in combination, they affect the goodness of life. Thus he will seek to understand what is the effect, for good or evil, of beauty combined with wealth or with poverty and with this or that condition of the soul, or of any combination of high or low birth, public or private station, strength or weakness, quickness of wit or slowness, and any other qualities of mind, native or acquired; until, as the outcome of all these calculations, he is able to choose between the worse and the better life with reference to the constitution of the soul, calling a life worse or better according as it leads to the soul becoming more unjust or more just. All else he will leave out of account; for, as we have seen, this is the supreme choice for a min, both while he lives and after death. Accordingly, when he goes into the house of death he should hold this faith like adamant, that there too he may not be dazzled by wealth and such-like evils, or fling himself into the life of a despot or other evil-doer, to work irremediable harm and suffer yet worse things himself, but may know how to choose always the middle course that avoids both extremes, not only in this life, so far as he may, but in every future existence; for there lies the greatest happiness for man.

To return to the report of the messenger from the other world. The Interpreter then said: 'Even for the last comer, if he choose with discretion, there is left in store a life with which, if he will live strenuously, he maybe content and not unhappy. Let not the first be heedless in his choice, nor the last be disheartened.’

After these words, he who had drawn the first lot at once seized upon the most absolute despotism he could find. In his thoughtless greed he was not careful to examine the life he chose at every point, and he did not see the many evils it contained and that he was fated to devour his own children; but when he had time to look more closely, he began to beat his breast and bewail his choice, forgetting the warning proclaimed by the Interpreter; for he laid the blame on fortune, the decrees of the gods, anything rather than himself. He was one of those who had come down from heaven, having spent his former life in a well-ordered commonwealth and become virtuous from habit without pursuing wisdom. It might indeed be said that not the least part of those who were caught in this way were of the company which had come from heaven, because they were not disciplined by suffering; whereas most of those who had come up out of the earth, having suffered themselves and seen others suffer, were not hasty in making their choice. For this reason, and also because of the chance of the lot, most of the souls changed from a good life to an evil, or from an evil life to a good. Yet, if upon every return to earthly life a man seeks wisdom with his whole heart, and if the lot so fall that he is not among the last to choose, then this report gives good hope that he will not only be happy here, but will journey to the other world and back again hither, not by the rough road underground, but by the smooth path through the heavens.

It was indeed, said Er, a sight worth seeing, how the souls severally chose their lives—a sight to move pity and laughter and astonishment; for the choice was mostly governed by the habits of their former life. He saw one soul choosing the life of a swan; this had once been the soul of

Orpheus, which so hated all womankind because of his death at their hands that it would not consent to be born of woman. And he saw the soul of Thamyras take the life of a nightingale, and a swan choose to be changed into a man, and other musical creatures do the same. The soul which drew the twentieth lot took a lion's life; this had been Ajax, the son of Telamon, who shrank from being born as a man, remembering the judgment concerning the arms of Achilles. After him came the soul of Agamemnon, who also hated mankind because of his sufferings and took in exchange the life of an eagle. Atalanta's soul drew a lot about half-way through. She took the life of an athlete, which she could not pass over when she saw the great honors he would win. After her he saw the soul of Epeius, son of Panopeus, passing into the form of a craftswoman; and far off, among the last, the buffoon Thersites' soul clothing itself in the body of an ape. It so happened that the last choice of all fell to the soul of Odysseus, whose ambition was so abated by memory of his former labors that he went about for a long time looking for a life of quiet obscurity. When at last he found it lying somewhere neglected by all the rest, he chose it gladly, saying that he would have done the same if his lot had come first. Other souls in like manner passed from beasts into men and into one another, the unjust changing into the wild creatures, the just into the tame, in every sort of combination.

Now when all the souls had chosen their lives, they went in the order of their lots to Lachesis; and she gave each into the charge of the guardian genius he had chosen, to escort him through life and fulfill his choice. The genius led the soul first to Clotho, under her hand as it turned the whirling Spindle, thus ratifying the portion which the man had chosen when his lot was cast. And, after touching her, he led it next to the spinning of Atropos, thus making the thread of destiny irreversible. Thence, without looking back, he passed under the throne of Necessity. And when he and all the rest had passed beyond the throne, they journeyed together to the Plain of Lethe through terrible stifling heat; for the plain is bare of trees and of all plants that grow on the earth. When evening came, they encamped beside the River of Unmindfulness, whose water no vessel can hold. All are required to drink a certain measure of this water, and some have not the wisdom to save them from drinking more. Every man as he drinks forgets everything. When they had fallen asleep, at midnight there was thunder and an earthquake, and in a moment they were carried up, this way and that, to their birth, like shooting stars. Er himself was not allowed to drink of the water. How and by what means he came back to the body he knew not; but suddenly he opened his eyes and found himself lying on the funeral pyre at dawn.

And so, Glaucon, the tale was saved from perishing; and if we will listen, it may save us, and all will be well when we cross the river of Lethe. Also we shall not defile our souls; but, if you will believe with me that the soul is immortal and able to endure all good and ill, we shall keep always to the upward way and in all things pursue justice with the help of wisdom. Then we shall be at peace with Heaven and with ourselves, both during our sojourn here and when, like victors in the Games collecting gifts from their friends, we receive the prize of justice; and so, not here only, but in the journey of a thousand years of which I have told you, we shall fare well.

# The Republic Of Plato.

Translated by
John Llewelyn Davies
and.
David James Vaughan.

Socrates; Servant; Polemarchus; Glaucon; Adeimantus;
Cephalus; Thrasymachus; Cleitophon.

## Book 1.

Socrates:: I went down yesterday to the Piraeus with Glaucon the son of Ariston, to offer up prayer to the goddess, and also from a wish to see how the festival, then to be held for the first time, would be celebrated. I was very much pleased with the native Athenian procession; though that of the Thracians appeared to be no less brilliant. We had finished our prayers, and satisfied our curiosity, and were returning to the city, when Polemarchus the son of Cephalus caught sight of us at a distance, as we were on our way towards home, and told his servant to run and bid us wait for him. The servant came behind me, took hold of my cloak, and said;

Boy:: Polemarchus bids you wait.

Socrates:: I turned round and asked him where his master was.

Boy:: There he is, coming on behind; pray wait for him.

Glaucon:: We will wait.

Socrates:: Soon afterwards Polemarchus came up, with Adeimantus the brother of Glaucon, and Niceratus the son of Nicias, and a few other persons, apparently coming away from the procession.

Socrates:: Polemarchus instantly began;

Polemarchus:: Socrates, if I am not deceived, you are taking your departure for the city.

Socrates:: You are not wrong in your conjecture.

Polemarchus:: Well, do you see what a large body we are?

Socrates:: Certainly I do.

Polemarchus:: Then either prove yourselves the stronger party, or else stay where you are.

Socrates:: No; there is still an alternative; suppose we persuade you that you ought to let us go.

Polemarchus:: Could you possibly persuade us, if we refused to listen?

Glaucon:: Certainly not.

Polemarchus:: Make up your minds then that we shall refuse to listen.

Socrates:: Here Adeimantus interposed, and said;

Adeimantus:: Are you not aware that towards evening there will be a torch-race on horseback in honour of the goddess?

Socrates:: On horseback! that is a novelty. Will they carry torches, and pass them on to one another, while the horses are racing? or how do you mean?

Polemarchus:: As you say; besides, there will be a night-festival, which it will be worth while to look at. We will rise after dinner, and go out to see this festival; and there we shall meet with many of our young men, with whom we can converse. Therefore stay, and do not refuse us.

Glaucon:: It seems we shall have to stay.

Socrates:: Well, if you like, let us do so.

We went therefore home with Polemarchus, and found there his brothers Lysias and Euthydemus, and, along with them, Thrasymachus of Chalcedon, and Charmantides the Paeanian, and Cleitophon the son of Aristonymus. Polemarchuses father, Cephalus, was also in the house. I thought him looking very much aged; for it was long since I had seen him. He was sitting upon a cushioned chair, with a garland upon his head, as he happened to have been sacrificing in the court. We found seats placed round him; so we sat down there by his side. The moment Cephalus saw me, he greeted me, and said;

Cephalus:: It is seldom indeed, Socrates, that you pay us a visit at the Piraeus; you ought to come oftener. If I were still strong enough to walk with ease to the city, there would be no occasion for your coming here, because we should go to you. But as it is, you ought to come here more frequently. For I assure you that I find the decay of the mere bodily pleasures accompanied by a proportionate growth in my appetite for philosophical conversation and in the pleasure I derive from it. Therefore do not refuse my request, but let these young men have the benefit of your society, and come often to see us as thoroughly intimate friends.

Socrates:: To tell you the truth, Cephalus, I delight in conversing with very old persons. For as they have gone before us on the road over which perhaps we also shall have to travel, I think we ought to try to learn from them what the nature of that road is, whether it be rough and difficult, or smooth and easy. And now that you have arrived at that period of life, which poets call the threshold of Age, there is no one whose opinion I would more gladly ask. Is life painful at that age, or what report do you make of it?

Cephalus:: I will certainly tell you, Socrates, what my own experience of it is. I and a few other people of my own age are in the habit of frequently meeting together, true to the old proverb. On these occasions, most of us give way to lamentations, and regret the pleasures of youth, and call up the memory of amours and drinking parties and banquets and similar proceedings. They are grievously discontented at the loss of what they consider great privileges, and describe themselves as living well in those days, whereas now, by their own account, they cannot be said to live at all. Some also complain of the manner in which their relations insult their infirmities, and make this a ground for reproaching old age with the many miseries it occasions them. But in my opinion, Socrates, these persons miss the true cause of their unhappiness. For if old age were the cause, the same discomforts would have been also felt by me, as an old man, and by every other person that has reached that period of life. But, as it is, I have before now met with several old men who expressed themselves quite in a different manner; and in particular I may mention Sophocles the poet, who was once asked in my presence, How do you feel about love, Sophocles? are you still capable of it? to which he replied, Hush! if you please; to my great delight I have escaped from it, and feel as if I had escaped from a frantic and savage master. I thought then, as I do now, that he spoke wisely. For unquestionably old age brings us profound repose and freedom from this and other passions. When the appetites have abated, and their force is diminished, the description of Sophocles is perfectly realized. It is like being delivered from a multitude of furious masters. But the complaints on this score, as well as the troubles with relatives, may all be referred to one cause, and that is, not the age, Socrates, but the character, of the men. If they possess well-regulated minds and easy tempers, old age itself is no intolerable burden; if they are differently constituted, why in that case, Socrates, they find even youth as irksome to them as old age.

Socrates:: I admired these remarks of Cephalus, and wishing him to go on talking, I endeavored to draw him out by saying; I fancy, Cephalus, that people do not generally acquiesce in these views of yours, because they think that it is not your character, but your great wealth, that enables you to bear with old age. For the rich, it is said, have many consolations.

Cephalus:: True, they will not believe me; and they are partly right, though not so right as they suppose. There is great truth in the reply of Themistocles to the Seriphian who tauntingly told him, that his reputation was due not to himself, but to his country; should not have become famous, if I had been a native of Seriphus; neither would you, if you had been an Athenian. And to those who, not being rich, are impatient under old age, it may be said with equal justice, that while on the one hand, a good man cannot be altogether cheerful under old age and poverty combined, so on the other, no wealth can ever make a bad man at peace with himself.

Socrates:: But has your property, Cephalus, been chiefly inherited or acquired?

Cephalus:: Have I acquired it, do you say, Socrates? Why, in the conduct of money matters, I stand midway between my grandfather and my father. My grandfather, whose name I bear, inherited nearly as much property as I now possess, and increased it till it was many times as large; while my father Lysanias brought it down even below what it now is. For my part, I shall be content to leave it to these my sons not less, but if anything rather larger, than it was when it came into my hands.

Socrates:: I asked the question, because you seemed to me to be not very fond of money; which is generally the case with those who have not made it themselves; whereas those who have made it, are twice as much attached to it as other people. For just as poets love their own works, and fathers their own children, in the same way those who have created a fortune value their money, not merely for its uses, like other persons, but because it is their own production. This makes them moreover disagreeable companions, because they will praise nothing but riches.

Cephalus:: It is true.

Socrates:: Indeed it is. But let me ask you one more question. What do you think is the greatest advantage that you have derived from being wealthy?

Cephalus:: If I mention it, I shall perhaps get few persons to agree with me. Be assured, Socrates, that when a man is nearly persuaded that he is going to die, he feels alarmed and concerned about things which never affected him before. Till then he has laughed at those stories about the departed, which tell us that he who has done wrong here must suffer for it in the other world; but now his mind is tormented with a fear that these stories may possibly be true. And either owing to the infirmity of old age, or because he is now nearer to the confines of the future state, he has a clearer insight into those mysteries. However that may be, he becomes full of misgiving and apprehension, and sets himself to the task of calculating and reflecting whether he has done any wrong to any one. Hereupon, if he finds his life full of unjust deeds, he is apt to start out of sleep in terror, as children do, and he lives haunted by gloomy anticipations. But if his conscience reproaches him with no injustice, he enjoys the abiding presence of sweet Hope, that kind nurse of old age, as Pindar calls it. For indeed, Socrates, those are beautiful words of his, in which he says of the man who has lived a just and holy life, Sweet Hope is his companion, cheering his heart, the nurse of age, Hope, which, more than aught else, steers the capricious will of mortal men. There is really a wonderful truth in this description. And it is this consideration, as I hold, that makes riches chiefly valuable, I do not say to every body, but at any rate to the good. For they contribute greatly to our preservation from even unintentional deceit or falsehood, and from that alarm which would attend our departure to the other world, if we owed any sacrifices to a god, or any money to a man. They have also many other uses. But after weighing them all separately, Socrates, I am inclined to consider this service as anything but the least important which riches can render to a wise and sensible man.

Socrates:: You have spoken admirably, Cephalus. But what are we to understand by that very quality, justice, to which you refer? Are we to define it as neither more nor less than veracity and restitution of what one man has received from another; or is it possible for actions of this very nature to be sometimes just and sometimes unjust? For example, every one, I suppose, would admit, that, if a man, while in the possession of his senses, were to place dangerous weapons in the hands of a friend, and afterwards in a fit of madness to demand them back, such a deposit ought not to be restored, and that his friend would not be a just man if he either returned the weapons, or consented to tell the whole truth to one so circumstanced.

Cephalus:: You are right.

Socrates:: Then it is no true definition of justice to say that it consists in speaking the truth and restoring what one has received.

Polemarchus:: Nay but it is, Socrates, at least if we are at all to believe Simonides.

Cephalus:: Very well, I will just leave the discussion to you. It is time for me to attend to the sacrifices.

Socrates:: Then Polemarchus inherits your share in it, does he not?

Cephalus:: Certainly!

Socrates:: with a smile; Cephalus immediately withdrew to the sacrifices.

Answer me then, you that are the heir to the discussion; What do you maintain to be the correct account of justice, as given by Simonides?

Polemarchus:: That to restore to each man what is his due, is just. To me it seems that Simonides is right in giving this account of the matter.

Socrates:: Well, certainly it is not an easy matter to disbelieve Simonides; for he is a wise and inspired man. But what he means by his words, you, Polemarchus, may perhaps understand, though I do not. It is clear that he does not mean what we were saying just now, namely, that property given by one person in trust to another, is to be returned to the donor, if he asks for it in a state of insanity. And yet I conclude that property given in trust is due to the truster. Is it not?

Polemarchus:: Yes, it is.

Socrates:: But, when the person who asks for it is not in his senses, it must not be returned on any account, must it?

Polemarchus:: True, it must not.

Socrates:: Then it would seem that Simonides means something different from this, when he says that it is just to restore what is due.

Polemarchus:: Most certainly he does; for he declares that the debt of friend to friend is to do good to one another, and not harm.

Socrates:: I understand; the person who returns money to a depositor does not restore what is due, if the repayment on the one side, and the receipt on the other, prove to be injurious, and if the two parties are friends. Is not this, according to you, the meaning of Simonides?

Polemarchus:: Certainly it is.

Socrates:: Well; must we restore to our enemies whatever happens to be due to them?

Polemarchus:: Yes, no doubt, what is due to them; and the debt of enemy to enemy is, I imagine, harm; because harm is at the same time appropriate to such a relation.

Socrates:: So then it would seem that Simonides, after the manner of poets, employed a riddle to describe the nature of justice; for apparently he thought that justice consisted in rendering to each man that which is appropriate to him, which he called his due. But here let me entreat you to give me your opinion. Suppose that consequently some one had asked him the following question; That being the case, Simonides, what due and appropriate thing is rendered by the art called medicine, and what are the recipients? what answer do you think he would have returned us?

Polemarchus:: Obviously he would have said that bodies are the recipients, and drugs, meats, and drinks, the things rendered.

Socrates:: And what due and appropriate thing is rendered by the art called cookery, and what are the recipients?

Polemarchus:: Seasoning is the thing rendered; dishes are the recipients.

Socrates:: Good; then what is the thing rendered by the art that we are to call justice, and who are the recipients?

Polemarchus:: If we are to be at all guided by our previous statements, Socrates, assistance and harm are the things rendered, friends and enemies the recipients.

Socrates:: Then, by justice, Simonides means doing good to our friends, and harm to our enemies, does he?

Polemarchus:: I think so.

Socrates:: Now, in cases of illness, who is best able to do good to friends and harm to enemies, with reference to health and disease?

Polemarchus:: A physician.

Socrates:: And, on a voyage, who is best able to do good to friends and harm to enemies, with reference to the perils of the sea?

Polemarchus:: A pilot.

Socrates:: Well; in what transaction, and with reference to what object, is the just man best able to help his friends and injure his enemies?

Polemarchus:: In the transactions of war, I imagine, as the ally of the former, and the antagonist of the latter.

Socrates:: Good. You will grant, my dear Polemarchus, that a physician is useless to persons in sound health.

Polemarchus:: Certainly.

Socrates:: And a pilot to persons on shore.

Polemarchus:: Yes.

Socrates:: Is the just man, also, useless to those who are not at war?

Polemarchus:: I do not quite think that.

Socrates:: Then justice is useful in time of peace too, is it?

Polemarchus:: It is.

Socrates:: And so is agriculture, is it not?

Polemarchus:: Yes.

Socrates:: That is to say, as a means of acquiring the fruits of the earth.

Polemarchus:: Yes.

Socrates:: And further, the shoemakers art is also useful, is it not?

Polemarchus:: Yes.

Socrates:: As a means of acquiring shoes, I suppose you will say.

Polemarchus:: Certainly.

Socrates:: Well then, of what does justice, according to you, promote the use or acquisition in time of peace?

Polemarchus:: Of covenants, Socrates.

Socrates:: And by covenants do you understand co-partnerships; or something different?

Polemarchus:: Co-partnerships, certainly.

Socrates:: Then is it the just man, or the skilful draught-player, that makes a good and useful partner in playing draughts?

Polemarchus:: The draught-player.

Socrates:: Well; in bricklaying and stonemasonry is the just man a more useful and a better partner than the regular builder?

Polemarchus:: By no means.

Socrates:: Well then, in what partnership is the just man superior to the harp-player, in the sense in which the harp-player is a better partner than the just man in playing music?

Polemarchus:: In a money-partnership, I think.

Socrates:: Excepting perhaps, Polemarchus, when the object is to lay out money; as when a horse is to be bought or sold by the partners; in which case, I imagine, the horse-dealer is better. Is he not?

Polemarchus:: Apparently he is.

Socrates:: And again, when a ship is to be bought or sold, the ship-wright or pilot is better.

Polemarchus:: It would seem so.

Socrates:: That being the case, when does the opportunity arrive for that joint use of silver or gold, in which the just man is more useful than any one else?

Polemarchus:: When you want to place your money in trust and have it safe, Socrates.

Socrates:: That is to say, when it is to be laid by, and not to be put to any use?

Polemarchus:: Just so.

Socrates:: So that justice can only be usefully applied to money when the money is useless?

Polemarchus:: It looks like it.

Socrates:: In the same way, when you want to keep a pruning-hook, justice is useful whether you be in partnership or not; but when you want to use it, justice gives place to the art of the vinedresser?

Polemarchus:: Apparently.

Socrates:: Do you also maintain that, when you want to keep a shield or a lyre without using them, justice is useful; but when you want to use them, you require the art of the soldier or of the musician?

Polemarchus:: I must.

Socrates:: And so of everything else; justice is useless when a thing is in use, but useful when it is out of use?

Polemarchus:: So it would seem.

Socrates:: Then, my friend, justice cannot be a very valuable thing if it is only useful as applied to things useless. But let us continue the inquiry thus. Is not the man who is most expert in dealing blows in an encounter, whether pugilistic or otherwise, also most expert in parrying blows?

Polemarchus:: Certainly.

Socrates:: Is it not also true that whoever is expert in repelling a disease, and evading its attack, is also extremely expert in producing it in others?

Polemarchus:: I think so.

Socrates:: And undoubtedly a man is well able to guard an army, when he has also a talent for stealing the enemies plans and all his other operations.

Polemarchus:: Certainly.

Socrates:: That is to say, a man can guard expertly whatever he can thieve expertly.

Polemarchus:: So it would seem.

Socrates:: Hence, if the just man is expert in guarding money, he is also expert in stealing it.

Polemarchus:: I confess the argument points that way.

Socrates:: Then, to all appearance, it turns out that the just man is a kind of thief; a doctrine which you have probably learnt from Homer, with whom Autolycus, the maternal grandfather of Odysseus, is a favorite, because, as the poet says, he outdid all men in thievishness and perjury. Justice therefore, according to you, Homer, and Simonides, appears to be a kind of art of stealing, whose object, however, is to help ones friends and injure ones enemies. Was not this your meaning?

Polemarchus:: Most certainly it was not; but I no longer know what I did mean. However, it is still my opinion that it is justice to help ones friends, and hurt ones enemies.

Socrates:: Should you describe a mans friends as those who seem to him to be, or those who really are, honest men, though they may not seem so? And do you define a mans enemies on the same principle?

Polemarchus:: I should certainly expect a man to love all whom he thinks honest, and hate all whom he thinks wicked.

Socrates:: But do not people make mistakes in this matter, and fancy many persons to be honest who are not really honest, and many wicked who are not really wicked?

Polemarchus:: They do.

Socrates:: Then to such persons the good are enemies, and the bad are friends, are they not?

Polemarchus:: Certainly they are.

Socrates:: And, notwithstanding this, it is just for such persons at such times to help the wicked, and to injure the good.

Polemarchus:: Apparently it is.

Socrates:: Yet surely the good are just, and injustice is foreign to their nature.

Polemarchus:: True.

Socrates:: Then, according to your doctrine, it is just to do evil to those who commit no injustice.

Polemarchus:: Heaven forbid it, Socrates; for that looks like a wicked doctrine.

Socrates:: Then it is just, to injure the unjust and to assist the just.

Polemarchus:: That is evidently a better theory than the former.

Socrates:: In that case, Polemarchus, the result will be that, in those numerous instances in which people have thoroughly mistaken their men, it is just for these mistaken persons to injure their friends, because in their eyes they are wicked; and to help their enemies, because they are good. And thus our statement will be in direct opposition to the meaning which we assigned to Simonides.

Polemarchus:: That consequence certainly follows. But let us change our positions; for very probably our definition of friend and enemy was incorrect.

Socrates:: What was our definition, Polemarchus?

Polemarchus:: That a friend is one who seems to be an honest man.

Socrates:: And what is to be our new definition?

Polemarchus:: That a friend is one who not only seems to be, but really is, an honest man; whereas the man who seems to be, but is not honest, is not really a friend, but only seems one. And I define an enemy on the same principle.

Socrates:: Then, by this way of speaking, the good man will, in all likelihood, be a friend, and the wicked an enemy.

Polemarchus:: Yes.

Socrates:: Then you would have us attach to the idea of justice more than we at first included in it, when we called it just to do good to our friend and evil to our enemy. We are now, if I understand you, to make an addition to this, and render it thus, It is just to do good to our friend if he is a good man and to hurt our enemy if he is a bad man.

Polemarchus:: Precisely so; I think that this would be a right statement.

Socrates:: Now is it the act of a just man, to hurt anybody?

Polemarchus:: Certainly it is; that is to say, it is his duty to hurt those who are both wicked, and enemies of his.

Socrates:: Are horses made better, or worse, by being hurt?

Polemarchus:: Worse.

Socrates:: Worse with reference to the excellence of dogs, or that of horses?

Polemarchus:: That of horses.

Socrates:: Are dogs in the same way made worse by being hurt, with reference to the excellence of dogs, and not of horses?

Polemarchus:: Unquestionably they are.

Socrates:: And must we not, on the same principle, assert, my friend, that men, by being hurt, are lowered in the scale of human excellence?

Polemarchus:: Indeed we must.

Socrates:: But is not justice a human excellence?

Polemarchus:: Undoubtedly it is.

Socrates:: And therefore, my friend, those men who are hurt must needs be rendered less just.

Polemarchus:: So it would seem.

Socrates:: Can musicians, by the art of music, make men unmusical?

Polemarchus:: They cannot.

Socrates:: Can riding-masters, by the art of riding, make men bad riders?

Polemarchus:: No.

Socrates:: But if so, can the just by justice make men unjust? In short, can the good by goodness make men bad?

Polemarchus:: No, it is impossible.

Socrates:: True; for, if I am not mistaken, it is the property, not of warmth, but of its opposite, to make things cold.

Polemarchus:: Yes.

Socrates:: And it is the property not of drought, but of its opposite, to make things wet.

Polemarchus:: Certainly.

Socrates:: Then it is the property not of good, but of its opposite, to hurt.

Polemarchus:: Apparently it is.

Socrates:: Well, is the just man good?

Polemarchus:: Certainly he is.

Socrates:: Then, Polemarchus, it is the property, not of the just man, but of his opposite, the unjust man, to hurt either friend or any other creature.

Polemarchus:: You seem to me to be perfectly right, Socrates.

Socrates:: Hence if any one asserts that it is just to render to every man his due, and if he understands by this, that what is due on the part of the just man is injury to his enemies, and assistance to his friends, the assertion is that of an unwise man. For the doctrine is untrue; because we have discovered that, in no instance, is it just to injure any body.

Polemarchus:: I grant you are right.

Socrates:: Then you and I will make common cause against any one who shall attribute this doctrine to Simonides, or Bias, or Pittacus, or any other wise and highly-favored man.

Polemarchus:: Very good; I, for one, am quite ready to take my share of the fighting.

Socrates:: Pray do you know to whom I refer the authorship of this saying, that it is just to help our friends, and hurt our enemies?

Polemarchus:: To whom?

Socrates:: I attribute it to Periander, or Perdiccas, or Xerxes, or Ismenias the Theban, or some other rich man who thought himself very powerful.

Polemarchus:: You are perfectly right.

Socrates:: Well, but as we have again failed to discover the true definition of justice and the just, what other definition can one propose?

While we were still in the middle of our discussion, Thrasymachus was, more than once, bent on interrupting the conversation with objections; but he was checked on each occasion by those who sat by, who wished to hear the argument out. However, when I had made this last remark and we had come to a pause, he could restrain himself no longer, but, gathering himself up like a wild beast, he sprang upon us, as if he would tear us in pieces. I and Polemarchus were terrified and startled; while Thrasymachus, raising his voice to the company, said;

Thrasymachus:: What nonsense has possessed you and Polemarchus all this time, Socrates? And why do you play the fool together with your mutual complaisance? No? if you really wish to understand what justice is, do not confine yourself to asking questions, and making a display of refuting the answers that are returned, (for you are aware that it is easier to ask questions than to answer them); but give us an answer also yourself, and tell us what you assert justice to be, and let me beg you to beware of defining it as the obligatory, or the advantageous, or the profitable, or the lucrative, or the expedient; but whatever your definition may be, let it be clear and precise; for I will not accept your answer, if you talk such trash as that.

Socrates:: When I heard this speech, I was astounded, and gazed at the speaker in terror; and I think if I had not set eyes on him before he eyed me, I should have been struck dumb. But, as it was, when he began to be exasperated by the conversation, I had looked him in the face first; so that I was enabled to reply to him, and said with a slight tremble;

Do not be hard upon us. If I and Polemarchus are making mistakes in our examination of the subject, be assured that the error is involuntary. You do not suppose that, if we were looking for a piece of gold, we should ever willingly be so complaisant to one another in the search as to spoil the chance of finding it; and therefore, pray do not suppose that, in seeking for justice, which is a thing more precious than many pieces of gold, we should give way to one another so weakly as you describe, instead of doing our very best to bring it to light. You, my friend, may think so, if you choose; but my belief is that the subject is beyond our powers. Surely then we might very reasonably expect to be pitied, not harshly treated, by such clever men as you.

When he had heard my reply, he burst out laughing very scornfully, and said;

Thrasymachus:: O Hercules! here is an instance of that mock-humility which Socrates affects. I knew how it would be, and warned the company that you would refuse to answer, and would feign ignorance, and do anything rather than reply, if any one asked you a question.

Socrates:: Yes, you are a wise man, Thrasymachus; and therefore you were well aware that, if you asked a person what factors make the number 12, and at the same time warned him thus; Please to beware of telling me that 12 is twice 6, or 3 times 4, or 6 times 2, or 4 times 3; for I will not take such nonsense from you; you were well aware, I dare say, that no one would give an answer to such an inquirer. But suppose the person replied to you thus; Thrasymachus, explain yourself; am I to be precluded from all these answers which you have denounced? What, my good sir! even if one of these is the real answer, am I still to be precluded from giving it, and am I to make a statement that is at variance with the truth? or what is your meaning? What reply should you make to this inquiry?

Thrasymachus:: Oh, indeed! as if the two cases were alike!

Socrates:: There is nothing to prevent their being so. However, suppose they are not alike; still if one of these answers seems the right one to the person questioned, do you think that our forbidding it, or not, will affect his determination to give the answer which he believes to be the correct one?

Thrasymachus:: Do you not mean that this is what you are going to do? You will give one of the answers on which I have put a veto?

Socrates:: It would not surprise me if I did; supposing I thought right to do so, after reflection.

Thrasymachus:: Then, what if I produce another answer on the subject of justice, unlike those I denounced, and superior to them all? What punishment do you think you merit?

Socrates:: Simply the punishment which it is proper for the unenlightened to submit to; and that is, I conceive, to be instructed by the enlightened. This, then, is the punishment which I, among others, deserve to suffer.

Thrasymachus:: Really you are a pleasant person. But, besides being instructed, you must make me a payment.

Socrates:: I will, when I have any money.

Glaucon:: But you have. So, as far as money is a consideration, speak on, Thrasymachus. We will all contribute for Socrates.

Thrasymachus:: Oh, to be sure! in order that Socrates, I suppose, may pursue his, usual plan of refusing to propound an answer himself, while he criticizes and refutes the answers given by other people.

Socrates:: My excellent friend, how can an answer be given by a person who, in the first place, does not, and confesses he does not, know what to answer; and who, in the next place, if he has any thoughts upon the subject, has been forbidden by a man of no common parts to give utterance to any of his fancies? No, it is more natural that you should be the speaker; because you profess to know the subject, and to have something to say. Therefore do not decline; but gratify me by answering, and do not grudge to instruct Glaucon and the rest of the company as well.

When I had said this, Glaucon and the others begged him to comply. Now it was evident that Thrasymachus was eager to speak, in order that he might gain glory, because he thought himself in possession of a very fine answer. But he affected to contend for my being the respondent. At last he gave in, and then said;

Thrasymachus:: This, forsooth, is the wisdom of Socrates! He will not give instruction himself, but he goes about and learns from others, without even showing gratitude for their lessons.

Socrates:: As for my learning from others, Thrasymachus, there you speak truth; but it is false of you to say that I pay no gratitude in return. I do pay all I can; and, as I have no money, I can only give praise. How readily I do this, if in my judgment a person speaks well, you will very soon find, when you make your answer; for I expect you to speak well.

Thrasymachus:: Then listen. My doctrine is, that justice is simply the interest of the stronger. Well; why do you not praise me? No, you refuse.

Socrates:: Not so; I am only waiting to understand your meaning, which at present I do not see. You say that the interest of the stronger is just. What in the world do you mean by this, Thrasymachus? You do not, I presume, mean anything like this, that, if Polydamas. the athlete, is stronger than we are, and if it is for his interest to eat beef in order to strengthen his body, such food is for the interest of us weaker men, and therefore is just.

Thrasymachus:: This is scandalous, Socrates; you understand my doctrine in the sense in which you can damage it most.

Socrates:: No, no, my excellent friend; but state your meaning more clearly.

Thrasymachus:: So you are not aware, that some cities are governed by an autocrat, and others by a democracy, and others by an aristocracy?

Socrates:: Of course I am.

Thrasymachus:: In every city does not superior strength reside in the ruling body?

Socrates:: Certainly it does.

Thrasymachus:: And further, each government has its laws framed to suit its own interests; a democracy making democratical laws; an autocrat despotic laws, and so on. Now by this procedure these governments have pronounced that what is for the interest of themselves is just for their subjects; and whoever deviates from this, is chastised by them as guilty of illegality and injustice. Therefore, my good sir, my meaning is, that in all cities the same thing, namely, the interest of the established government, is just. And superior strength, I presume, is to be found on the side of government. So that the conclusion of right reasoning is that the same thing, namely, the interest of the stronger, is everywhere just.

Socrates:: Now I understand your meaning, and I will endeavor to make out whether it is true or not. So then, Thrasymachus, you yourself in your answer have defined justice as interest, though you forbade my giving any such reply. To be sure, you have made an addition, and describe it as the interest of the stronger.

Thrasymachus:: Yes; quite a trifling addition, perhaps.

Socrates:: It remains to be seen, whether it is an important one. But this much is certain, that we are bound to examine into the correctness of your doctrine. For we both admit that justice is in harmony with interest; but you lengthen this into the assertion that justice is the interest of the stronger; to which I demur. Therefore we are certainly bound to study the subject.

Thrasymachus:: Pray do so.

Socrates:: It shall be done. Be so good as to answer this question. You doubtless also maintain that it is just to obey the rulers?

Thrasymachus:: I do.

Socrates:: Are the rulers infallible in each several city, or are they liable to make a few mistakes?

Thrasymachus:: No doubt they are liable to make mistakes.

Socrates:: And therefore, when they undertake to frame laws, is their work sometimes rightly, and sometimes wrongly done?

Thrasymachus:: I should suppose so.

Socrates:: Do rightly and wrongly mean, respectively, legislating for, and against, their own interests? Or how do you state it?

Thrasymachus:: Just as you do.

Socrates:: And do you maintain that whatever has been enacted by the rulers must be obeyed by their subjects, and that this is justice?

Thrasymachus:: Unquestionably I do.

Socrates:: Then, according to your argument, it is not only just to do what makes for the interest of the stronger, but also to do what runs counter to his interest, in other words, the opposite of the former.

Thrasymachus:: What are you saying?

Socrates:: What you say, I believe. But let us examine the point more thoroughly. Has it not been admitted that, when the rulers enjoin certain acts upon their subjects, they are sometimes thoroughly mistaken as to what is best for themselves; and that, whatever is enjoined by them, it is just for their subjects to obey? Has not this been admitted?

Thrasymachus:: Yes, I think so.

Socrates:: Then let me tell you, that you have also admitted the justice of doing what runs counter to the interest of the ruling and stronger body on every occasion when this body unintentionally enjoins what is injurious to itself, so long as you maintain that it is just for the subjects to obey, in every instance, the injunctions of their rulers. In that case, O most wise Thrasymachus, must it not follow of course, that it is just to act in direct opposition to your theory? For, obviously, it is enjoined upon the weaker to do what is prejudicial to the interest of the stronger.

Polemarchus:: Yes, indeed, Socrates; that is perfectly clear.

Clitophon:: No doubt, if you appear as a witness in Socrates behalf.

Polemarchus:: Nay, what do we want witnesses for? Thrasymachus himself admits that the rulers sometimes enjoin what is bad for themselves; and that it is just for their subjects to obey such injunctions.

Clitophon:: No, Polemarchus; Thrasymachus laid it down that to do what the rulers command is just.

Polemarchus:: Yes, Cleitophon; and he also laid it down that the interest of the stronger is just. And having laid down these two positions, he further admitted that the stronger party sometimes orders its weaker subjects to do what is prejudicial to its own interests. And the consequence of these admissions is, that what is for the interest of the stronger ill be not a bit more just than what is not for his interest.

Clitophon:: But, by the interest of the stronger he meant, what the stronger conceived to be for his own interest. His position was, that this must be done by the weaker, and that this is the notion of justice.

Polemarchus:: That was not what he said.

Socrates:: It does not matter, Polemarchus; if Thrasymachus chooses to state his theory in that way now, let us make no objection to his doing so.

Tell me, then, Thrasymachus; was this the definition you meant to give of justice, that it is what seems to the stronger to be the interest of the stronger, whether it be really for his interest or not? Shall we take that as your account of it?

Thrasymachus:: Certainly not; do you think I should call a man who is mistaken, at the time of his mistake, the stronger?

Socrates:: Why I thought that you said as much, when you admitted that rulers are not infallible, but do really commit some mistakes.

Thrasymachus:: You are a quibbler, Socrates, in argument; do you call, now, that man a physician who is in error about the treatment of the sick, with strict reference to his error? Or do you call another an accountant, who makes a mistake in a calculation, at the time of his mistake, and with reference to that mistake? We say, to be sure, in so many words that the physician was in error, and the accountant or the writer was in error; but in fact each of these, I imagine, in so far as he is what we call him, never falls into error. So that, to speak with precise accuracy, since you require such preciseness of language, no craftsman errs. For it is through a failure of knowledge that a man errs, and to that extent he is no craftsman; so that whether as craftsman, or philosopher, or ruler, no one errs while he actually is what he professes to be; although it would be universally said that such a physician was in error, or such a ruler was in error. In this sense I would have you to understand my own recent answer. But the statement, if expressed with perfect accuracy, would be, that a ruler, in so far as he is a ruler, never errs, and that, so long as this is the case, he enacts what is best for himself, and that this is what the subject has to do.

Therefore, as I began with saying, I call it just to do what is for the interest of the stronger.

Socrates:: Very good, Thrasymachus; you think me a quibbler, do you?

Thrasymachus:: Yes, a thorough quibbler.

Socrates:: Do you think that I put you those questions with a mischievous intent to damage your position in the argument?

Thrasymachus:: Nay, I am quite sure of it. However you shall gain nothing by it; for you shall neither injure me by taking me unawares, nor will you be able to overpower me by open argument.

Socrates:: I should not think of attempting it, my excellent friend; But that nothing of this kind may occur again, state whether you employ the words ruler and stronger in the popular sense of them, or in that strict signification of which you were speaking just now, when you say that it is just for the weaker to do what is for the interest of the ruler as being the stronger.

Thrasymachus:: I mean a ruler in the strictest sense of the word. So now try your powers of quibbling and mischief; I ask for no mercy. But your attempts will be ineffectual.

Socrates:: Why, do you suppose I should be so mad as to attempt to beard a lion, or play off quibbles on a Thrasymachus?

Thrasymachus:: At any rate you tried it just now, though you failed utterly.

Socrates:: Enough of this banter. Tell me this; is the physician of whom you spoke as being strictly a physician, a maker of money, or a healer of the sick? Take care you speak of the genuine physician.

Thrasymachus:: A healer of the sick.

Socrates:: And what of a pilot? Is the true pilot a sailor or a commander of sailors?

Thrasymachus:: A commander of sailors.

Socrates:: There is no need, I imagine, to take into the account his being on board the ship, nor should he be called a sailor; for it is not in virtue of his being on board that he has the name of pilot, but in virtue of his art and of his authority over the sailors.

Thrasymachus:: True.

Socrates:: Has not each of these persons an interest of his own?

Thrasymachus:: Certainly.

Socrates:: And is it not the proper end of their art to seek and procure what is for the interest of each of them?

Thrasymachus:: It is.

Socrates:: Have the arts severally any other interest to pursue than their own highest perfection?

Thrasymachus:: What does your question mean?

Socrates:: Why, if you were to ask me whether it is sufficient for a mans body to be a body, or whether it stands in need of something additional, I should say, Certainly it does. To this fact the discovery of the healing art is due, because the body is defective, and it is not enough for it to be a body. Therefore the art of healing has been put in requisition to procure what the interests of the body require. Should I be right, think you, in so expressing myself, or not?

Thrasymachus:: You would be right.

Socrates:: Well then, is the art of healing itself defective, or does any art whatever require a certain additional virtue; as eyes require sight, and ears hearing, so that these organs need a certain art which shall investigate and provide what is conducive to these ends; is there, I ask, any defectiveness in an art as such, so that every art should require another art to consider its interests, and this other provisional art a third, with a similar function, and so on, without limit? Or will it investigate its own interest? Or is it unnecessary either for itself, or for any other art, to inquire into the appropriate remedy for its own defects because there are no defects or faults in any art, and because it is not the duty of an art to seek the interests of aught, save that to which, as an art, it belongs, being itself free from hurt and blemish as a true art, so long as it continues strictly and-in its integrity what it is? View the question according to the strict meaning of terms, as we agreed; is it so or otherwise?

Thrasymachus:: Apparently it is so.

Socrates:: Then the art of healing does not consider the interest of the art of healing, but the interest of the body.

Thrasymachus:: Yes.

Socrates:: Nor horsemanship what is good for horsemanship, but for horses; nor does any other art seek its own interest, (for it has no wants), but the good of that to which as an art it belongs.

Thrasymachus:: Apparently it is so.

Socrates:: Well, but you will grant, Thrasymachus, that an art governs and is stronger than that of which it is the art.

He assented, with great reluctance, to this proposition.

Then no science investigates or enjoins the interest of the stronger, but the interest of the weaker, its subject.

To this also he at last assented, though he attempted to show fight about it. After gaining his admission, I proceeded; Then is it not also true, that no physician, in so far as he is a physician, considers or enjoins what is for the physicians interest, but that all seek the good of their patients? For we have agreed that a physician strictly so called, is a ruler of bodies, and not a maker of money; have we not?

He allowed that we had.

And that a pilot strictly so called is a commander of sailors, and not a sailor?

Thrasymachus:: We have.

Socrates:: Then this kind of pilot and commander will not seek and enjoin the pilots interest, but that of the sailor and the subordinate.

He reluctantly gave his assent.

And thus, Thrasymachus, all who are in any place of command, in so far as they are rulers, neither consider nor enjoin their own interest, but that of the subjects for whom they exercise their craft; and in all that they do or say, they act with an exclusive view to them, and to what is good and proper for them.

When we had arrived at this stage of the discussion, and it had become evident to all that the explanation of justice was completely reversed, Thrasymachus, instead of making any answer, said;

Thrasymachus:: Tell me, Socrates, have you a nurse?

Socrates:: Why? I rejoined; had you not better answer my questions than make inquiries of that sort?

Thrasymachus:: Why because she leaves you to drivel, and omits to wipe your nose when you require it, so that in consequence of her neglect you cannot even distinguish between sheep and shepherd.

Socrates:: For what particular reason do you think so?

Thrasymachus:: Because you think that shepherds and herdsmen regard the good of their sheep and of their oxen, and fatten them and take care of them with other views than to benefit their masters and themselves; and you actually imagine that the rulers in states, those I mean who are really rulers, are otherwise minded towards their subjects than as one would feel towards sheep, or that they think of anything else by night and by day than how they may secure their own advantage. And you are so far wrong in your notions respecting justice and injustice, the just and the unjust, that you do not know that the former is really the good of another, that is to say the interest of the stronger and of the ruler, but your own loss, where you are the subordinate and the servant; whereas injustice is the reverse, governing those that are really simpleminded and just, so that they, as subjects, do what is for the interest of the unjust man who is stronger than they, and promote his happiness by their services, but not their own in the least degree. You may see by the following considerations, my most simple Socrates, that a just man everywhere has the worst of it, compared with an unjust man. In the first place, in their mutual dealings, wherever a just man enters into partnership with an unjust man, you will find that at the dissolution of the partnership the just man never has more than the unjust man but always less. Then again in their dealings with the state, when there is a property-tax to pay, the just man will pay more and the unjust less, on the same amount of property; and when there is anything to receive, the one gets nothing, while the other makes great gains. And whenever either of them holds any office of authority, if the just man suffers no other loss, at least his private affairs fall into disorder through want of attention to them, while his principles forbid his deriving any benefit from the public money; and besides this, it is his fate to offend his friends and acquaintances every time that he refuses to serve them at the expense of justice. But with the unjust man every thing is reversed. I am speaking of the case I mentioned just now, of an unjust man who has the power to grasp on an extensive scale. To him you must direct your attention, if you wish to judge how much more profitable it is to a mans own self to be unjust than to be just. And you will learn this truth with the greatest ease, if you turn your attention to the most consummate form of injustice, which, while it makes the wrong-doer most happy, makes those who are wronged, and will not retaliate, most miserable. This form is a despotism, which proceeds not by small degrees, but by wholesale, in its open or fraudulent appropriation of the property of others, whether it be sacred or profane, public or private; perpetrating offences, which if a person commits in detail and is found out, he becomes liable to a penalty and incurs deep disgrace; for partial offenders in this class of crimes are called sacrilegious, men-stealers, burglars, thieves, and robbers. But when a man not only seizes the property of his fellow-citizens but captures and enslaves their persons also, instead of those dishonorable titles he is called happy and highly favored, not only by the men of his own city, but also by all others who hear of the comprehensive injustice which he has wrought. For when people abuse injustice, they do so because they are afraid, not of committing it, but of suffering it. Thus it is, Socrates, that injustice, realized on an adequate scale, is a stronger, a more liberal, and a more lordly thing than justice; and as I said at first, justice is the interest of the stronger; injustice, a thing profitable and advantageous to oneself.

Socrates:: When he had made this speech, Thrasymachus intended to take his departure, after deluging our ears like a bathing-man with this copious and unbroken flood of words. Our companions however would not let him go, but obliged him to stay and answer for his doctrines. I myself also was especially urgent in my entreaties, exclaiming, Really, my good Thrasymachus, after flinging us such a speech as this, are you intending to take your leave, before you have satisfactorily taught us, or learnt yourself, whether your theory is right or wrong? Do you think you are undertaking to settle some insignificant question, and not the principles on which each of us must conduct his life in order to lead the most profitable existence?

Thrasymachus:: Why that is not a true statement of the case, in my opinion.

Socrates:: So it seems, or else that you are quite indifferent about us, and feel no concern whether we shall live the better or the worse for our ignorance of what you profess to know. But pray vouchsafe, my good sir, to impart your knowledge to us also; any benefit you confer on such a large party as we are will surely be no bad investment. For I tell you plainly for my own part that I am not convinced, and that I do not believe that injustice is more profitable than justice, even if it be let alone and suffered to work its will unchecked. On the contrary, my good sir, let there be an unjust man, and let him have full power, to practice injustice, either by evading detection or by overpowering opposition, still I am not convinced that such a course is more profitable than justice. This, perhaps, is the feeling of some others amongst us, as well as mine. Pray then convince us satisfactorily, my highly-gifted friend, that we are not well advised in valuing justice above injustice.

Thrasymachus:: But how, can I persuade you? If you are not convinced by my recent statements what more can I do for you? must I take the doctrine and thrust it into your mind?

Socrates:: Heaven forbid you should do that; but in the first place, abide by what you say, or if you change your ground, change it openly without deceiving us. As it is, Thrasymachus, (for we must not yet take leave of our former investigations,) you see that having first defined the meaning of the genuine physician, you did not think it necessary afterwards to adhere strictly to the genuine shepherd. On the contrary, you suppose him to feed his sheep, in so far as he is a shepherd, not with an eye to what is best for the flock, but, like a votary of feasting who is going to give an entertainment, with an eye to the good cheer, or else to their sale, like a money-maker, and not like a shepherd. Whereas the only concern of the shepherds art is, I presume, how it shall procure what is best for that, of which-it is the appointed guardian; since as far as concerns its own perfection, sufficient provision is made, I suppose, for that, so long as it is all that is implied in its title; and so I confess I thought we were obliged just now to admit that every government, in so far as it is a government, looks solely to the advantage of that which is governed and tended by it, whether that government be of a public or a private nature. But what is your opinion? do you think that the rulers in states, who really rule, do so willingly?

Thrasymachus:: No, I do not think it, I am sure of it.
